At the IMT, when other people were on trial, Ohlendorf had appeared as a prosecution witness, and had testified in agreement with the extermination claims.⁴⁰² He testified that he had received oral orders to add extermination of Jews to his activities, that gasmobiles were used to exterminate women and children, that document 501-PS was authentic (Becker's letter), and that the Wehrmacht was implicated in these things. Thus, this charge regarding the *Einsatzgruppen* was part of the IMT judgment, which even stated that Ohlendorf exterminated Jews with group D.⁴⁰³ As we have seen, these statements in the judgment constituted "proof of the facts stated" when Ohlendorf, no doubt contrary to his expectations, was put on trial as the principal defendant in Case 9. In view of the legal constraints involved here, nobody's position could have been more hopeless than Ohlendorf's at his own trial.

Ohlendorf's NMT testimony was simply contradictory; he was stuck with his IMT testimony, which the prosecution was mindful of holding him to, but he tried to squirm out anyway, and the result was a story having no coherency whatever.⁴⁰⁴ He retracted his earlier statement that there had been specific ex-

⁴⁰² IMT, vol. 4, 311-355.

⁴⁰³ IMT, vol. 22, 478-480, 491-494, 509f., 538.

⁴⁰⁴ NMT, vol. 4, 223-312.

termination orders, but under cross examination, he said that he was killing all Jews and gypsies anyway, but that this was just an anti-partisan operation, not part of a program to exterminate all Jews and gypsies on racial or religious grounds. However, the total number of persons of all categories executed by group D during his year in Russia was only 40,000, and not the 90,000 that he had testified to at the IMT, and which the NMT prosecutor attempted to hold him to. Either figure, of course, especially the former, makes some sense, if the executions were only in connection with anti-partisan measure, but make no sense at all if one is supposed to be executing all Jews and gypsies at the same time, including women and children.

Ohlendorf's NMT testimony is thus hopelessly contradictory, as it was bound to be in the circumstances in which he found himself. One should note, however, that Ohlendorf did not testify to the reality of any executions, which his court was not formally committed, *a priori*, to accepting, as factual anyway. The only part of Ohlendorf's testimony that may be of value is his attack on the *Einsatzgruppen* reports as "edited."

Ohlendorf's testimony contrasts with that of Haensch, an SS Lieutenant Colonel who was in command of a *Sonderkommando* in group C for about seven weeks. The fact that Haensch had not testified previously when others were on trial, and the fact that his lower rank made the *a priori* constraints on Case 9 of lesser effect in his case, gave him a freedom that Ohlendorf did not enjoy. He testified that absolutely nobody, in giving him his orders, had ever mentioned Jews as such in connection with executive activities of the *Einsatzgruppen*, and that his *Sonderkommando* had not, as a matter of fact, had a policy of executing Jews as such. He estimated that his *Sonderkommando* executed about sixty people during his period of service. All of these claims were completely in conflict with what are said to be the reports of the *Einsatzgruppen*, as the court pointed out in detail in the judgment, concluding that in connection with Haensch:⁴⁰⁵

"[...] *one can only dismiss as fantastic the declaration of the defendant that his predecessor who had admittedly executed thousands of Jews under the Führer Order, and whose program Haensch was to continue, said nothing to Haensch about that program. And when Haensch boldly uttered that the first time he ever had any inkling of the Führer Order was when he arrived in Nuremberg six years later, he entered into the category of incredulousness which defies characterization.*"

Ohlendorf and Haensch were both sentenced to hang. Ohlendorf's sentence was carried out in 1951, but Haensch's sentence was commuted to fifteen years. Presumably, he was out sometime during the Fifties.

Of course, the basic plea of all defendants in Case 9 as well as in almost all other cases was that whatever they did was done in obedience to orders that could be disobeyed only under circumstances that would have resulted in the execution of the disobedient person. Incidentally, in my opinion this is a per-

⁴⁰⁵ NMT, vol. 4, 313-323, 547-555.

fectly valid defense, and it may have been this consideration that played a role in whatever inducements were offered to Germans to become prosecution witnesses at the IMT trial; it did not imply his guilt or, at least, it logically did not, if it was done in obedience to orders. In fact, this was the case in the German military law that the German witnesses were familiar with. Disobedience of even an illegal order was a serious and punishable offense. People such as Höss and Ohlendorf had, no doubt, reasoned that their testimony at the IMT had incriminated them only in the sense of perjury, an offense that they knew the Allied tribunals would never charge them with. Ohlendorf's attempts to ingratiate himself with the U.S. prosecutors did not, moreover, end with the IMT, for he was also used, after his own trial and while he was under sentence of death, as a prosecution witness against Wehrmacht generals in Case 12.

Personal guilt, obviously, is not involved, if the actions demanded or suggested by the accusers would have led to the clearly inevitable death of the accused. I suspect that every accuser of the *Einsatzgruppen* would have obeyed orders to participate in the air raids on Hamburg, Dresden, Hiroshima, and Nagasaki (none of which, incidentally, had credible military motivations).

However, I do not want to create an impression that I am denying that the *Einsatzgruppen* executed apparent civilians, including women and children, in connection with their activities in Russia. All experience with anti-partisan warfare, whether conducted by the British, the French, or the Americans, suggests – quite independently of the tainted (to put it mildly) evidence of the trials at Nuremberg – that such things happened. In the Vietnam war, Americans did much of this with napalm, and then made a big fuss over the fact that one obscure Lieutenant had been caught doing it with bullets.

Neither am I trying to create an impression that, actually, everybody is very brutal, but a thorough discussion of the problems involved would carry us far afield, so it will not be attempted; only the essentials can be outlined here.

It is an unhappy fact that partisan, irregular, or guerilla warfare, together with the measures taken to suppress such operations, is not only the dirtiest business in existence but has also been a regular feature of Twentieth-Century history. It is dirty business even when the two sides are highly civilized and culturally similar. A good example is the British campaign against the Irish rebellion of 1916-1921, where both sides acted with remarkable brutality.

If one adds to the fact of guerilla warfare that at least one side is drawn from a primitive, uncivilized, or semi-civilized population, then one has a situation that it is most difficult for an ordinary civilized person to grasp, if he has no direct experience of it. It is too easy for us, sitting in the warmth of our living rooms, to generate moral indignation over operations, which involve the killing of "apparent civilians, including women and children." The typical West European or American has lived in a culture, in which certain standards of charity, kindness, and honor have been taken for granted, and it is difficult for him to understand that certain fundamental assumptions about other people would not hold in a context such as guerilla warfare in Asia or Russia; the viciousness involved exceeds the imagination. To give just one example drawn

from our Vietnam experience: what do you do, if a child, despite signaled warnings to stay away, is obstinately approaching you asking for food or candy, and it is known that there is a good chance that there is a grenade attached to him?

Of course, many needless brutalities always occur in such circumstances, but one should attempt to understand the situation.

What I am denying with respect to the *Einsatzgruppen* is that one can give any credence to the story told by the trials evidence, which, while it is somewhat variable on some points, has the basic feature of asserting that the *Einsatzgruppen*, which had a total strength of about 3,000 for the anti-partisan operations for all of occupied Russia, regularly and as a matter of policy pursued a second set of objectives not related to military considerations, those objectives (exterminations) requiring substantial means for their attainment. We can, especially in view of the obvious forgery and perjury which has been practiced in connection with making this claim, dismiss all of that as propaganda. What did in fact happen, can only, most probably, be approximately grasped on account of the scantiness of reliable evidence. Unfortunately, it would appear that the events in Russia will never be established with exactitude, and that these episodes will remain partially in darkness.

Chapter 7: The Final Solution

The German Policy and the Wannsee Conference

We have shown that the exterminations are a propaganda hoax, *i.e.*, we have shown what did not happen to the Jews. To complete our study, we should show what did, in fact, happen to the Jews.

The problem of what happened to European Jews is a fairly easy one, if one wishes only a general answer, but a very difficult, indeed probably impossible problem, if one demands statistical accuracy. To answer the question in general, all one need do is consult the relevant German documents. What the German leaders were saying to each other about their policy is obviously the first authority one should consult.

The general nature of German Jewish policy is very simple to discover; it is all set out in NMT volume 13. The U.S. Prosecution in the Wilhelmstrasse Case presented a document, NG-2586, which consists of several parts, each part being some document important in the development of German Jewish policy. In fact, one part, NG-2586-J, is a summary of the other parts and, thus, a handy summary of the policy. One can do no better than simply reproduce the text, a memo by Martin Luther (Horst Wagner's predecessor), dated August 21, 1942:⁴⁰⁶

"1. The principle of the German Jewish policy after the seizure of power consisted in promoting with all means the Jewish emigration. For this purpose, in 1939, Field Marshall Göring in his capacity as Plenipotentiary for the Four Year Plan established a Reich Central Office for Jewish Emigration, and the direction was given to SS Lieutenant General Heydrich in his capacity as chief of the Security Police. The Foreign Office is represented in the committee of the Reich Central Office. The draft of a letter to this effect to the Chief of the Security Police was approved by the Reich Foreign Minister as 83/24 B in February 1939.

2. The present war gives Germany the opportunity and also the duty of solving the Jewish problem in Europe. In consideration of the favorable course of the war against France, D III proposed in July 1940 as a solution – the removal of all Jews from Europe and the demanding of the Island of Madagascar from France as a territory for the reception of the Jews. The Reich Foreign Minister has basically agreed to the beginning of the preliminary work for the deportation of the Jews from Europe. This should be

⁴⁰⁶ NMT. vol. 13, 243-249.

done in close cooperation with the offices of the Reichsführer-SS (compare D III 200/40).

The Madagascar plan was enthusiastically accepted by the RSHA, which in the opinion of the Foreign Office is the agency which alone is in the position technically and by experience to carry out a Jewish evacuation on a large scale and to guarantee the supervision of the people evacuated, the competent agency of the RSHA thereupon worked out a plan going into detail for the evacuation of the Jews to Madagascar and for their settlement there. This plan was approved by the Reichsführer-SS. SS Lieutenant General Heydrich submitted this plan directly to the Reich Foreign Minister in August 1940 (compare D III 2171). The Madagascar plan in fact had been outdated as the result of the political development.

The fact that the Führer intends to evacuate all Jews from Europe was communicated to me as early as August 1940 by Ambassador Abetz after an interview with the Führer (compare D III 2298).

Hence, the basic instruction of the Reich Foreign Minister, to promote the evacuation of the Jews in closest cooperation with the agencies of the Reichsführer-SS, is still in force and will therefore be observed by D III.

3. The administration of the occupied territories brought with it the problem of the treatment of Jews living in these territories. First, the military commander in France saw himself compelled as the first one to issue on September 27, 1940, a decree on the treatment of the Jews in occupied France. The decree was issued with the agreement of the German Embassy in Paris. The pertinent instruction was issued directly by the Reich Foreign Minister to Ambassador Abetz on the occasion of a verbal report.

After the pattern of the Paris decree, similar decrees have been issued in the Netherlands and Belgium. As these decrees, in the same way as German laws concerning Jews, formally embrace all Jews independent of their citizenship, objections were made by foreign powers, among others protest notes by the Embassy of the United States of America, although the military commander in France through internal regulation had ordered that the Jewish measures should not be applied to the citizens of neutral countries.

The Reich Foreign Minister has decided in the case of the American protests that he does not consider it right to have military regulations issued for making an exception of the American Jews. It would be a mistake to reject objections of friendly states (Spain and Hungary) and on the other hand to show weakness toward the Americans. The Reich Foreign Minister considers it necessary to make these instructions to the field commanders retroactive (compare D III 5449).

In accordance with this direction, the Jewish measures have been given general application.

4. In his letter of June 24, 1940 – Pol XII 136 – SS Lieutenant General Heydrich informed the Reich Foreign Minister that the whole problem of the approximately three and a quarter million Jews in the areas under

German control can no longer be solved by emigration – a territorial final solution would be necessary.

In recognition of this, Reich Marshall Göring on July 31, 1941, commissioned SS Lieutenant General Heydrich to make, in conjunction with the interested German Control agencies, all necessary preparations for a total solution of the Jewish problem in the German sphere of influence in Europe (compare D III 709 secret). On the basis of this instruction, SS Lieutenant General Heydrich arranged a conference of all the interested German agencies for January 20, 1942, at which the State Secretaries were present from the other ministries and I myself from the Foreign Office. In the conference General Heydrich explained that Reich Marshall Göring's assignment to him had been made on the Führer's instruction and that the Führer instead of the emigration had now authorized the evacuation of the Jews to the East as the solution (compare page 5 of the enclosure to D III 29/42 Secret). State Secretary Weizsäcker had been informed on the conference; for the time being the Reich Foreign Minister had not been informed on the conference, because SS Lieutenant General Heydrich agreed to holding a new conference in the near future in which more details of the total solution should be discussed. This conference has never taken place due to Lieutenant General Heydrich's appointment as acting Reich Protector of Bohemia and Moravia and due to his death.

In the conference on January 20, 1942, I demanded that all questions concerned with countries outside Germany must first have the agreement of the Foreign Office, a demand to which SS Lieutenant General Heydrich agreed and also has faithfully complied with, as in fact, the office of the RSHA handling Jewish matters had, from the beginning, carried out all measures in frictionless cooperation with the Foreign Office. The RSHA has in this matter proceeded indeed almost over-cautiously.

5. On the basis of the Führer's instruction mentioned under '4' (above), the evacuation of the Jews from Germany was begun. It was urged that at the same time these Jews should also be taken who were nationals of the countries which had also undertaken Jewish measures. The RSHA accordingly made an inquiry of the Foreign Office. For reasons of courtesy, inquiry was made by way of the German legations in Bratislava [Slovakia], Zagreb [Croatia], and Bucharest [Romania] to the Governments there as to whether they wanted to recall their Jews from Germany in due time or to agree to their deportation to the ghettos in the East. To the issuance of this instruction, agreement was given before dispatch by the State Secretary, the Under State Secretary in Charge of the Political Division, the Director of the Division for Economic Policy and the Director of the Legal Division (compare D III 336 Secret).

The German Legation in Bucharest reports with reference to D III 602 Secret, that the Romanian government would leave it to the Reich Government to deport their Jews along with the German Jews to the ghettos in the

East. They are not interested in having the Romanian Jews return to Romania.

The Legation in Zagreb has informed us that the Croat Government expresses gratitude for the gesture of the German Government; but it would appreciate the deportation of its Jews to the East (compare D III 624 Secret).

The Legation in Bratislava reported with reference to D III 661 Secret that the Slovak Government is fundamentally in agreement with the deportation to the eastern ghettos. But the Slovak claims to the property of the Jews should not be endangered.

The wire reports have also been submitted, as customary, to the Reich Foreign Minister's Bureau.

On the basis of the reports of the Ministers, I have informed the RSHA with reference to D III 661 Secret that the Jews of Romanian, Croat, and Slovak nationality could also be deported; their property should be blocked. The Director of the Political Division, Section IV of the Political Division, Section IX of the Legal Division and Section IV of the Division for the Economic Policy have cosigned the document. Accordingly, the deportations of the Jews from the occupied territories was undertaken.

6. The number of Jews deported in this way to the East did not suffice to cover the labor needs there. The RSHA therefore, acting on the instruction of the Reichsführer-SS, approached the Foreign Office to ask the Slovak Government to make 20,000 young, strong Slovak Jews from Slovakia available for deportation to the East. The German Legation in Bratislava was provided, by D III 874, with proper instruction. The instruction was signed by the State Secretary, the Under State Secretary in charge of the Political Division, and Section IV of the Political Division.

The Legation in Bratislava reported re D III 1002 that the Slovak Government has taken up the suggestion eagerly; the preparatory work could be begun.

Following up this pleased concurrence of the Slovak Government, the Reichsführer-SS proposed that the rest of the Slovak Jews also be deported to the East and Slovakia thereby be made free of Jews. The Legation was, re D III 1559 Ang. II, provided with proper instruction. The draft of the instruction was signed by the State Secretary; after its dispatch it was submitted for their information to the bureau of the Reich Foreign Minister and the Under State Secretary in charge of the Political Division.

As the Slovak Episcopacy meanwhile raised objections to the deportation of the Jews before the Slovak Government, the instruction carries the express statement that in no case must there develop internal political difficulties on account of the evacuation of the Jews in Slovakia. By the telegraphic report, re D III 2006, the Legation reported that the Slovak Government, without any German pressure, has declared itself agreeable to the deportation of all Jews and that the State President agreed personally to the deportation. The telegraphic report was submitted to the bureau of the

Reich Foreign Minister. The Slovak Government had furthermore agreed that it will pay as a contribution to the cost entailed RM 500 for every evacuated Jew.

In the meantime 52,000 Jews have been removed from Slovakia. Due to church influences and the corruption of individual officials 35,000 Jews have received a special legitimization. However, Minister President Tuka wants the Jewish removal continued and therefore has asked for support through diplomatic pressure by the Reich (compare D III 3865). The Ambassador is authorized to give this diplomatic help in that he may state to State President Dr. Tiso that the exclusion of the 35,000 Jews is a surprise in Germany, the more so since the cooperation of Slovakia up to now in the Jewish problem has been highly appreciated here. This instruction has been cosigned by the Under State Secretary in charge of the Political Division, and the State Secretary.

7. The Croat Government is likewise fundamentally agreeable to the removal of the Jews from Croatia. It especially considers the deportation of the four to five thousand Jews from the Italian occupied Second zone (centered around Dubrovnik and Mostar) to be important, as they represent a political burden and their elimination would serve the general pacification. The removal can of course take place only with German aid, as difficulties are to be expected from the Italian side. There have been practical examples of resistance to the Croat measures by Italian officials on behalf of well-to-do Jews. Furthermore, the Italian Chief of Staff in Mostar has said that he cannot approve the removal since all the people living in Mostar have been assured of the same treatment.

Since meanwhile according to a telephone communication from Zagreb, the Croat Government has given its written approval of the proposed measure, Minister Kasche thinks it right to begin with the removal, and in fact to begin for the whole country. One could therefore take the risk of having difficulties develop in the course of the action, so far as concerns the zone occupied by Italians.

A report for the Reich Foreign Minister to this effect (D III 562 Secret) has been held up by State Secretary von Weizsäcker since he considered an inquiry should first be made at the Embassy in Rome. The answer has not been received.

The problem of the Italian Jews has come up in the same way in connection with the evacuation of the Jews in France.

Ambassador Abetz points out in connection with the deportation in preparation from the Occupied French Territory that there was an urgent political interest to take the foreign Jews first in the evacuation measures. Since these Jews were regarded as foreign bodies, they were already especially hated and passing them over and giving them thereby a quasi privileging would cause bad feeling, the more so since among them were to be found responsible instigators of Jewish terror and sabotage acts. It was re-

grettable that the Axis appeared exactly in this point to pursue no uniform policy.

If the evacuation of the foreign Jews were not immediately possible, the Italian Government should be for the time being asked to repatriate their Jews from France.

On the Italian side, economic interests appear to play a decisive role. The safeguarding of these interests, however, is entirely possible, so that on this point there needs to be no obstacle to the planned solution.

On this question of the Italian Jews in France a conference record of July 24, re D III 562 Secret, has been submitted to the Reich Foreign Minister.

8. On the occasion of a reception by the Reich Foreign Minister on November 26, 1941, the Bulgarian Foreign Minister Popoff touched on the problem of according like treatment to the Jews of European nationalities and pointed out the difficulties that the Bulgarians had in the application of their Jewish laws to Jews of foreign nationality.

The Reich Foreign Minister answered that he thought this question brought up by Mr. Popoff not uninteresting. Even now he could say one thing to him, that at the end of this war all Jews would have to leave Europe. This was an unalterable decision of the Führer and also the only way to master this problem, as only a global and comprehensive solution could be applied and individual measures would not help very much. Furthermore, one should not attribute too much worth to the protests on behalf of the Jews of foreign nationality. At any rate, we would not let ourselves be taken in any further by such protests from the American side. He – the Reich Foreign Minister – would have the problem described by Mr. Popoff investigated by the Foreign Office.

The Reich Foreign Minister commissioned me to undertake the investigation promised (compare D III 660g) [document NG-4669].

I should like to make reference to my basic conference memorandum of December 4, 1941, re D III 660 Secret, which I am dispatching, together with the proper files. This conference memorandum was held up by the State Secretary, because he considered a further examination by the Legal Division first necessary. In their opinion the German-Bulgarian trade and shipping pact was not in agreement with the German-Bulgarian arrangements proposed by me. I therefore notified the German Legation in Sofia, re D III 497 Secret, under the date of June 19, in reference to the suggestion of the Bulgarian Foreign Minister Popoff at his reception to contact the Bulgarian Government and find out whether it was prepared to come to an agreement in the Jewish problem that there should be no rights from the trade and shipping pact given effect in favor of the Jews in the promise of reciprocity.

If the question is put from the Bulgarian side as to whether Germany is ready to deport Jews from Bulgaria to the East, the question should be answered in the affirmative, but in respect to the time of the departing should

be answered evasively. This decree was cosigned by the State Secretary, the Under State Secretary, the Director of the Political Division, the Director of the Division for Economic Policy, Section IV of the Political Division, Section IV of the Division for Economic Policy, and also by Ribbentrop. The Legation exchanged notes with the Bulgarian Government and reported that the Bulgarian Government is fundamentally prepared in the problem of the evacuation to sign an agreement with us. Thereby the basis is given to include the Bulgarian Jews in the Jewish measures. (D III 559 Secret and 569 Secret).

9. The Hungarian Government has not yet been approached with respect to the Jewish removal, because the status of the Hungarian legislation up to the present does not promise a sufficient success.

10. In accordance with the agreement of the Romanian Government mentioned under '8' the evacuation of the Romanian Jews from Germany and the occupied territories was begun, whereupon various Romanian consulates and the Romanian Minister in Berlin, who had no instructions from their Government, intervened. Ambassador von Killinger was therefore asked for clarification. The Legation seems to have made use of the Jewish advisor assigned to it, Richter, for this purpose. He is a person to whom the Romanian Government confirmed its earlier agreement to the inclusion of the Romanian Jews in the German measures and to whom the Deputy Ministry President Mihai Antonescu informed of the request of the Marshall that the German agencies should also carry out the removal from Romania itself and should be then immediately with the transport of the Jews from the areas Arad, Timisoara and Turda.

For details may I refer to my conference memorandum of August 17 as D III 649.

11. At the request of the governments concerned, the legations in Bratislava, Zagreb and Bucharest have been assigned advisors for Jewish affairs. They have been made available at the request of the Foreign Office by the RSHA. Their assignment is for a limited time. It ends as soon as the Jewish problem in the country concerned can be regarded as solved in the German sense. Originally it was regarded as solved as soon as the country concerned has issued Jewish laws similar to the German ones.

Accordingly Richter was recalled from Romania last year by the RSHA.

At the urgent request of the legation in Bucharest, Richter was again assigned to the legation despite the objection of the RSHA. This was done with the express intention of having him remain there until the actual final solution in Romania (D III 1703 Secret and 1893 Secret).

Since all negotiations with the Romanian Government went through the Foreign Office, the report of SS First Lieutenant Richter submitted by the Reichsführer-SS should be considered only as an internal work report to the RSHA. The unusual procedure of having the confirmation of a final conference in the handwriting of the Deputy Minister President was sharply objected to immediately through the directive of the 17th of this month;

the official handling of the affair must be carried out immediately. The files have been submitted there already under D III 659 Secret.

The intended deportations are a further step forward on the way of the total solution and are in respect to other countries (Hungary) very important. The deportation to the Government General is a temporary measure. The Jews will be moved on further to the occupied Eastern Territories as soon as the technical conditions for it are given.

I therefore request approval for the continuation of the negotiations and measures under these terms and according to the arrangement made.

Signed: LUTHER"

The material starting with the words "If the question is put from the Bulgarian side [...]" and ending with the words "The files have been submitted there already under D III 659 Secret," is deleted in NMT volume 13. In section 4, the date of June 24, 1940, for document Pol XII 136 appears, from the context, to be in error; it should be 1941.

This is not a solitary document; not only is it a summary of a certain number of documents spelling out the Jewish policies of the German Government, but all documents bearing on Jewish policies, except for those we have identified as forgeries, fall within the scheme implied by it. The "final solution" meant the expulsion of all Jews from the German sphere of influence in Europe. After the invasion of Russia, its specific meaning was the resettlement of these Jews in the East. The German documents at every level (among those that have survived) express this unambiguously, a fact which is conceded even by the bearers of the extermination legend, who are forced to declare that this must just be code terminology for extermination.⁴⁰⁷

Actually, in the discussions prior to this chapter, we have had several occasions to refer to this program of resettlement to the East. Its most important expression has been in the Red Cross excerpt which, despite its ambiguous remarks about "extermination," presents a picture in rather close accord with the story told by NG-2586-J. At Theresienstadt, the Red Cross wondered if the place "was being used as a transit camp and asked when the last departures for the East had taken place." In Slovakia, the Jews had been subject to "forced immigration towards the territories under German control." A large number of Romanian Jews had been resettled in the East, but things did not work out, and many returned, although there had been adequate opportunity to exterminate them, if such had been the policy. Despite the several vague and ambiguous remarks about "extermination," which we noted in Chapter 5 (p. 194), the undeniable effect of the Red Cross *Report* is to confirm that the Germans were doing what their documents say they were doing.

The German documents are not only confirmed by neutral authority; we have seen that they are even confirmed by hostile sources. In Chapter 4 (p. 150), we discussed the Theresienstadt Jews sent to Auschwitz, as related by the WRB report. The manner of their treatment makes sense only if Birkenau

⁴⁰⁷ Hilberg (1961), 619 or 621.

was serving as a transit camp for them. Moreover, the Israeli source cited on page 151 reported that Theresienstadt Jews were, indeed, being sent to the East. Thus, even hostile sources report that the Germans were doing what their documents say they were doing.

What is described in NG-2586-J is the program as it existed starting in early 1939. Actually, on account of the pressures against the Jews between 1933 and 1939, the great majority of German-Austrian Jews had emigrated before the outbreak of the war. The Germans had not cared very much where the Jews emigrated to. Palestine seemed a good possibility on account of the British Balfour Declaration of 1917, but negotiations with the British on this did not go very well, because the British wished to maintain good relations with the Arabs who, at that time, constituted the bulk of the population of Palestine. Nevertheless, there was some steady Jewish emigration from Europe to Palestine, but this was finally cut to a trickle by the policy announced by the British White Paper of May 1939.⁴⁰⁸

The Madagascar project, fantastic as it seems today, was taken quite seriously by the Germans, although nothing ever came of it. The war with Russia, which started in June 1941, opened up obvious new resettlement possibilities, and this resulted in Göring's famous letter to Heydrich regarding the "final solution of the Jewish question," dated July 31, 1941:⁴⁰⁹

"As supplement to the task that was entrusted to you in the decree dated January 24, 1939, namely to solve the Jewish question by emigration and evacuation in a way, which is the most favorable in connection with the conditions prevailing at the time, I herewith commission you to carry out all preparations with regard to organizational, factual, and financial viewpoints for a total solution of the Jewish question in those territories in Europe under German influence.

If the competency of other central organizations is touched in this connection, these organizations are to participate.

I further commission you to submit to me as soon as possible a draft showing the organizational, factual, and financial measures already taken for the execution of the intended final solution of the Jewish question."

It is customary to quote this letter with deletion of the reference to "emigration and evacuation."⁴¹⁰ The planned Jewish emigration to the eastern territories of not only the German Jews but also the Jews in the "territories in Europe under German influence" was a relatively extensive project and so, in accord with Göring's reference to the "competency of other central organizations," Heydrich called a special conference, the "Wannsee Conference," which was finally held on January 20, 1942. Representatives of several branches of the German Government attended the conference. Eichmann was the next to lowest

⁴⁰⁸ Sachar, 365-368, 412-417; John & Hadawi, vol. 1, 295-326.

⁴⁰⁹ NMT, vol. 13, 169f.

⁴¹⁰ E.g. Shirer (1960), 964.

ranked person at the conference. The minutes of the conference, NG-2586-G, are lengthy, but the heart of the project was expressed as follows:⁴¹¹

“Meanwhile, in view of the dangers of an emigration during the war and in view of the possibilities in the East, the Reichsführer-SS and the Chief of the German Police had forbidden the emigrating of the Jews.

The emigration program has now been replaced by the evacuation of the Jews to the East as a further solution possibility, in accordance with previous authorization by the Führer.

These actions are of course to be regarded only as a temporary substitute; nonetheless here already the solution of the Jewish problem is of great importance. [...]

Under proper direction the Jews should now in the course of the final solution, be brought to the East in a suitable way for use as labor. In big labor gangs, with separation of the sexes, the Jews capable of work are brought to these areas and employed in road-building, in which task undoubtedly a great part will fall out through natural diminution.

The remnant that finally is able to survive all this – since this is undoubtedly the part with the strongest resistance – must be given treatment accordingly, since these people, representing a natural selection, are to be regarded as the germ cell of a new Jewish development, if they are allowed to go free. (See the experience of history.)

In the program of the practical execution of the final solution, Europe is combed through from the West to the East. The Reich area, including the Protectorate of Bohemia and Moravia, will have to be taken in advance, alone for reasons of the housing problem and other social-political necessities.

The evacuated Jews are brought first group by group into the so-called transit ghettos, in order from there out to be transported farther to the East.

An important provision for the whole execution of the evacuation, so SS General Heydrich explained further, is the exact establishment of the category of persons who are to be included.

It is intended not to evacuate Jews over 65 years of age, but to remove them to a ghetto for the aged – Theresienstadt is under consideration.

Along with these old-age classes – of the perhaps 280,000 Jews who on 31/10/1941 were in the Old Reich and in Austria, perhaps 30% are over 65 years old – there will also be taken to the ghettos for the aged the Jews who are serious war-wounded cases and Jews with war decorations (Iron Cross, First Class). With this appropriate solution the many potentials for exceptions will be eliminated with one blow. [...]

In connection with the problem of the effect of the Jewish evacuation on the economic life, State Secretary Neumann stated that the Jews employed

⁴¹¹ NMT, vol. 13, 212f.; Poliakov & Wulf (1955), 119-126.

in war-important industries could not be evacuated for the present, as long as there were no replacements available.

SS General Heydrich pointed out that these Jews, in accordance with the directive approved by him for the execution of the current evacuations, would not be evacuated.

State Secretary Dr. Bühler states that the Government General would welcome the initiation of the final solution of this problem in the Government General, because here for once the transport problem plays no out-of-the-ordinary role, and here labor commitment considerations would not hinder the course of this action. [...] Furthermore, of the approximately two and one half million Jews here in question the majority of cases were unfit for work. [...] He had only one request, that the Jewish problem in this territory be solved as quickly as possible."

Here is unambiguous documentary evidence that no extermination program existed; the German policy was to evacuate the Jews to the East. It did not, moreover, require the capture of German documents to expose this fact. It was well known during the war and, during the resettlement program's early states, it was reported and commented on countless times in the Allied press. In the case of Vienna Jews deported to Poland in early 1941, the *New York Times* even remarked that they "found their new homes much more comfortable than they expected or even dare hope." Later reports on the resettlement program did not describe it so favorably, but the press at least reported approximately what was going on.⁴¹²

Rothe, incidentally, had taken the position that the Wannsee Conference is itself a propaganda myth. His principal reason for this is his belief, for which he presents respectable evidence, that Heydrich was in Prague on January 20, 1942. However, the date attributed to the conference and the document said to be the minutes of the conference are so consistent with everything else that is known about the German policy that we believe that Rothe is mistaken on this point.⁴¹³

The only factual aspect of the program of evacuation to the East which is generally consistent with the extermination claims is that many Jews sent to the camps in Poland did not return, at least not to their former homes. This, apparently, had been the reason why many people with more or less first-hand information about certain individuals have accepted the extermination claims. However, the situation is basically simple. These camps were obviously serving as transit camps for the program of evacuation to the East. We have observed that at Birkenau there was a special compound that served as a transit camp for Theresienstadt Jews, and that Dutch Jews also passed through Auschwitz (Chapter 4, p. 150). The concentration camp at Lublin also played this incidental role on occasion.⁴¹⁴ Treblinka, which was a labor camp but does

⁴¹² See particularly the *New York Times* (Feb. 28, 1941), 4; (Oct. 18, 1941), 4; (Oct. 28, 1941), 10; (Feb. 9, 1942), 5; (Mar. 15, 1942), 27; (Aug. 6, 1942), 1.

⁴¹³ Rothe, 173-196.

⁴¹⁴ NO-1611 and NO-1882 in NMT, vol. 5, 616-619.

not appear to have been administered by the WVHA, clearly served also as a transit camp, especially for Warsaw Jews. As with Auschwitz, Reitlinger finds the alleged facts put forward concerning gassings at Treblinka difficult to reconcile with one another. Sobibór was explicitly called a transit camp.⁴¹⁵

It may astonish the reader that the documents we have reviewed, which constitute very strong evidence that no extermination program existed, are not passed over in silence by the bearers of the extermination legend, but are thrust boldly into our faces as evidence that an extermination program *did* exist. Not only is this the implicit idea conveyed by the collection of documents in NMT volume 13; Reitlinger and Hilberg are quite serious in considering these documents relevant to an extermination program. Thus, the “evacuation to the East” is claimed as a code term for extermination.

On account of the fact that a fixed feature of the extermination legend is that one of the tasks of the *Einsatzgruppen* in Russia was the extermination of the Jews, the bearers of the legend are committed to the view that the policy of extermination had been settled on by the summer of 1941. Thus, although Göring’s letter of July 31, 1941 to Heydrich specifically states that the “final solution” is a program of emigration and evacuation, and although it makes specific reference to the program which existed from 1939, which both Reitlinger and Hilberg concede was an emigration program, both authors must and do take the position that this was really an extermination order. They are apparently not bothered by the fact, noted by them, that deportations of Reich Jews to Russia and the Baltic states had started in the autumn of 1941.⁴¹⁶

Continuing to keep faith with their fundamental commitment, the Wannsee Conference of January 1942 is also interpreted as a veiled discussion of extermination, although the evacuation program, of which the minutes of the Conference speak, was in fact in progress. Both authors lay stress on the reference to the “remnant that finally is able to survive all this” and are to be “given treatment accordingly.” This passage could mean any number of things. The version of the Wannsee Conference minutes that is printed in NMT volume 13, incidentally, has the phrase “if they are allowed to go free” deleted by the editors. This suggests that the editors may have interpreted the passage as a recommendation that the “remnant” should be “allowed to go free.” In commenting on the Wannsee Conference minutes, Reitlinger remarks that “Heydrich was discreet enough not to mention the rest,” and that “the drafting of circumspect minutes was one of the major arts of Hitler’s Reich.” Hilberg resolves the lack of clarity of meaning of some of the passages (from his point of view) by remarking that “we know from the language of the *Einsatzgruppen* reports that he meant killing.”⁴¹⁷ This amounts to making the extraordinary claim that Hitler’s Reich was “circumspect” regarding the language used in the minutes of secret conferences, but not circumspect regarding the language used in the widely distributed *Einsatzgruppen* reports. In any case, these passages in what is

⁴¹⁵ Reitlinger, 149, 279; Hilberg (1961), 318, 619 or 621.

⁴¹⁶ Reitlinger, 84-97; Hilberg (1961), 262f.

⁴¹⁷ Reitlinger, 102-109; Hilberg (1961), 264f.; NMT, vol. 13, 213.

said to be the minutes of the Wannsee Conference are the only passages in the documents describing German Jewish policy for which a sinister interpretation is possible, although many interpretations are possible.

The excessively strained interpretations of these documents are factors, added to the several discussed in Chapter 4, which forced Reitlinger to declare that Höss must have really meant the summer of 1942 as the date of receiving his extermination orders from Himmler. Reitlinger and Hilberg both assume that the deportations to the east were for the purpose of killing the Jews there, in one way or another, and that the gas chambers in Poland were established in mid-1942 as a change in the method of killing. We have seen that this theory does not harmonize with the dates associated with the planning of and preliminary work on the Auschwitz crematories that are supposed to have been designed for the exterminations. Thus, the claim that the documents should be interpreted as meaning other than what they say, leads one into irresolvable contradictions and difficulties, but such would also be the result, if comparable practices were applied to the interpretation of recipes, road signs, mathematical formulae, etc.

There is no point in discussing further these efforts to make these documents mean other than what they say. The German policy, the "final solution," was to resettle Jews in the occupied territories in the East. This is what their documents say, and the program spoken of in these documents is confirmed by neutral sources and even, to a significant extent, by hostile sources. By way of additional confirmation, it is worth mentioning passages by Grayzel in his *History*. In one paragraph he says that the Germans were doing what their documents say they were doing:

"They followed this up with wholesale deportations. They set aside a number of places in Eastern Europe in which they concentrated Jews from other lands, in line with the avowed Nazi policy of 'freeing' all of Europe from Jewish influence."

In the next paragraph, Grayzel contradicts this statement by saying that the Germans were doing what the Allied propaganda said they were doing: exterminations, gas chambers, etc. Grayzel makes no attempt to resolve the contradiction.⁴¹⁸

It may be wondered why the authors of the hoax have presented us with documents which describe, in very general terms, what the German policy was. The hoaxers were confronted with (a) the fact that Europeans were told by the Germans, at the time of the deportations, that the Jews were to be resettled and (b) the fact that the resettlement program had been reported in the Allied press and (c) the fact that, in regard to the documents, it was necessary to make a choice among three possibilities: presenting no high level documents dealing with the Jewish policy, presenting forged high level documents dealing with the policy, and presenting selected high level documents dealing with the policy. Under the circumstances, the third of the three possibilities was obvi-

⁴¹⁸ Grayzel, 785f.

ously to be preferred. It was clearly better to present a genuine document, signed by Göring and speaking of the “final solution” of the Jewish question, than to present a forged document or no document. Although the final solution is specified as “emigration and evacuation,” it was considered not possible to avoid the fact that the Nazis described their program in such terms. Thus, today the bearers of the extermination legend merely claim that all of this was code terminology.

One must not pass over the important work of R. L. Koehl, who is that strange bird, a professional academic historian writing in or near a field completely dominated by non-historians. The main value of Koehl’s work is in putting Poland into proper focus and perspective.

During the war years, Germany undertook to change the composition of the populations near its eastern borders. The main instrument of this program was the RuSHA (*Rasse- und Siedungshauptamt*, Race and Settlement Main Office) of the SS. The basic policy was to move selected Reich Germans and ethnic German communities of Eastern Europe (*Volksdeutsche*) into the conquered territories contiguous to Germany. Jews and Poles were expelled from these areas and sent to various places, in some cases to the farms the ethnic Germans had vacated, to special Eastern ghettos, and also to certain special “Z villages” in Poland.

Koehl explicitly endorses the reality of the extermination program, but his account of it is most peculiar:⁴¹⁹

“The official version insisted that the Jews were going to be moved further east into conquered Soviet territory to remove them more effectively from the German sphere of life. Like many other German pronouncements, this one contained several grains of truth: (1) train-loads of Jews from the Reich were sent as far east as possible for liquidation, often at the hands of non-Germans such as the Ukrainians or the Baltic peoples. (2) The Poles were, in Rosenberg’s early plans as Minister for the East, to be considered for resettlement in the Soviet area (Smolensk), thus freeing the General Government for German settlement.”

Koehl does not provide any evidence for the killings by Ukrainians or the Baltic peoples; the sources cited at this point make no such claims. Then in referring to the extermination camps:⁴²⁰

“In the fall and winter of 1941-1942, the last 240,000 Jews of the annexed provinces were removed to the newly constructed extermination camps at Kolo, Belzec, Majdanek, and Sobibor.”

The list excludes Auschwitz, which comes up in Koehl’s book only in a remark about some Germans sent there for punishment, in connection with “Aktion Reinhardt” (to be explained below) and also in the following:⁴²¹

“[Dr. Klukowski] stated that of 691 villages in the county of Zamosc, 297 were wholly or partly evacuated by July 1943. He estimated that

⁴¹⁹ Koehl, 131f.

⁴²⁰ *Ibid.*, 146.

⁴²¹ *Ibid.*, 130, 184.

110,000 Poles and Jews were removed from the area, males and females of working age going to forced labor in the Auschwitz Hydrogenation Plant, the rest going to the other 394 ('Z') villages."

One may draw one's own conclusions. Koehl's book is recommended to the reader who wishes a detailed view of Nazi population policies, especially in their relations to German nationalism, Nazi racial ideology, and internal Nazi party politics.

Numbers Deported: Whence and Whither

Many European Jews were deported East, and we should now take a closer look at this program of deportations. There are several obvious questions: who was deported, how many, to where, what was life like where they were sent, and what happened to them. To some extent, only partial or provisional answers are possible here.

First, we should consider the numbers and origins of the Jews involved in this resettlement program. Here we run into the problems discussed in Chapter 1; counting Jews can be difficult. However, it is not statistical accuracy we seek here but order of magnitude or approximate figures that can be used to show that, on the basis of verifiable data, the Jews who were deported could easily have survived after all. It will thus be satisfactory to merely accept certain figures offered by Reitlinger and by Hilberg for the purposes of discussion, although one can pick quarrels with them (as one can with Rassinier's study). The figures are estimates of numbers *killed*; it is understood that here we assume that these people had merely been resettled in the East. In the case of Reitlinger, we employ his higher estimate:⁴²²

Table 8: Numbers of resettled Jews		
	REITLINGER	HILBERG
Germany	180,000	160,000
Austria	60,000	53,000
Czechoslovakia	251,000	271,000
Denmark		1,000
France	65,000	70,000
Belgium	28,000	50,000
Luxembourg	3,000	2,000
Norway	700	1,000
Holland	102,700	120,000
Italy	8,000	17,000
Yugoslavia	58,000	63,000
Greece	60,000	62,000
Totals	816,400	870,000

⁴²² Reitlinger, 533-546; Hilberg (1961), 670.

To some extent, these figures are based on German documents, notably the "Korherr Report," documents NO-5193-8; to some extent neutral sources are involved, such as the Dutch Red Cross with the Holland figures. There is also a certain amount of demographic speculation involved. However, I believe that at least the totals given are of the correct order.

We do not admit Hungary into the list, because those said by both Reitlinger and Hilberg to have been exterminated are pure invention; they were not even deported East. Somewhat fewer than 100,000 were sent to Germany for labor toward the end of the war; quite a few of these must have perished in the chaotic conditions of the last months, but the number is essentially impossible to arrive at.

Romania is also supposed to have lost 200,000-370,000 Jews via extermination, but as Reitlinger remarks, such figures are "conjectural" on account of "the lack of reliable information." Conceded to be in the same category are the largest groups of allegedly exterminated Jews: 2,350,000-3,300,000 from Poland and 400,000-700,000 from the USSR. These figures are pure demographic speculation, with absolutely no supporting data other than the declarations of post-war Communist governments.

These figures will be considered further below. At this point, we merely recall that the Jews deported from France and Belgium were not French or Belgian Jews (pp. 113, 118), but that those deported from Holland were almost all Dutch Jews (p. 119). The reason for this appears to have been a mere legal technicality. France and Belgium had formally surrendered to the Germans and formal armistice terms were agreed to. In Holland, the Queen had merely fled to England and thus the Germans viewed Holland as being without an independent state.⁴²³ German rights in Holland were correspondingly more extensive. Of course, the Germans intended to eventually expel all Jews from Europe, but they naturally started with the ones for which the minimum of legal difficulties existed.

The excerpt of the Red Cross *Report*, which we examined in Chapter 5, is certainly in conflict with the extermination claims in the case of the Romanian Jews. It is reasonable to assume that the bulk of the Jews in Soviet-controlled territory that was occupied by the Germans after June 22, 1941, escaped into the interior before the arrival of the latter, a belief that is also held by Reitlinger (page 241). In any case, there is no evidence that the Germans did more than adopt the sort of guarded and hostile attitude toward the Jews who remained, which was implied by the partisan menaces discussed in the preceding chapter. The Polish Jews constituted the majority of the Jews moved around by the Germans and present, on account of their location and circumstances, the greatest difficulties to any detailed analysis of the matter. We can only reconstruct in general outline what happened to them.

We first remark that, while it is convenient here to distinguish between Russian and Polish Jews, the real distinction is most slight, if it could be said

⁴²³ Reitlinger, 367, 377.

to exist at all. Before World War I, both sets of Jews were subjects of the Russian Empire.

The first relevant events involving Polish Jews were due to Russian, rather than German measures. Germany and Russia partitioned Poland in 1939, the eastern half and thus a large portion of the Polish Jews thereby coming under Soviet rule. These Jews were the objects of a Russian resettlement program whose broad features have been described by Korzen in an article published by the Israeli Government. Korzen's article is of some importance to the matters treated in this chapter.⁴²⁴

Briefly, what happened is that "hundreds of thousands" of these Jews were dispersed throughout the Soviet Union in an evacuation program which commenced in June 1940. At first, many were sent to labor camps, but after September 1941, a serious effort was made "to convert the refugees into Soviet citizens and prevent their leaving the Soviet Union." The dispersion was as far as Central Asia and even to the Far East. Details are difficult to develop, and Korzen pleads for more interest in research into the matter. Many became Soviet citizens, some trekked back to Poland after the war and in many cases proceeded on to Israel. Korzen remarks that the Jews who remained in Poland as leaders of the new Communist regime were put under pressure "to change their names to purely Polish-sounding ones as well as to keep their Jewish origin secret." Some eventually arrived at places such as Persia and India via Shanghai. The Joint Distribution Committee of New York maintained contact with the refugees in the Soviet Union during the war, and assisted their movements after the war.

It is also known that a large number of Jews, given by one source as 300,000, fled from western to eastern Poland in 1939 when the Nazis invaded the former.⁴²⁵ Thus, a significant fraction, perhaps as many as a third, of the Polish Jews had been moved beyond reach of the Germans before the outbreak of war between Russia and Germany in June 1941.

Although there had been a limited German resettlement program earlier, notably for Vienna Jews, the Nazi resettlement program began with earnestness in the autumn of 1941. If Polish Jews are excluded but Romanian Jews included in our immediate considerations, we see that the Germans moved at most a million Jews to settlements or ghettos in the occupied East. From the locations that have been mentioned, we can get a fairly good idea of where these settlements were located: Riga – Minsk – Ukraine – Sea of Azov (north of the Black Sea) forms a connected and plausible line on a map.

While we have a good idea of where these settlements were, we know little else about them other than that they existed. As one should naturally expect, the Allied occupation destroyed the relevant German records and documents, so that only scraps survive that deal with the resettlement program in terms more specific than, say, the Luther memorandum (NG-2586-J reproduced above). Indeed, Steengracht's defense made a serious effort to produce such

⁴²⁴ *Yad Vashem Studies*, vol. 3, 119-140.

⁴²⁵ Kimche & Kimche, 63.

documents at Nuremberg, but the best it could do relative to the eastern camps was to submit two documents into evidence. The first, Steengracht 64,⁴²⁶ is a letter from Eichmann, dated June 5, 1943, to the Foreign Office for the attention of Thadden. It concerns the Jewish camps in the east and some articles that had appeared in various European magazines concerning them. It appears that “fantastic rumors” in Slovakia concerning these camps were being given credence by some people there, and in addition to citing the magazine articles, Eichmann remarked:

“[...] to counteract the fantastic rumors circulating in Slovakia about the fate of the evacuated Jews, attention should be drawn to the postal communications of these Jews with Slovakia [...], which for instance amounted to more than 1,000 letters and postcards for February/March this year. Concerning the information apparently desired by Prime Minister Dr. Tuka about the conditions in Jewish camps, no objections would be raised by this office against any possible scrutinizing of the correspondence before it is forwarded to the addressees.”

The second Steengracht document, Steengracht 65 (also going under the number NO-1624), is somewhat more effective in giving a picture of the situation of the Jews in the occupied east. It is an order, dated August 20, 1943, by the chief of the RuSHA (Race and Settlement Main Office), SS General Hilbrandt, relative to associations between Germans and Jews in the occupied east and to the permissible ways in which the latter could be employed. It reads:

“It has been pointed out to me by various sources that the behavior of German offices in the occupied Eastern territories toward Jews had developed in such a way in the past months as to give rise to misgivings. In particular, Jews are being employed in jobs and services, which, in consideration of maintaining secrecy, should only be assigned to absolutely reliable persons, who should appear to be the confidential representatives of the German offices in the eyes of the indigenous population. Unfortunately, in addition to this, there is allegedly personal association of Reich Germans with Jewesses, which exceeds the limits that must be strictly observed for ideological and racial reasons. It is said to concern native Jews as well as Jews and Jewesses who have been deported from the Old Reich to the occupied Eastern territories. This state of affairs has already led to the fact that Jews are exploiting their apparently confidential positions in exchange for the supply of preferential rations by the indigenous population. It is said that recently, when apprehensions were expressed in the East about a German retreat, indigenous persons endeavored to ingratiate themselves particularly with those Jews employed in German offices, in order to ensure better treatment at the hands of the Bolsheviks. The decent section of the indigenous population viewed these events with great disapproval, because it saw in them the contradiction between National Socialist principles and the actual attitude of the Germans.

⁴²⁶ Steengracht 64 in NMT, vol. 13, 300; NO-1247 cited by Reitlinger, 308, and quoted by Hilberg (1961), 254. Steengracht 65 (or NO-1624) does not appear to be reproduced anywhere.

Owing to improper labor assignment of Jews, the esteem of the Greater German Reich and the position of its representatives are being harmed and the necessity for effective police security of the occupied Eastern territories prejudiced. Grave dangers could arise particularly from the fact that the Jews are utilizing the jobs assigned to them for espionage and propaganda in the service of our enemies.

I therefore request that the subordinate offices in the occupied Eastern territories be given the following instructions:

1) Jews and persons of a similar status may only be employed in manual labor. It is prohibited to employ them in office work (such as bookkeeping, typewriting, card indexing, registration). Strict attention must be paid to the fact that they will not be given work, which would permit them to draw conclusions on matters that are to be kept secret.

2) It is forbidden to employ Jews for general or personal service, for the discharging of orders, for the negotiation of business deals, or for the procuring of goods.

3) Private association with Jews, Jewesses, and persons of a similar status is prohibited as well as any relations beyond those officially necessary."

The "persons of a similar status" referred to were probably mainly gypsies. We assume that Steengracht's counsel made a thorough search of the documents which had been allowed to survive at Nuremberg. Hildebrandt's order to the RuSHA merely repeated, verbatim, a Kaltenbrunner order of August 13, 1943, to all German offices in the occupied eastern areas (document NO-1247). The failure of Steengracht to use NO-1247 was probably due to its being nearly identical to NO-1624.

Such documents are only a pathetic scrap from what must have been extensive written records dealing with the Jewish settlements in the East. The first was probably allowed to survive because it speaks of "fantastic rumors" in circulation in Slovakia. The other two probably just slipped through because their implications were not sufficiently obvious.

In Boehm's book *We Survived*, Jeanette Wolff, a German Jewess who was a leader of the German Social Democratic Party, has contributed an article on her experiences after being deported to Riga in Latvia. Her tale of gratuitous beatings by the SS, sex orgies, and drunkenness is not believable. Her article is worth something, however, because it shows that there was a large system of settlements, ghettos, and camps for Jews in the vicinity of Riga. These settlements quartered not only Latvian Jews, but also large numbers of Jews deported from Germany and other European countries. Of course, in Chapter 4 (p. 151) we noted the Theresienstadt source who reported that the Nazis were deporting Jews to Riga and other places throughout the course of the war. Nazi documents dealing with the Riga settlement have not survived.

The Polish Ghettos

One can see, in general outline, what happened to the Polish (and Latvian and Lithuanian) Jews by consulting the “holocaust” literature, which has been contributed by “survivors.” In the larger towns and in the cities, the Jews within Poland were quartered in ghettos, which existed throughout the war. In Poland, there were particularly large ghettos at Lodz (Litzmannstadt), Warsaw, Bialystok, Lwow, and Grodno; in Lithuania, at Vilna and Kovno; in Latvia, as we noted above, at Riga. Although the “survivor” literature offers endless ravings about exterminations (frequently of a sort not reconcilable with the legend, e.g., gas chambers in Cracow in December 1939), it also offers enough information for one to grasp approximately how things were. In each ghetto, there was a Jewish Council, *Judenrat*, which was the internal government of the ghetto. The ghetto police were Jewish and responsible to the *Judenrat*. The *Judenrat* usually counseled cooperation with the Germans because, under the circumstances, it saw no other plausible course. The Germans made frequent demands for labor details drawn from the ghetto, and the *Judenrat* then drew up the lists of people to be thus conscripted. There were also resistance organizations in the larger ghettos, usually well armed, whose members often viewed the *Judenrat* as composed of German stooges.⁴²⁷

Dawidowicz’s book devotes several chapters to conditions in the Polish ghettos. Although the initial policy of the Germans, immediately after occupying Poland, had been to forbid Jewish schools, this policy was soon abandoned, and Jewish children received an essentially regular education in schools operated either privately or under the authority of the *Judenrat*. Cultural activities for adults – literary, theatrical, musical – helped alleviate the otherwise unhappy features of ghetto life. The Jewish social welfare agency was the ZSS (dissolved in mid-1942 by the Germans but shortly later reconstituted as the JUS, *Jüdische Unterstützungsstelle*), which drew supplies of food, clothing, and medicine from the German civil administration, and which also maintained contact, through the German Red Cross, with foreign organizations that provided money and supplies. Before the U.S. entry into the war, the bulk of such external funds came from the Joint Distribution Committee in New York, but after December 1941, this was no longer legally possible.

Despite the protected status of the ZSS-JUS, it sometimes provided cover for illegal political activities. The various political organizations – Socialist, Communist, Zionist, Agudist – were connected with the resistance organizations, whose activities ranged from active sabotage to propaganda and, on occasion, to armed resistance. Extermination propaganda started in underground publications slightly earlier than it started being generated by the World Jewish Congress (see Appendix E), but it was not believed by the Jewish population, because nothing in their experiences supported it; letters received from

⁴²⁷ In the “survivor” literature, see in particular Glatstein *et al.*, 25-32, 43-112; Gringauz (1949 & 1950); Friedman & Pinson.

Jews deported East reassured friends and relatives. As Dawidowicz writes in her introductory chapter on the problems posed by the “holocaust” for historical research:

“One impediment was the inadequacy of Jewish documentation, despite its enormous quantity. [...] The absence of vital subjects from the records may be explained by the predicament of terror and censorship; yet, lacking evidence to corroborate or disprove, the historian will never know with certainty whether that absence is a consequence of an institutional decision not to deal with such matters or whether it was merely a consequence of prudential policy not to mention such matters. The terror was so great that even private personal diaries, composed in Yiddish or Hebrew, were written circumspectly, with recourse to Scripture and the Talmud as a form of esoteric expression and self-imposed reticence.”

As is clear from all studies of German population policies in Poland, e.g. those of Dawidowicz and of Koehl, there was a constant moving about of Jews, in accordance with the general German policy of concentrating them as far east as practicable. According to the “Korherr Report” of March 1943, 1,449,692 Jews had been transported “out of the East provinces to the Russian East.” It is further specified that 90% of these had passed through camps in the General Government, and the others had passed through camps in the Warthegau (presumably meaning mainly Lodz). The huge ghetto of Warsaw was liquidated in the spring of 1943, and most of the Jews were sent further east, with Treblinka serving as a transit camp for this resettlement. This was only accomplished, however, after fierce Jewish resistance and a battle that received world publicity while it was raging. The resettlement, however, was not complete, because there were always at least some Jews at the site of the ghetto and, as remarked above, all of the larger ghettos existed in some degree throughout the war.

When a resettlement was announced to a ghetto, it was the duty of the *Judenrat* to draw up the lists of those to be resettled. With only rare exceptions, the Jews being resettled went along peacefully, because it was well known that the “resettlement” was just that.

It appears that epidemics were common in the ghettos. The Germans attributed them to “a lack of discipline” on the part of the Jews. They took what counter-measures they could and, as the *New York Times* reported on at least one occasion, “many ambulances were sent to Warsaw to disinfect the ghetto.”⁴²⁸

While the general eastward movement of these Jews is an established fact, the data to reconstruct exactly what numbers were sent where does not exist. The important point to note, however, was that it is almost certain that the greater number of Polish Jews were completely cleared out of all of pre-war Poland except the most eastern part. Because the territory of post-war Poland is made up of what had been eastern Germany and western and central Poland (Russia acquiring what had been eastern Poland), this means that most Jews

⁴²⁸ *New York Times* (Oct. 18, 1941), 4.

had, indeed, been removed from what is today referred to as Poland. In connection with the large ghettos, which are mentioned above, it is worth noting that Lwow, Grodno, Vilna, Kovno and Riga were all absorbed into the Soviet Union after the war, and that Bialystok is now at the extreme eastern side of Poland. If there were about three million Jews in Poland before the war, then, when one takes into account the numbers, which fled to the Soviet Union in 1939, those who were deported by the Russians in 1940, those who managed to slip into such countries as Slovakia or Hungary, and those who might have perished in epidemics, we see that there were at most two million Polish Jews in scattered ghettos in German controlled territory, and that the greater number of these people had been sent to territory considered Soviet after the war.

Thus we see, in general outline sufficient for our purposes, the actual nature of the so-called "final solution of the Jewish problem." It is not necessary here to attempt to fill in much more detail, and the ultimate prospects for providing great detail are questionable in any case. That this "solution" was really in no sense "final," and that the Jews would have returned with a change in the political climate, is not so extraordinary. Twentieth-Century governments invariably give their projects bold and unrealistic labels: Peace Corps, Alliance for Progress, Head Start, war to end wars, etc.

What Happened to Them?

It remains to consider what happened to all of these people. Here again, we have a situation in which there exists much less data than one would hope for. However, we have enough information to reconstruct what happened to an extent suitable for our purposes. Actually, we must consider several possibilities in this respect. The following are the reasonable possibilities.

1. The Germans liquidated many while in retreat, because these people could be considered manpower to be employed against the Germans. It is necessary to consider this as a reasonable possibility because we have noted that the Germans had, indeed, considered this aspect of the matter seriously enough to make it difficult for Jews to emigrate from Europe.

However, there are two things working strongly against the possibility that the Germans liquidated on a significant scale while in retreat. First, the most able workers, who were also of military age, had already been picked out for labor, and were being employed by the Germans in various ways. Second, and most importantly and simply, if the Germans had carried out such liquidations on a large scale, the Allies would have charged them with it. The Allies would have had material for legitimate extermination charges rather than the "gas chamber" nonsense.

While the evidence indicated that the German authorities did not carry out large scale liquidations of Jews while in retreat, common sense and a feel for the conditions that existed should cause us to assume that there were numerous

massacres of Jews carried out by individuals and small groups acting on their own. Some German, Hungarian, or Romanian troops, and some East European civilians, their anti-Jewish feelings amplified by the disastrous course of the war, no doubt made attacks on Jews at the time of the German retreats. It is known that earlier in the war, when East Europeans had attempted to start pogroms, the German authorities had restrained and suppressed them.⁴²⁹ However, under conditions of chaotic retreat, the Germans were probably much less concerned with anti-Jewish pogroms.

2. The Russians liquidated many. We list this only because Russia is such an enigma, and its actions in the populations area often seem very arbitrary. However, there is no evidence for liquidations at the hands of the Russians, and one should doubt this possibility.

3. Many perished on account of conditions in the camps or ghettos. This is a most serious possibility. We have seen that health conditions can be very unstable in camps, and that the situation can be very sensitive to any sort of chaos or shortage of necessities. Moreover, we have observed that the ghetto conditions, whether the Germans were at fault or (as the Germans claimed) the Jews were responsible, were favorable to epidemics even early in the war, when the Germans had the general situation under control in other respects. Therefore, there is a good possibility that many Jews in ghettos perished in the chaotic conditions that accompanied the German retreats. Also, Korzen believes that many of the 1940 exiles to Russia died in the Russian camps they were sent to, so it is possible that many ghetto Jews perished on account of Soviet ways of administering the ghettos after they fell into Russian hands.

4. Many were dispersed throughout the Soviet Union and integrated into Soviet life somewhere. This is a most likely possibility, because it is well established that the Soviet Union encouraged the absorption of Jews during and immediately after the war. For example, we have noted that this was the policy exercised toward the 1940 deportees. Another example is what happened with respect to the Carpatho-Ukraine, before the war a province of Czechoslovakia, and annexed by the Soviet Union after the war. Ten thousand Jews, former residents of the Carpatho-Ukraine, had the status of refugees in Czechoslovakia in the spring of 1946. Russia insisted that these Jews be repatriated to the Soviet Union. Although such a step was contrary to the existing agreements on refugees, the Soviet pressure on President Benes was great enough to force him to yield.⁴³⁰

One should also note the existence, within the Soviet Union, of the specifically Jewish "autonomous state" of Birobidzhan, which is in the Soviet Far East on the Amur River on the border of Manchuria. Birobidzhan had been established by the Soviets in 1928 as a Jewish state. Immediately after the war, there existed in New York the "Einstein Fund of Ambijan" (acronym for

⁴²⁹ The best source to consult to see the nature of and motivation for the anti-Jewish pogroms, and the German measures to suppress them, seems to be Raschhofer, 26-66. See also Burg (1962), 50.

⁴³⁰ *New York Times* (Apr. 13, 1946), 8.

American Birobidzhan Committee), whose purpose was “to help refugee colonization of Birobidzhan.” There were other operations in New York, which aided Jews resettled in Birobidzhan immediately after World War II.

There were also Jewish organizations, such as the Joint Distribution Committee, which aided Jews in other parts of the Soviet Union, and there also existed in New York the Committee for Aid to Minsk and Neighboring Towns. There also existed UNRRA programs in White Russia (Byelorussia) and Ukraine, which will be commented on below. These efforts to aid Jewish refugees in the Soviet Union had the public support of prominent Jews, *e.g.* Albert Einstein expressed appreciation to the Soviet Government for helping “hundreds of thousands of Jewish people” by giving them a home in the USSR.⁴³¹

While the Soviet Union encouraged the absorption of Jews, it also made a specific agreement with the Communist government of Poland for the repatriation of those who had been Polish citizens on September 17, 1939. The agreement, made in July 1945, specifically included those resident on territory annexed by the Soviet Union in 1940 and provided that such people could either elect Soviet citizenship or Polish citizenship. With respect to Jews, it was eventually decided that the deadline for making the choice was June 30, 1946.

As we noted in Chapter 1 (p. 36), Reitlinger concedes that the post-war Jewish population of the Soviet Union might very well have exceeded the pre-war figure, on account of the addition of Polish (and Baltic and other) Jews. He regards the *Jewish Observer* estimate of 500,000 Polish Jews who elected to remain in the Soviet Union as “very conservative,” and concedes huge and insuperable uncertainties in this connection. Thus, although the Russians were willing to let Polish Jews leave before the June 30, 1946 deadline, they nevertheless encouraged their absorption into the Soviet Union. This could account for an enormous number of the Jews who had been resettled to the East by the Germans. It is pointless, however, to try to infer anything from alleged population statistics offered by the Russians or by Jewish organizations.⁴³²

5. Many of the uprooted Jews might have returned to their original homes or at least to their original homelands in Europe. We have seen that the Russians were willing to allow Polish Jews to leave the Soviet Union, and we should assume that a similar policy was practiced toward Jews of other nationalities. It is only possible but not probable that the Soviet Union absorbed all of the Jews who had been deported East by the Germans from Germany, the Netherlands, etc.

At first thought, it might appear that the clearly logical course after the war for any uprooted Jew would have been to return to his original country of residence. This is not the case, however, for various reasons. For one thing, in perhaps the majority of cases there was nothing to return to. The main reason for this was the German program called “Aktion Reinhardt,” in which Jews deported to the East were deprived of almost all of their property; their furni-

⁴³¹ *New York Times* (Jul. 20, 1945), 9; (Sep. 7, 1945), 5; (Nov. 25, 1945), 32; (Mar. 10, 1946), 2; (Apr. 17, 1946), 27; (May 13, 1946), 18; (May 17, 1946), 5; (Dec. 2, 1946), 5.

⁴³² Reitlinger, 534, 542f.; *New York Times* (Jul. 8, 1945), 1; (Mar. 24, 1946), 3.

ture, any livestock, business property, their jewelry, any clothing they could not carry as luggage, and all but about \$25 of any ordinary currency they had were simply confiscated in the course of resettlement (some of the business property might have been resettled with them). The camps at Lublin and Auschwitz were principal gathering and processing points for much of this property, wherever it had actually been confiscated.⁴³³ Thus, many Jews, having neither property nor relatives at their original homes, had no very compelling reasons for returning to them. The German program had truly been one of uprooting.

Another aspect of the situation was that, in late 1945 and in 1946, there was much talk about anti-Jewish pogroms allegedly occurring with great frequency in Poland and other East European countries. If these reports were true, then the pogroms were a powerful inducement to the Jews to leave. If these reports were merely Zionist propaganda having little, if any, basis in fact, then one can infer that the Zionists were engaging in operations designed to move Jews out of eastern Europe. Thus, whether the reports of pogroms were true or false, they suggest a movement of Jews out of eastern Europe.

At the Yalta meeting in 1945, Churchill, Roosevelt, and Stalin had agreed that "it would be impossible for Jewish refugees to return to Poland and be re-integrated into its normal life."⁴³⁴ While it is certain that many Jews returned to their homelands, there were solid facts and also, apparently, much propaganda discouraging them from doing so. If this is true, and if it is also true that a significant number of Polish Jews left Soviet territory, then many of them must have proceeded through Poland to other destinations. This is the case. The Zionist political leadership had other destinations in mind for them.

6. Many of the Jews eventually resettled neither in the Soviet Union nor in their original countries but elsewhere, mainly in the U.S. and Palestine. We all know this to be true, but there is some uncertainty in the numbers involved, principally in the case of the U.S. immigrants. Until November 1943, the U.S. Immigration and Naturalization Service recognized a category "Hebrew" among "races and peoples," but in that month, this practice was stopped, and no official records of Jewish immigration have been kept since then.⁴³⁵

Another problem in accounting in detail for Jewish movements around the time of the end of the war is that we run right into the War Refugee Board and the UNRRA (United Nations Relief and Rehabilitation Administration) in attempting to examine this subject. It will be recalled that the WRB was set up in early 1944 as an apparently joint venture of the U.S. State, Treasury, and War Departments, but that it was, in fact, under the control of Secretary of the Treasury Morgenthau. The Board was granted the extraordinary power of appointing special attachés with diplomatic status. Another very irregular feature was that the WRB worked very closely with private organizations. Collaboration with the Joint Distribution Committee and the World Jewish Congress and

⁴³³ Koehl, 198f.; NMT, vol. 5, 692-741; vol. 4, 954-973.

⁴³⁴ *New York Times* (Jun. 28, 1945), 8.

⁴³⁵ Davie, 33.

several other Jewish and Zionist organizations was extensive. Some non-Jewish organizations were also involved, notably the American Friends Service Committee. The WRB and the three U.S. government departments involved with the WRB were specifically “authorized to accept the services or contributions of private persons or organizations.”⁴³⁶ We therefore have a rather slippery entity involved here, engaged in both propaganda and relief work, with the rights of a government operation when an official status seemed convenient, and the rights of a private organization when a private status was advantageous.

Relief activities were carried on by the WRB from about mid-1944 to mid-1945, at which time the operations of an international character fell almost entirely into the hands of the UNRRA. This organization had been set up in November 1943, and had operated until March 1949. Its first director, appointed by Roosevelt, was Herbert Lehman, ex-Governor of New York State and a leading New Deal Democrat. Roosevelt’s reported logic for choosing Lehman was as follows:⁴³⁷

“It would be a fine object lesson in tolerance and human brotherhood to have a Jew head up this operation, and I think Herbert would be fine.”

Lehman was succeeded in early 1946 by Fiorello LaGuardia, ex-Mayor of New York City. Although LaGuardia’s father was not Jewish, and he naturally found it profitable to court the huge New York Italian vote, LaGuardia really counts as a Jewish Zionist politician, and is essentially treated as such by the Encyclopedia Judaica. Thus, we can be sure that the crowd involved here is basically the same as with the WRB. Also, we again have a slippery entity, this time because it is a so-called international organization. For example, when Congress demanded in September 1945 that the General Accounting Office be allowed to examine the UNRRA operations (the U.S. was said to be paying about two-thirds of the costs of UNRRA, but the fraction was probably somewhat higher), Lehman told it to mind its own business.⁴³⁸

The UNRRA operations were far-flung. Most of the UNRRA aid went to Eastern Europe, and the amount sent to Poland was second only to that sent to China. Aid was also sent to White Russia and Ukraine.⁴³⁹

By mid-1944, the WRB and the UNRRA were operating a large system of refugee camps in North Africa, Italy and Palestine. These camps were almost exclusively for Jews. Starting in 1944, extensive evacuations of Jews from Europe to these camps were in progress. Many were evacuated from the Balkans via Istanbul, and there was also a Black Sea route through Istanbul. Entry into the U.S. or countries of South America was sought and obtained for many of these people while the war was still in progress. It was in this context that the camp at Oswego, NY, right next to the Canadian border, was established. In

addition, many who had not initially been put into one of the camps in Palestine managed to reach that destination anyway.⁴⁴⁰

After Germany collapsed, the UNRRA administered DP (displaced persons) camps, mainly in the British and American zones of occupation in German and Austria. Of course, there were many non-Jews in these camps, but the Jews had a privileged position, and in many cases were quartered in houses or hotels, which had been requisitioned for them.⁴⁴¹

The UNRRA operations in Germany were one of the scandals of the occupation era. Notorious were the raids on German homes for the purposes of “rescuing” children. It had been the Nazi policy in eastern Europe, when orphans fell into their hands, to conduct a racial examination in order to select Aryan orphans for adoption by German families. These children were being raised exactly as German children were, and became the innocent victims of the UNRRA terror. It is not known what happened to them.⁴⁴²

The behavior of the DPs in the UNRRA camps was abysmal. As the most prominent historian of the U.S. military government in Germany wrote:⁴⁴³

“They not only consumed large quantities of food, but they exhibited many of the psychoneurotic traits, which must be expected from people who have undergone the tribulations that many of the displaced persons suffered. It was commonplace for them to allege that they were not receiving the consideration that they deserved from the Allied authorities. They often objected to the camps, in which they were living, maintaining that it reflected on their position to be lodged in camps. Some urged that the best German houses be cleared of their occupants and placed at the disposal of the displaced persons, especially the Jews. They refused to assist in some instances in keeping their quarters reasonably habitable, taking the position that it was not their responsibility to make any effort to help themselves. During this period, the actual care of the displaced persons was handled for some months by UNRRA, but final responsibility remained with military government, and it had to give attention to the charges made in the press as to inadequate treatment.

Moreover, the displaced persons continued their underground war with the German population, despite all their promises and the efforts exerted by UNRRA and the American Army personnel. Forages into the countryside never ceased; some displaced persons took advantage of every opportunity to pick a quarrel with the Germans. With German property looted, German lives lost, and German women raped almost every day by the displaced persons, widespread resentment developed among the populace, especially when they could not defend themselves against the fire-arms which the displaced persons managed to obtain.”

⁴⁴⁰ US-WRB (1945), 9, 16-45, 61-69, 72-74.

⁴⁴² Koehl, 219f.

⁴⁴³ Zink, 121f.

In one well publicized incident, Jewish and Polish DPs, with the assistance of some U.S. Army personnel, forced German townspeople to dig up recently buried bodies and, while beating and kicking the Germans, forced them to remove decayed flesh and clean the bones.⁴⁴⁴

Zionism Again

We are interested, however, in the political role that these DP camps played, and the simple fact of the matter is that the Jewish DP camps and other living quarters served as transit and military training camps for the invasion of Palestine.

The world had an opportunity to learn this fact as early as January 1946. As happens on occasion in “international organizations,” the nominal head of the UNRRA operations in Germany, British General Sir Frederick E. Morgan, was his own man and not a Zionist stooge. While he had real control only over a part of the UNRRA German operations, he knew most of what was going on, and made a public issue of it. At a press conference in Frankfurt, he charged that an organized Jewish group was sponsoring an exodus of Jews from Poland into the U.S. zone in Germany. He ridiculed “all the talk about pogroms within Poland,” pointing out that Jews arriving in trainloads in Berlin were well fed, well dressed, and had plenty of money:

“They certainly do not look like a persecuted people. I believe that they have got a plan, a positive plan, to get out of Europe.”

Morgan added that their money was to a great extent occupation marks, printed by the Russians. It may be recalled by the reader that one of the most spectacular acts of Soviet agent Harry Dexter White, whom we encountered in Chapter 3 (pp. 97, 132) as the boss of the U.S. Treasury’s international operations, was his transmission to the Russians of the plates of the U.S. occupation currency.

Chaim Weizmann denounced Morgan’s statement as “palpably anti-Semitic,” and Rabbi Wise declared that it savored of Nazism at its worst, and was reminiscent of the fraudulent *Protocols of Zion*. UNRRA headquarters in the U.S. announced that Morgan had been dismissed, but Morgan denied this. Wise, Henry Monsky (president of B’nai B’rith), and other prominent Jews then huddled with Lehman and “assured Governor Lehman that it was unwise under the circumstances to press the case against Morgan,” since Morgan apparently had enough evidence to support his statement.

Later in 1946, there was an inquiry into the Jewish problem by an Anglo-American committee, which determined that Morgan had under-estimated the situation. In the Jewish DP camps

⁴⁴⁴ *New York Times* (Oct. 26, 1946), 5.

“faces changed from day to day and new persons answered to old names on the nominal roles as the Zionist Organization moved Jews ever nearer to Palestine.”

The Jews, mainly Polish, were pouring into western Germany from the East and passing through the UNRRA operated camps. In these camps, many of them received military instruction for the invasion of Palestine from uniformed non-commissioned officers of the British and U.S. armies. Although it was the case that almost none actually wanted to go to Palestine but to the U.S., every means of forcing immigration to Palestine was employed. Summing up his association with UNRRA, General Morgan wrote in his memoirs (*Peace and War*, 1961):

“To serve such an outfit is beyond description.”

Years later, Zionist authors conceded Morgan’s charge in laudatory accounts of the organized exodus of Jews from Europe.⁴⁴⁵

In August 1946, LaGuardia fired Morgan for charging that UNRRA served as “an umbrella covering Russian secret agents and criminal elements engaged in wholesale dope-peddling and smuggling.” Morgan was replaced by Meyer Cohen of the Washington office of UNRRA. This action was taken at a time when there was a great deal of well-publicized conflict between UNRRA and military authorities in Germany. LaGuardia had come to Germany at the time, in order to deal with various problems, Morgan being one of them. At a news conference held immediately after he fired Morgan, LaGuardia had an angry exchange with Hal Foust of the *Chicago Tribune*, whom we encountered in Chapter 1 (p. 51). Foust had asked how much money nations other than the U.S. had contributed to UNRRA. LaGuardia, however, would answer none of Foust’s questions, on the grounds that Foust’s “dirty, lousy paper would not print it anyway.” To Foust’s repeated requests for the information, LaGuardia shrieked, “Shut up!”⁴⁴⁶

Morgan had not been the first high ranking Allied officer to collide with the Zionists. In the summer of 1945, the “Harrison report” to the White House had asserted that Jews in the U.S. zone in Germany were treated almost as badly as they had been under the Nazis. Although many Jews in the camps publicly ridiculed these claims, General Eisenhower, the Supreme Allied Commander, visited General George S. Patton, Jr. (U.S. Third Army commander and military governor of Bavaria), and “read the riot act to him and astounded him by saying that he meant it when he said that Germans were to be ousted from their homes, if necessary, to make their victims comfortable.” Shortly later, Eisenhower relieved Patton of his duties, allegedly because Patton had said in public that too much fuss was being made about ousting Nazis from key positions, that the distinction between Nazis and non-Nazis was similar to the distinction between Republicans and Democrats, and that the key to a successful occupation of Germany lay in showing the Germans “what grand fellows we are.” This was just the most publicized instance of the wide-

⁴⁴⁵ Kimche & Kimche, 88f.; John & Hadawi, vol. 2, 23-26, 34-36; Kubek, 79.

⁴⁴⁶ *New York Times* (Aug. 14, 1946), 10; (Aug. 21, 1946), 1, 5; (Aug. 23, 1946), 18.

spread “reluctance of occupation authorities on the operational level to act as tough as the policies enunciated by the heads of state in Berlin and by General Eisenhower himself.” Patton was assigned to command a group writing a military history, but he was in an automobile accident in December 1945, and died two weeks later from complications.⁴⁴⁷

Eisenhower’s attitude toward Zionists had always been most friendly. Shortly before the end of the war, the Zionist organizer Ruth Klieger, a native of Romania who had emigrated to Palestine before the war, had visited Eisenhower’s SHAEF headquarters in Paris in order to explain to Judge Rifkind, Eisenhower’s adviser on DP matters, her mission of organizing transports of Jews to Palestine from Germany. She was made a U.S. Army colonel on the spot, and given the papers necessary for her mission in Germany. Eisenhower’s services did not end there, because the troop transport ship *Ascania*, owned by SHAEF and manned under orders from Eisenhower’s command, was then put at the disposal of the Zionists, and 2,400 Jews were taken to Palestine in it. The British met it on arrival but did not want complications with SHAEF, so they allowed the passengers to enter Palestine. Eisenhower later became President of the United States.⁴⁴⁸

As suggested above, the Jews who left the Soviet Union for Poland did not, for the most part, remain in that country very long. Supported by the Joint Distribution Committee and related Jewish organizations (contributions to which were tax-deductible in the U.S.),⁴⁴⁹ the Jews moved on to Germany and, in some instances, Czechoslovakia, spurred on by Zionist propaganda of all sorts. There was the talk, which we have noted, of pogroms, and there was also, no doubt, a widespread idea among the Jews that all were bound for the U.S. From Germany, many did indeed eventually depart for the U.S. But many others moved on to Italy, where there were also UNRRA camps for them, or to France, which earned a reputation at that time for marked friendliness to the Zionist cause. From Czechoslovakia, the Jews moved on to Italy or to Vienna and from Vienna to ports in Italy, or Yugoslavia, or to Budapest, Belgrade, and points near Palestine. In all this hectic illegal movement there was, of course, no respect paid to such things as legitimate passports or identity papers. Greek identity papers were manufactured on a large scale, and many Jews posed as Greeks returning home from Poland. When the Greek government learned of this, they sent an official to investigate, but the official was an active Zionist himself, and merely informed the Zionist Organization that he could cover up the past illegalities but that the “Greek” angle would have to be discarded. It had, however, served so well that in Czechoslovakia, border guards, who thought that they had learned from the large number of “Greeks” that they had processed what members of that nationality looked like, got suspicious and made arrests when real Greeks appeared.⁴⁵⁰

⁴⁴⁷ *New York Times* (Oct. 1, 1945), 2; (Oct. 2, 1945), 1; (Oct. 3, 1945), 1.

⁴⁴⁸ Kimche & Kimche, 101-103.

⁴⁴⁹ *Ibid.*, 97-98.

⁴⁵⁰ *Ibid.*, 85-88.

In the beginning of the mass movements, the Zionist Organization had found that the Jews were too undisciplined and demoralized to serve as members of an effective movement. They therefore settled on the method of the propaganda of hatred to boost the fighting morale of the Jews in the various camps; they began "to instill into these Jews a deep dislike and hatred for the German and, indeed, for their entire non-Jewish environment, for the *goyim* around them." In the winter of 1946, the Anglo-American investigation committee visited the Jewish camps in Germany, and was "overwhelmed by this *anti-goyism* among the camp inmates, by the impossibility of maintaining any contact between the displaced Jews and the British and American peoples."⁴⁵¹

The U.S. occupation authorities in Germany were naturally very concerned about the fact that so many people, so tenuously classified as "refugees," were pouring into their area of responsibility, but were reluctant to speak out too loudly or bluntly, for fear of the sort of abuse that had been heaped on Patton and Morgan. However, the constant increase in the "refugee" population was creating problems that could not be ignored. In June 1946, a group of U.S. editors and newspaper executives arrived in Frankfurt as the first stop in a tour of Germany, and were told by "high United States officers" that Jews were flooding into the U.S. zone at the rate of 10,000 per month, thereby creating a "grave problem." It was said that "many of them are coming from Russia, and if they join those in Poland in an apparent mass movement toward Palestine, we may have to look after 3,000,000 of them." Of particular interest in this statement is where "many" of the Jews were coming from, and the fact that the U.S. Army authorities felt it plausible to use a figure of 3,000,000 (not a misprint). They were, of course, exaggerating the situation in order to provoke some sort of relevant action, for there was never any possibility that 3 million Jews would enter the U.S. zone in Germany. Nevertheless, their use of such a figure and their specifying that "many" of the Jews were "coming from Russia" are worth noting.⁴⁵²

The problem got so much attention that in early August 1946, the American military governor, General McNarney, announced that "the United States border patrol will not permit Jewish refugees from Poland to enter the United States zone in organized truckloads and trainloads." McNarney added, however, that "if persecutees come across the borders individually, of course, it is a different matter, and we will accept them." It may have surprised many observers that this seemingly unimportant qualification was so satisfactory for the Zionists that, shortly later, Rabbi Wise and other prominent Zionists publicly lauded "the attitude of Gen. Joseph T. McNarney [...] toward the entire problem." The puzzle was resolved the following November, when it was reported that a record 35,000 Jews entered West Germany from Poland (the greater part of them to the U.S. zone) in September, and that the "trickle" that existed in November amounted to "150 to 200 persons daily."⁴⁵³

⁴⁵¹ *Ibid.*, 81-83.

⁴⁵² *New York Times* (Jun. 24, 1946), 12.

⁴⁵³ *New York Times* (Aug. 10, 1946), 4; (Aug. 27, 1946), 6; (Nov. 2, 1946), 7.

In the news stories of this period, it was frequently the case that the Jews “returning” from Russia to Poland were described as consisting mainly of the 1940 deportees to the Soviet Union. Such a press treatment was to be expected, because the others were supposed to be dead, but such interpretations may be disregarded, although, as Korzen remarks, this group included 1940 deportees.

During 1946, the U.S. Senate War Investigating Committee sent its chief counsel, George Meader, to Germany to investigate the U.S. occupation policies. Meader’s report, which charged, *inter alia*, widespread immorality and racketeering in the Army, was suppressed as a result of “tremendous pressure by the White House, State and War Departments, and Senator Arthur Vandenberg” and a threat of resignation by General Clay, but the contents eventually were made public anyway. The report was very critical of the entire practice of accommodating the Jews who were pouring in from Poland, because they were not really refugees (in the sense of having been stranded in Germany at the end of the war) but part of the mass movement of people that was being sponsored by private groups on behalf of a specific political cause, Zionism. The U.S., therefore, was “financing a political program” by receiving these Jews in the German DP camps, although that program had never been submitted to the Congress for consideration. In the U.S., therefore, there was concern with and opposition to the substantial support that U.S. “refugee” policy was giving to the Zionist cause, but it was too late and too little to have any significant influence on events.

In his report, Meader complained of the difficulty of getting the Jewish (as distinct from non-Jewish) DPs to do any work or even help fix up their own dwellings. Nevertheless, they constantly complained that things were not being done as well as they thought they could be done. Meader also pointed out that illegal activities and crimes of violence by DPs were numerous. He remarked that the U.S. had agreed to accept as immigrants 2,250,000 refugees from Europe.⁴⁵⁴

It is of only slight value to report here the figures that were being given for the number of Jewish DPs. In the autumn of 1946, it was said that there were 185,000 Jewish DPs in camps in West Germany. When one adds those in Austria, the figure would exceed 200,000. It is also said that there were over 400,000 Jewish refugees in Western Europe on July 1, 1947.⁴⁵⁵ However, such figures do not say very much, because the camps for Jews and other refugees really served as transit camps and, in the case of the Jews, there was the constant movement toward the U.S. and Palestine, largely illegal or “unofficial” in the case of the latter destination, and possibly in the case of the former destination as well.

The principal, but not sole, destinations of the Jews who left Europe were Palestine and the U.S., so we should attempt to estimate the numbers involved.

Table 9: Palestine population

YEAR	MOSLEMS	JEWS	CHRISTIANS	OTHERS
1924	532,636	94,945	74,094	8,263
1929	634,811	156,481	81,776	9,443
1934	747,826	282,975	102,407	10,793
1939	860,580	445,457	116,958	12,150
1944	994,724	528,702	135,547	14,098

Palestine population figures kept by the British authorities are probably accurate up to some point in 1946, see Table 9.⁴⁵⁶

In late 1946, there were supposed to be 608,000 Jews and 1,237,000 Moslems, Christians, and “Others.” Past this point, accurate British figures do not exist, on account of the large extent of illegal immigration, as the British gradually lost control of the situation. In any event, by the time some of the dust had settled in July 1949, the Israeli Government reported that there were 925,000 Jews in Israel. These were predominantly Jews of European origins, the large scale immigration of Jews from North Africa and Asia having been a subsequent development promoted by the Israeli Government. By 1957, there were about 1,868,000 Jews in Israel, and 868,000 Arabs had fled to neighboring countries since the Jewish takeover.⁴⁵⁷

It is worth pausing here to remark that many people have a very mistaken picture of Zionism and Israel. It is now widely assumed that Zionism was born at the end of World War II, when large numbers of European Jews, having decided that they could no longer live in Europe, invaded a previously all-Arab Palestine, and drove the Arab inhabitants out. In fact, Zionism, the movement for the establishment of a Jewish state in Palestine, has a history that starts in the late Nineteenth Century. By 1917, Zionism was such a potent political force that Britain, locked in bloody struggle with Imperial Germany, made the “Balfour Declaration,” effectively promising Palestine to the Jews, in return for Jewish support in the war. Since Britain also had certain agreements with the Arabs, Palestine became the “too often promised land.”

Zionist organizations promoted the movement of Jews to Palestine after World War I, and during the Thirties, as the population figures above suggest, Palestine had become perhaps the biggest headache of British foreign policy, which faced the impossible task of reconciling the Jewish and Arab claims to Palestine. It was during the late Thirties that Zionism found itself actively cooperating with the Gestapo, which met regularly with Zionist representatives, and even helped in the provision of farms and facilities to set up training centers in Germany and Austria for Jewish emigrants. The Zionists and the Gestapo had the same objective of getting Jews out of Europe.⁴⁵⁸

The consequence of World War II did not create Zionism as an effective political movement; they merely gave Zionism the world political victory it

needed for the final stage of the takeover of Palestine. All world power had fallen to the U.S. and the Soviet Union, both of which were most friendly to the Zionist cause at the time. Under the circumstances, the Arab position was hopeless, because it depended on the firmness and political independence of a Britain that was almost prostrate politically and economically.

Migration to the USA

While it is possible to get a presumably fair idea of the extent of Jewish immigration into Palestine, one encounters what amounts to a stone wall in attempting to determine this for the U.S. We have seen that the policy of classifying immigrants as “Hebrews” was dropped in the same month of 1943 that the U.S. government went into the business of processing DPs on a large scale through the creation of UNRRA. Immediately after the war, there was naturally much Jewish pressure for the admission of great numbers of Jewish immigrants, and in December 1945, President Truman announced that there would be an acceleration in the immigration process in order to allow a higher rate of admission. While Truman regretted that the unused quotas from the war years were not cumulative and could not be applied to future admissions, he pledged that all outstanding immigration quotas and regulations would be respected.⁴⁵⁹ If they were indeed respected, then the effect on Jewish admissions would nevertheless have been secondary because they entered under the categories of the various nationalities: German, Austrian, Dutch, Polish, etc. However, the existing regulations did not permit the admission of as many persons as was desired, so shortly after the war, there was special legislation relating to the admission of DPs, in which “existing barriers were set aside.” The legislation also set up a “Displaced Persons commission” to assist in the resettlement of the immigrants and, according to the account of the Commission, over 400,000 such persons were resettled in the U.S. in the period 1948-1952 (the period specified in the legislation). The official account goes on to claim that only 16 percent of these 400,000 were Jewish, but that is just the official account of a government which had taken specific steps to assure that the relevant data would not exist.⁴⁶⁰

For what it is worth, we summarize here the more relevant parts of the immigration data that the U.S. government has published, see Table 10.⁴⁶¹

We have only given the numbers for selected European countries, *i.e.* those countries that may have contributed many *uprooted* Jews, although there is a difficulty involved here, as we shall see shortly. The total for Hungary 1951-

⁴⁶⁰ US Displaced Persons Commission, v, 248.

⁴⁶¹ This data comes ultimately from the *Annual Report* of the US Immigration and Naturalization Service. In this case, I employed the summaries given in the *Information Please Almanac* (1969) and the *Statistical Abstract of the US* (Sep. 72).

Table 10: U.S. government immigration data

AREA	REGULAR IMMIGRATION		DPS	TOTAL
	1941-1950	1951-1960	1948-1952	FROM AREA
Austria	24,860	67,106	8,956	100,922
Belgium	12,189	18,575	951	31,715
Czechoslovakia	8,347	918	12,638	21,903
Denmark	5,393	10,984	62	16,439
Estonia	212	185	10,427	10,824
France	38,809	51,121	799	90,729
Germany	226,578	477,765	62,123	766,466
Greece	8,973	47,608	10,277	66,858
Hungary	3,469	36,637	16,627	56,733
Italy	57,661	185,491	2,268	245,420
Latvia	361	352	36,014	36,727
Lithuania	683	242	24,698	25,623
Netherlands	14,860	52,277	64	67,201
Poland	7,571	9,985	135,302	152,858
Romania	1,076	1,039	10,618	12,733
USSR	548	584	35,747	36,879
Yugoslavia	1,576	8,225	33,367	43,168

1960 does not seem to include those who entered on account of special legisla- tion passed in connection with the refugees from the Hungarian rebellion in 1956, about 45,000 of whom were admitted to the U.S. It is worth mentioning that 285,415 persons entered the U.S. from Europe in the years 1954-1971 un- der various other provisions for refugees.

For reasons that will be clear when we attempt to interpret this data, we note the immigration totals from the various continents:

Table 11: Immigration totals by continent

AREA	REGULAR IMMIGRATION		DPS	TOTAL
	1941-1950	1951-1960	1948-1952	FROM AREA
Europe	621,704	1,328,293	405,234	2,355,231
Asia	31,780	147,453	4,016	183,249
N.&S. America	354,804	996,944	307	1,352,055
Africa	7,367	14,092	107	21,566
Pacific	19,242	16,204	10	35,456
Totals	1,034,897	2,502,986	409,674	3,947,557

An important point in interpreting this data is that, in the case of regular immi- gration in the years 1941-1950 and 1951-1960, the country of origin is defined as the country of last permanent residence, while in the case of the DPS who entered in U.S. in 1948-1952, the country of origin is the country of birth.

That nationality was the country of last permanent residence in the case of regular immigration makes these figures particularly difficult to interpret. This is well illustrated by the total 766,466 who entered the U.S. from Germany,

more than 90 percent on the regular quota basis. If we imagine a German Jew as a Jew who actually was raised in Germany and had possessed German citizenship, then only a fraction of the 766,466 could have been Jews, for the simple reason that the greater number of the estimated 500,000 or 600,000 German Jews had emigrated before the war. In order to get some idea of the number of German Jews who might have immigrated into the U.S. after the war, recall that the Jews deported east by the Germans from France and Belgium were almost all German Jews who had emigrated from Germany before the war. Thus, if we accept Reitlinger's figures, the total German Jews deported to the east might have been around 250,000. If, say, half went to Palestine after the war, then it would appear that no more than about 125,000 of the "Germans" who entered the U.S. could have been Jews. However, this calculation is upset by the simple observation that the status of "permanent resident" might have been conferred on many of the Jews of several nationalities who were quartered under various conditions in Germany immediately after the war. The period was not noted for strict adherence to legalities, so it is safe to assume that somewhat more than 125,000 of these "Germans" were Jews. Likewise with the figures for Italy.

The haziness of the concept of "permanent resident" is also the reason for the inclusion of immigration figures from such places as North and South America and Asia. We should not expect that the uprooted Jews were particularly scrupulous in regard to legal credentials, and we have seen this illustrated in the case of the "Greeks" who passed through Czechoslovakia. It should not have been difficult to arrange for the creation of credentials which declared Jews to have been permanent residents of various South American countries, and possibly also of Canada. A side trip to the country in question while en route to the U.S. might have been necessary, but such a trip would have been scenic anyway. South American countries would probably have been happy to cooperate, because the Jews were not in the process of settling with them, and there was no doubt bribe money as well.

For these reasons, I believe that one is perfectly safe in assuming that at least 500,000 uprooted Jews entered the U.S., and the correct figure is probably higher. Since the area of New York City is the home of millions of Jews, a few hundred thousand could have moved there alone, and nobody would have observed more than the fact that he, personally, was aware of a few Jews who came to New York from Europe after the war.

In this analysis we have assumed, of course, that the great masses of Jews who resettled after the war were uprooted Jews, and did not include statistically significant portions of, say, French Jews, who had no more reason to leave France than Jews in the U.S. have to leave that country. The net result of the Nazi Jewish resettlement policies was that a great number of Jews, uprooted from their homes, came into the power of Zionist-controlled refugee relief organizations, which were able to direct these masses of Jews to destinations chosen for political reasons.

Recapitulation

This is as far as the demographic analysis need be carried here, and it is probably essentially as far as it could be carried in any case. If we assume that at the end of the war there were about three million uprooted Jews whose situations had to be disposed of somehow by the Allies, then it is possible that one-half million emigrated to the U.S., one-half million went to Palestine, one million were absorbed by the Soviet Union, 750,000 settled in Eastern Europe excluding the Soviet Union, and 250,000 settled in Western Europe. On the other hand, the correct figures, including those offered here as data, may very well be somewhat different. The treatment presented here is guaranteed to be valid in a general way, but statistical accuracy cannot be attained.

If we attempt to estimate the number who perished, on account of the chaotic conditions in the camps as the Germans retreated, on account of epidemics in the ghettos during more normal periods, on account of pogroms or massacres that might have taken place especially while the Germans were retreating, on account of *Einsatzgruppen* executions, and on account of unhealthy conditions in the concentration camps in Germany, especially at the very end of the war (which affected only Jewish political prisoners and ordinary criminals and the young adult Jews who had been conscripted for labor and sent to the concentration camps), we again have, in my opinion, an impossible problem on our hands.⁴⁶² Rassinier's estimate is about a million Jewish dead, but one can take very many exceptions to his arguments. A figure of a million Jewish dead, while possible, seems rather high to me. However, given the vast uncertainties involved, I really have no taste for arguing the matter one way or another.

One should feel no need to apologize for such confessions of statistical ignorance. Korzen, in his study of the Polish Jews dispersed by the Russian deportations of 1940, confesses large and important areas of ignorance in his study, especially in regard to numbers, and he had the friendly offices of the Israeli government to help with his research. A study such as the present one necessarily labors under severe handicaps regarding relevant statistics. Indeed, I was surprised that it was possible to reconstruct statistical and quantitative aspects even to the incomplete extent presented here. The most powerful groups on earth have sought to distort the record of what actually happened to the Jews of Europe during the Second World War.

⁴⁶² Editor's note: Walter N. Sanning has tried to tackle this "impossible" statistical challenge in a study which appeared first in 1983 (expanded and updated in 2023); it was countered eight years later by a mainstream study emphatically affirming the iconic 6-million figure; see Benz (1991), and Rudolf (2024a) for a juxtaposition of Sanning and Benz.

J. G. Burg

In his memoirs, J. G. Burg (Josef Ginsburg) has presented a story completely consistent with the historical record. At the outbreak of war in September 1939, he was resident in Lemberg, Poland. He immediately fled with his family to Czernowitz, Romania, in the province of Bukovina, which the Red Army occupied in June 1940. A year later, the German attack on Russia drove out the Red Army, and Ukrainian bands started conducting pogroms, which were halted by German and Romanian troops. Later, Ginsburg and his family were deported east to Transnistria, where life was at least bearable. A Mr. Kolb of the Swiss and International Red Cross visited their settlement in early 1943.

After the German defeats mounted, there was growing tension between the Germans and Romanians, and many Romanians attempted to befriend the Jews. The German-Romanian front started to collapse in mid-1944, and Ginsburg and family returned to Czernowitz. Everywhere there was chaos, starvation, and the Russian terror. Even after the end of the war, conditions were not very good, so in 1946, Ginsburg and family moved on to Breslau, and then proceeded to an UNRRA DP camp near Munich in the U.S. occupation zone of Germany. In the camp, almost all Jews were naturally very interested in the possibility of proceeding to the U.S., because they knew that many Jews were doing just that. However, the Zionist leadership attempted by all means to divert their interest from the U.S. to Palestine. To the question "Can one emigrate to the U.S. and remain a Zionist?," a Professor Spiktor replied:⁴⁶³

"Whoever emigrates to the US in this hour of destiny, can not only be no Zionist, he also thereby forsakes his own Jewish people."

Six months later, Professor Spiktor emigrated to the U.S. Ginsburg and his family went to Palestine with many of the other Jews from the camp.

Conclusions

We are now very close to the end of our study. The thesis of this book has been proved conclusively. The Jews of Europe were not exterminated, and there was no German attempt to exterminate them. The Germans resettled a certain number, and these people were ultimately resettled again in accordance with Allied programs. Although various statistical details are missing from our analysis, it is possible to reconstruct quantitative aspects of the problem to a satisfactory degree.

The Jews of Europe suffered during the war by being deported to the East, by having had much of their property confiscated, and, more importantly, by suffering cruelly in the circumstances surrounding Germany's defeat. They may even have lost a million dead.

⁴⁶³ Burg (1962), 108.

Everybody in Europe suffered during the war, especially the people of central and eastern Europe. The people who suffered most were the losers, the Germans (and Austrians), who lost 10 million dead due to military casualties, Allied bombings, the Russian terror at the end of the war, Russian and French labor conscriptions of POW's after the war, Polish and other expulsions from their homelands, under the most brutal conditions, and the vengeful occupation policies of 1945-1948.⁴⁶⁴

Himmler Nailed it Perfectly

The “gas chambers” were wartime propaganda fantasies completely comparable to the garbage that was shoveled out by Lord Bryce and associates in World War I. The factual basis for these ridiculous charges was nailed with perfect accuracy by Heinrich Himmler in an interview with a representative of the World Jewish Congress just a few weeks before the end of the war:⁴⁶⁵

“in order to put a stop to the epidemics, we were forced to burn the bodies of incalculable numbers of people who had been destroyed by disease. We were therefore forced to build crematoria, and on this account, they are knotting a noose for us.”

It is most unfortunate that Himmler was a “suicide” while in British captivity, because had he been a defendant at the IMT, his situation would have been such that he would have told the true story (being fully informed and not in a position to shift responsibility to somebody else), and books such as the present book would not be necessary, because the major material could be read in the IMT trial transcript. But then, you see, it was not within the bounds of political possibility that Himmler live to talk at the IMT.

That Himmler's assessment of the gas chamber accusations is the accurate one should be perfectly obvious to anybody who spends any time with this subject, as we have seen especially in Chapter 4. In particular, Hilberg and Reitlinger should have been able to see this before completing even fractions of their thick books, which are monumental foolishness.

⁴⁶⁴ Aretz, 337-346.

⁴⁶⁵ Reitlinger, 521.

Chapter 8: Remarks

Miscellaneous Objections

We close this work with a few miscellaneous remarks, most of which deal with some objections that may arise in certain situations.

An objection that one highly intelligent critic actually expressed was that he thought that my story was similar to ones he had read about “flying saucers” and “divining rods.” The reaction was startling, but it was at least understandable. Years of propaganda have so associated Nazi Germany with the six million legend that denial of the legend seems at first almost as preposterous for many people as denying that World War II happened at all. Nevertheless, the objection is not one that can be answered, except by pointing out that our account does not involve the supernatural or extraterrestrial or, indeed, anything more unusual than people lying about their political enemies. With this critic, one can only ask that he attempt to say something intelligent.

The most consequential objection to this work will be that I have employed the “holocaust” literature, in particular the books by Reitlinger and Hilberg, as sources, although I have also denounced such books as “monumental foolishness.” This objection is a serious one, because I would be the first to hold that, once the extermination legend had been buried, these books will become significant only as supreme examples of total delusion and foolishness, and will be referenced only in connection with the great hoaxes of history. However, our task here is precisely to bury the legend, and the only way to do that is by considering the story that has been advanced, and this amounts to analyzing the case put forward by Reitlinger and Hilberg. The only practical way of exposing the hoax is by considering the claims that have been put forward by the extermination mythologists.

There was a second reason for employing Reitlinger and Hilberg as sources. In this work, great weight had been placed on providing documentation that a reader without access to a large library can confirm on his own. Unfortunately, this desire could not be entirely satisfied, because a good part of the analysis relies on documents and publications that are not readily available without going through complicated borrowing procedures. In order to partially overcome this difficulty, I have used Reitlinger and Hilberg as sources on many such points, but I have only done this in cases where I have been able to confirm their remarks. I have not adopted the practice of assuming that anything that Reitlinger or Hilberg says that helps my case must be true. For example, in connection with our discussion in Chapter 5 (p. 203) concerning the

date of the first Allied air raid at Auschwitz, I gave reasons for the conclusion that the first raid did not occur before August 1944. It would have been dishonest to merely reference Hilberg on this point, because Hilberg believes that the first raid occurred in December 1944 and is obviously confused on this point.⁴⁶⁶

Another reason for the frequent referencing of Reitlinger and Hilberg is my sincere wish that the reader would take a look at such books; it is only then that the reader can become completely convinced that the hoax is a hoax. In this connection, one can recommend a typical procedure that the reader may go through to confirm the matter in a general way. First, get a copy of Hilberg's book. On pages 567-571, Hilberg presents a magnificent discussion of the alleged role of the Zyklon B in the exterminations, and on page 619 or 621, he points out that the German documents speak only of a program of deportations to the East and associated operations. It is also useful to read his discussion of what the Nuremberg trial documents say happened in Hungary, 509-554, and to note the document numbers he cites in this connection. Next find, if possible, a copy of Reitlinger's book, first or second edition. On pages 158-159 (150 in the first edition), he reproduces the text of document NO-4473, in which he notes that the "gas chamber" that allegedly existed in the building which contained Crematory II at Auschwitz was described as a "*Vergasungskeller*" in the original German. On pages 118, 121 and 182 (112, 114-115 and 169 in the first edition) Reitlinger remarks on the "mystery" that "at certain periods, entire transports (of Jews) were admitted" into Auschwitz. Reitlinger also briefly mentions the chemical industry at Auschwitz, pages 109 and 492 (105 and 452 in the first edition). Hopefully, the reader will undertake a more thoroughgoing confirmation, but the above would be a good start.

Some people may assume, fallaciously, that opinions expressed by Jews and Germans on the subject of the "Final Solution" carry nearly authoritative weight.

Under circumstance where the subject of this book is being discussed by a group of people, a seemingly potent argument – because it is so laden with emotion and can upset the decorum of the group – may be offered by a Jew who claims to have lost some relative or close acquaintance in the "holocaust," and he may even have knowledge that the supposedly missing relative had been sent to Auschwitz, Treblinka, or some such place.

There are several ways to react to such a point. An obvious possibility is that the man is lying. However, it is more probable that he is telling the truth as he knows it. Assuming that his story is valid, there is only one sense in which it can be valid. That is, all he can claim is that he or his family lost contact with some relative in Europe during the war, and never heard from that person again. Obviously, such data does not imply the existence of a Nazi extermination program.

⁴⁶⁶ Hilberg (1961), 632.

That contact was lost during the war was almost inevitable, either because it was difficult for Jews deported to the east to communicate with people in allied countries, or because it was difficult or impossible to communicate from the east to points farther west during the chaotic last year of the war. Thus, the only point of interest in such a case is the claim that contact was not reestablished after the war.

The simplest explanation is that the relative did indeed perish somewhere in Europe during the war, or in a concentration camp, from causes that have been covered in this book, along with an indeterminate number of other persons of central and east European nationalities.

The second possibility is that the relative survived the war, but did not reestablish contact with his prewar relations. One possible, although not very likely, motivation for such a failure to reestablish contact could have been some prohibition on such correspondence imposed by the Soviet Government on those Jews who had been absorbed into the Soviet Union.

A more important and more plausible motivation for failing to reestablish contact held when a separation of husband and wife was involved. A very large number of marriages are held together by purely social and economic constraints; such constraints didn't exist for a great number of the Jews uprooted by the German policies and wartime and postwar conditions.

In many cases, deported Jewish families were broken up for what was undoubtedly intended by the Germans to be a period of limited duration. This was particularly the case when the husband seemed a good labor conscript; just as German men were conscripted for hazardous military service, Jews were conscripted for unpleasant labor tasks. Under such conditions, it is reasonable to expect that many of these lonely wives and husbands would have, during or at the end of the war, established other relations that seemed more valuable than the previous relationships. In such cases, then, there would have been a strong motivation not to reestablish contact with the legal spouse. Moreover, none of the "social and economic constraints," which we noted above, were present, and Jews were in a position to choose numerous destinations in the resettlement programs that the Allies sponsored after the war. This possibility could account for a surprisingly large number of "missing" Jews. For example, suppose that a man and wife with two small children were deported, with the man being sent to a labor camp and the wife and children being sent to a resettlement camp in the East. Let us suppose that the wife failed to reestablish contact with her husband. We thus seem to have four people reported dead or missing; the husband says his wife and children are presumably dead, and the wife says her husband was lost. However, this one separation of husband and wife could account for even more missing Jews, for it is likely that the parents and other relatives of the wife, on the one hand, and the parents and other relative of the husband, on the other, would also have lost touch with each other. Thus, one had some number of people on the husband's side claiming that some number of people on the wife's side are missing, and vice

versa. Obviously, the possibilities of accounting for “missing” Jews in this way are practically boundless.

It is said that the *Yad Vashem* archives in Jerusalem now have the names of between 2.5 and 3 million Jewish “dead from the Nazi holocaust.” The data have supposedly been “collected on one-page testimony sheets filled in by relatives or witnesses or friends.” Of course, it is in no way possible to satisfactorily substantiate this production of the Israeli government, which certainly cannot be claimed to be a disinterested party in the question of the number of Jews who perished. There is no doubt that many Jews died during the war, so we should expect that a part of the *Yad Vashem* claim is valid, but it is also the case that there is no possible way to distinguish, in this data, between Jews who actually died during the war, and Jews with whom the signers of the “testimony sheets” have merely lost contact. The data is particularly meaningless when it is a “friend” who has contributed a declaration; I have lost contact with a great many former friends and acquaintances, but I assume that nearly all are still alive. Indeed, the use of the testimony of “friends” for the purpose of gathering the *Yad Vashem* data shows that the data is mostly meaningless; such “friends” have no more basis for declaring their missing acquaintances dead than I do.⁴⁶⁷

I have no idea what is meant by the “witnesses” who signed the testimony sheets. There is also a better than negligible possibility that some signers of these declarations invented missing friends and relative for any of a number of possible motivations, and it is even possible that some of the signers never existed.

To summarize our reaction to the claims of Jews regarding persons said to be victims of the “holocaust,” such claims are no doubt valid to some extent, because many Jews died, but the hard data possessed by Jews who report such losses, when they are reporting truthfully, is not conclusive in regard to the deaths of the persons involved, and certainly in no way implies the existence of a Nazi extermination program.

Postwar Germany and Willy Brandt

One must be careful in interpreting the fact that Germans, themselves, seem to believe in the exterminations. Certainly, most individual Germans seem to concede the myth, and not all do so in order to stay out of trouble. However, it is clear that the German people were no better situated to see the truth than anybody else. Many might, indeed, have observed local Jews being deported, not to return after the war, and this may have given some an even more vivid conviction in support of the extermination hoax than that which holds generally. The basic observation to make relative to the views of individual Germans is

⁴⁶⁷ Colorado Springs *Sun* (Jan. 30, 1973), 6.

that the standard sort of “information” on this subject has been available to them, and they are thus just as innocently deluded as other nationalities.

The West German government, which, by interminable war crimes trials, now being held thirty or more years after the alleged crimes, by instruction in the schools, and now by means of naked terror, as shown in the Stäglich episode,⁴⁶⁸ does everything possible to keep the lie propped up and to prevent open discussion, is a different matter, because the cause for its behavior is not innocent misunderstanding. The basic fact is that the claim of the Bonn government to be a German government is somewhat tenuous. The entire political structure of West Germany was established by the U.S. government. This includes the control of the newspapers and other media, the control of the schools, and the constitution of this *Bundesrepublik*. As a puppet creation, this “German” political establishment necessarily had an interest in the lies of the conquerors, and behaved accordingly. That is very simple, and this situation is perfectly illustrated by the career of the man who was Chancellor of West Germany during the greater part of the time when this book was being written: Herr Willy Brandt (an alias – Brandt’s real name is Herbert Ernst Karl Frahm – Frahm was his mother’s maiden name).

Marxist Brandt left Germany after the Hitler takeover, and acquired Norwegian citizenship. After the German invasion of Norway in 1940, he slipped into neutral Sweden, and eventually was given a position in the press corps there. It was none other than Willy Brandt who, during the war, was transmitting the concocted propaganda stories that had supposedly originated in Stockholm and ended up on the pages of the *New York Times*.⁴⁶⁹

After the defeat of Germany, Brandt naturally decided that the atmosphere back home had improved, so he returned to Germany, resumed German citizenship, and entered West Berlin politics as a Social Democrat. He eventually became Mayor of West Berlin, and acquired a press aide, Hans Hirschfeld, a German Jew who, along with Kempner, Marcuse *et al.*, had been employed in the OSS during the war. During the 1961 espionage trial in the U.S. of R. A. Soblen, which resulted in Soblen being sentenced to life imprisonment, a government witness, Mrs. J. K. Beker, who had been a courier in a Soviet espionage ring during the war but had turned FBI informer later, testified that she had carried information from Hirschfeld to Soblen for transmission to Moscow. Mrs. Beker was the principal government witness, so the obvious answer

⁴⁶⁸ As a punishment for publishing his recollections of Auschwitz, Stäglich’s pension as a retired judge was reduced by 20% for five years; *Nation Europa* (Coburg, August 1975), 39. The reduction of Stäglich’s pension was “naked terror” by the standards of 1975. That action against Stäglich was mild in comparison to what was to come. Later on, the University of Göttingen revoked Stäglich’s Dr.-jur. degree for having published his research results in the book *Der Auschwitz Mythos*, which was seized and destroyed by the German authorities; German Federal Constitutional Court, ref. 1 BvR 408f./83; see Grabert; Stäglich (2015a), 483-564; *Deutschland in Geschichte und Gegenwart* 36(3) (1988), 18; *ibid.*, 36(1) (1988), 7, *ibid.*, 31(1) (1983), 19f., *ibid.*, 29(3) (1981), 38. Re. the escalation of naked terror in Germany see Rudolf (2002).

⁴⁶⁹ *New York Times* (Aug. 12, 1972), 23.

of the defense should have been to produce Hirschfeld. Indeed, Soblen's defense counsel said that he had attempted to convince Hirschfeld to come to the U.S. to testify, but Hirschfeld declined, at first on the grounds that the publicity associated with his appearance as a witness could hurt Brandt, who was engaged in an election campaign. Hirschfeld was also concerned about the possibility that he might be charged with some sort of offense if he journeyed to the U.S. Brandt, in New York during the controversy involving Hirschfeld, naturally defended his former close associate, who had by that time been living in retirement in Germany.

In order to give the defense every opportunity to make a case for Soblen, the government offered Hirschfeld immunity against prosecution for "any past acts or transactions" if he would come to the U.S. to testify, adding only that Hirschfeld could be prosecuted for any perjury committed in a retrial of Soblen. Hirschfeld nevertheless declined to appear in Soblen's defense.⁴⁷⁰

Brandt eventually became Chancellor of West Germany, and won the Nobel Peace Prize for 1971 for his efforts to build friendlier relations with the eastern bloc, his "*Ostpolitik*." Brandt seemed to be riding high, but by 1974, various Brandt policies had brought his Social Democratic Party to a new low in popular esteem, and even SPD politicians in long-term SPD strongholds expressed the belief that they were going to lose their next elections. Fortuitously for the SPD, the Günter Guillaume scandal erupted in late April with Guillaume's arrest as an East German espionage agent. Although it had been known that Guillaume had been a member of an East Berlin espionage organization, he had been cleared by the Brandt government for a high post in the inner circle of Brandt's associates and advisers. The scandal brought Willy Brandt's downfall with his resignation on May 7, 1974. Brandt was succeeded by Helmut Schmidt, whose leadership terminated the decline of the SPD.⁴⁷¹

Clearly, a career such as Brandt's postwar career is possible only in a country in which treason has become a normal part of political life, so it is not in the least surprising that the Bonn government is a defender of the hoax.

An interesting objection is the claim that nobody would dare invent such a tale as the six million legend; nobody had the extraordinary imagination required, and even if he did, the obvious risks in telling such gigantic lies should dissuade him. The argument amounts to the claim that the mere existence of the legend implies the truth of its essentials, so I suppose we can classify it as the hoaxers' ontological argument.

What is interesting about this objection is its superficially logical quality. Indeed, I imagine that this calculation accounts in good measure for the widespread acceptance of the legend; people assume that nobody would be so brazen as to invent such lies. Nevertheless, the logic is not sound, for history affords us numerous examples of popular acceptance of gigantic lies, and in this

⁴⁷⁰ *New York Times* (Oct. 6, 1961), 10; (Oct. 14, 1961), 10; (Oct. 17, 1961), 35; (Nov. 4, 1961), 11; R. H. Smith, 237n.

⁴⁷¹ *New York Times* (May 8, 1974), 16.

connection, we can again cite witchcraft hysteria as precedent for the psychological essentials of the six million hoax.

The Talmud

It is ironic that Hitler anticipated the psychology of the “big lie” in his remarks on the subject in Chapter X of *Mein Kampf*. It is also ironic that the most mind-boggling invented accounts of exterminations appear in the Jewish Talmudic literature in connection with the last two of the three great Jewish revolts against the Roman empire, the Diaspora revolt of 115-117 AD, and the Palestine revolt of 132-135 AD. In connection with the Palestine revolt of 66-70 AD, the Talmudic writings do nothing more than bewail the loss of the Temple in Jerusalem, and discuss the implications of the loss for Jewish law. A good discussion of the three revolts is given in Michael Grant’s *The Jews in the Roman World*.

According to the ancient accounts (mainly Cassius Dio, who wrote around 200 AD, and Eusebius, the early Fourth-Century Bishop of Caesarea), the Diaspora revolt started in Cyrenaica (northeast Libya) at a time when the Emperor Trajan had, for the purpose of annexing Parthia and its valuable Mesopotamian territory, constituted a huge eastern army at the price of withdrawing many small contingents that had served to keep order in various parts of the Empire. The Jews attacked the Greek and Roman civilian populations, and it is said they killed 220,000 in Cyrenaica, amusing themselves in various gruesome ways. The revolt then spread to Egypt, where the Jews killed an unknown number, and to Cyprus, where they are said to have killed 240,000. In Alexandria, however, the predominantly Greek population gained control of events, and are said to have massacred the Jews of that city. Recent archaeological evidence indicates that the ancient accounts are not exaggerated.⁴⁷²

The Talmud says almost nothing about this revolt, except to give the number of Jews killed in Alexandria as “sixty myriads on sixty myriads, twice as many as went forth from Egypt,” *i.e.* 1,200,000, on the assumption that addition and not multiplication is intended. The killings are blamed on “the Emperor Hadrian,” which may be due to the fact that Hadrian was at the time the commander of Trajan’s eastern army, and succeeded Trajan as Emperor when Trajan died in 117, possibly before the final suppression of the revolt.

The figure given for the number of Jewish victims is obviously exaggerated, for, while it is usually difficult to be more than approximately correct in estimating the populations of ancient cities, Alexandria of the period had a population of 500,000 or more, with an upper bound of one million a reasonable one to assume, because that was the approximate population of the city of Rome, a figure concerning which there is also some uncertainty, but if Rome ever attained a population significantly greater than one million, it never got

⁴⁷² Fuks.

near two million.⁴⁷³ The 1,200,000 martyred Jews may seem a brazen invention, but you haven't seen anything yet.

The next great revolt was in Palestine in 132-135, and was a serious attempt by its leader, Bar-Kokhba, to set up a Jewish state with himself as king, although he eventually claimed to be the Messiah. During the revolt, he made laws, issued money, and performed the other regular functions of government.

Bar-Kokhba's end came in 135. Jerusalem not being suitable to withstand a siege, he led the remnant of his army to the village of Bethar (the present Bitir), which is located on high ground about 10 miles southwest of Jerusalem, 25 miles from the Dead Sea and 35 miles from the Mediterranean. The dimensions of the ancient town were roughly rectangular, with a north-south length of about 600 meters and an east-west width of about 200 meters. The south half of the town was fortified.⁴⁷⁴ These dimensions plus the fact that the estimates for the Jewish population of Palestine of the time range from a low of 500,000 to a high of 2.5 million make it unlikely that Bar-Kokhba's Bethar army numbered as many as 50,000 men.⁴⁷⁵

The Romans laid siege to Bethar in the summer of 135, and Bar-Kokhba's resistance collapsed in August. The Romans broke into the fortress, and Bar-Kokhba was killed in that final battle.

For general reasons, it seems unlikely that the Romans carried out a massacre of the Jewish population of Bethar. The only "evidence" for a general massacre occurs in the Talmudic literature (including in this context the *Midrash Rabbah*), which for reasons unknown comments extensively on the siege of Bethar and its supposed aftermath. Except where noted, the Talmudic passages are reproduced in the Appendix to the book *Bar-Kokhba* by the archaeologist Yigael Yadin. The size of Bar-Kokhba's Bethar army is given as 200,000 men. Bar-Kokhba is said to have been so tough that, when the Romans catapulted missiles into his fort, he would intercept the missiles with his knee with such force that he would knock them back into the faces of the astonished Romans, killing many. The *Talmud* goes on to claim that the number of Jews killed by the Romans after the fortress fell was 4 billion "or as some say" 40 million, while the *Midrash Rabbah* reports 800 million martyred Jews. In order to reassure us that these figures are given in earnest, the necessarily accompanying events are set forth. The blood of the slain Jews reached to the nostrils of the Romans' horses and then, like a tidal wave, plunged a distance of one mile or four miles to the sea, carrying large boulders along with it, and staining the sea a distance of four miles out.

The Jewish school children of Bethar, according to the Talmudic literature, were of course not spared by the Romans, who are said to have wrapped each of them in his scroll, and then burned all of them, the number of these school

⁴⁷³ *Cambridge Ancient History*, vol. 10, 296; Packer; Carcopino, 16-21; T. Frank, vol. 2, 245; vol. 4, 158f.; vol. 5, 218n.

⁴⁷⁴ *Encyclopedia Judaica*, vol. 4, 735.

⁴⁷⁵ McCown.

children having been either 64 million or at least 150,000 (the approximate present public school population of Washington, DC).

The Romans matched the Germans in efficiency, for the bodies of the slain Jews were used to build a fence around Hadrian's vineyard, which is said to have been eighteen miles square, and blood saved over from the tidal wave was used to fertilize Roman vineyards for seven years. Shades of soap, glue and fertilizer factories!

It is also claimed that Bar-Kokhba (usually referred to in the Talmudic literature as Bar-Koziba – it is still not clear what his real name was) was killed by rabbis for falsely claiming to be the Messiah.⁴⁷⁶

The Talmudic literature was not intended for general circulation, so its authors could exercise more freedom than the inventors of the six million hoax, who had to assess the gullibility of a possibly skeptical gentile audience. However, the spirit of the Talmudic accounts in the above instances seems remarkably similar to the spirit of our century's hoax. In this connection, it may be noted that it is not really anomalous that a Talmudic scholar such as Rabbi Weissmandel plays a possibly significant role in the hoax. Also, because Rabbi Wise translated a good deal of ancient and medieval Jewish literature, and also founded a Jewish seminary, he may also have some claim to being a Talmudic scholar. One suspects that such scholars might have been exactly the type required to give birth to the hoax.

Credentials

A remaining objection could raise the question of my credentials for writing such a book. This is a good point, for it is true that my formal training has been in engineering and applied mathematics and not history.

It is not unprecedented for investigators to make contributions in fields apparently remote from their specialties, but I will concede that the point should not be waved aside lightly. Normally, we expect developments in historical investigation to come from historians, just as developments in engineering come from engineers. Exceptions to this rule can be admitted, but some justification for the exception should be expected.

My justification is the obvious one: default on the part of regular professional historians. No such person has come forward with a critical study of the question, or with any work actually arguing any particular side of the extermination question and presenting the evidence which supports the thesis. The closest thing to such a work is the book by Reitlinger, who is at least willing to take explicit note of some of the anomalies that develop in presenting the story of the "holocaust," but Reitlinger is not a historian but an artist and art collector. He has written several books, the most significant being his three-volume study of the history of dealings in objects of art, *The Economics of Taste*. After

⁴⁷⁶ *Babylonian Talmud, Sanhedrin* 93b; p. 627 in the translation edited by Epstein.

Reitlinger, Hilberg manages a tiny bit of a critical attitude, but Hilberg is a professor of political science at the University of Vermont, and his doctorate is in public law and government.

The books by Reitlinger and Hilberg recognize, to a very inadequate but nevertheless perceptible degree, a responsibility to convince the skeptic. The other extermination mythologists do not make any effort whatever to show that the exterminations happened; they just assume we all know it happened, and then they take it from there. This is the case with the remaining three of the five leading extermination mythologists – Nora Levin, Leon Poliakov, and Lucy S. Dawidowicz. Levin was a research librarian while writing her book, and now teaches history at Gratz College, a small Jewish school in Philadelphia. Poliakov is research director of the *Centre de Documentation Juive Contemporaine* in Paris, and thus a professional Jewish propagandist. Dawidowicz is the only regular professional historian in the group, and occupies the Leah Lewis Chair in Holocaust Studies at the Yeshiva University in New York. All five of the leading extermination mythologists are Jews.

In books and articles on subjects that are other than, but touch on, the “holocaust,” professional historians invariably give some sort of endorsement to the lie, but the extent to which contrary hints are found in their writings, is considerable. No professional historian had published a book arguing and presenting evidence either for or against the reality of the exterminations. The motivations are obvious. No established historian had been willing to damage his reputation by writing a scholarly-sounding work supporting the extermination allegations, solemnly referencing documents and testimonies produced at illegal trials held under hysterical conditions, and seriously setting forth, without apology, obvious idiotic nonsense such as the alleged dual role of the Zyklon. At least, no inducement to produce such a work seems to have come along. On the other hand, the pressure of intellectual conformity (to put it mildly) in academia has evidently terrorized historians into silence in the opposite regard. This being the case, it is both justified and expected that works such as the present one be produced by engineers and whatever.⁴⁷⁷

Other Matters

As promised early in this book, we have dealt here at depth with only one propaganda myth, and have in no sense attempted to cover the general field of World War II revisionism. There is no point in repeating here what has been

⁴⁷⁷ In the years after this book was first published in 1976, there was a great outburst of relevant scholarship of varying quality (see *e.g.* my Preface to the 2003 and the present edition). Today I would not express myself on the historians in quite the way I have in these paragraphs. See for example my discussion of books by Martin Gilbert and Walter Laqueur in Supplement 2, written in 1982. Their books, while not brilliant, are competent and routine works of history. Their outstanding feature is that the authors fail to draw the obvious conclusions from their own research, as I explain in Supplement 2.

ably said by other authors who have contributed to demolishing lingering mythology relating to the war, but a few words, intended mainly to direct the reader to the appropriate literature, are in order.

The myth of Germany's solitary responsibility for the outbreak of war in 1939 has been demolished by the American historian David L. Hoggan in his book *The Forced War*. A. J. P. Taylor's *The Origins of the Second World War* is not as extensive, but it has achieved a much greater circulation and has been available in paperback for some time. Taylor's well-deserved reputation as a Germanophobe have made his book a notable addition to the revisionist literature.

The myth of extraordinary Nazi brutality, as compared to the brutalities of the Western democracies, had been exploded by a number of books, of which the best is F. J. P. Veale's *Advance to Barbarism*, of which a new and expanded edition appeared in 1968. Other noteworthy books are *Unconditional Hatred* by Captain Russell Grenfell, RN, *America's Second Crusade* by William Henry Chamberlin, and Freda Utley's *The High Cost of Vengeance*. However, these authors ignore one of the greatest crimes of the western democracies, the forcible repatriation of Soviet citizens to the Soviet Union after the war ("Operation Keelhaul"). Most of what we know of this shameful episode is due to the efforts of Julius Epstein, a Jew who left Germany during the Thirties for the usual reasons, but started his crusades for truth during the war with his investigations into the Katyn Forest massacre, and has spent the greater part of the postwar period investigating Operation Keelhaul. His book on the subject was published in 1973. Solzhenitsyn's *The Gulag Archipelago* offers a long discussion of Operation Keelhaul, which, because it is written from a Russian point of view, supplements Epstein's treatment notably. Nicholas Bethell's *The Last Secret* explores the political background of the forced repatriations.

For a reader interested in a more thoroughgoing discussion of the revisionist literature, the best seems to appear in the testimonial volume *Harry Elmer Barnes*, edited by Arthur Goddard. The pamphlet by Barnes, *Blasting the Historical Blackout*, is a more intensive analysis of the status of World War II revisionism, and is still available.

None of the above-named publications touch the gas chamber myth, or deal in a serious way with whatever was supposed to have happened in the German concentration camps. Here, we have treated the camps almost entirely from a single point of view, and have not deeply investigated the factual basis of other allegations of brutalities of a more random and less systematic nature. However, the Ilse Koch case, which was discussed in Chapter 2 (pp. 66-68), should be sufficiently instructive in distinguishing between fact and fiction, and the methods used at Dachau by the U.S. authorities to produce "evidence" of extraordinary brutalities should be conclusive.

The scandal of the continued imprisonment of Rudolf Hess, who died in prison in 1987 at age 93, was treated by a number of books while he was alive, notably *Prisoner No. 7: Rudolf Hess*, by Eugene K. Bird, one of the U.S. commanders at Berlin's Spandau prison, who broke regulations by not only

talking to Hess but also interviewing him in depth. Two other books are *Motive for a Mission* by James Douglas-Hamilton and *Hess: The Man and His Mission* by J. Bernard Hutton.

Some Implications

In this book, we have necessarily restricted ourselves to the demolition of only one myth, and have not attempted to treat the very broad subject of the general behavior of Nazi Germany as compared to the Allies, except by recommending the above publications. They will help support the major implication of this work: the media in the western democracies are exposed as constituting a lie machine of vaster extent than even many of the more independent minded have perceived.

A second implication of this work naturally relates to Palestine. The “justification” that Zionists invariably give for driving the Arabs out of Palestine always involves the six million legend to a great extent. Of course, there is more than one *non sequitur* involved; Palestine was not invaded by six million dead Jews or, indeed, by any dead Jews, and in any case, it is not just or reasonable to make the Arabs pay for whatever the Germans are supposed to have done to Jews in Europe during the Second World War. Moreover, Israel is not a land that welcomes all persons who suffered in some way at the hands of the Nazis, but all Jews, regardless of whether they or their relatives had ever had any contact with the Nazis.

Today the United States supplies enough aid to Israel to assure that Israel is able to retain, by armed occupation, lands that the United States itself declares to be rightfully Arab (the territories seized in the 1967 war). Although it is hard to see why the six million legend should motivate such a policy, such a motivation or justification is very often advanced. When, in November 1975, an overwhelming majority at the United Nations, in a burst of intellectual clarity rare for that organization, endorsed a resolution declaring Zionism to be a form of racism (a truth as inescapable as $2 + 2 = 4$) the U.S. representative Daniel Patrick Moynihan, an otherwise impressive intellect, was reduced in astonishingly short order to hysterical yapping about the six million. As was shown by the aftermath of the “Yom Kippur War” of 1973, this support of Israel is completely contrary to the interests of the West. The obvious fact that this support is immoral in terms of the moralizing that has become a pervasive feature of Western foreign policies makes it doubly mad.

Another country that has extended considerable material aid to Israel is West Germany. As of 1975, the Bonn government had paid Jews several billion worth of restitutions and indemnifications of various sorts (calculated mainly in terms of dollars of the late Fifties and early Sixties), and was still making commitments for new payments.⁴⁷⁸

⁴⁷⁸ *New York Times* (Jan. 18, 1975), 6. Editor’s note: By 1963, total German payments amounted

The largest single such program was defined in the 1952 Luxembourg Treaty between the Federal Republic and Israel; Bonn committed itself to paying Israel \$750 million, primarily in the form of German industrial products and oil shipments from Britain. The program, referred to in Israel as the *Shilumin* program, was completed in 1966. The text of the Luxembourg Treaty opens with the words:⁴⁷⁹

“Whereas
unspeakable criminal acts were perpetrated against the Jewish people during the National Socialist regime of terror
 and whereas
by a declaration of the Bundestag on 27 September 1951, the Government of the Federal Republic of Germany made known their determination, within the limits of their capacity, to make good the material damage caused by these acts [...].”

The Bonn government has undertaken additional programs of indemnification that have been similarly motivated. Because this work has shown that the “unspeakable criminal acts,” in the sense in which that expression is used in the Luxembourg Treaty, are largely a hoax and, specifically, a Zionist hoax, it then develops that Israel owes Germany a lot of money, because the proposed justification for the reparations has been invalidated.

to 20 billion marks (5 billion 1963 dollars), and by 1984 the total had risen to 70 billion marks (23 billion 1984 dollars; D. v. Westernhagen, *Die Zeit*, Oct. 5, 1984, 36); in 2002, the German government estimated total payments of 138 billion marks equaling some 78 billion 2003 dollars: Bundesministerium der Finanzen (2002). As of 2012, a total amount of some 70 billion Euros (or 140 billion marks) had been reached (de.wikipedia.org/wiki/Deutsche_Wiedergutmachungspolitik). The majority of these funds were paid to individual Jews, to Jewish organizations and to the State of Israel.

⁴⁷⁹ Vogel, 56, 88-100.

Appendices

Appendix A: The “Statement”

Document 1553-PS is a set of documents, typewritten in French (except for a short part in English), and said to have been authored by Kurt Gerstein. The English translation, as provided by the Nuremberg staff, is presented below with certain modifications that are explained. The original is reproduced by Roques.⁴⁸⁰ The first document is the lengthiest of the set, and is what would normally be considered to be the “Gerstein statement.”

“Graduate engineer for Mine surveying (Bergassessor Diplomingenieur)

Kurt Gerstein

Rottweil, 26 April 1945

Personal particulars: Gerstein, Kurt, Mine Surveyor, expelled from State service in 1936 as an anti-Nazi; certified engineer. Born on 11 August 1905, at Muenster, Westphalia. Partner of the factory De Limon Fluhme & Company, automatic greasing of locomotives, brakes Westinghouse, Knorr, etc. Duesseldorf, Industriestrasse 1 – 17.

Father: Ludwig Gerstein, President of the District Court (Landgerichtspraesident) at Hagen, Westphalia, retired.

Mother: Clara Gerstein, nee Schmemann, died 1931.

Married since 2 May 1937 to Elfriede nee Bensch at Tuebingen, Gartenstrasse 24, 3 children: Arnulf, 5 years old Adelheid 3-1/2 years old Olaf 2 years old. Life: 1905 to 1911 Muenster, 1911 to 1919 Sarrebruck, 1919 to 1921 Halberstadt, 1921 to 1925 Neuruppin near Berlin, graduated in 1925. – Studies 1925 to 1931, Marburg on the Lahn, Aachen, Berlin-Charlottenburg Universities and technical colleges, 1931, certified engineer’s examination. Since 1925, active member of the Protestant youth organization the Y.M.C.A., and above all, of the Higher Christian Youth, called the ‘Bible Circle’ (Bk, Bibelkreis). Political career: follower of Stresemann and Bruening, active on their behalf; since June 1933, persecuted by the Gestapo for Christian activities against the Nazi State. 2nd of May 1933, joined the NSDAP; 2 October 1936, expelled from the NSDAP because of activities against Party and State. 30 January 1935, public protest in the theater of the town of Hagen in Westphalia, against the anti-Christian drama ‘Wittekind’. Beaten and wounded by the Nazis. 27 November 1935, mining surveyor’s examination (Bergassessor). Then employed by the State at Sarrebruck. On 27 September 1936, imprisoned by the Gestapo for ‘activities against the State’ because of having sent 8,500 anti-Nazi pamphlets to high officials of the State. Imprisoned until the end of October 1936, released, was expelled from civil service. From Decem-

⁴⁸⁰ Roques, 222-227.

ber 1936 till the beginning of the war, medical studies at the Institute for the Protestant Medical Mission in the tropics, at Tuebingen. One-third – approximately – of income, that is one-third of 18,000 Reichsmarks per year, I donated since 1931 for my ideal religious goals. At my own expense, I had printed and mailed about 230,000 religious anti-Nazi pamphlets.

14 July to 28 August 1938, second imprisonment, in the Welzheim concentration camp. Hearing of the massacres of idiots and insane people at Grafeneck, Hadamar, etc., shocked and deeply wounded, having such a case in my family, I had but one desire, to see, to gain an insight of this whole machine and then to shout about it to the whole world! With the help of two references written by the two Gestapo employees who had dealt with my case, it was not difficult for me to enter the Waffen SS. 10 March to 2 June 1941, elementary instruction as a soldier at Hamburg-Langenhorn, Arnhem and Oranienburg, together with forty doctors. Because of my twin studies – technology and medicine – I was ordered to enter the medical-technology branch of the SS-Fuehrungshauptamt (SS Operational Main Office) – Medical Branch of the Waffen SS – Amtsgruppe D (Division D), Hygiene Department. Within this branch, I chose for myself the job of immediately constructing disinfecting apparati and filters for drinking water for the troops, the prison camps and the concentration camps. My close knowledge of the industry caused me to succeed quickly where my predecessors had failed. Thus, it was possible to decrease considerably the death toll of prisoners. On account of my successes, I very soon became a Lieutenant. In December 1941, the tribunal which had decreed my exclusion from the NSDAP obtained knowledge of my having entered the Waffen SS. Considerable efforts were made in order to remove and persecute me. But due to my successes, I was declared sincere and indispensable. In January 1942, I was appointed Chief of the Technical Branch of Disinfection, which also included the branch for strong poison gases for disinfection. On 8 June 1942, the SS Sturmbannfuhrer Guenther of the Reichs-Sicherheits-Hauptamt entered my office. He was in plain clothes and I did not know him. He ordered me to get a hundred kilograms of prussic acid and to accompany him to a place which was only known to the driver of the truck. We left for the potassium factory near Colling (Prague). Once the truck was loaded, we left for Lublin (Poland). We took with us Professor Pfannenstiel MD, Ordinary Professor for Hygiene at the University of Marburg on the Lahn. At Lublin, we were received by SS Gruppenfuhrer Globocnik. He told us: this is one of the most secret matters there are, even the most secret. Whoever talks of this shall be shot immediately. Yesterday, two talkative ones died. Then he explained to us: at the present moment – 17 August 1942 – there are three installations:

1. Belzec, on the Lublin-Lemberg road, in the sector of the Russian demarcation line. Maximum 15,000 persons a day. (Seen!)

2. Sobibor, I do not know exactly where it is located. Not seen. 20,000 persons per day.

3. Treblinka, 120 km NNE of Warsaw. 25,000 persons per day. Seen!

4. Maidanek, near Lublin. Seen in the state of preparation.

Globocnek then said: *You will have to handle the sterilization of very huge quantities of clothes, 10 or 20 times the result of the clothes and textile collection (Spinnstoffsammlung) which is only arranged in order to conceal the source of these Jewish, Polish, Czech, and other clothes. Your other duties will be to change the method of our gas chambers (which are run at the present time with the exhaust gases of an old 'Diesel' engine), employing more poisonous material, having a quicker effect, prussic acid. But the Fuehrer and Himmler who were here on 15 August – the day before yesterday – ordered that I accompany personally all those who are to see the installations. Then Professor Pfannenstiel asked: 'What does the Fuehrer say?' Then Globocnek, now Chief of Police and SS for the Adriatic Riviera to Trieste, answered: 'Quicker, quicker, carry out the whole program!' he said. And then Dr. Herbert Lindner, director in the Ministry of the Interior said: 'But would it not be better to burn the bodies instead of burying them? A coming generation might think differently of these matters!' And then Globocnek replied: 'But, gentlemen, if ever, after us such a cowardly and rotten generation should arise that they do not understand our so good and necessary work, then, gentlemen, all National Socialism will have been for nothing. On the contrary, bronze plates should be buried with the inscription that it was we, who had the courage to achieve this gigantic task'. And Hitler said: 'Yes, my good Globocnek, that is the word, that is my opinion, too'.*

The next day we left for Belcek. A small special station of two platforms leans against a hill of yellow sand, immediately to the north of the road and railways: Lublin-Lemberg. To the South, near the road, some service houses with a signboard: 'Belcec, service center of the Waffen SS'. Globocnek introduced me to SS Hauptsturmfuehrer Overmeyer from Pirmasens, who with great restraint showed me the installations. That day no dead were to be seen, but the smell of the whole region, even from the large road, was pestilential. Next to the small station there was a large barrack marked 'Cloakroom' and a door marked 'Valuables'. Next a chamber with a hundred 'barber' chairs. Then came a corridor, 150 meters long, in the open air and with barbed wire on both sides. There was a signboard: 'To the bath and inhalations'. Before us we saw a house like a bath house with concrete troughs to the right and left containing geraniums or other flowers. After climbing a small staircase, 3 garage-like rooms on each side, 4 x 5 meters large and 1.90 meters high. At the back, invisible wooden doors. On the roof a Star of David made out of copper. At the entrance to the building, the inscription: Heckenholt Foundation. That was all I noticed on that particular afternoon.

Next morning, a few minutes before 7, I was informed: In 10 minutes the first train will arrive. And instead, a few minutes later the first train came in from Lemberg. 45 cars, containing 6,700 persons, 1,450 of whom

were already dead on their arrival. Behind the little barbed wire opening, children, yellow, scared half to death, women, men. The train arrives: 200 Ukrainians, forced to do this work, open the doors, and drive all of the people out of the coaches with leather whips. Then, through a huge loud-speaker instructions are given: to undress completely, also to give up false teeth and glasses – some in the barracks, others right in the open air, to tie one's shoes together with a little piece of string handed everyone by a small Jewish boy of 4 years of age, hand in all valuables and money at the window marked 'Valuables', without bond, without receipt. Then the women and girls go to the hairdresser, who cut off their hair in one or two strokes, after which it vanishes into huge potato bags 'to be used for special submarine equipment, door mats, etc.', as the SS Unterscharfuehrer on duty told me. Then the march begins: Right and left, barbed wire, behind, two dozen Ukrainians with guns. Led by a young girl of striking beauty they approach. With police Captain Wirth, I stand right before the death chambers. Completely naked they march by, men, women, girls, babies, even one-legged persons, all of them naked. In one corner a strong SS man tells the poor devils, in a strong deep voice: 'Nothing whatever will happen to you. All you have to do is to breathe deeply, it strengthens the lungs; this inhalation is a necessary measure against contagious diseases, it is a very good disinfestant!' Asked what was to become of them, he answered: 'Well, of course, the men will have to work, building streets and houses. But the women do not have to. If they wish to, they can help in house or kitchen'. Once more, a little bit of hope for some of these poor people, enough to make them march on without resistance to the death chambers. Most of them, though, know everything, the odor has given them a clear indication of their fate. And then they walk up the little staircase – and see the truth! Mothers, nurse-maids, with babies at their breasts, naked, lots of children of all ages, naked too; they hesitate, but they enter the gas chambers, most of them without a word, pushed by the others behind them, chased by the whips of the SS men. A Jewess of about 40 years of age, with eyes like torches, calls down the blood of her children on the heads of their murderers. Five lashes into her face, dealt by the whip of Police Captain Wirth himself, chase her into the gas chamber. Many of them say their prayers, others ask: 'Who will give us the water for our death?' (Jewish rite?). Within the chambers, the SS press the people closely together, Captain Wirth had ordered: 'Fill them up full'. Naked men stand on the feet of the others. 700-800 crushed together on 25 square meters, in 45 cubic meters! The doors are closed. Meanwhile the rest of the transport, all naked, wait. Somebody says to me: 'Naked also in winter! But they can die that way!' The answer was: 'Well, that's just what they are here for!' And at that moment I understood why it was called 'Heckenholt Foundation'. Heckenholt was the man in charge of the 'Diesel' engine, the exhaust gases of which were to kill these poor devils. SS Unterscharfuehrer Heckenholt tries to set the Diesel engine moving. But it does not start! Captain Wirth

comes along. It is plain that he is afraid because I am a witness to this breakdown. Yes, indeed, I see everything and wait. Everything is registered by my stopwatch. 50 minutes, 70 minutes – the Diesel engine does not start! The people wait in their gas chambers. In vain. One can hear them cry. ‘Same as in a synagogue’, says SS Sturmbannführer Professor Dr. Pfannenstiel, Professor for Public Health at the University of Marburg/Lahn, holding his ear close to the wooden door. Captain Wirth, furious, deals the Ukrainian who is helping Heckenholt 11 or 12 lashes in the face with his whip. After 2 hours and 49 minutes, as registered by my stopwatch, the Diesel engine starts. Up to that moment the people in the four already filled chambers were alive, 4 times 750 persons in 4 times 45 cubic meters. Another 25 minutes go by. Many of the people, it is true, are dead at that point. One can see this through the little window through which the electric lamp reveals, for a moment, the inside of the chamber. After 28 minutes only a few are living. After 32 minutes, finally, all are dead! From the other side, Jewish workers open the wooden doors. In return for their terrible job, they have been promised their freedom and a small percentage of the valuables and the money found. Like stone statues, the dead are still standing, there having been no room to fall or bend over. Though dead, the families can still be recognized, their hands still clasped. It is difficult to separate them in order to clear the chamber for the next load. The bodies are thrown out, blue, wet with sweat and urine, the legs covered with excrement and menstrual blood. Everywhere among the others, the bodies of babies and children. But there is not time! Two dozen workers are engaged in checking the mouths, opening them by means of iron hooks: ‘Gold to the left, without gold to the right!’ Others check anus and genitals to look for money, diamonds, gold, etc. Dentists with chisels tear out the gold teeth, bridges or caps. In the center of everything, Captain Wirth. He is on familiar ground here. He hands me a large tin full of teeth and says: ‘Estimate for yourself the weight of gold. This is only from yesterday and the day before yesterday! And you would not believe what we find here every day! Dollars, diamonds, gold! But look for yourself!’ Then he led me to a jeweler who was in charge of all these valuables. After that they took me to one of the managers of the big store of the west, Kaufhaus des Westens, Berlin, and to a little man whom they made play the violin, both chiefs of the Jewish worker commands. ‘He is a captain of the royal and imperial (K.u.K.) Austrian Army, who held the German Iron Cross 1st Class’, I was told by Hauptsturmfuehrer Obermeyer. The bodies were then thrown into large ditches of about 100 x 20 x 12 meters, located near the gas chambers. After a few days the bodies would swell up and the whole contents of the ditch would rise 2-3 meters high because of the gases that developed in the bodies. After a few more days swelling would stop and the bodies would collapse. The next day the ditches were filled again, and covered with 10 centimeters of sand. A little later, I heard, they constructed grills out of rails and burned the bodies on them with Diesel oil and gasoline in order to

make them disappear. At Belcek and Treblinka nobody bothered to take anything approaching an exact count of the persons killed. The figures announced by the BBC are inaccurate. Actually, about 25,000,000 persons were killed; not only Jews, however, but especially Poles and Czechoslovakians, too, who were, in the opinion of the Nazis, of bad stock. Most of them died anonymously. Commissions of so-called doctors, actually nothing but young SS men in white coats, rode in limousines through the towns and villages of Poland and Czechoslovakia to select the old, tubercular and sick people and to cause them to disappear, shortly afterwards, in the gas chambers. They were the Poles and Czechs of [category] No. III, who did not deserve to live because they were unable to work. The Police Captain Wirth asked me not to propose any other kind of gas chamber in Berlin, to leave everything the way it was. I lied – as I did in each case all the time – that the prussic acid had already deteriorated in shipping and had become very dangerous, that I was therefore obliged to bury it. This was done right away.

The next day, Captain Wirth's car took us to Treblinka, about 120 km NNE of Warsaw. The installations of this death center differed scarcely from those at Belcek but they were still larger. There were 8 gas chambers and whole mountains of clothes and underwear about 35 – 40 meters high. Then, in our 'Honor' a banquet was given, attended by all of the employees of the institution. The Obersturmbannfuehrer Professor Pfannenstiel MD, Professor of Hygiene at the University of Marburg/Lahn, made a speech: 'Your task is a great duty, a duty so useful and so necessary'. To me alone he talked of this institution in terms of 'beauty of the task, humane cause', and to all of them: 'Looking at the bodies of these Jews one understands the greatness of your good work!' The dinner in itself was rather simple, but by order of Himmler the employees of this branch received as much as they wanted as far as butter, meat, alcohol, etc. were concerned. When we left we were offered several kilograms of butter and a large number of bottles of liqueur. I made the effort of lying, saying that I had enough of everything from our own farm, so Pfannenstiel took my portion, too.

We left for Warsaw by car. While I waited in vain for a vacant bed, I met Baron von Otter, Secretary of the Swedish Legation. As all the beds were occupied, we spent the night in the corridor of the sleeper. There, with the facts still fresh in my memory, I told him everything, asking him to report it to his government and to all the Allies. As he asked for a reference with regard to myself, I gave him, as such, the address of the Superintendent General, D. Otto Dibelius, Berlin-Lichterfelde West, Bruederweg 2, a friend of Martin Niemoeller and chief of the Protestant resistance against Nazism. Some weeks later I met Baron von Otter twice again. He told me that he had sent a report to the Swedish Government, a report which, according to him, had a strong influence on the relations between Sweden and Germany. I was not very successful in my attempt to report everything to the chief of the Vatican Legation. I was asked whether I was a soldier,

and then was refused an interview. I then sent a detailed report to Dr. Winter, secretary of the Berlin Episcopate, in order to have him pass it on to the bishop of Berlin and through him to the Vatican Legation. When I came out of the Vatican Legation in the Rauchstrasse in Berlin, I had a very dangerous encounter with a police agent who followed me. However, after some very unpleasant moments I succeeded in giving him the slip.

I have to add, furthermore, that in the beginning of 1944, SS Sturmbannfuhrer Guenther of the Reichssicherheitshauptamt asked me for very large supplies of prussic acid for obscure use. The acid was to be delivered to his business office in Berlin, Kurfuerstenstrasse. I succeeded in making him believe that this was impossible because there was too much danger involved. It was a question of several carloads of poisonous acid, enough to kill a large number of persons, actually millions! He had told me he was not sure whether, when, for what kind of persons, how and where this poison was needed. I do not know exactly what were the intentions of the Reichssicherheitshauptamt and the SD. But later on, I thought of the words of Goebbels of 'slamming the door behind them' should Nazism never succeed. Maybe they wanted to kill a large part of the German people, maybe the foreign workers, maybe the prisoners of war – I do not know! Anyhow, I caused the poison to disappear for disinfestation purposes, as soon as it came in. There was some danger for me in this, but if I had been asked where the poisonous acid was, I would have answered that it was already in a state of dangerous deterioration and that therefore I had to use it up as disinfestant! I am sure that Guenther, the son of the Guenther of the Racial Theory, had, according to his own words, orders to secure the acid for the – eventual – extermination of millions of human beings, perhaps also in concentration camps. I have here bills for 2,175 kgs, but, actually about 8,500 kgs are involved; enough to kill 8 million people. I had the bills sent to me in my name; I said this was for reasons of secrecy; however, I did this in order to be somewhat free in my decisions and to have a better possibility of making the poisonous acid disappear. I never paid for these shipments in order to avoid refunding, which would have reminded the SD of these stocks. The director of Degesch, who had made these shipments, told me that he had shipped prussic acid in ampoules for the purpose of killing human beings. On another occasion Guenther consulted me about the possibility of killing a large number of Jews in the open air in the fortification trenches of Maria-Theresienstadt. In order to prevent the execution of this diabolic proposal, I declared that this method was impracticable. Some time later I heard that the SD had secured, through other channels, the prussic acid to kill these unfortunate people at Theresienstadt. The most disgusting camps were not Oranienburg, Dachau, or Belsen, but Auschwitz (Oswice) and Mauthausen-Gusen near Linz/Danube. These are the places in which millions of people disappeared in gas chambers or gas chamber-like cars. The method of killing the children was to hold a tampon with prussic acid under their nose.

I myself witnessed experiments on living persons in concentration camps being continued until the victim died. Thus, in the concentration camp for women, Ravensbruck near Fuerstenberg-Mecklenburg, SS Hauptsturmführer Grundlach MD made such experiments. In my office, I read many reports of experiments made at Buchenwald, such as the administration of up to 100 tablets of Pervitine per day. Other experiments – every time on about 100-200 persons – were made with serums and lymph, etc., till the death of the person. Himmler personally had reserved for himself the granting of permission to conduct these experiments.

At Oranienburg, I saw how all the prisoners who were there for being perverts (homosexuals) disappeared in one single day.

I avoided frequent visits to the concentration camps because it was customary, especially at Mauthausen-Gusen near Linz-Danube, to hang one or two prisoners in honor of the visitors. At Mauthausen it was customary to make Jewish workers work in a quarry at great altitude. After a while the SS on duty would say: 'Pay attention, in a couple of minutes there will be an accident'. And, indeed, one or two minutes later, some Jews were thrown from the cliff and fell dead at our feet. 'Work accident' was written in the files of the dead. Dr. Fritz Krantz, an anti-Nazi SS Hauptsturmfuehrer, often told me of such events. He condemned them severely and often published facts about them. The crimes discovered at Belsen, Oranienburg, etc., are not considerable in comparison with the others committed at Auschwitz and Mauthausen.

I plan to write a book about my adventures with the Nazis.

I am ready to swear to the absolute truth of all my statements.

[signed by hand:] Kurt Gerstein "

It is difficult to believe that anybody intended that this "statement" be taken seriously. A few specific points are examined here, but on the whole, I leave the reader to marvel at it. The part printed in the NMT volumes starts at "Hearing of the massacres" and ends at "one understands the greatness of your good work!" However, the remark about the BBC and the 25 million gas chamber victims is deleted. The version used by Eichmann's Jerusalem tribunal was far more drastically edited.⁴⁸¹

The original version of this book presented a very faithful reproduction of the English translation provided by the Nuremberg staff, a shortcut that I came to regret. For example, where it says above "Naked also in winter!", the French was "*aussi en hiver nus!*" However, in my original version it read "Naked in winter!", because that is how the Nuremberg staff rendered it. This caused a misunderstanding on my part that I passed along to readers; the events were supposed to have happened in August, but the incorrect translation implied it was winter. Thus, I have attempted here to bring the English text into closer conformity with the French language original. I have also been able

⁴⁸¹ Rassinier (1964), 93-106.

to use the subsequent work of Henri Roques, which was the basis for a 1985 Ph.D. dissertation at the University of Nantes.

In this book, it has been the practice not to give SS ranks since these would not be understood by most readers; an Oberscharführer sounds just as important as an Obergruppenführer. Approximate contemporaneous U.S. Army equivalents have been used instead (these correspondences are given in Appendix B). However, in presenting the Gerstein statement, this practice has not been adhered to on account of the document's lack of both descriptive and orthographic consistency. For example, Pfannenstiel is identified as both an "Obersturmbannführer" (Lieutenant Colonel) and as a "Sturmbannführer" (Major). In the translation of the Nuremberg staff he became a "Sturmführer." We see both the correct "Reichssicherheitshauptamt" and the incorrect "ReichsSicherheitsHauptamt" and, below, "Reichs-Sicherheitshauptamt." Below we also see both "Niemöller" and "Niemoeller." It is difficult to believe that a German could have followed such practices in a statement written out voluntarily.

No two people could possibly agree on how such deranged material should be presented in English. Do not assume that an obvious error is mine. As for the very long paragraphs, that is the way the document came. For the sake of the reader, I even inserted a couple paragraph breaks that were not there.

It may seem impossible to squeeze 700 or 800 people into a chamber 20 or 25 meters square and 1.9 meters high, but it is possible if one uses a scrap press, but in that case the victims would be literally, just as the document asserts, "crushed," and gassing would be quite superfluous.

It is of passing interest that in the original document "Warsaw" is not referred to via the German or French names for the city, but via the Polish "Warsawa."

As Rassinier has put it: if it is not true that Hitler made the said visit to Lublin-Majdanek,⁴⁸² if it is not true that 700 to 800 people can be contained in a gas chamber of 25 square meters, if it is not true that the Germans gassed 25 million people, and since the document contains little else, then we should ask: what does it contain that is true?

The role of Baron von Otter, a young Swedish diplomat during the war, was scrutinized in the postwar period. No confirmation of the Gerstein-Otter meetings had come from any Swedish source during the war, *i.e.*, before the document we have examined was created. Moreover, everybody knows that there was no friction in Sweden's relationship with Germany over the allegations attributed to Gerstein or anything similar.

In the immediate postwar period, the Allies were eager to organize support for their atrocity charges. Having the Gerstein document in hand but no Gerstein, they approached Baron Lagerfelt, a Swedish diplomat in London, to ask him to press von Otter to confirm the Gerstein story. Von Otter was then stationed in Helsinki, and Lagerfelt was a personal friend. These communications

⁴⁸² Rothfels (1953), esp. note 39a.

took place in July 1945, but Lagerfelt's success was only partial. He was able to compose an *aide-mémoire* for the Swedish Foreign Office, dated August 7, 1945, confirming the substance of what the Gerstein statement says about the meetings with von Otter, but he did not identify von Otter. The *aide-mémoire* identifies only "a foreign diplomat of a neutral country," and the country is not even named.⁴⁸³ In 1945, von Otter evidently refused to allow his name to be used to confirm the story in an official document. However, in submitting the document, Lagerfelt was covered by his private correspondence with von Otter.

Von Otter's wish for anonymity in a 1945 report to his own Foreign Office raises problems. First, there was a document, our 1553-PS, that named him, so the maneuver was futile. Perhaps at that early point von Otter did not grasp that a document naming him was to get into the public record. That view was understandable; the Nuremberg trials were months off, and 1553-PS had not yet become notorious.

The second problem in interpreting von Otter's wish for anonymity is that the Gerstein statement presents him as having told Gerstein, at a subsequent meeting in 1942, that he had reported the allegations to the Swedish Foreign Office. Why then the wish for anonymity in 1945? A more basic question: why was a 1945 report to the Foreign Office needed at all, if von Otter had reported the matter in 1942? We shall see.

The Gerstein matter followed von Otter around in the postwar period. The Swedish Foreign Ministry wrote to the Centre de Documentation Juive Contemporaine in Paris on Nov. 10, 1949, attaching a copy of the *aide-mémoire* of August 7, 1945, apparently to a letter naming von Otter. On Nov. 22, 1952, Dibelius, as Lutheran Bishop of Berlin, wrote to the Institut für Zeitgeschichte in Munich, confirming that he not only heard the story of the gassings directly from Gerstein, but had also learned from von Otter, "a few days" after the August 1942 train ride from Warsaw, of the encounter with Gerstein and the contents of his story.⁴⁸⁴

Von Otter does not seem to have confirmed the Gerstein story in a public forum until 1966, during an interview with Pierre Joffroy, author of a book on Gerstein. Von Otter then confirmed the meetings with Gerstein and the associated story, but was very vague on details. He also said that he never transmitted the Gerstein story to Dibelius, as Gerstein had supposedly asked, although he encountered Dibelius by chance in Berlin in the autumn of 1942. (We see that at least one distinguished citizen lied! I think the liar on this point was Dibelius.) On May 29, 1981, von Otter testified in a French trial similarly. In March 1983, von Otter stated in a television interview that his alleged 1942 report of the Gerstein encounter to the Swedish Foreign Office was only oral, not written. Moreover, he never made a personal memorandum of the encounter.⁴⁸⁵ That resolves the puzzle of the quest for anonymity in 1945, and the

⁴⁸³ Roques, 312.

⁴⁸⁴ Rothfels (1953), esp. 181 and note 10.

⁴⁸⁵ Roques, 309-313. On the 1983 television interview Roques cites Alain Decaux, *L'Histoire en*

need for a report in 1945. There was no 1942 report to the Swedish Foreign Office. Add that to the 25 million etc., as a falsehood in the document.

As for Dibelius, although he had been a leading member of Hugenberg's Nazi linked DNVP before 1933, he became associated with the Niemöller led church opposition to the Nazis after 1933. Niemöller was incarcerated in 1935, but Dibelius was allowed to go free, and then he vanished into the obscurity of a minor post in a church welfare organization, being made Bishop after the war ended in 1945. It is not correct to characterize Dibelius as an active member of the wartime resistance, as the Gerstein statements do, thereby inflating his significance well beyond what the facts warrant.⁴⁸⁶

In the relevant reports of Cesare Orsenigo, the Papal Nuncio in Berlin, that have been published by the Vatican, there is of course no reference to Gerstein. See Appendix E.

A German version of the "Gerstein statement," of essentially the same content, was produced about a year after Gerstein's disappearance. His wife said that Gerstein had, unknown to her at the time, deposited it among their belongings at the Hotel Mohren in Rottweil. Frau Gerstein's discovery of such a document in the dark days of 1946 naturally buttressed her status as the wife of Saint Gerstein rather than the wife of ordinary SS officer Gerstein, an enviable position for a German at the time. The German version of the "Gerstein statement" is typewritten and unsigned and reproduced by Roques.⁴⁸⁷

What is presented above is what would normally be considered the "Gerstein statement," but the statements allegedly (according to document 1553-PS) deposited by Gerstein in various languages in the spring of 1945 actually continue:

"Kurt Gerstein, additional statement.

In my flat in Berlin W 35, Buelowstrasse 47, second floor, left, I was surrounded by a circle of anti-Nazis. Here are some of their names:

Major Lutz Reis, now at Hamburg, Glasurit-Works.

Dr. Felix Buss, chief legal counsel to Telefunken, Berlin, SW 11, Hallesches Ufer 30.

Director Alex Menne, Hamburg, Glasurit-Works.

Pastor Buchholz, chaplain of the Pleetzensee prison, who accompanied the officers of July 20, 1944 to the scaffold. These officers as well as my good friend, Pastor Martin Niemöller, smoked the cigarettes and cigars I got into the prison for them.

Pastor Mochalski, who replaced Pastor Martin Niemöller at the Annon Church at Dahlem.

Dorothea Schulz, secretary of Pastor Niemöller.

Mrs. Arndt, secretary of Pastor Martin Niemoeller at Dachau.

Emil Nieuwenhuizen and his friend Hendrik, from Phillips-Eyndhoven, deportees whom I had met at Church and who, for a long time already

Question – 2.

⁴⁸⁶ Mosse, 245. *New York Times* (Feb. 1, 1967), 39.

⁴⁸⁷ Roques, 229-241.

were my guests twice or three times a week. They had meals at my place, and listened to the wireless.

Director Haueisen, Berlin NW 7, Mittelstrasse, Francke printing works.

Herbert Scharkowsky, editor, Scherl-Press.

Captain Nebelthau and his wife, now at Kirchentellinsfurt-Wurttemberg.

Dr. Hermann Ehlers, trustee of the Niemoeller anti-Nazi resistance Church.

Dr. Ebbe Elss, same as Dr. Ehlers.

Other references: General Superintendent D. Otto Dibelius, 'chief of the Church' resistance against Nazism.

Pastor Rehling, Hagen-Westphalia, active in the Westphalia Church anti-Nazi resistance movement.

Praeses Dr. Koch, Bad Oeynhausen, likewise.

Baron von Huene, anti-Nazi professor of the University of Tuebingen.

Bernhard J. Goedecker, Fabrikant, Munich, Tizianstrasse, anti-Nazi.

Director Franz Bäuerle, Munich, Siemensstrasse 17, anti-Nazi.

The Catholic Priest, Valpertz, Hagen-Westphalia.

Pastor Otto Wehr, Sarrebruck.

Pastors Schlaeger and Bittkau, Neuruppin near Berlin.

August Franz and his entire family, great anti-Nazi, Sarrebruck, now at Talheim-Wurttemberg.

Doctor Straub, Metzingen-Wurttemberg, and family.

[unsigned]"

With the exception of Niemöller and Dibelius, I recognize none of the names on the list of "anti-Nazis" in connection with any known wartime activities, anti-Nazi or otherwise. The only one I recognize in any connection is Dr. Hermann Ehlers, who became a leading CDU politician after the war and who died in 1954. It may be that the person identified as "Praeses Dr. Koch" is supposed to be Dr. Karl Koch, a Protestant theologian who was a member, along with Dibelius, of the DNVP in the Weimar days and who died in 1951.

The next part of document 1553-PS is a letter to Gerstein from DEGESCH regarding the preservability of the Zyklon and the possibilities for future shipments in the face of bombing attacks which had destroyed a plant. The letter would be worth reproducing here only if it, too, were in French (it is in German). The next part of the document is a short handwritten note:

"According to the annexed notes, the prussic acid was requested by the Reichs-Sicherheitshauptamt, Berlin W 35, Kurfürstendamm, by order of SS Sturmbannführer Guenther. I was in charge of this particular job and I performed my duties very faithfully, so that once the acid had arrived at Oranienburg and Auschwitz, I could have the boxes disappear into the disinfection rooms. Thus it was possible to prevent a misuse of the acid. In order to avoid drawing the attention of the Reichssicherheitshauptamt to the presence – or, as I should say, to the absence – of these stocks, I never paid for these shipments, the bills for which went to the same address, that

is, my own. In this manner, it was possible to have the acid disappear as soon as it had arrived. If the absence of the acid had been noticed I would have answered: It is a mistake made by the local disinfection office which did not know, and should not have known, either, the real destination; or I would have said: The acid had become putrefied and it was impossible to keep it any longer.

[signed:] Gerstein"

The final part of the document is the note in English:

"Bergassessor a.D.

Kurt Gerstein

Diplomingenieur

Domicil permanent:

Tuebingen/Neckar, Gartenstr. 24

26 April 1945

My report is intressant for Secret Service. The Things, I have seen, no more than 4-5 others have seen, and these others were nazies. Many of responsables of Belsen, Buchenwald, Maidanek, Oswice, Mauthausen, Dachau, etc. were men of my service, daily I have seen them in my double position.

1) SS Fuehrungs-Hauptamt, D, Sanitary-service and

2) Reichsarzt SS and Polizei, Berlin

I am in a situation to say the names and crimes of in reality responsables of this things, and I am ready to give the material for this accusation in World-Tribunal.

My-self, cordial friend of reverend Martin Niemöller and his family (now at Leoni/Starnberger See/Bavaria!) I was after two prisons and concentration-camp agent of 'confessional-church,' SS-Obersturmführer and compartment-chief in SS-Führungshauptamt and of Reichsarzt SS and Polizei, a dangerous position!

The things I have seen nobody has seen. 1942 August, I have made my reports for Svenska legation in Berlin. I am ready and in situation to say all my observations to your Secret-Service.

The secretary of Svenska legation Berlin, now at Stockholm Baron von Otter is ready to be wittnes of my relation of 1942 of all this cruelty – I propose to demand me for this informations.

Mr. Niemoeller

Mr. Stalin junior

Mr. Schuschnigg

at Dachau.

They are deported, nobody now, who they are. Please do not publish my report bevore exactement now: Niemoeller is liberated or dead.

Gerstein"

The remainder of document 1553-PS is the collection of Zyklon invoices. I have made no corrections in the above note in "English." Clearly, it was composed by a person who knew something of the French language. "Mr. Stalin junior" is no doubt a reference to Stalin's son, who was a POW in Germany. Schuschnigg was the Austrian Chancellor at the time of the Anschluss; he and Niemöller had been detained at Dachau for some time. Rassinier has provided an interesting discussion of Niemöller.⁴⁸⁸

⁴⁸⁸ Rassinier (1964), 35-39.

Appendix B: SS Ranks

The SS ranks and their approximate U.S. Army equivalents are as follows:

**Table 12: SS ranks and their approximate
U.S. Army equivalents**

U.S. ARMY	SS
Private	SS Mann
Private First Class	Sturmmann
Corporal	Rottenführer
Sergeant	Unterscharführer
Staff Sergeant	Scharführer
Technical Sergeant	Oberscharführer
Master Sergeant	Hauptscharführer
First Sergeant	Sturmscharführer
Second Lieutenant	Untersturmführer
First Lieutenant	Obersturmführer
Captain	Hauptsturmführer
Major	Sturmbannführer
Lieutenant Colonel	Obersturmbannführer
Colonel	Standartenführer
Colonel	Oberführer
Brigadier General	Brigadeführer
Lieutenant General	Gruppenführer
General	Obergruppenführer
General of the Army	Oberstgruppenführer

One can exercise a certain amount of choice on this subject. The three grades of *Gruppenführer* are sometimes equated with Major General, Lieutenant General and General, respectively. An *Oberführer* is sometimes described as a “Senior Colonel” or a Brigadier General; in the latter case a *Brigadeführer* is equated with a Major General.

These ranks had their origin in the early days when the SS was something of an offshoot of the SA, which had similar ranks.

Appendix C: Deportation of Jews

The six booklets which are the Netherlands Red Cross report entitled *Auschwitz* are actually about the approximately 100 transports of Jews which left the Netherlands, the first leaving on July 15, 1942, and the last on September 13, 1944. Auschwitz was the immediate destination of about two-thirds of the deported Jews, although large numbers were also sent to Sobibór, and some were sent to Theresienstadt, Bergen-Belsen and Ravensbrück. The Netherlands Red Cross (NRC) data is exhaustive in regard to all matters pertaining to the transports while they were in the Netherlands; the dates of departure, the destinations of the transports, and the numbers of people in each transport, with breakdowns of the numbers according to sex and age. The authors assume that all Jews whom they are unable to account for, after the Jews reached their immediate destination, were gassed or perished in some other manner. Thus, they conclude that a majority of the approximately 100,000 Jews deported from the Netherlands perished, since, obviously, their study is very short on data regarding what happened at the camps when these people reached them. There are, however, exceptions to those statements; there is data regarding the evacuation of Auschwitz in 1945 and there are other bits, *e.g.*, data from the Monowitz hospital. The most significant data, however, is what is said to be the registration and death record from the Birkenau men's camp for the period July 16 to August 19, 1942, which is presented in volume two of the report. Because the NRC also provides detailed data regarding the Jewish transports from Westerbork (transit camp in the Netherlands) during this period, a comparison can be made, and the comparison (as Reitlinger admits) contradicts the claim that a majority or even a significant number of the Jews were immediately gassed on arrival at Auschwitz. There were thirteen transports from Westerbork in July and August 1942, and they were composed as follows:

Table 13: Men transported from Westerbork in July and August 1942

The data said to be from the Birkenau men's camp is now presented, in order to be compared with the preceding Westerbork data. Column 1, below, gives the times (morning, M, and evening, E) of the roll-calls at Birkenau, column 2

gives the date of the roll call, column 3 gives the total number counted in the roll call, column 4 gives the number who died between roll calls, column 5 gives the number of new arrivals registered between roll calls, and column 6 gives the number lost between roll-calls on account of release or escape. In column 7 are comments on the origins of the various transports to the camps, and the transports from Westerbork are indicated. Pithiviers, Drancy and Beaune la Rolande were assembly points in France for Jewish transports, and Mechelen had the same function in Belgium. The transports from Slovakia were probably Jewish transports, but the composition of those from Poland is rather problematic. Where "various nationalities" (var. nat.) are indicated, the transports were most probably composed predominantly of political prisoners and ordinary criminals. Column 8 gives registration numbers assigned to the people indicated in column 5.

TOTALS (JUL. & AUG.)			6507	13173	5		

To give an example of interpretation of these figures, we see that between the evening of July 16 and the morning of July 17, 1942, the Westerbork transport of July 15 arrived at Auschwitz, and that 601 men from this transport were registered in the Birkenau men's camp and assigned registration numbers 47087-47687. During this period, 30 men also died in the camp, so the net change in the roll-call figure is $601 - 30 = 16848 - 16277 = 571$. Note that the 601 men from the Westerbork transport of July 15 are approximately the total men that started out on that transport, if one subtracts boys through 15 years of age. Since the table of Westerbork deportations has a separate column for "Women with children to 15 years," it is most probable that such children went with the women.

We have taken the liberty of making two corrections of obvious errors in the Birkenau men's camp data. The NRC report specified that 43 died between the evening of August 5 and 6, but a figure of 44 deaths brings agreement with the roll-call figures and the total of column 4. Also, the NRC report specifies that the Mechelen transport of August 15 received registration numbers 59345-59699, an obvious error which has been corrected.

The increments in registration numbers in column 8 do not agree in all cases with the numbers reported in column 5. Indeed, this is the case with the majority of transports which arrived between July 17 and July 24, and it is also true of the transports which received registration numbers 56856-57308. However, in all other cases, the registration numbers in column 8 agree with the figures in column 5.

When boys through 15 years of age are subtracted from the total of men in the various deportations from Westerbork, the resulting figures are in good general agreement with the numbers reported registered in the Birkenau men's camp, although for reasons that one can probably guess, the agreement is not perfect. There were probably small numbers who either joined the incoming transports and are not listed as such, or numbers who were not accepted into Birkenau for various reasons and sent to another destination. The largest unaccounted differences are in connection with the Westerbork transports of August 7 and August 10, where about 100 men are missing in each case in the registration at Birkenau.

This data, plus the one volume of the Birkenau Death Book (which is also discussed in vol. 1 of the NRC reports, except that it is referred to as the Auschwitz Death Book there), confirm the WRB report claim that there was a great epidemic at Auschwitz in the summer of 1942, forcing work there to stop. We know of no data covering a substantially later period, which reports comparably high death rates at Auschwitz, although, as explained in the text, the death rate there was always deplorably high from 1942 on.⁴⁸⁹

⁴⁸⁹ Compare Note 229, p. 152; Editor's remark: For a more comprehensive analysis of a vast amount of documents accessible in the 2020s on deportations to Auschwitz, see Mattogno (2023a), Part 2, 15-122.

Appendix D: The Belsen Trial

Josef Kramer's two statements, as they appear in Phillips, ed., *Trial of Josef Kramer*:

"Statement Of Josef Kramer

I was born on 10th November, 1906, at Munich. I am married and have three children. I volunteered for the S.S. in 1932; I had no training whatsoever, and was detailed for duty in a concentration camp. I did not volunteer for this specific kind of duty. When war broke out the S.S. was taken over by the Army and I volunteered for active service, as I would have preferred a fighting job, but I was told that I would have to do the job for which I was detailed. My first rank was Unterscharführer and my promotion to Scharführer and Oberscharführer was in 1934 and 1935. I cannot remember the dates.

Dachau. In 1936 I was in the office of the concentration camp at Dachau. The Kommandant of that camp was Standartenführer Loritz. There were only German prisoners in the camp. I cannot be absolutely certain, but as far as I can remember, they were all German. The S.S. Unit was Wachtruppe, Ober-Bayern. There were only political prisoners, criminals and anti-socials in this camp. Anti-socials are people like beggars and gypsies and people who do not want to work. No death sentences were carried out in the camp. The only cases in which people were killed was when they were trying to escape, in which case the guard had orders to shoot. In the case of any shootings, whilst prisoners were trying to escape, investigations were made by the Police. I left this camp at the beginning of June 1937.

Sachsenhausen. From Dachau I went to Sachsenhausen Concentration Camp. I had been promoted to commissioned rank, outside the establishment, to Untersturmführer. When I went to Sachsenhausen I was on the establishment there. The prisoners at Sachsenhausen consisted of the same three types as at the previous camp. The Kommandant of the camp was Standartenführer Baranowsky. There were no death sentences carried out in this camp. I was in charge of the mail department and therefore did not know everything that was going on, but have heard occasionally that people have been shot while trying to escape.

Mauthausen. My next concentration camp was Mauthausen in Austria. This camp was just being built when I arrived. The Kommandant was Standartenführer Ziereis. Here I had the same rank as before. Whilst in this camp I was promoted to Obersturmführer. I think this was in January, 1939. I was a sort of adjutant in charge of the office and at the disposal of the Kommandant. The prisoners were all Germans and of the same three types as I have described before. The last type, i.e. rogues and vagabonds,

were mainly Austrians, as there seemed to have been many when Austria was taken over by Germany. There were between 1500 and 2000 prisoners and they were all men. This includes Jewish prisoners. There was sufficient room in the camp for all prisoners when I was there. None of the prisoners knew at the time they arrived when they were going to leave. There were only a few who had a sentence like three months or six months, and the biggest part of the prisoners were there for an undefined period. Solitary confinement and solitary confinement with bread and water, or extra work on Sundays, were the sentences awarded for breaches of discipline. The prisoners were never beaten, nor do I know of any case of shooting. There were prison-breaks, but I was never present when somebody tried to escape. I was in the office and the telephone would ring and one of the guards would report that one of the prisoners had tried to escape. It was my duty then to go out and see where the prisoner worked and how it was possible for him to escape. We then notified the police and gave particulars of the person who had escaped. The instructions were that no prisoners had to go beyond a certain border-line. If a prisoner did, the guard had to challenge him three times with the words, 'Halt, or I shoot,' then first fire a shot in the air and only the second shot to kill. It is difficult to say how many shootings of this kind took place whilst I was at the camp because it is such a long time ago. I think that 10 to 15 people were shot, but I cannot say exactly. Every case of shooting had to be reported to the authorities at Mauthausen and at Linz. The nearest big town carried out an investigation. If someone was shot at, or shot whilst escaping, the guard was immediately put under a sort of open arrest, but none was ever convicted of wrongful shooting. Most of the people who were shot in this manner were criminals or vagabonds, the reason being that the larger part of the inmates of the camp belonged to that category.

The deaths that occurred were mostly from natural causes. When somebody died his relatives and the authorities, who had sent them to the concentration camp, had to be notified. There was one very severe winter when the deaths rose, but otherwise there were very few deaths. The prisoners were kept in wooden huts with three-tier beds, 250 to 300 in a hut. Whilst I was at this camp, Obergruppenführer Eike, who was in charge of all concentration camps, visited the camp three or four times, but I cannot remember the dates. There were no war prisoners in this camp. A few more political prisoners came in, but there were no great increases. Their nationality was mostly Austrian. There was no member of the former Austrian Government or of Schusnigg's Party either in Dachau or Mauthausen. I was in charge of the office and I dealt with the incoming and the outgoing mail on behalf of the Kommandant. I would read the mail to him and he would give me his orders, which I would pass on to the various sub-commanders. The powers of the Kommandant, with regard to punishment of prisoners, were not exactly laid down, but I think he could give up to 21 days. He was the only one who had disciplinary powers. I do not know the

number of prisoners when I left in 1940, but the camp was full. The strength was recorded every day, but I cannot remember now what the number was. Some of the prisoners were sent away to other camps. These transfers were made not according to the type of prisoners but according to the type of work we wanted done, and according to their trades. Whilst I was there, some people were released back to freedom. I cannot remember whether they were political prisoners or others, but I remember that on Hitler's birthday, 20th April, 1940, I saw 50 prisoners in the courtyard who were going to be released.

Auschwitz. I went to Auschwitz in May 1940. I lived outside the camp in a village with my family. I had an office in the camp where I worked during the day. The Kommandant of the camp was Obersturmführer Höss. I was adjutant. I do not know what the number of the staff was when I came. The biggest part of the prisoners at Auschwitz were political prisoners of Polish nationality. There was very little there when I arrived, as the camp had just been built. All that was there when I left, four months after my arrival, were stone buildings which had been built by the Poles. There had been men, women and cattle living in the wooden buildings. The stone buildings were empty. The former inhabitants of the wooden buildings were shifted. When I first started, the camp staff consisted of only myself and one clerk, and there was only one S.S. Company for guard there. I cannot remember the name of the company, but they were referred to as 'Guards Company Concentration Camp Auschwitz.' This company had no 'Feldposte' number. The highest ranking officer was the camp Kommandant, after him came the Kommandant of the Guards Company, Obersturmführer Plorin. There were no officers, apart from the company commander. The platoons were commanded by warrant officers. There were three platoons per company and between 30 and 40 men in a platoon. This varied as required. Beside the camp Kommandant, myself, the clerk and the S.S. Company, there was nobody there. A second clerk came later. There were 40 or 50 S.S. men who did not belong to the Guards Company, who had administrative duties in the camp, such as in charge of the kitchen and of the barracks, etc.

I do not know the number of prisoners in that camp. It may have been between 3000 and 4000, but I would not like to commit myself. Untersturmführer Meyer was in charge of administration. I cannot remember his Christian name as I always kept well away from the others. The reason for that was that I had my family there. There was a doctor there and I think his name was Potau. He came from Upper Silesia. He died later on, but I cannot recollect this very well. There was another Untersturmführer, by the name of Meier (or Meyer), who was in charge of the prisoners. I think his Christian name was Franz. The Kommandant issued orders to the S.S. officer in charge of the guard. His orders came from the next highest S.S. formation. This formation was S.S. Wirtschaftsverwaltungshauptamt, Berlin, Amtsgruppe D, Berlin, Oranienburg.

When prisoners arrived we were notified by the Gestapo in Katowice. There were cases when prisoners came in who were brought by ordinary policemen, and they also brought files relating to them. They came mostly in batches. They arrived by train at Auschwitz station and were collected by car from there. The prisoners were all men. There were no questionings by the Gestapo in the camp. All the questioning was done before the prisoners arrived. There was one official of the police on the camp staff who dealt with criminals against whom proceedings had been taken before. I cannot remember his name. He only stayed a short while and was then exchanged for another one. When the prisoners arrived, some were healthy and some were not, but none showed any sign of ill-treatment or malnutrition. I think that during the time I was there, there were no cells for solitary confinement, but, as I say, the camp was only in its initial stages. The same rules as to German political and German prisoners were applied to the Poles and, later, to the Russians. There was no difference. One of the stone buildings was reserved for a hospital. This stone building did not differ in any way from the other buildings. Beside the one doctor I have mentioned, there was another doctor supplied from the interned people, among whom there were many doctors and medical students. It was not within my power to give any orders to the medical staff as the doctors came immediately under the Kommandant. The rate of deaths was roughly one per cent, in the summer or possibly one and a half per cent, this was a weekly average. These were natural deaths and it depended upon what was wrong with them when they came in. Reports were made by the camp doctor and I, as adjutant, saw them. I received an average of 30 of these reports per week. The prisoners who had died were burnt. There were prisoners working in the crematorium under orders of guards. The ashes were sent to the relatives if they required them.

There were very few releases from this camp whilst I was there. These releases were authorized only by the Gestapo in Berlin, for political prisoners; or by the police authorities for ordinary criminals. The Gestapo organization who dealt with the camp was the Gestapo Departmental Headquarters at Katowice. Whether there was another Headquarters between Katowice and the Central H.Q. in Berlin, I do not know. The Gestapo men were either civilians in plain clothes, or uniforms, with no distinguishing marks. Some of them wore an S.D. badge. The S.D. and the Gestapo were two different things. I depended upon the S.S. for my orders. So did the Kommandant of the camp. The Gestapo, however, dealt with the political prisoners within the camp. All corporal punishment had to be authorized from Berlin. The camp authorities could not authorize any corporal punishments. In the beginning, corporal punishment was administered by the guards, but, later on, this was forbidden by Berlin, and the prisoners had to administer the punishment themselves. I do not know why this order came from Berlin. It was signed by Gruppenführer Glücks and came from Oranienburg, Berlin.

Dachau. Between 15th and 20th November, 1940, I went back to Dachau. So far I had always been employed in the office, first as clerk, then as adjutant, and now I should get to know the work immediately connected with the prisoners. I was to be trained to become a Lagerführer. My transfer was authorized by the Central S.S. organization in Berlin. When I arrived in Dachau the camp was in perfect running order and consisted of 30 or 32 wooden buildings, all told, for housing the prisoners, including the hospital, etc. The number of prisoners in one barrack varied between 300 and 450. The total number of prisoners was between 13,000 and 14,000. There were three companies of S.S. (120 to 150 men in each company) to guard them, and the administrative personnel consisted of about 100 or 120. The officers of the Guards Companies were not professional S.S. They were people who had been called up from trades or professions, put in the Army, and then detailed to S.S. They were then from the S.S. detailed to their particular duties, e.g. concentration camps; they did not volunteer for these particular duties. They received their orders from the Kommandant who, in turn, received his orders from Berlin, Oranienburg. The Kommandant's name was S.S. Obersturmführer Piorkowski. The next in rank after the Kommandant was the Lagerführer, Hauptsturmführer Eill. I do not remember his Christian name. There was one officer in charge of administration, Hauptsturmführer Wagner. Then there were three company commanders whose names I cannot remember.

The prisoners were all men and consisted of criminals and political prisoners as before, and a new type, namely Poles and Russians, who had been prisoners of war and who were detailed for certain work, e.g. farming jobs, and who had committed minor crimes such as trying to escape or refusing to work, and they were therefore sent to the concentration camp. These prisoners of war were interned because they had committed these crimes. At this time there were only prisoners from the Eastern front, namely Poles and Russians. It has been pointed out to me that the war in Russia only broke out in June, 1941, whereas I left again in April, 1941. If this is so I must have mixed it up with Auschwitz. I was only there as a sort of trainee and had very little to do with the organization of the place. I cannot remember any prison-breaks. The death rate I cannot remember because it had nothing to do with me, but I know it was a very good camp.

There was a furniture factory and prisoners worked as carpenters and joiners, also as tailors and cobblers. Prisoners were only allowed out outside the camp in exceptional cases, such as for gardening. There were about forty to fifty new intakes per week whilst I was there. There were few transfers and very few releases. The prisoners came from the Gestapo in Munich. If they were criminals they came from the Police, also in Munich. Parties, organized by the camp administration, who visited the camp and going round the camp, were a regular feature about two or three times a week. These parties were formed mostly of prominent guests from abroad,

statesmen and politicians from countries allied to Germany. No high-ranking German officials ever visited the camp.

Natzweiler, April, 1941, to 10th or 15th May, 1944. My appointment at Natzweiler was Lagerführer and in October, 1942, I was appointed camp Kommandant. I had been promoted to the rank of Hauptsturmführer before I was appointed Kommandant. When I arrived at the camp the Kommandant was Sturmbannführer Huettig. The officer in charge of administration was Obersturmführer Faschingbauer. The doctor was Obersturmführer Eiserle. The O.C. Guards Company was Obersturmführer Peter. The administrative personnel consisted of 20 to begin with, and 70 to 75 in the end. The camp is a very small one. There were no prisoners when I arrived as the camp had just been built. When I left in May 1944, there were 2500 to 3000 prisoners, comprising the three usual categories: political, anti-socials, criminals and, later, Polish and Russian prisoners of war who had committed minor crimes or tried to escape or refused to work. There were also a few hundred prisoners from Luxembourg. I cannot quite say for certain whether there were any French prisoners there or not. The prisoners arrived with papers and their nationality was on these papers, but I cannot remember any details because I did not go through the papers myself. None of these people came in the camp direct; they all came from other concentration camps. I can, therefore, not say what they were in for, but as far as I know they were of the same three types as I have described before.

I cannot remember that, at any rate, prisoners have been lent for experiments to a doctor in Strassburg. I cannot remember Professor Pickard of Strassburg. It is quite impossible that experiments of any kind on prisoners have been carried out without my knowledge, as in both my appointments as Lagerführer and later as Lager Kommandant, I would have known. Obergruppenführer Glücks from the Ministry in Berlin came to inspect the camp twice in the beginning, once in the summer of 1941 and once in the spring of 1942. The visit of Gruppenführer Pohl took place at the end of April or the beginning of May 1944. The only things that Glücks enquired into were how many political prisoners, how many anti-socials there were. Foreigners figured as political prisoners. He did not ask for their nationalities. I do not know of any British prisoners having been there. I have never seen a document which shows British as the nationality of any prisoners in the camp. There were 15 wooden barracks in the camp and up to 250 prisoners to each of these barracks. The camp was on top of the hill and my office was in the camp boundary. I lived in the village at the bottom of the hill with my family. The officers were all married and lived with their families in the village. One change in the personnel which I can remember was that Obersturmführer Peter, who commanded the company of guards, was transferred and replaced by an Obersturmführer called Meier. I do not know any of the Rottenführer who were there. There was a crematorium at the camp. The death rate depended upon the season. There were about 7 to 8 per week in the good season and about 15 to 18 in the bad season. They

all died natural deaths. The same procedure of informing the relatives and the authority that had sent them to the camp was followed in this camp as in the others described before.

There was only one medical officer on the staff (Obersturmführer Eiserle), and four or five medical orderlies (German). There were doctors and medical students among the prisoners who assisted the M.O. [Medical Officer]. Many persons of over 50 years died of natural causes, such as heart diseases. Compared with other camps, the death rate in this camp was very low. I used to go into the doctor's surgery and he explained the various things, like medical supplies, he had there, but as it was in Latin I did not really know what it was all about. He never complained about lack of medical supplies. There were two barracks set aside for the hospital, one for the people who were only weak and the other one as a real hospital. There were 60 to 75 beds in the real hospital. The surgeon had facilities for carrying out minor operations but not major operations. For these people were sent to Strassburg. A document was signed when a person went there and it was signed again when he returned, and the death rate was shown in the books of the camp.

There were 20 to 25 prison-breaks whilst I was there, and ten of the prisoners who tried to escape were shot. Eight or nine were recaptured and brought back and the others got away. The eight or nine who were recaptured got between 14 and 21 days' detention, according to their age and physical condition. In four or five cases out of twenty, they were either whipped or beaten. The culprit got 10 or 15 lashes in each case. This was supervised by the Lagerführer and the camp doctor. When I was Lagerführer I supervised this myself. Generally speaking, when corporal punishment was administered, the number of lashes given varied between 5 and 25. The number was laid down in the order coming from Berlin. Twenty-five was the maximum. The doctor had to be present when corporal punishment was administered. I cannot recollect where a prisoner was unable to stand his punishment and fainted. If such a case had arisen, it would have been the doctor's duty to interfere as that was why he was there. The punishment was administered with ordinary wooden sticks, 3 or 4 feet long and about as thick as my thumb. the sticks were made of solid wood, as you find them in the woods around the camp. The punishment was administered by another prisoner, who was chosen at random, and in the following manner: the prisoner was made to bend down over a table, and the lashes were given on his backside, without his clothes having been removed previously. I never had any difficulties with prisoners who had to administer this punishment. They were given the order and they complied with it. If they had refused to comply with the order I could not have punished them for this refusal. The orders from Berlin were that so many lashes had to be administered by another prisoner, but the order did not say what should be done if one of the prisoners refused to beat one of his comrades.

There were no set rules for what crimes corporal punishment could be administered. It was up to the Kommandant to apply to Berlin for authority for corporal punishment to be administered. The application to Berlin had to say what kind of offense the prisoner had committed and what punishment he had been given already for offenses committed previously. This letter had to be signed by the Kommandant. The sort of offenses for which I would have applied to Berlin for authority for corporal punishment to be given was: 'This prisoner has already three or four times stolen food from his fellow prisoners' or for untidiness or for disobedience or for attacking a guard. The first thing that happened when somebody broke out of the camp and was brought back, was that the Criminal Investigation Department made investigation to find out whether he had committed any crimes whilst at large, and then he was brought before the Kommandant without any trial and the Kommandant ordered punishment. Every man who tried to escape had to be reported to Berlin and likewise had to be reported when he was brought back. The Kommandant could give him 21 days' detention without referring to higher authority, but could give corporal punishment only with authority from Berlin. Every member of the guard was armed with a rifle and there were machine-guns on the turrets. Whips and sticks were forbidden. The guards just carried rifles.

When the prisoners came in in a bunch they were all put in the same block. Eventually, they were sorted out into three groups, politicals, anti-socials and criminals, but never according to their nationalities. There were no strict rules as to that point, but it developed like this as we went along. The three above-mentioned categories were kept apart only in their living quarters. They worked together, fed together and could talk to each other. In the beginning the prisoners worked only in the camp itself. Later we opened a quarry nearby. Other work that was done was that airplane engines were taken to pieces and those parts were salvaged which could be used again. Fifteen to twenty prisoners were released while I was there. The order for releases came from Berlin. I do not know why the order came. They were all political prisoners and of German nationality.

The camp was surrounded by barbed wire – 3 meters high. There were towers at the corners of the camp with machine-guns. There was one row of barbed wire where the guards patrolled and then another row of barbed wire. The wire was not electrified in the beginning because there was no current, but later, when current was available, this was done, in the spring of 1943. I was Kommandant then. Two months before I left the camp eight or nine dogs arrived, who were used to assist the guard. They were controlled by the guards. I remember two incidents where prisoners tried to escape from the quarry, but I cannot remember that they were shot. During the whole of my three years I had only two shootings in the quarry. The other eight prisoners who tried to escape, whom I have already mentioned, tried to escape from the camp itself and not from the quarry.

The only hanging that took place was in the summer of 1943 and it was done on orders from Berlin. Two Gestapo agents brought a prisoner to the camp and showed me an order, signed by somebody in Berlin, saying that this man had to be delivered to my camp and had to be hanged. I cannot remember by whom this order was signed. I therefore detailed two prisoners to carry out the execution. A scaffold was built in the camp and the execution was carried out in my presence. The people present were: the camp doctor (Obersturmführer Eiserle), who certified that the cause of death was hanging, the two Gestapo agents who had brought the prisoner, the two prisoners who carried out the execution, and myself. I cannot remember the name of the prisoner; I think his nationality was Russian. I cannot remember his name because he never appeared in my books. He was only delivered to be hanged. It is quite impossible that any other executions took place whilst I was camp Kommandant. The other prisoners of the camp were not paraded for this execution. No authorized shootings or any other executions took place at the camp on orders from Berlin. I have never heard of any special, narrow cells where men were hanged by their arms. There were no special buildings for prisoners who were under arrest, and no solitary confinement cells. It is quite impossible that any execution by hanging prisoners by their arms was carried out without my knowledge. The only prison we had was a block which was separated by barbed wire from the rest and this one was used for people who had contravened camp discipline.

All the prisoners in this camp were men. I have never heard of a prisoner called Fritz Knoll at this camp. He was not a foreman, but he may have been one of the prisoners. I cannot remember his name. If someone had died on a working party it would have been reported to the office and the office would have reported to me, but I cannot remember such an incident having occurred. Every instance of a prisoner dying at work or through any other cause would be reported to the office, by the office to the Criminal Investigation official and by him to the Kommandant. My command and control over all happenings in the camp at Natzweiler was so complete, and my staff had such definite orders, that the execution of any prisoners without my knowledge during the time when I was Kommandant is an utter impossibility.

Only S.S. personnel were allowed to inspect the camps. Nobody else was allowed anywhere near it. This included army officers who were forbidden to enter any concentration camp. One could only go into a concentration camp with authority from the S.S. General Commanding in Berlin. S.D. personnel were not allowed in the camp either, without authority from Berlin. With the exception of Gruppenführer Glücks, who came from the Ministry in Berlin, and Obergruppenführer Pohl, nobody visited the camp for the two years I commanded it. Apart from these visits, I was answerable to no one, except on paper, to Berlin. I cannot remember any particulars of

the visit of Obergruppenführer Pohl at the beginning of May 1944. He came to inspect the camp and just had a good look round.

During the time I was Lagerführer I received the Kriegsverdienstkreuz (2nd Class) in the spring of 1943. There was no particular reason for this decoration. It was mainly for being Lagerführer for two years in that camp. I was put forward for the decoration by the Kommandant. I have also got the Kriegsverdienstkreuz (1st Class), which I received in January 1945. During the whole of the time I was at Natzweiler I was responsible for the camp. When I left I handed over to my successor. He was Sturmbahnführer Hartjenstein. The handing-over proceedings took place in my office, and I handed over the whole camp to him. The books were not handed over formally to my successor, they were not mentioned.

Auschwitz, 10th to 15th May, 1944, till 29th November, 1944. Auschwitz was an enormous camp to which many smaller camps in the vicinity belonged. As the responsibility for the whole camp could not be taken by one man, it was split, and I was put in charge of one part of the camp. I was Kommandant of that part, but as I came under the supreme commander of the whole camp, who was my superior officer, my duties were those of a Lagerführer, though my appointment was called Kommandant. I had under me in my part of the camp the hospital and the agricultural camp, which was an enormous camp and contained many thousand acres. The number of prisoners under my immediate control varied between 15,000 and 16,000 and 35,000 and 40,000, comprising male and female.

There were between 350 and 500 deaths a week. The death rate was higher among the men, the reason being that the influx from the working camp consisted mainly of sick people. When I speak of the death rate in Auschwitz, I mean that all these people died of natural causes, that is to say either from illness or old age. The death rate was slightly above normal, due to the fact that I had a camp with sick people who came from other parts of the camp. The only reason I can see for the higher death rate, not only at Auschwitz but at all concentration camps in comparison with civil prisons, was that prisoners had to work, whereas in civil prisons they had not to work.

In Auschwitz the prisoners went out to work at 5 a.m. in the summer and returned at 8 p.m., sometimes even later. They worked seven days a week, but on Sundays they returned at 1, 2 or 3 o'clock in the afternoon. The work was of an agricultural nature and all the work there was done by prisoners. The whole camp contained about 90,000 to 100,000 prisoners, but this is only a rough estimate. My superior officer, and the Kommandant of the whole camp, was Obersturmbannführer Höss. There were men, women and children in the camp. The majority of prisoners under my immediate control were Easterners, i.e. Poles and Russians. I have no reason to believe that there were any prisoners of war among them, although there might have been without my knowing it. As far as I can remember there were no British internees. I think the British prisoners were in the concen-

tration camp at Sachsenhausen and in another camp near Hamburg called Neuengamme. It is possible that there were some French people in my camp, but I cannot say for certain. There were more women than men prisoners.

I had three companies of S.S. under me to guard the camp. Some of the guards were men of the Waffen S.S., and there were women employed by the S.S. as wardresses. There were roughly 420 male S.S. guards and about 40 to 50 women guards. The men and women prisoners who were outside the camp in the agricultural part were invariably guarded by men. The women guards only guarded the prisoners within the compound. There were about 10 to 14 doctors for the whole camp, out of which two were detailed to my particular part of the camp. There was a hospital in each part of the camp, but the biggest was in my part. I cannot say exactly how many beds there were in the hospital; this depended on how close you could put the beds together.

Prisoners were housed in wooden buildings with three-tier beds. The men were separated from the women and the children were with their mothers. Married people were separated. There were 150 buildings all told, men and women camps together; about 80 or 90 were for men and about 60 for women; 25 or 30 buildings were set aside for the hospitals. The camp was only being started, and it was planned to enlarge it considerably.

All prisoners who died were cremated. There was no sort of service held when they died. They were just burnt. The cremations were carried out by prisoners. All I had to do when a prisoner died was to inform Obersturmbannführer Höss and he would deal with it. I had no administration in Auschwitz. All the prisoners were known by numbers only. I had nothing to do with meting out punishment in Auschwitz; that was all done through Höss. When I came to Auschwitz there was no corporal punishment for women, but I have heard it mentioned, and it was talked about in the camp, that there had been corporal punishment for women before, and that it had been abolished. The only way in which I was informed corporal punishment for women was not allowed was that conversation in the camp to which I have referred. I cannot remember with whom this conversation took place. If a case would have arisen in which a woman would have committed one of the crimes for which a man would have been beaten, I would have pointed out to the women guards that corporal punishment could not be administered to women. The only authority on which I could have placed this was that conversation shortly after my arrival. Even if corporal punishment for women would have been allowed, I would never have put it into practice, as such a thing is inconceivable to me. The punishment administered to women, if they had committed any of the crimes for which men were beaten, was that they were transferred to another working party where they had a dirtier type of work or longer hours.

When a request for labor came from Berlin, the prisoners had to parade before the doctor. I was very often present at these parades, but not always. The examination took place by the prisoners filing by the doctor without undressing. Then the decision whether a man or a woman was fit enough to be sent to work was made. If, however, somebody had to be examined to ascertain whether he was fit to receive corporal punishment, a proper medical examination was carried out. The reason why no proper medical examination could be carried out in the case of detailing people for labor was that the requests ran into thousands and the doctor would have been busy for days. This method of choosing people for work was the normal method applied in all concentration camps. There was nothing unusual about it.

There were four or five cases of people trying to escape whilst I was there. These attempts were made separately. Some of these prisoners got away. No prisoners were flogged; there were no executions, shootings or hangings in my part. I went through the camp frequently on inspections. The doctor alone was responsible for certifying the cause of death if a prisoner died. The doctors changed continuously. One of these doctors was Hauptsturmführer Mengele. I carried out inspections of the bodies of people who had died through natural causes in my capacity as Kommandant when I was wandering round the camp. Whoever died during the day was put into a special building called the mortuary, and they were carried to the crematorium every evening by lorry. They were loaded on the lorry and off the lorry by prisoners. They were stripped by the prisoners of their clothes in the crematorium before being cremated. The clothes were cleaned and were re-issued where the people had not died of infectious diseases. During my inspections I never saw prisoners who had died through physical violence. When a prisoner died, a doctor had to certify the time of death, the cause and the details of the disease. A doctor signed a certificate and sent it to the Central Camp Office. These certificates did not go through my hands. The two doctors worked daily from 8 o'clock in the morning until 8 or 9 at night. All efforts were made by these doctors to keep the prisoners alive. Medical supplies and invigorating drugs were applied. Two different doctors took charge of my part of the camp every day. I remember one very well, because he had been the longest period in my particular part of the camp and he had also served under my predecessor, Hartjenstein. I do not know how long he had been there. His name was Hauptsturmführer Mengele, as mentioned before.

The camp wire was electrified and the dogs were only used outside the camp compound to guard prisoners who were working on agricultural jobs. It was never reported to me that prisoners had to be treated for dog bites. No interrogations were carried out in the camps, and I have never done any interrogating at all whilst I was Kommandant. I sometimes sent people away for interrogation to the Criminal Investigation Officer, in which case they went to the Central Camp Office and were brought back

after the interrogation had been completed. I do not know who did the interrogating.

I have heard of the allegations of former prisoners in Auschwitz referring to a gas chamber there, the mass executions and whippings, the cruelty of the guards employed and that all this took place either in my presence or with my knowledge. All I can say to all this is that it is untrue from beginning to end.

Belsen, 1st December, 1944, till 15th April, 1945. On 29th November 1944, I went to Oranienburg, Berlin, to report to Gruppenführer Glücks. His appointment was Chef der Amtsgruppe D, which means that he was the officer in charge of the organization of all concentration camps within the Reich. He was responsible to Obergruppenführer Pohl, whose appointment was Chef der Wirtschaftsverwaltungshauptamtes der S.S. (head of the Administration Department of the S.S. at the Ministry): equivalent to a General in the Army. He said to me: 'Kramer, you are going to Belsen as Kommandant. At Belsen there are, at the moment, a lot of Jewish prisoners who will eventually be exchanged.' It was later, when I was in Belsen, that I learned that these Jewish prisoners were being exchanged against German nationals abroad. The first exchange took place between 5th and 15th December 1944, and was carried out under the personal supervision of an official who came from Berlin for that purpose. I cannot remember his name. His rank was 'Regierungs-Rat.' The first transport contained about 1300 to 1400 prisoners. Glücks said to me at the interview in Berlin: 'It is intended to turn Belsen into a camp for sick prisoners. This camp will take all sick prisoners and internees from all concentration camps in Northern and North-Western Germany, and also all sick persons among these prisoners who are working either in firms or with industrial firms.' He was referring to Arbeitseinsatzstellen, which means prisoners who have been allotted to peasants or industrial firms, coal mines, and the quarries for labor and for whom special camps have been erected on the premises. Responsibility for feeding and for accommodation is entirely the responsibility of the firm. Responsibility for administration remained with the parent concentration camp. He said: 'There are considerable numbers of prisoners working with industrial firms who are sick or physically unfit to do the work they are detailed for. All these prisoners will be drafted into Belsen Camp. It puts an unnecessary burden upon the industrial firms concerned and therefore these prisoners must be transferred. Which prisoners and how many Belsen is eventually going to hold I cannot tell you at the moment, because that will have to be worked out as we go along. The general rule is to be that every prisoner who through illness is absent from his work for more than 10 or 14 days will be transferred to Belsen. If and when these prisoners recover in Belsen, they will either be formed into new detachments and sent out to new jobs or returned to their old work, whichever may be more expedient. You see that this is going to be a very big task for you. I suggest that you go to Belsen now to look at the camp and see

how you get along. If you want any help you can either come back to Berlin or write.'

This is where the duty conversation came to an end. Glücks then asked me how my wife and children were, and I enquired into the well-being of his family. I also asked whether it would be possible when I took over Belsen Camp to move my family there. He told me that I would have to go to Belsen and have a look. If I could find a suitable house I should write to him and he would authorize the move of my household. This conversation took place between Gruppenführer Glücks and myself, there was nobody else present. These were the only instructions I received and I did not ask for any more. I did not think I would require any more instructions and was quite satisfied with my orders.

After the interview with Glücks I spoke to three officers whom I knew personally. They were: Standartenführer Maurer (he was in charge of the allocation of prisoners to camps and for labor); Hauptsturmführer Sommer (he worked in Maurer's department); and Sturmbannführer Burger (he was the man who supervised the administration in the various concentration camps). I did not have any conversation on duty matters with either of the three above-named people. They were friends of mine, and as I happened to be in the house, I went to their various offices to say 'Hello.' The leading doctor was a Standartenführer Dr. Lolling. He was the M.O. in charge of all concentration camps. I cannot remember any names of other people, but I can remember these four names because they either came to visit the camps or I saw their names on various letters coming from the Ministry.

I then travelled to Belsen, where I was received by Obersturmführer Schaaf. He was the officer in charge of administration. The next morning I went to the office and met Sturmbannführer Haas, the Kommandant, who knew that I was arriving from Berlin to take over complete charge of Belsen. I asked him how many prisoners the camp contained, and he said, 'Roughly 15,000.' He said that it was not much use to discuss matters in the office and suggested a tour through the camp. On that tour he pointed out changes and improvements which he still wanted to make. The camp was about 1½ kilometres long and between 300 and 350 metres wide. There were roughly 60 barracks, including accommodation for guards and stores; 40 to 45 were for the accommodation of the prisoners. The prisoners were made up of men, women and children; families were allowed to live together; otherwise men were separated from women. Six buildings in the men's camp, three in the family camp, and two in the women's camp served as hospitals. There was a crematorium in the camp.

I do not know of what nationality the prisoners were when I arrived, because there were no files or papers of any kind in the camp. It was impossible for me to know what kind of prisoners there were as they had been sent to Belsen because they were ill, from all concentration camps over the country. Many of them had lost their identification marks, and as there were no records it was absolutely impossible to tell who was who. I started

to keep my own records of the prisoners, but these records were all destroyed on orders which I received from Berlin about the end of March. I do not remember who signed these orders.

The personnel consisted of one Guard Company S.S. The O.C. of the company was Hauptscharführer Meyer. He came from somewhere near Hanover. He was of average height, about 1 m. 70; he wore spectacles, had hardly any hair and was about 50. Then there was Hauptsturmführer Vogler. He was the officer in charge of administration who took over from Schaaf, whom I mentioned before as officer in charge of administration on my arrival. The officer in charge of the Criminal Department was Untersturmführer Frericks. The Lagerführer (Obersturmführer Stresse) was transferred a few days after my arrival, and I was without a Lagerführer for over two months and had to do the job myself with only one N.C.O. as assistant, whose appointment was Rapportführer; he was Oberscharführer Reddhaser. The M.O. was Sturmbannführer Schnabel. A Hauptscharführer acted as dentist. He was later on promoted Untersturmführer. His name was Linsmeier. There were no other officers and I had no Adjutant. There were 60 to 70 N.C.O.s, 20 to 25 of whom were in the Guards S.S. Company and the others employed on administrative duties. One of the N.C.O.s employed was the N.C.O. who was Office Clerk to the Officer in charge of Administration. He was Unterscharführer Kuckertz. There was another senior N.C.O. in my office. His name was Unterscharführer Rang. He acted as Untersturmführer and Adjutant. Other N.C.O.s whom I remember are Oberscharführer Hilmer (N.C.O. Administration); Unterscharführer Lademacher (also N.C.O. Administration); Unterscharführer Wille (also N.C.O. Administration); and Unterscharführer Müller, who was in charge of the food stores. When I took over Belsen there were six officers, including myself. I had no senior N.C.O.s. When I took over there were three women on the staff. I cannot remember their names at the moment.

The death rate when I arrived was between 40 and 60 a week. When I entered the camp the Lagerführer had to report to me and had to say: 'There are so many in the camp; so many died yesterday; which leaves so many.' On my arrival a book was kept in which these figures were entered, but was later dispensed with. This book I had taken over from my predecessor. It was kept by the acting Lagerführer in his office. There was also another book in which the strength was recorded. The acting Lagerführer held a parade every morning to count the prisoners. On this parade every Blockführer reported the strength of his unit and the number of deaths that had occurred the previous day, and the Rapportführer added up the strength of the various blocks on a sheet of paper, making a grand total. This report included the number of deaths that had occurred the previous day. There were approximately 40 Blockführer on parade every day.

In January I took over a new camp, adjoining the old camp, in which there were 40 to 50 new blocks. I did not get any more staff when I took this camp over. Only later, when camps in Silesia were evacuated, guards

arrived with prisoners, thus putting up the strength of personnel. I was not always informed when transports of prisoners arrived; especially transports of prisoners evacuated from Silesia arrived without warning. There were transports with only 100 or 200 people, and others with 1500, 2000, 2500, etc. I had food reserves in the camp, and when a new batch of prisoners arrived I had to fall back on these reserves until I had reported the new strength and thus got additional food for the higher number of prisoners. There was no regular food transport; the railway should have brought the food whenever there was a train available. I am unable to say how many prisoners I had after this month because it was my orders that I had to sent out prisoners for work as fast as possible. The incoming prisoners were therefore balanced by those being sent out for work and the figures fluctuated every day. Every prisoner who was fit to work was sent out with working parties ('Arbeitseinsatz') to industrial firms. The other prisoners worked only inside the camp and for the maintenance of the camp.

On 1st December when I took over there were roughly 15,000 people in the camp; roughly 200 died in December; on 1st January there were roughly 17,000 people in the camp; 600 died in January; on 1st February there were 22,000 prisoners in the camp. From the 15th February onwards I am unable to say how many prisoners I had as no more books were kept, as this proved utterly impossible in view of the transports streaming in from camps in Silesia which were being evacuated and, as I have already said, the records which I had maintained I destroyed in March.

I do not know the number of deaths which occurred in this period at all, but the conditions in Belsen got worse from the middle of February till the middle of April 1945, when the Allies came. I inspected the camp daily during this period and was fully aware of the conditions and the great number of people who were dying. The death rate during the months of February, March and April gradually mounted until it reached 400 or 500 a day. This figure was due to the fact that if people were healthy I had to send them out on working parties and only retain the sick and dying. I was notified by the Stationmaster that a transport had arrived and I would have to collect the prisoners. The transports arriving were checked in by the guards only by numbers and not by names. About twice a week food was indented for from local depots and a return sent to the Ministry in Berlin, which was based on the figures given by the guards, who checked the people on entering the camp.

All prisoners received three meals a day. I cannot tell what the daily ration was as this was laid down by the food depot and was standardized. I never checked up on the rations from the depots, but I made sure that each prisoner had one litre of vegetable stew for the main meal, and in the morning the prisoner had coffee and bread, if available, and for the evening meal coffee and bread, again if available, and cheese or sausage. If the prisoners had worked on this diet it would have been insufficient for them to survive, but as they did not work I think it was enough to keep them

alive. I thought they could stand this diet for about six weeks, and after six weeks I was hoping to get some more food. The rations described above were the normal rations in any concentration camp at that time. The main point on which the food deteriorated was bread, as this was lacking entirely for two or three days running several times. It was absolutely impossible for me to procure enough bread to feed the number of prisoners I had. In the early days the bread had been supplied by local bakeries at Belsen. Later there were so many prisoners in the camp that the local bakeries could not supply the required quantity any longer, and I sent out lorries to Hanover and other places to fetch bread, but even then I was not able to get half the bread I required to feed prisoners on normal rations. Apart from bread, the rations were never cut down. Flour was supplied in lieu of bread and was employed in making meals. It turned out, however, that had we made bread of this flour the death rate would not have been so high. I went to the depot in Celle and then to the next higher authority in Hanover and put them in the picture as to what was going on in Belsen. I also pointed out to them that if a catastrophe was going to happen, I would not only disclose the facts but also make them responsible. I cannot remember whom I saw at either of these places. I have never applied to Berlin in these matters because they could not have helped me in any way. This was entirely a matter for the ration people in Celle and in Hanover. My visits to these depots resulted in extra rations of potatoes and turnips arriving some time later.

I remember one case of cannibalism quite well. It was reported to me that a prisoner had entered the mortuary and that parts of one body were missing. I put a guard on the dead bodies at night and that guard arrested a man the same night who had approached a dead body. This man was arrested, but before he could be interrogated next morning he hanged himself. Whether there were more cases of cannibalism I cannot tell, but I put a guard on the mortuary from that night onwards. That guard consisted of prisoners. I thought that the prisoners would guard the bodies against other prisoners. Whether they did or did not do so I cannot tell. The mortuary was not always in the same building, as the prisoners fluctuated to such a great extent. I had to shift the accommodation continuously and therefore the building detailed as a mortuary was not always the same. If changes took place, this building was cleaned by the prisoners and used for their accommodation the next day.

The camp doctor reported sick and was replaced by Dr. Klein at the middle of February. Roughly, on 1st March another M.O. arrived. His name was Hauptsturmführer Horstmann. Two days before the Allies arrived Horstmann left with the troops and only Dr. Klein remained. Apart from those two (Klein and Horstmann), there were no S.S. doctors in the camp. At the end of January Dr. Lolling, from the Ministry in Berlin, arrived on an inspection tour. I pointed out to him that if, as I was told in Berlin, Belsen was going to be a camp for sick people, I needed more doc-

tors. He said that there were none available at the moment, but that as soon as he had some he would send them. Dr. Lolling inspected the camp and was fully aware of the conditions prevailing there at the time when he inspected it. He spent a whole day walking through the camp with Dr. Schnabel and inspected it thoroughly. The measures taken were that Dr. Lolling took a list of requirements with him and said he would see to it that we got the necessary medical supplies. Even though I was Kommandant I did not know anything about the supply of medical equipment and medical stores. This I left entirely to the M.O. All medical supplies were asked for direct from Berlin (Dr. Lolling's department). This is all I know about this matter.

During my stay at Belsen there were 15 to 20 prison-breaks. Some of the prisoners trying to escape were shot whilst trying to escape. I do not know how many. Towards the end of December an order arrived from Berlin forbidding corporal punishment altogether. From that moment onwards no corporal punishment was meted out.

Between 20th and 28th February the M.O. notified me that spotted fever had broken out in the camp. This fact was certified by a Bacteriological Institute in Hanover. I therefore closed the camp and sent a report to Berlin. The answer from Berlin was that I had to keep the camp open to receive transports coming from the East, fever or no fever. The second time I wrote to Berlin was between 1st and 10th March, when I sent a complete report on the conditions prevailing in the camp. These two occasions were the only occasions on which I ever made any representations to higher authority. These two letters were addressed to the Verwaltungsgruppe B in Berlin. I did not go to Berlin myself as I was instructed at my interview in November, because that would have taken three or four days and there was nobody to carry on in my absence.

As far as I can remember, Gruppenführer Pohl inspected Belsen Camp about 20th March. He came with one other officer. I conducted Pohl right through the camp and pointed out conditions as they were. He did not come because of the letter I had written. He came on a routine inspection tour – 'Just to have a look at the camp.' Whether the letter I had written to the Central Office in Berlin was mentioned during our conversations I cannot tell. I pointed out conditions to him, and he said that something must be done. The first measure he suggested was to close the camp and put no more people into it. I suggested two measures to Pohl to cope with the situation: (a) no further transports to come in; and (b) the exchange of the Jews in the camp to take place immediately. The result of this was that he dictated a letter from my office, addressed to Berlin, saying that the exchange of Jewish prisoners had to take place immediately. This exchange did eventually take place during the last days of March, I do not know again where these prisoners were to be exchanged, but they left Belsen going to Theresienstadt. Between 6000 and 7000 people were sent away to be exchanged (three trainloads). These 6000 or 7000 constituted the entire

number of Jewish prisoners who were to be exchanged. They were transported in three train-loads, each train consisting of 45 to 50 trucks. I had orders to send off three consignments on three different days. Each time I detailed a few guards – I cannot remember how many – and there was an N.C.O. in charge of each train, probably a Scharführer, but I cannot remember. I do not know to whom these N.C.O.s had to report at the other end. All I knew was I had to send off three train-loads. I never saw these N.C.O.s whom I sent away, again.

I pointed out to Pohl that I wanted more beds and more blankets, and he agreed that in this matter, like as in the other matters, immediate help was required. The doctor and the officer in charge of administration also spoke to Pohl. The officer in charge of Administration pointed out his difficulties in obtaining food, whereas the doctor was satisfied with the position as he had just received a new consignment of medical stores. Pohl held his appointment in Berlin for roughly two years. Glücks was there much longer as he had been there already under Eike. Eike was later sent to the Western Front and afterwards to the Eastern Front, where he was killed.

I do not know what nationality any of the prisoners were of at Belsen as there were no papers sent with them and the only check was done by numbers. I therefore cannot tell whether there were any British subjects among the prisoners, but it is possible that there were. I have never heard of a prisoner called Keith Meyer, who was a British subject.

The female staff increased in number the same as the male staff, as women guards arrived with women transports from the east. All women in the camp were under my command, the same as the men. Twenty to 22 wardresses were still at Belsen when the Allies arrived, and approximately 26,000 women prisoners. Unless I received complaints from the prisoners themselves I had no means of ascertaining what treatment was meted out by the female guards, but I had complete confidence in those guards. The only criticism I had to make was that they were a bit too familiar with the female prisoners. I had the same confidence in the male guards. They were 100 per cent correct and I have never received any complaints from the prisoners. In February or March – I cannot remember the exact date – Oberaufseherin Volkenrath arrived and was put in charge of the women guards. I had complete confidence in her.

There was a crematorium in the camp and as long as coke was available all dead bodies were cremated. When there was no more coke available they were buried in mass graves. I have never seen a Red Cross official in any of the camps I had been to. I cannot tell why not. If a Red Cross official had called I would have rung up Berlin immediately to ask whether he was permitted to enter the camp, as nobody could enter the camp without permission from Berlin. What the answer would have been I cannot tell.

There were no standing orders from Berlin for any of the concentration camps I have been to as to: (a) the space allotted to individual prisoners; (b) sanitation, or (c) working conditions. This was completely left to the

discretion of the Kommandant. I can remember no standing orders or instructions from Berlin except with regard to visitors to the camp and to punishments. In all other matters the Kommandant had complete discretion. When Belsen Camp was eventually taken over by the Allies I was quite satisfied that I had done all I possibly could under the circumstances to remedy the conditions in the camp.

Further Statement of Josef Kramer

1. I relinquished command of Struthof-Natzweiler in May 1944, and handed over to Sturmbannführer Hartjenstein. At this time and for at least a year previously Buck was commanding Schirmeck, but there was no official connection between Schirmeck and Struthof. There was a Gestapo officer attached to me during my period at Struthof; his name was Wochner and he was sent by the Gestapo at Stuttgart. According to the district allocation Struthof should have been, in my opinion, in Strassburg Gestapo area, but I believe that in any case Strassburg Gestapo depended on Stuttgart.

2. With reference to the orders received to gas certain women and despatch them to Strassburg University, as sworn by me before Commandant Jadin of the French Army, I give the following details: The orders I received were in writing signed by order of Reichsführer Himmler by Gruppenführer Glücks. As nearly as I can remember they stated that a special transport would arrive from Auschwitz and that the people on this transport were to be killed and their bodies sent to Strassburg to Professor Hirt. It further said that I should communicate with Professor Hirt as to how the killing was to take place. This I did and was given by Hirt a container of gas crystals with instructions how to use them. There was no regular gas chamber in Struthof, but he described to me how an ordinary room might be used. I do not know any more of the professors concerned with Hirt, but I do know that there was in one of the departments a Professor Bickerbach.

3. The first time I saw a gas chamber proper was at Auschwitz. It was attached to the crematorium. The complete building containing the crematorium and gas chamber was situated in Camp No. 2 (Birkenau), of which I was in command. I visited the building on my first inspection of the camp after being there for three days, but for the first eight days I was there it was not working. After eight days the first transport, from which gas chamber victims were selected, arrived, and at the same time I received a written order from Höss, who commanded the whole of Auschwitz Camp, that although the gas chamber and crematorium were situated in my part of the camp, I had no jurisdiction over it whatever. Orders in regard to the gas chamber were, in fact, always given by Höss, and I am firmly convinced that he received such orders from Berlin. I believe that had I been in Höss's position and received such orders, I would have carried them out, because even if I had protested it would only have resulted in my being tak-

en prisoner myself. My feelings about orders in regard to the gas chamber were to be slightly surprised, and wonder to myself whether such action was really right.

4. In regard to conditions at Belsen, I say once more that I did everything I could to remedy them. In regard to the food, the prisoners throughout March and April 1945, got their full entitlement, and in my opinion this entitlement was perfectly sufficient for the healthy prisoner, but from the middle of February onward sick people began to come in and I felt they should have more food. I sent my Messing N.C.O., Unterscharführer Müller, to the food depots in Celle and Hanover, but he was told that no further food could be issued because we were already getting our entitlement. I did, in fact, get some food from the food store in the Wehrmacht Camp at Belsen, but it would have been no use my asking for more from them because they were not my correct authorized depot.

5. In regard to accommodation, when I was ordered to take 30,000 more people in early April, when the camp was already more than full, I appealed to Lieutenant-General Beineburg in the Kommandantur in the Wehrmacht Camp at Belsen and it was he who arranged for 15,000 prisoners to be lodged in the barracks in that camp. He had to get special permission over the telephone to do this. I never appealed to the General for help on the food situation or any other difficulties because I knew that he would not have been able to help me, in that he had no jurisdiction. I do not consider that I should have appealed to him because I knew that he could not have helped. Furthermore, I do not believe that anybody in Germany could have altered the food entitlement for the prisoners in the camp because I do not believe that the food was available. It surprises me very much to hear that there were large and adequate stocks of food in the Wehrmacht Camp. Nevertheless, I still feel that an appeal to the General would have been useless.

6. I have been told that some of my S.S. staff were guilty of ill-treatment and brutality toward the prisoners. I find this very difficult to believe and I would trust them absolutely. To the best of my belief they never committed any offenses against the prisoners. I regard myself as responsible for their conduct and do not believe that any of them would have infringed my orders against ill-treatment or brutality.

7. The Hungarian troops took over guard duties around the perimeter of my camp during the first days before the British arrived. I agree that during this period more shootings took place than was customary when the Wehrmacht were doing guard. I remember the incident on 15th April 1945, in the late afternoon, when I went with British officers to the potato patch and was ordered to remove the dead body of a prisoner from that patch. I think it is wrong that this man should have been shot and have no doubt at all that it was either the Wehrmacht or the Hungarians who were responsible.

8. *The rifle range which is visible at the north-west corner of my camp was used fairly regularly by the Wehrmacht two or three days a week.*”

Appendix E: The Role of the Vatican

The implications of a lie on the scale of the Jewish extermination hoax cannot be constrained to bear on isolated subjects such as Israel or World War II revisionism. Before not many years, it was realized that, during and after the war, Pope Pius XII had never spoken out in condemnation of the supposed exterminations of Jews. This fact naturally raised some problems for the propaganda history of World War II. The specific event that ignited general controversy was Rolf Hochhuth's play *Der Stellvertreter* (*The Deputy*). Supposedly based on the "Gerstein statement," the play performs a completely unscrupulous job of character assassination on Pius XII by relating events inconsistent with the "statement," thereby piling invention on invention. However, the play was unquestionably the catalyst for the discussion of a fairly important fact, although the ensuing discussion, carried on among people who had been completely taken in by the hoax, never clarified anything and only amplified the confusion.

It is no more necessary, here, to explain why Pius XII did not speak up about exterminations of Jews than it is necessary to explain why he did not protest the extermination of Eskimos. However, the role of the Vatican is of some interest to our subject, so a few words are appropriate.

First, a few background remarks. During the period 1920-1945, the Vatican considered Communism to be the principal menace loose in the world. This being the case, it was open to friendly relations with the Fascists after their assumption of power in Italy in 1922 and the Concordat of 1929, reversing the earlier pre-Fascist anti-clerical policies of Italian Governments. This was the basis for relations that remained generally good until Mussolini fell from power in 1943.

When Hitler came to power in 1933, the Vatican had similar hopes for an anti-Communist regime that would make domestic peace with the Church. At first, it appeared that events would unfold as in Italy, and the Concordat of 1933 with Hitler (still in force), guaranteeing the church a portion of tax revenues and further defining the proper spheres of Church and State, reinforced this expectation.

Things did not turn out so well, however. Although the Concordat had defined the Church's rights in the sphere of education and youth culture in general to the satisfaction of the Vatican, the Nazis found it difficult to live with such terms and found various ways of undercutting the Catholic position without formally repudiating the terms of the Concordat. For example, the Catholic Youth associations were forbidden to engage in sport on the shrewd calculation that such restrictions of such associations to the realm of the truly spiritual would guarantee that they would wither. There were also various means of intimidation employed against parents who insisted on sending their children to

Catholic schools. Moreover, Nazi publications such as *Das Schwarze Korps* (the SS magazine) and *Der Stürmer* were openly anti-Christian and constantly heaped abuse on the Pope and the Catholic clergy in general, favorite charges being that the holy men were homosexuals or were having amorous liaisons with Jewesses. Although the Nazis never reneged on the most important provision of the Concordat, the commitment on tax revenues, the mutual hostility became so great that many felt that there was always a good possibility for a second *Kulturkampf* (Bismarck's unsuccessful attempt of the 1870s to break the power of the Roman Church in Germany).

The Nazi-Vatican hostility led, in 1937, to the most unusual Papal encyclical *Mit brennender Sorge*. Issued in German rather than the usual Latin, it was among the strongest attacks that the Vatican had ever made on a specific State. The Pope at the time was Pius XI, and Eugenio Cardinal Pacelli, who was to become Pope Pius XII in 1939, was the Vatican Secretary of State. Pacelli, a diplomat of world-wide experience, for ten years Papal Nuncio in Germany, and fluent in German, was already regarded as the obvious heir to Pius XI, and his pre-eminence in the area of international diplomacy was unquestioned. *Mit brennender Sorge* was written under his supervision.⁴⁹⁰

Despite the unquestioned hostility between the Church and the Nazis, it should be kept in mind that Communism, in the eyes of the Vatican, was still the prime enemy. With an antagonist such as the German Nazis, there was room for maneuver for the Church, but the Communists, up to that date, had shown themselves to be total and deadly enemies. Moreover, Germany was not the only European state with which the Vatican was displeased. France and Czechoslovakia had strongly anti-clerical Governments. Thus, when war came, the Vatican (although, of course, officially neutral) could not be enthusiastic for either side. Because Communism was considered the prime enemy, it is probably correct that the Vatican rather preferred the Axis side, but in their eyes this was definitely a choice of lesser evils. Moreover, there was a considerable diversity of preferences within the Church. For example, the war-time Papal Nuncio in Berlin, Msgr. Cesare Orsenigo, was evidently satisfied with the German victory over France in 1940 and expressed to the German Foreign Office his hope that the Germans would march into Paris through Versailles. On the other hand, the Jesuit-controlled Vatican radio was so anti-German that the British considered it a virtual extension of their own propaganda service.⁴⁹¹

So much for the political background of the Vatican's situation during the war. We return to consideration of the fact of Pope Pius's silence on exterminations of Jews. It would not be feasible to review here the views of all who have contributed to the controversy, so we shall restrict ourselves in this respect. First, there is the Vatican itself, which is represented mainly by the nine volumes of wartime documents that it published in the years 1967-1975, *Actes et documents du Saint Siège relatifs à la seconde guerre mondiale*. The princi-

⁴⁹⁰ Rhodes, 171-210.

⁴⁹¹ Rhodes, 246.

pal editor of this series had been Robert A. Graham, an American Jesuit and former editor of the Jesuit magazine *America*. Graham, who accepts the extermination legend, has emerged as the principal spokesman for the Vatican in these matters. It is unfortunate that the only volumes of the nine that are devoted entirely to war victims are the last two, published in 1974-1975, which carry the subject no further than December 1943.

Among the numerous authors in the controversy, the various positions are well represented by two recent books: *The Vatican in the Age of the Dictators* by Anthony Rhodes (London, 1973), a defender of the Vatican, and *The Pope's Jews* by Sam Waagenaar (London, 1974), a critic of the Pope.

The official Vatican position, as set forth in the Introduction to the eighth volume of *Actes et documents*, is as follows:

"During his brief visit to the Vatican on 26 September [1942], the personal representative of President Roosevelt, Myron Taylor, renewed an official request for information. They had received, from the Geneva office of the Jewish agency for Palestine, information on the desperate situation of the Polish Jews and the Jews deported to Poland. The report, dated 30 August, described the liquidation of the Warsaw ghetto, executions in a camp called Belick, in Lwow, and in Warsaw. The destination of the deportations was death: 'The Jews deported from Germany, Belgium, Holland, France, and Slovakia,' said the report, 'were sent to the slaughterhouse, while the aryans deported to the East from Holland and France were actually used for labor.' The memorandum from Taylor to Cardinal Maglione [Vatican Secretary of State] said: 'I would be very grateful to Your Eminence if it were possible to tell me if the Vatican has any information which tends to confirm the report contained in this memorandum. If so, I would like to know if the Holy Father has some suggestions touching on some practical means of using the forces of public opinion of the civilized world in order to prevent the continuation of this barbarism.'

Cardinal Maglione had to reply, on 10 October, that he had on his part no particular information confirming the Geneva report. In effect, the most detailed information, received those days by the Vatican, was the same as that received by the United States. The sources were the Polish Ambassador to the Vatican and the Jewish organizations themselves. 'The reports on severe measures adopted against non-aryans have also come to the Holy See from other sources, but at present it has not been possible to verify their accuracy.' Under these conditions, the second question on practical means to put into operation did not call for a reply.

Very significant are the notes set down by Maglione after having received the Taylor document: 'I do not believe that we have any information which confers these grave tidings. Right?' For his part the 'minutante' [recorder or archivist] wrote: 'There is Mr. Malvezzi's.' The information of Malvezzi, official of an Italian firm, recently returned from Poland, was grave but general and did not harmonize with the Geneva report.

That which the Cardinal Secretary of State heard as 'severe measures' can be interpreted in the light of the documents of these two years. The information received in the Vatican consisted of second or third hand reports, taken seriously however, concerning the brutal treatment imposed on the Jews of Hungary, Croatia, Slovakia, France, and other countries. What was the ultimate destination of the deportees, what was the plan of the Nazis, then remained an enigma. When, for example, in the month of March, Msgr. Burzio, the Chargé d'affaires in Slovakia, spoke of the deportees as going to 'a certain death,' it is clear that he based this assertion on the inhuman conditions of the departures and the brutality of the guards. After such a beginning, it was easy to imagine that the old, the sick, and the children were not able to live long, even if typhus did not cut them down in the overpopulated and unsanitary camps. In the same sense was taken the remark of the Croation police chief Eugene Kvaternik, according to whom the Germans had already caused two million Jews to die and that the same fate awaited the Croatian Jews. Afterwards, these words have been confirmed as only too exact. It is obvious, however, that the representative of the Holy See, Father Abbé Marcone, in reporting them to the Vatican, did not believe or was unable to believe that they should be taken literally. One took them at least as a grave intimation of the tragedy which appeared only in general outline.

The end of the year 1942 saw several public declarations on the deportations. On 17 December, the United Nations published in London a declaration on the rights of man, in which it denounced, in strong but general terms, the treatment inflicted on the Jews. On 24 December, Pope Pius XII made, in his Christmas Eve message, a very clear allusion to the deportations, concerning which the world, at that time, was able only with difficulty to form an idea."

This Vatican explanation is not acceptable. It is of course true that only occasional scraps bearing on exterminations of Jews appear in their documents. Moreover, no reasonable person would deny that most of these scraps must be classified as inventive propaganda, for the claims of exterminations are either coupled in some sense with other claims that nobody would defend today, or are associated with other oddities demolishing their credibility. For example, a note of 2 January 1943 to the Vatican from Wladislas Racziewicz, the President of the Polish exile government in London, claimed that the Germans had embarked on a general extermination of the Polish population in addition to its Jewish minority (in agreement with our analysis of Chapter 3, the note mentions the Auschwitz concentration camp with an implication that it is not one of the sites of exterminations).⁴⁹² We have already noted, in Chapter 3 (p. 138), that Msgr. Burzio, the Papal Chargé d'affaires in Slovakia, sent some invented tales back to Rome. Additional scraps of this sort are reviewed below.

⁴⁹² *Actes et documents*, vol. 7, 179.

One must, of course, accept the Vatican claim that such information as they had during the war could not have been taken as decent evidence of exterminations; that has already been proved in this book. However, that is not the point. The Vatican spokesmen today assert not merely that their information did not reveal an extermination program, but that the exterminations happened, on a continental scale, without reliable information about them coming to the Vatican. It is this claim that is completely ridiculous and simply cannot be entertained for more than a few seconds.

It is not possible for an extermination program of the type claimed to have transpired without the Vatican learning of it. The slaughters are supposed to have taken place mainly in Catholic Poland, where the Church had its agents, Catholic priests, in every village, situated in such a way (hearing gossip, confessionals, etc.) that no such thing as the exterminations could possibly have happened without the entire Polish Catholic clergy knowing about them. It is true that the Germans imposed a censorship on communications to or from Poland, so that the Polish clergy and the Vatican could not communicate with customary freedom, as explained in the Introduction to volume three of *Actes et documents*, but as also there explained, there were many ways of circumventing the censorship, notably through Italians, who had business of various sorts in Poland and points east, and through messages carried by private persons from Poland to the office of the Papal Nuncio in Berlin, who communicated with the Vatican through privileged diplomatic channels.

Rhodes realizes that the claim of ignorance of the exterminations is not tenable, and concedes (because he assumes the exterminations happened) that Pius XII must have known about them. The explanation for the failure to speak up unambiguously seems to Rhodes to be a fear that any public and explicit condemnation would have made the situation of Catholics in Germany and the occupied territories worse. Rhodes then asserts that “in his *private* messages to Heads of States in connection with the persecution of the Jews, Pius XII certainly ‘spoke up’” (Rhodes’s italics), and then gives two examples of such private messages, bearing on Slovakia and on Hungary, which however contain nothing about exterminations, but speak only of deportations and persecutions of Jews in general terms.⁴⁹³

Rhodes’s picture of a timid Pius, afraid to speak up against the Nazis and their programs, does not hold up for many reasons. As shown by the documents Rhodes quotes, he must claim that the Pope was also too timid to speak up in confidential diplomatic communications. Moreover, the historical record does not support Rhodes’s picture of a Catholic Church terrorized into silence by the Nazis. While, in parallel with their counterparts in Allied countries, they never opposed the German war effort, they were quite vocal during the war in their opposition to the religion-related policies and values of the National-Socialist regime, and expressed their opposition in the Catholic press in Germany and in pulpits throughout Germany. In December 1942, the German

⁴⁹³ Rhodes, 347.

Bishops, meeting in their annual conference in Fulda, sent a declaration to the German Government denouncing the persecution of Catholic Churches in occupied countries. In January 1943, Konrad Count von Preysing, Bishop of Berlin, made a public condemnation of Nazi racial theories and policies. In August 1943, the German Bishops publicly denounced the Nazi policies hostile to Catholic education, and this denunciation was read in public all over Germany.⁴⁹⁴ The inescapable fact is that the Catholic Church was not terrorized into silence.

Timidity does not explain why Pope Pius failed to condemn the alleged exterminations after the Nazis had been defeated. The Pope's speech to the College of Cardinals on June 2, 1945 was a long and blistering attack on the defeated Nazis, and yet the only thing in the speech that could possibly be interpreted as a reference to exterminations was a reference to "applications of National-Socialist teachings, which even went so far as to use the most exquisite scientific methods to torture or eliminate people who were often innocent." However, reading further in the speech, it becomes clear that the Pope, like so many other people at the time, was thinking of the catastrophic scenes found in the German camps at the end of the war. The only specific victims mentioned are the Catholic priests interned at Dachau, a high percentage of whom perished there for reasons abundantly covered in this book. Although Pope Pius did mention that one Polish auxiliary bishop died of typhus, his remarks leave the impression that he believed that the deaths in the camps were intentional on the part of the Nazis, and the priests interned at Dachau are described by Pius as having "endured indescribable sufferings for their faith and for their vocation." There is nothing in the address about exterminations of any racial, religious or national group.⁴⁹⁵

While it is the case that the record does not indicate that the Roman Church was terrorized into silence during the war, the Vatican was nevertheless vulnerable to pressure to some degree, as is made evident by an examination of the circumstances behind the declaration of Pope Pius which came closest to sounding like a condemnation of exterminations, his Christmas Eve message of 1942.

In Chapter 3 (pp. 91f.) and above we saw that, in the autumn of 1942, the Allies inquired of the Vatican whether it had any information supporting the extermination claims that Rabbi Wise and some others had been making for several months and that the Vatican had no such information. While Pope Pius and the Secretary of State, Luigi Cardinal Maglione, no doubt smelled *Greuelpropaganda* immediately upon hearing such stories, the Vatican material reproduced above shows that they at least made some effort to inquire into the matter. Also, the Papal Nuncio in Italy, Msgr. Francesco Borgongini-Duca, met on November 10, 1942 with Guido Buffarini, Undersecretary in the Italian Ministry of the Interior, for the purpose of discussing the general military and

⁴⁹⁴ *New York Times* (Jan. 22, 1943), 6; (May 13, 1943), 8; (Sep. 5, 1943), 7; (Sep. 6, 1943), 7.

⁴⁹⁵ *New York Times* (Jun. 3, 1945), 22.

political situation. The situation of the Jews was discussed, and Borgongini-Duca reported to Maglione:⁴⁹⁶

"He then spoke to me concerning the speech of Hitler [in Munich on 8 November] and, I having asked him if in allusions to retaliations, they might mean asphyxiating gas, he twice replied to me decidedly no."

Thus, the Vatican had essentially no information, in the autumn of 1942, tending to confirm the extermination claims, and it took this position in its exchanges with Allied representatives when the matter came up. In Chapter 3 (p. 93) we noted that there was one anonymous note supposedly from a Vatican source, produced in late November, which supported the extermination claims. However, since that was not the Vatican position, the note was no doubt a forgery in some sense. If it did come from a source inside the Vatican, it may have been authored by Virgilio Scattolini, an employee of the Vatican newspaper *l'Osservatore Romano*, who posed as a Vatican insider during the war in order to sell his fabricated "information," suitably tailored for the buyer, to all comers, and who for a while was considered "our man in the Vatican" by the OSS.⁴⁹⁷ A lesser possibility is that the note came from the priest Pirro Scavizzi, who is discussed below.

The information that the Vatican had in December 1942 relative to Nazi persecutions of Jews is well represented by a message composed by Msgr. Giuseppe Di Meglio of the staff of Orsenigo, Papal Nuncio in Berlin, and delivered to the Vatican by Di Meglio on December 9, 1942. The message deals at length with the German policies toward the Jews, and it is a good assumption that such material was written in response to a request from the Vatican to Orsenigo for such information. The Berlin Nunciature was doubtless considered about the best source of such information within the church, because a good deal of the communication between Poland and the Vatican was through Orsenigo's Berlin office, as we noted above. The heart of the part of the message that dealt with the Jews was:⁴⁹⁸

"Since many fled, before the arrival of the German troops, from the Polish territories occupied by the Russians and from territories properly Russian, one estimates that presently, in the Reich and the occupied territories, including the Protectorate of Bohemia-Moravia, there are more than four million Jews, i.e., one fourth of the entire world Jewish population."

Measures.

1. Institution of ghettos.

Internal quarters of some cities have been designated for the Jews as their official homes, with the right of administration, police forces, and appropriate means of communication.

⁴⁹⁶ *Actes et documents*, vol. 7, 82.

⁴⁹⁷ *Catholic Historical Review*, vol. 59 (Jan. 1974), 719f.

⁴⁹⁸ *Actes et documents*, vol. 8, 738-742.

Of the ghettos established up to now, the most important are those of Litzmannstadt (Lodz) and Warsaw. Some ghettos are also found in the Baltic countries and in the occupied Russian territories.

2. Concentration camps.

Since, as is evident, places cannot be found for all Jews in the city ghettos, immense concentration camps have been created where they lead a harsh life; little food is given them; they are assigned to extremely hard working conditions which quickly lead many to death.

It is said that such concentration camps are found up to now in Poland, that the eastern territories, particularly Poland, have been established in the plans of the German Government as the definitive place of residence for the Jewish population of Europe.

Generally, in order to not attract the attention of the population too much, they are forced to leave in the middle of the night; they are permitted to take little clothing with them and only a small sum of money.

3. The Star.

Since the month of September 1941, a mark of identification has been compulsory for all Jews: a yellow star, six pointed, to be worn on the breast, with the inscription in the center, Jude!

The sight of these wretches who, pale and emaciated (their food rations are much less than those of the Germans; some foodstuffs are denied to them entirely), walk the streets at predesignated hours of the day or, when travelling, cluster together in corners, awakens a profound sense of horror and pity.

Inhuman treatment in the occupied territories and in the countries politically subject to Germany:

An Italian journalist, returned from Romania, gave me, some time ago, a long account concerning the brutal methods adopted in that country, mainly by German instigation, against the Jews.

He related to me that a train was completely filled with Jews; every opening was then closed, so that no air could enter. When the train arrived at its destination, there were only a few survivors, those, that is, who, finding themselves near some incompletely sealed opening, had been able to breathe a bit of air. [...]"

Di Meglio closed this part of his message by noting the anti-Christian character of Alfred Rosenberg's *Institut zur Erforschung des jüdischen Einflusses auf das deutsche kirchliche Leben* (Institute for Investigation of Jewish Influence in German Religious Life) and also by noting the unconcern of the German clergy with the tribulations of the Jews.

In several respects, Di Meglio's information was obviously erroneous. For example, we can gain a fair idea of the actual conditions of the deportations of Romanian Jews from the Report of the Red Cross, both from the excerpt reproduced in Chapter 5 here and from other sections,⁴⁹⁹ and also from the writ-

⁴⁹⁹ Red Cross (1948), vol. 3, 520ff.

ings of Ginsburg. It is certain that the events in the story related by the anonymous Italian journalist were invention. Di Meglio seems willing to accept the worst.

Di Meglio's treatment of the role of the concentration camps admits some misinterpretations of the actual conditions. For one thing, he suggested that many Jews were sent to concentration camps because there was insufficient space for them in the ghettos; this is not correct. Jews, among others, were sent to the camps in Poland as labor needs required. Di Meglio also gave the impression that the camps were primarily for quartering Jews, which is also incorrect. He also probably exaggerated the poverty of the diet in the camps, but, as we saw in Chapter 4, he was at least correct on the matter of the high death rate in the camps at the time he wrote his account, although overwork was not the cause of the deaths.

In other words, Di Meglio's description of the situation was the general or approximate truth, with some inaccuracies, and colored by his willingness to believe the worst. It is clear that he had no information on the existence of an extermination program even remotely resembling the one that was then taking shape in Allied propaganda and was being related to the Vatican by various Allied diplomats and Jewish organizations.

The Pope's Christmas address made a passing remark, without specific reference to the Jews, on "the hundreds of thousands who, through no fault of their own and solely because of their nation or race, have been condemned to death or progressive extinction." Berlin had mixed reactions to the address; the RSHA considered it a direct assault on the Nazi regime, while the Foreign Office appears to have considered it so much holy hot air. The Allies, we recall from our Chapter 3 (p. 110), had officially embraced the extermination claims on December 17 in a statement, in which "the number of victims" was "reckoned in many hundreds of thousands" of Jews, and they were not satisfied with the Pope's statement, and thought it was not explicit enough.⁵⁰⁰ From our point of view, however, the Christmas remark seems at first puzzlingly strong in view of the picture of the situation that the Vatican had received from the Berlin Nunciature, and also in consideration of the oddity that the Pope's strongest remark of such a category should have been made so early in the war and then not repeated.

An explanation for the appearance of the "death or progressive extinction" remark in the Pope's Christmas address is found in the Vatican's wartime documents. In late 1942 and early 1943, one of the Vatican's principal diplomatic objectives was to secure a pledge from the Allies not to bomb Rome. The British were particularly insistent on their right to bomb Rome, as compared to the Americans, who had a large Catholic minority that constituted a very important component of the political base of Roosevelt's New Deal. The British took the position that Rome could not be given special consideration, and would be bombed if and when military factors indicated such action. In pursuit

⁵⁰⁰ Rhodes, 272ff; Waagenaar, 409, 435f.

of its objective, the Vatican dealt not only with the Allies, attempting to divert them from their apparent course, but also with the Germans and Italians, attempting to persuade them to remove any operations of a military nature from Rome (there was little or no war industry in the city, but there were military command headquarters and military barracks). In December 1942, the Italian Government agreed to relocate its military headquarters away from Rome. Feeling that some progress toward their objective had been made, Cardinal Maglione met on December 14 with the British Minister to the Vatican, Sir F. D'Arcy Osborne, in order to communicate this development to the British, and to further discuss the bombing issue. Osborne, however, was unimpressed, and pointed out that there remained Italian troops quartered in the city. Maglione's notes on the meeting summarized the exchange thus:⁵⁰¹

"The Minister pointed out that one has the impression that the Holy See is particularly preoccupied with the Italian cities, when it speaks of bombings, because they are Italian.

I made him observe: (1) that for Rome there are special considerations. I recounted them to him (and I did not fail to repeat to him that if Rome is bombed, the Holy See will protest); (2) that the Holy See now intervenes against the bombing of the civilian population of the Italian cities because such bombings are in progress. The Minister must not forget that the Holy Father spoke against bombing of defenseless populations on other occasions: when the English cities were being bombed everybody knew that the bombings of the English cities did not escape really harsh words from the Holy Father.

The Minister recognized the justice of my observation and, then, exclaimed: 'But why doesn't the Holy See intervene against the terrible slaughter of the Jews?'

I recalled for him that the Holy Father had already asserted, in his messages, the right to life, to a peaceful existence, and to a sufficient share in the goods of this world for all men, whatever their race or religion.

One must not ignore, I added, how much the Holy Father has done and is doing to alleviate the plight of the poor Jews. These people know it and frequently thank the Holy See for how much it is doing for them.

The Minister insisted on this point: it would be necessary that the Holy See intervene to stop the massacres of the Jews. [end of note]"

Later the same day, Osborne ran into Msgr. Domenico Tardini, Secretary of the Congregation of Extraordinary Ecclesiastic Affairs (the Vatican Foreign Office), and regarding the departure of the Italian military command headquarters from Rome, Osborne assured Tardini that "It changes nothing!" Tardini summarized his conversation with Osborne in his notes and concluded:⁵⁰²

⁵⁰¹ *Actes et documents*, vol. 7, 136ff. Waagenaar, 413, quotes from the Osborne-Maglione exchange, but he does not quote it in its proper context of the bombing threat to Rome.

⁵⁰² *Actes et documents*, vol. 7, 138f.

“The removal of the military commands may help put better in evidence that whoever bombs Rome is barbaric (and thus it is well that the Holy See be an interested party), but it will not spare Rome from the bombs.”

We thus see the background of the Pope’s Christmas Eve remark. To the Vatican, it appeared from the exchange between Osborne and Maglione that the English were in effect proposing a deal: the Pope condemns extermination of Jews, and the Allies do not bomb Rome, a persuasive position that can convince even a Holy Father. Aside from any possible ethical considerations, it was obvious to the Vatican that it could not wreck its official neutrality by publicly accusing the Germans of completely fabricated offenses and, in any case, the Germans were still the dominant military power on the Continent at that time, so the remark appeared in the Christmas address without specific reference to Jews or Germany (along with other remarks that sounded more or less anti-German without being specific). However, the Allied bombing threat to Rome did not diminish after Christmas 1942. Thus, except for a brief similar remark ignored by the world press, which occurred in a long papal address of June 2, 1943, no more talk of this nature came from the Vatican. Pope Pius made a favorable reference to the Christmas remark in his letter of April 30, 1943, to his friend von Preysing, but even in that confidential communication, his specific words were milder than those of the Christmas remark.⁵⁰³

Although the Vatican was entirely justified in interpreting Osborne’s remarks as a specific proposition, it is most likely that this was a misinterpretation nevertheless, and that Osborne did not imagine himself as offering a deal. It is possible, for example, that Osborne felt that Maglione had a relatively strong position, and thus he grasped at something somewhat out of context in order to supplement his side of the verbal exchange. The official Allied declaration on extermination of Jews came three days later, and thus the matter was no doubt somewhat in the air in the diplomatic corps, and came to Osborne rather naturally.

Rome was first bombed on July 19, 1943 (by the Americans), the targets being the rail center that German and Italian troops had started passing through after the Allied landings in Sicily on July 9th. In subsequent raids, bombs occasionally fell on the Vatican, but the damage to historical and religious monuments in the Vatican and elsewhere in Rome was slight.

The only other point of some interest in regard to the role of the Vatican is that its efforts in extending aid to Jews were fairly extensive, as discussed by Rhodes. However, Waagenaar should also be read in this connection, on account of Rhodes’s failure to make some points. However, from the point of view of analyzing the extermination legend, the only significant inference to draw from such activities of the Vatican is that they offer further data showing that the exterminations could not possibly have happened without the Vatican knowing of them, because the Vatican was somewhat involved in Jewish affairs in Europe at the time.

⁵⁰³ *Ibid.*, vol. 2, 326; vol. 9, 40; Rhodes, 348f.

While the significant points regarding the role of the Vatican are not many and have been covered, there are a few odd matters that we may as well set forth while we are on this subject.

A strange character appearing in the Vatican's wartime documents is Pirro Scavizzi, a very ordinary priest who rode Italian military hospital trains that shuttled back and forth between Italy and the eastern front. He was called an "almoner," and he administered to the wounded Italian soldiers, whatever incantations are delivered in such circumstances. Since he did so much traveling, however, he was frequently used as a courier, and his frequent near contact with, and regular delivery of messages to, high ranking prelates seems to have fired his imagination.

The first oddity we run into was in February-March 1942. Scavizzi produced a letter, allegedly from Adam Sapieha, Archbishop of Cracow, on the subject of the sufferings of Catholic priests under the brutal Germans. As related in *Actes et documents*, however, the circumstances were most peculiar:⁵⁰⁴

"[...] the Archbishop renounced all precaution and described [...] the rigor of the Nazi oppression and the tragedy of the concentration camps. But after having deposited this testimony with [...] Scavizzi, he grew fearful, and sent Scavizzi a message asking him to burn the document 'for fear that it fall into the hands of the Germans, who would have shot all the Bishops and perhaps others.' The Abbé Scavizzi destroyed the note in question, but not without first having made a copy in his own hand, and having added at the same time his own testimony on the tragedy and the despair which constituted the daily course of existence of the Catholics of Poland."

Scavizzi's producing of a letter which he had burned, in honoring the request of the author of the letter, necessarily makes one a bit uneasy about him, but let us bear with him a bit. He next appears in connection with a letter he wrote to Pope Pius from Bologna on May 12, 1942:⁵⁰⁵

"In regard to the present Nuncio [Orsenigo in Berlin], the Cardinal [Innitzer in Vienna] deplored the silence about it [the persecution of the Jews] and expressed the judgment that He [Orsenigo] is too timorous and not interested in such grave matters.

The anti-Jewish campaign is implacable and constantly grows worse, with deportations and even mass executions.

The massacre of the Jews in the Ukraine is already complete. In Poland and Germany, they also intend to carry it to completion, with a system of mass killings."

Even if Innitzer had held such views, it is ludicrous in the extreme to imagine that he would have confided them to Scavizzi, even for Scavizzi's personal information, not to mention for transmission to the Pope via Scavizzi. One is now entitled to raise suspicions regarding Scavizzi's reliability.

⁵⁰⁴ *Actes et documents*, vol. 3. 15f. Rhodes, 288.

⁵⁰⁵ *Actes et documents*, vol. 8, 534.

Scavizzi next appears on October 7, 1942, when he wrote a "report on the situation in Poland" that managed to get into the Vatican files:⁵⁰⁶

"The Jews: The elimination of the Jews, with mass killings, without regard for children or even for babies, is almost total. As for the remainder of them, who are all marked by white armbands, civilized life is impossible. They are not permitted to shop, enter business establishments, take street-cars or taxis, attend spectacles or frequent non-Jewish homes. Before being deported or killed, they are condemned to forced hard labor, even if they are of the cultivated class. The few remaining Jews appear serene, almost ostentatiously proud. It is said that more than two million Jews have been killed."

At this point, one develops a second suspicion, namely that the Vatican took as knowledge what we have set forth as our first suspicion about Scavizzi: that little weight should be attached to Scavizzi's statements. They had such material from Scavizzi in their files but did not consider it as confirming the claims of the Zionist organizations, as is made clear above.

Possibly because the Vatican wartime documents are still in the process of editing for publication at the time this is being written, Scavizzi makes no more appearances in them. However, in 1964 (he died around 1967) he claimed in an Italian magazine that the Pope had *confided* to him, Pirro Scavizzi, during the war, on the apparently negative implications of a proposed excommunication of Hitler (a nominal Catholic) for his exterminations of Jews!⁵⁰⁷ That does it. Scavizzi was obviously a weaver of self-inflating tall tales, designed to make him appear rather more important than his humble station in riding the hospital trains would have suggested. It therefore becomes clear that our second suspicion must be correct: Scavizzi was considered by the Vatican to be a harmless nut, who could be trusted to administer last rites and even to deliver messages, but not to keep facts straight. It is mildly humorous that, judging from their editorial comments, the editors of *Actes et documents* seem to take Scavizzi seriously. However, because the interpretation of Scavizzi as a teller of tall tales fairly leaps out at the reader from the documents, it is possible that the editors have other thoughts on the subject of Scavizzi that they have not expressed.

There is, however, one point of not negligible importance in connection with Scavizzi's reports, particularly the report of May 12, 1942 concerning the persecution of the Jews. It is not likely that Scavizzi independently invented the extermination legend, although it is remotely possible. If he did not invent the extermination claims appearing in his letter of May 12, 1942, he must have heard them somewhere, a fact of some interest, as his report is dated over a month before Zionist organizations in the West started talking this way (the first known such statement for the World Jewish Congress was on June 29, 1942, as we noted on page 107). This suggests that such propaganda was in circulation in Eastern Europe earlier than June 1942. This, indeed, is in agree-

⁵⁰⁶ *Ibid.*, 669n.

⁵⁰⁷ Rhodes, 345; Waagenaar, 431.

ment with the account of Dawidowicz, according to whom extermination claims for the Wartheland (the annexed part of Poland south of the Corridor), claiming killings via gasmobiles at Chełmno, first appeared in the four-page Jewish underground, the *Veker*, which printed these first extermination claims on pages three and four in issues published in February 1942. Claims of exterminations in the General Government of Poland (via gassing at Bełżec) appeared in the underground publication *Mitteilungen* in early April 1942.⁵⁰⁸ The evidence, thus, suggests that the extermination legend owes its birth to obscure Polish Jewish propagandists, but the nurturing of the legend to the status of an international and historical hoax was the achievement of Zionist circles centered primarily in the West, particularly in and around New York.

Since it appears that extermination propaganda was in existence in Poland in the spring of 1942, and because much of the information that reached the Vatican from Poland came through the office of the Papal Nuncio in Berlin, such stories might have reached Orsenigo at the time. Indeed, a letter of Orsenigo's to Msgr. Giovanni Montini (the later Pope Paul VI, who often substituted for Maglione during the war), dated July 28, 1942, was devoted mainly to deploring the difficulty of ascertaining exactly what was happening in regard to the Jews. After commenting on the occasional practice of the Nazis of suddenly and without warning ordering selected Jews to pack up for deportation, he wrote:⁵⁰⁹

"As is easy to understand, this lack of advance notice opens the door to the most macabre suppositions on the fate of the non-aryans. There are also in circulation rumors, difficult to verify, of disastrous journeys and even of massacres of Jews. Also every intervention in favor only of the non-aryan Catholics has thus far been rejected with the customary reply that baptismal water does not change Jewish blood, and that the German Reich is defending itself from the non-aryan race, not from the religion of the baptized Jews."

Among such sinister rumors, there is no lack of some less bleak: thus, for example, there is talk that in Holland, where deportations of the non-aryans have now commenced, an outspoken protest by the clergy, with which the Catholic Bishops associated themselves, succeeded in getting the baptized non-aryans excepted from the deportations. Likewise, it was reported that in the notorious ghetto of Litzmannstadt, in the Wartheland, a Polish priest, who with a spirit of apostolical heroism had requested it, was granted permission to enter and remain there for the care of the souls of the non-aryan Catholics."

An editorial footnote remarks that the story from Holland was false. We remark in passing that a considerable portion of the Vatican concern for aiding Jews, in this period, was specifically for the families of Jewish background that had converted to Catholicism and whose situation was particularly tragic,

⁵⁰⁸ Dawidowicz, 295ff.

⁵⁰⁹ *Actes et documents*, vol. 8, 607f.

since it seemed that nobody wanted them; the Germans considered them Jews, and the Jews considered them renegades.

The preceding remarks of Orsenigo make it clear that he had heard certain horrid rumors, although it is not clear what he meant by “massacres” (*eccidi in massa*). There were, of course, as we noted in Chapters 5 and 7 (pp. 195, 291), occasional massacres of Jews during the war, and the reports he had received may have pertained to them, or they might have had their origin in the extermination propaganda that had recently started coming from Jewish underground organizations in Poland. It is even possible that he was thinking of some report that Scavizzi had made at the Berlin Nunciature in connection with the “information” he transmitted in his letter of May 12, 1942. In any case, the Di Meglio letter of December 9, 1942 shows that the Nunciature, at that time, had accepted no extermination claims (except possibly for the story from Romania), if such claims reached it.

There are just a couple more points worth discussion in relation to the Vatican documents. During the war, the Vatican representative in Greece and Turkey was Msgr. Angelo Roncalli, the later Pope John XXIII. On July 8, 1943, he reported to the Vatican from Istanbul as follows:⁵¹⁰

“1. In accord with my rule of circumspection in my contacts with various people, even those entitled to special respect, I avoid meetings not strictly necessary or singularly useful. For example, I saw von Papen [German Ambassador to Turkey] only once in six months, and only hastily and in passing on the occasion of my Easter visit to Ankara. At the time there was much talk of the Katyn affair which, according to von Papen, should have made the Pole reflect on the advantage of their turning to the Germans. I replied with a sad smile that it was necessary first of all to make them overlook the millions of Jews sent to Poland and soppressi there, and that in any case, this was a good occasion for the Reich to improve its treatment of the Poles.

Now that von Papen has returned, as has the entire diplomatic corps, from Ankara to Istanbul and the Bosphorus, occasions for meetings will not be lacking.

2. Now and then, the fine Baron von Lersner comes to see me. [...]”

Roncalli then proceeded to discuss matters not relevant to our subject. When this document was published by the Vatican, the press reported that Roncalli had remarked on “the millions of Jews sent to Poland and annihilated there,”⁵¹¹ a fair enough translation, but a few words on the point of the translation are worthwhile. The Italian verb *sopprimere* (whose past participle appears in Roncalli’s note) is cognate to the English “to suppress” and the French *supprimer* (which is relevant because Roncalli and von Papen probably spoke to each other in French). The Italian and French words are equivalent in meaning, but they are not equivalent to the English word because, when applied to people, *sopprimere* and *supprimer* carry some implication of killing in large num-

⁵¹⁰ *Ibid.*, vol. 7, 473f.

⁵¹¹ *New York Times* (Apr. 5, 1973), 1, 5.

bers. However, when applied to people, they are not entirely equivalent to “extermination” or “annihilation”; both French and Italian have words cognate to and equivalent to these two English words. To apply *sopprimere* to a large group of people carries an implication only of large numbers of killings, and may or may not mean “extermination,” depending on the context. Thus, one must allow the possibility that Roncalli was thinking of something other than the sorts of extermination claims that the Allies had made, and which Roncalli had certainly heard by then. For example, he may have been thinking in terms of such things as the then-recent and highly publicized German suppression of the Warsaw Ghetto rebellion, in the course of which the Germans killed many Jews. However, I am inclined to reject such an interpretation; it seems more likely to me that Roncalli was indeed thinking in terms of extermination such as the Allies had claimed.

If, however, one reads the Roncalli account carefully against its proper diplomatic background, it becomes clear that it is not really very important what, very specifically, Roncalli was thinking about when he made this remark. He describes a chance meeting between two diplomats, one of whom, he, did not wish a meeting. In accord with his “rule of circumspection,” his words would therefore have been chosen to “avoid meetings.” What Roncalli in effect said to von Papen was that, if the latter wished to prolong the meeting, Roncalli was going to be difficult. Roncalli communicated to von Papen, in diplomatic language, the attitude he sets forth in plain and direct language in the first sentence of his report. Roncalli’s remark was a diplomatic parry of a certain well-known type, wherein it is not really important to determine, in better than vague terms, what the speaker was referring to, or to determine whether or not the speaker himself accepted the truth of the allegation in question. All that is relevant in the exchange is that Roncalli did not want to talk to von Papen, and that was all he communicated to von Papen. If, on the other hand, Roncalli wished to speak to von Papen, he certainly would not had *opened* his side of the exchange with such necessarily antagonistic remarks, either in reference to exterminations or in reference to bloody suppression of ghetto revolts, and quite independently of any of his own opinions on the subject of alleged German atrocities and brutalities.

Because the Vatican was an observer of and participant in the events of World War II, it was inevitable that the extermination stories, which the whole world heard, were heard also by the Vatican. The stories are thus naturally reflected in passages found in the Vatican documents, and when we encounter such passages there, they should be viewed in the context of the possible specific motivations of the person making the remark, and also of the evolution of the propaganda as analyzed in this book, especially in Chapter 3. Roncalli, as his report clearly implies in its first sentence, was merely trying to get rid of von Papen at their July 8, 1943 encounter in Ankara, when he repeated the extermination claim which, as he well knew, had not been specifically endorsed by the Vatican despite Allied pressures.

Another letter we encounter in the Vatican documents was written to Pope Pius in August 1942 by the Ukrainian Roman Catholic Archbishop André Szeptyczkyi. The letter dwells at great length on supposed German atrocities, and the reader will be very puzzled, especially in regard to motivation, until the last lines are read, and Szeptyczkyi finally comes to the whole point of his letter. He remarks on his failures over a three-year period to obtain from the Pope an Apostolic Benediction (*i.e.* a papal endorsement, most important in religious politics) and then points out that his sufferings and strivings under “evil” Germans should certainly be adequate grounds for granting one at last.⁵¹²

That the few passages appearing in the Vatican documents and bearing on exterminations of Jews merely reflect the evolution of the propaganda, as analyzed in this book, is very clear. In Chapter 3 (p. 138) we noted that Burzio passed on to the Vatican, from Slovakia, tales about soap factories, when such tales were a feature of the propaganda. Another example is a set of notes made by Maglione on May 5, 1943, recording extermination stories. The occasion for composing the notes is not clear, *i.e.* the reader cannot tell from what has been published, whether Maglione was recording his own impressions or merely allegations made by somebody else (other documents written by Maglione around that time do not suggest that he believed the extermination stories). In any case, gas chamber exterminations at Treblinka and near Brest-Litovsk are noted. The editors of *Actes et documents*, obviously puzzled, remark:⁵¹³

“The information, probably delivered by an Italian official, would seem quite old, since it mentions neither Birkenau nor Auschwitz, where the greater part of the exterminations were concentrated at the time.”

Further on this theme, the editors remark that in 1943⁵¹⁴

“[...] the Allied propaganda, which dwelled abundantly on the German atrocities, was completely silent on Auschwitz, for reasons which have never been satisfactorily analyzed.”

Just as it was inevitable that some of the propaganda would manifest itself in the Vatican’s documents, it was also inevitable that some of the truth, in regard to the matters we are concerned with here, would find its way into that part of the Vatican archives selected for publication. Thus, the documents suggest that the Vatican did after all have some access to Jews in Poland, not only Polish Jews but also Italian Jews who were deported after the German occupation of Rome on September 8, 1943.⁵¹⁵ Also, the editors of volume 9 of *Actes et documents* (on the subject of war victims in 1943) note that friends and relatives of deported Jews were known to have later received mail from them, that the members of the Dutch resistance who were “in constant contact with the Jews of their country, [reported] simply that the deportees were enlisted for work in

⁵¹⁴ *Ibid.*, 42.

⁵¹⁵ *Ibid.*, 493, 499, 632-636.

the camps, while the aged were sent to ghettos,” and that the Jewish leaders in Rome were unaware of any extermination program, and feared deportations only in connection with such things as “the rigors of winter and the fragile health of many deportees,” as is confirmed by “many letters received then at the Vatican, and which today form a thick dossier in the archives. [...] no mention is made of their brutal extermination.” We also read that Father Marie-Benoît (a priest who was deeply involved in wartime aid to Jews) made a report in July 1943 on deportations of Jews from France, and remarked that the Auschwitz and nearby camps were work camps where “the morale among the deportees is generally good, and they are confident of the future.”⁵¹⁶

Because Auschwitz extermination propaganda started in 1944, we will probably encounter Auschwitz extermination claims in the Vatican’s wartime documents when the Vatican publishes documents for 1944-1945, because bearing on exterminations, that is all there is in the documents of this critically situated source: propaganda.

Addendum on Robert A. Graham

The obituary/tribute below first appeared, very slightly modified, in the *Journal of Historical Review*, March/April 1998, based on my manuscript of 31 July 1997. The Graham letter of 24 January 1983 was reproduced there from the original.

When I was writing *The Hoax of the Twentieth Century*, I encountered an extraordinary source, viz. the multi-volume collection of documents and commentary *Actes et documents du Saint Siège relatifs à la seconde guerre mondiale* (Acts and documents of the Holy See relative to the Second World War). The series, whose principal editor was Robert A. Graham, was still being published by the Vatican, and more volumes were in the future.

Graham was a former editor of the Jesuit magazine *America*. The “extermination” claim was not challenged in the series, and it was generally understood that Graham’s main interest was in defending the wartime Pope Pius XII against charges of tacit consent to, and even collaboration with, Nazi policies of physical extermination of the Jews. Such charges crested with Rolf Hochhuth’s play *The Deputy*.

I believed that the Vatican documents constitute an important source. I devoted an entire appendix of my book to discussing them.

In studying the series of volumes, I was struck by some of the editorial remarks and believed that the editor, although not a revisionist in our sense, was implicitly raising fundamental questions of a revisionist bent. A good example was the quotation of some selected passages from some reports, from appar-

⁵¹⁶ *Ibid.*, 38, 42f.

ently well-informed sources, delivered to the Pope on 15 July 1943, which described Auschwitz as essentially a work camp, and spoke of Jews who had been deported from France sending letters back to their families.⁵¹⁷

These impressions were so strong that I believed it necessary to contact Graham directly. In early 1977, I wrote to him in Rome, thus starting a very satisfactory and years long correspondence, although the request for copies of documents that I made to him at the time could not be filled, for reasons beyond his control.⁵¹⁸

In summer 1977, I was in Rome and visited him. Our conversation confirmed to me what I had read between the lines in *Actes et documents*: the editor was puzzled by the evidence he had examined, because much of it seemed impossible to reconcile with the “extermination” legend. He showed me a pamphlet I had not seen, published in 1943 by the “Polish Labor Group,” which was New York based but in touch with the Polish underground. Its title was appropriate: *Oświęcim – Camp of Death* (“Oświęcim” is Polish for “Auschwitz”). The pamphlet presented the truth with some embellishment, but what was important to Graham was that it did not speak of “exterminations” in any way reconcilable with the legend. He let me borrow the pamphlet to photocopy.

Vol. 10 of *Actes et documents* was long delayed, and I wrote to Graham several times in my eagerness to see it. Publication finally came in 1980, and Graham was thoughtful enough to alert me personally. I got a copy, and found references to more interesting but unpublished documents. Again I wrote to Graham, and happily, this time, my request was filled.⁵¹⁹

At the IHR Convention in 1982, I compared the Holocaust legend to the Donation of Constantine, and sent Graham a copy of the paper (see Supplement 2, p. 401). In the paper, I had noted that the Jewish historian Walter Laqueur understood, as I did, “that the far-flung nature of the operations of the Catholic Church guaranteed that the Vatican would have known what was happening to the Jews.”⁵²⁰ Graham acknowledged receipt of the copy of my paper with a very kind, respectful and encouraging letter, referring to and not disputing the remark about the Vatican:

⁵¹⁷ *Ibid.*, 42, 393. The footnote on p. 42 should refer to “Nr. 264”, not 164. More examples are given toward the end of “Appendix E” of my book.

⁵¹⁸ I wanted copies of the documents about deportations of Jews from France that *Actes et documents* had quoted but not reproduced. Graham told me to send my “request through channels”, i.e. to Archbishop Agostino Casaroli, Secretary of the Council for the Public Affairs of the Church. I did so, but Casaroli replied that since the reports in question “were provided by Jewish authorities in France” then I should address myself to them. I wrote to the Centre de documentation juive contemporaine in Paris, but received no answer. I also visited the Centre in July 1977, but I could not find the documents.

⁵¹⁹ The most interesting document was a letter from Alexandru Safran, Grand Rabbi of Romania, to Msgr. Andrea Cassulo, Papal Nuncio in Bucharest, dated 30 June 1944. It expressed concern that the Jews of Hungary were “exposed to great privations and sufferings”, at a time when the legend would have us believe they were mostly dead. The Jews of Hungary and Romania remained in close contact throughout this period.

⁵²⁰ See here Supplement 2, p. 423.

"VILLA MALTA

24 January 1983

Dear Mr. Butz,

Your airmailed copy of your September 1982 paper reached me today. I hasten to thank you for keeping me in mind when elaborating on your theme.

On a quick reading, I see I must reflect further on the validity of your approach. I never thought of this in analogy of the Donation of Constantine!

I note your quote from Laqueur on the Vatican. He was apparently peeved at us for telling him we published what we had, as of 1942. What makes him assume that there is on the contrary a lot more? This is begging the question.

I wish you a prosperous New Year and fresh discoveries and new insights on a great drama!

Sincerely yours,

Robert A. Graham"

I always knew that there was an honest and honorable man editing the publication of the Vatican documents.

Rev. Robert A. Graham, S.J., died in a California retirement home, at age 84, on 11 February 1997.

Supplements

Supplement 1: The International Holocaust Controversy

Presented orally at the 1979 conference of the Institute for Historical Review. This is a slightly edited version of the paper as published in The Journal of Historical Review, vol. 1, no. 1, Spring 1980, pp. 5-22.

Some of you may be accustomed to hearing of me speak on the subject that I call “The Hoax of the Twentieth Century,” the legend of the physical extermination of millions of Jews, usually six million, by the government of National-Socialist Germany during the Second World War. On several occasions, I have met with interested groups, and given them what amounts to an oral synopsis of many of the arguments in my book.

Today I will cover different ground; I shall not concentrate on the hoax itself, but on the development of the international controversy surrounding the hoax. I have several reasons for this choice of subjects, and probably the most obvious is the fact that this is after all an advanced group of well-informed persons, many or most of whom are familiar with the relevant English language literature, and Dr. Faurisson is here to show you some things about the hoax you probably have not seen yet.⁵²¹ Another subject only partially known to most here is the development of the international controversy. Indeed, many “well-informed” Americans are not aware that there has been a very loud international Holocaust controversy recently, because they are forced to get most of their information on world developments from the U.S. press, which sometimes gives readers the impression that Butz is the only author who has rejected or challenged central claims of the extermination legend.

There are important perspectives to be gained by viewing the controversy on an international scale. Permit me to say a few more words motivating the present focus on the controversy surrounding the hoax rather than the hoax itself.

A Simple Subject

One of my dilemmas is that, by writing a whole book on the hoax, I may have suggested something that I did not wish to suggest, because there is an im-

⁵²¹ Robert Faurisson, “Extensive Research on the ‘Gas Chambers’ at Auschwitz”, audio tape, 90 min., Newport Beach, CA: Institute for Historical Review; printed version: Faurisson (1980a).

portant point that I should perhaps have stressed. I wrote on page 28, but did not stress, the important point that

“There are many considerations supporting this view, and some are so simple that they may surprise the reader even further. The simplest valid reason for being skeptical about the extermination claim is also the simplest conceivable reason: at the end of the war, they were still there.”

The dilemma I am delineating is that, by generating much verbiage on this subject, I may give some the impression that it is a complex one. Therefore, let me state emphatically that the great verbiage is required not because the subject is complicated but because public opinion has become distorted by the media’s generation of many times that verbiage, generated over several decades, with the consequence that unusual and elaborate therapy is required. However, it is very important that this select group not lose sight of the fact that the subject is quite simple, and that only a cultural illness has made the great efforts of revisionists necessary.

The elements in an effective exposé of the hoax are not many. The principal points are as follows:

1. The Jews were singled out for special persecution by Nazi Germany. Many were deprived of their property, conscripted for labor, or deported east during the war. The German documents do not speak of exterminations. The term “Final Solution” (*Endlösung*) meant the expulsion of the Jews from Europe, and the deportations to the east were a step toward that objective.
2. Documents published by the International Red Cross and the Vatican do not harmonize with the extermination claims, and the very well-informed wartime Pope, Pius XII, is often castigated for not speaking up against exterminations of Jews.
3. Partially on account of general wartime conditions and partially as a consequence of the German measures against the Jews (*e.g.* crowding into ghettos), a large number of Jews perished, but nothing near six million.
4. Published population statistics are quite meaningless, mainly because almost all of the Jews involved in the problem were East European (*e.g.* two or three million Polish Jews), but also because in the USA there has been no reliable count – the census does not treat this, and the concept “Jew” was not admitted into the official records when a very large number entered the U.S. after the war. To the extent that a significant number of Jews might seem to be missing from some region they occupied before the war, they can to the best of our knowledge be accounted for in terms of the massive and well-known postwar movements of Jews to the U.S., Palestine, and other lands, and also in terms of their simply remaining in the Soviet Union where the Germans had put them, according to the German documents.
5. The evidence for the extermination allegations depends crucially on trials, such as the Nuremberg trials, held before courts that were for political reasons constrained to accept the basic truth of such allegations. Thus, to

many relevant defendants, it seemed that the only possible defense strategy was to deny not the exterminations but only their personal responsibility for them (*e.g.* Ernst Kaltenbrunner or Adolf Eichmann).

6. The horrible scenes found in the German camps in 1945 were the result of the total collapse – in the context of the total collapse of German industry and transport – of all German countermeasures against diseases, mainly typhus, that had plagued all German camps throughout the war. These German countermeasures had included periodic showers of all inmates, and also extensive and periodic use of insecticides, such as Zyklon B, for disinfestation purposes.
7. Concentration camp inmates were an important source of labor for the hard pressed wartime German economy, and the high death rate that prevailed in the camps throughout the war was considered “catastrophic” by the Germans (Chapter 4, p. 172). As a result of the high death rate, about 350,000 or perhaps 400,000 inmates died in the German camps during the war, some minority of that number being Jews.⁵²²
8. There were crematoria in all of the camps for the disposal of the bodies of people who died there.
9. The camps in Germany are not even claimed to have been “extermination camps,” except in occasional publications of a frankly sensationalistic nature. The so-called “extermination camps,” such as Auschwitz, were all in Poland, and were captured by the Soviet troops after having been evacuated in an orderly fashion by the Germans. The Russians found no horrible scenes comparable to those we later found in Germany, and no evidence of exterminations.
10. The “gas chambers” are fictitious, and the best the bearers of the legend can do to argue their existence is to advance the ludicrous claim that the Zyklon did double duty in exterminating Jews as well as lice or to misrepresent a shower or even an ordinary room as a “gas chamber.” Another tactic is to confuse the concept of a “gas oven.” All crematorium ovens are “gas ovens.”

That is the basic structure of the hoax.

Why a “Hoax”?

At this point, it is convenient to remark on the title I chose for my book. In the controversy, one of the things that jolted some, even some who were otherwise favorably impressed by the book, was my use of the term “hoax” to describe

⁵²² The figure is for deaths of people who had been registered as camp inmates, in written records of which enough have survived to permit the estimate. The legend asserts that the “exterminated” millions were not entered in such records. See the report, “The Number of Victims of the National-Socialist Persecution,” available from the International Tracing Service, D-3548 Arolsen, Germany. The remark should not be misinterpreted as a claim that the number of Jews who perished was some minority of 350,000. Many more died outside of the concentration camps, from diseases in ghettos, in occasional pogroms, and in other commonplace and uncommonplace ways. The number is not known.

the received legend. Some felt that, whatever the truth of the legend, the term was not adequate or appropriate to the situation. Such a trivializing concept, it was thought, should not be applied to a legend that lives on the vast scale of the Holocaust – it struck some as comparable to criticizing Handel's *Messiah* as a "ditty."

Let me assure you that the choice of "hoax" was calculated, and that today I am even more convinced that it was a felicitous choice, for the reason that the thing really is trivial. The term "hoax" suggests something cheap and crude, and that is precisely what I wish to suggest. A term such as "myth," although correct and sometimes used by me, does not convey this important description of the nature of the evidence supporting the extermination claim.

The uncomfortable reaction to the term "hoax" merely reflects the nature of the great popular delusion on this subject. At one time, some of the people who are addressing you here, such as Dr. Faurisson and myself, shared not only the popular belief in the truth of the legend but also the popular impression that its truth was beyond question – "as established as the Great Pyramid," as I wrote. However, at some point we undertook an investigation and discovered, remarkably quickly, that, beneath the legend's face of granite, there stood feet of clay.

It is this focus on the feet of clay, which revisionists have seen in the historical record, that creates a great psychological distance between the revisionists and even many intelligent people, and sometimes causes revisionists to appear to be crusaders of some sort. Those who have not seen the feet of clay cannot have the degree of certainty that seems to accompany revisionists. I believe that perhaps this contrast between the apparent dignity of the received legend and the reality of its crude and contemptible foundations is the key point that must be developed in the psychological reorientation of people whom you wish to inform. Once such a psychological reorientation is accomplished, the rest is routine. The jolt that the word "hoax" causes is a calculated initial step in this reorientation.

A Societal Problem

Another reason for the wish to focus on the controversy here is that it represents a distinct problem. That is, there is an historical problem, treated in my book, and there is also the problem of the societal status of the legend, the subject of my talk today. The former, the historical problem, is relatively simple in comparison to the latter, or perhaps I should say that I do not feel that I understand the societal status of the hoax nearly as well as I understand the hoax itself. However, a couple of obvious features can be safely noted. For one thing, it is a case of media induced hysteria. For another, the political interests involved are not dead and gone, like those of World War I, but are as contemporary as tomorrow's headlines, for Israel is always in trouble, and will be in trouble as long as it exists as a Jewish state.

This has put historical scholarship into a dreadful situation, which can be seen more clearly, if we consider the manner in which knowledge is almost always diffused in the “hard” sciences. There, it is almost always the case that trained specialists, with appropriate credentials as professionals in the scientific area involved, make the initial revelations of new knowledge. These revelations are normally made first to colleagues, and are formulated in the esoteric language of the specialty. Then, over some period of time, the new knowledge filters to general society, with the terms in which it is described undergoing in the process gradual simplification and popularization.

That is clearly not what has been happening in this “Holocaust” area. The non-specialist who has seen the feet of clay cannot get his most urgent and elementary questions answered by consulting the scholarly journals, for the simple reason that the societal and political conditions I have referred to have frightened the scholars away, and that is essentially the cultural illness I referred to earlier. It is not so much that the historians have had the wrong answers – they have not even confronted the questions, and the number of persons outside of the historical profession to whom that fact is painfully obvious is at least literal myriads today. Imagine such a situation holding in physics.

Now one can understand the curiosity that so disturbs many persons that this is “a field completely dominated by non-historians,” as I wrote in Chapter 7 (p. 282). Although the remark is no longer entirely true, it is still largely the case that the people who have drawn the obvious conclusions from the feet of clay, and have publicized their conclusions, do not have backgrounds as historians – mine is in engineering. I am the first to concede that this is a sorry situation, but the situation would be even more sorry, if nobody were asking questions about the so-called Holocaust. We can and should take considerable comfort from the fact that we have retained the cultural vitality to carry on here despite the default of the historians.

Another facet of this is the fact that, the normal channels for the flow of knowledge having been blocked, leadership in disseminating the revisionist view of the Final Solution has fallen to publications with special ideological orientations. For example *The Spotlight* in the U.S. and the *National Zeitung* in Germany are weekly newspapers that do not claim to be scholarly, but again we should take comfort from the fact that somebody has been beating the drum, for such widely read publications do nevertheless create pressures on the historians that make it more difficult for them to continue avoiding this subject.

They also serve to inform the general public, and here we should take note of the requirements of historical revisionism, because I may be misunderstood by some here and it may appear from my remarks that I am claiming that ideally such matters should be confined to scholarly journals and that the general public should not be bothered with them. I intend no such meaning, but it is true that there must be a distinction between the matters treated by scholars and those treated by the popular press.

The general public does not have the faculties or temperaments to treat knowledge in the ways of the specialists, so one must be prepared to accept something else for such purposes, and here it is useful to distinguish between an intolerable and a tolerable popular outlook. It would, for example, be intolerable if the populace believed the world to be flat. However, I suppose that, for all practical purposes, a belief that it is spherical would be tolerable, and that a concern for the macro and micro deviations from sphericity can be left to the relevant specialists.

A comparable situation holds in this "Holocaust" area, and most of the publications that have been propagating the revisionist viewpoint on the "Six Million" have been doing a reasonably good job, both in terms of informing their readerships, given the noted constraints imposed by them, and in terms of generating pressures on the historians who might prefer to avoid the subject.

Development of the Controversy

Before the early Seventies, there was only a relatively minor amount of publicly expressed questioning of the Holocaust legend. The most significant literature was the work of the former Buchenwald inmate and French Resistance member Paul Rassinier, who died in 1967. However, in reflection of the fact that there existed little interest in the subject, English translations of the Rassinier books were not published until very recently, *i.e.* in the past four years.

Around 1972 or 1973, there was an international development, by its nature not noticed at the time, that remains fundamentally mysterious. What I am referring to is the fact that a number of persons in several countries, virtually simultaneously and completely independently of each other (in fact each was not even aware of the existence of the others) resolved to question the received legend in the manner that was appropriate to his own situation and to publish his conclusions. Thies Christophersen's booklet *Die Auschwitz Lüge*, based on his recollections of his own stay near Auschwitz during the war and with an Introduction by Manfred Roeder, was published in Germany in 1973, and it was soon followed there by Dr. Wilhelm Stäglich's short article in the monthly *Nation Europa*, also based on his recollections of his wartime assignment near Auschwitz. The year 1973 also saw the appearance in the U.S. of Dr. Austin J. App's booklet *The Six Million Swindle*.

Richard Harwood's booklet *Did Six Million Really Die?* was published in Britain in the spring of 1974, and later in the same year there was the uproar at the Sorbonne over a letter by Dr. Robert Faurisson, so both were at work on this subject in 1973, if not earlier. My work commenced in 1972, and my book was published in Britain in the spring of 1976 and in German translation a year later.

In this review, I have not mentioned every relevant publication, and no value judgments should be made purely from the inclusion or exclusion of any-

thing from the list. The purpose here is not to offer a bibliography or a critique but to discuss the development of the controversy.

These developments of the early and mid-Seventies initiated reactions and a controversy that still shows no sign of subsiding, as I think you are aware. In Germany, Roeder was successfully prosecuted for his Introduction to the Christophersen booklet,⁵²³ and Stäglich was punished with a five year, twenty percent reduction of his pension as a retired judge.⁵²⁴ These acts of officially enforced censorship did not daunt any of these persons. A new version of the Christophersen booklet was issued with an Introduction by Stäglich substituted for Roeder's. Stäglich has recently published his fine book *Der Auschwitz Mythos* through the Grabert-Verlag, and he has also co-published a shorter work with Udo Walendy. The so-called liberal establishment in Germany has been in a dither over this lone courageous man, and it has been openly asked in its press "is it really so difficult to get this old and neo-Nazi?"⁵²⁵

Events unfolded differently in Britain, indeed in such a manner as to clearly suggest that questioning of the holy Six Million was not much longer to be restricted to an underground of any sort. In an astonishing development, the now famous Harwood booklet was favorably reviewed by the well-known author Colin Wilson in the November 1974 issue of the influential monthly *Books and Bookman*. A furious controversy, which lasted about six months, ensued in the "Letters" section of this magazine. I have elsewhere criticized the Harwood booklet and pointed out some serious errors in it.⁵²⁶ However, it also has its virtues and has been effective in stimulating questions, cerebration, and discussion of its formerly taboo subject. It was banned in South Africa in 1976⁵²⁷ and effectively banned in West Germany in its German translation in late 1978.

The Institute of Jewish Affairs in London published its quite vacuous article on my book in the November-December 1976 issue of its magazine *Patterns of Prejudice*. Around the same time, there began at Northwestern University an uproar over my book that soon resulted in national and even international publicity. There was a long story in the *New York Times*, but the story misreported the title of the book as *Fabrication of Hoax*.⁵²⁸ I shall say a few more words about the fuss at Northwestern later.

In April 1977, I wrote to the magazine *Index on Censorship* (headquartered in London and affiliated with Amnesty International) to report to them the many acts of official censorship in this area, such as the events in Germany and South Africa. *Index* has assumed the responsibility of merely reporting instances of censorship, usually without further comment. They replied to me in May 1977 that they "will put the question of whether or not to take it up to our

⁵²⁷ *Patterns of Prejudice*, September-October 1977, 19.

⁵²⁸ *New York Times*, January 28, 1977, A10.

editorial board.” On my trip to Europe in the summer of 1977, I visited their headquarters and was told the editorial board had not yet deliberated on the matter. I have heard no further word from them, and I intend to write to them again soon to report new instances of censorship, which were not long in coming, for I was forbidden from speaking in Munich on September 3, 1977.⁵²⁹

Another development of 1977 was the commencement of the English language publishing operations of Ditlieb Felderer’s excellent group in Sweden.⁵³⁰

March 1978 brought the tragedy of the assassination of the French historian François Duprat, allegedly by an Auschwitz “remembrance commando,” for the offense of having denied the Six Million.⁵³¹

Spring 1978 saw the U.S. airing of NBC’s eight-hour *Holocaust* monstrosity with all the preliminary and post hoopla. The inanities and hysterics were repeated in Britain later in 1978 and in several European countries early in 1979. In Germany, the airing of *Holocaust* was perfectly timed to influence the Bundestag’s decision not to permit a statute of limitations to go into effect for “war crimes.” I criticized *Holocaust* elsewhere, and I shall not waste words on it here.⁵³² I understand that it is to be shown again soon.

In the summer of 1978, the Noontide Press edition of some of Rassinier’s writings appeared.⁵³³ A year later, Historical Review Press issued its English translation of Rassinier’s Eichmann book.⁵³⁴

Late 1978 brought a significant escalation of the controversy in all senses. In October 1978, the German publisher Propyläen issued Prof. Hellmut Diwald’s massive *Geschichte der Deutschen* (History of the Germans). Propyläen is an old firm, now owned by Axel Springer, which specializes in publishing books written by scholars but for an intelligent lay readership. On two pages, Diwald said some things very much in harmony with things revisionists of the “Final Solution” have said, and of course the clamor of the Establishment’s spokesmen was deafening. Golo Mann wrote that “these two pages [...] are the most monstrous that I have had to read in a German book since 1945,”⁵³⁵ and the publisher responded to the clamor by stopping the sale of the first edition and substituting a new edition with the two offending pages hastily rewritten – in a style I am assured is not Diwald’s – in order to conform to the usual line. Axel Springer further promised publicly, in words I cannot imagine coming from a U.S. publisher under any circumstances, that this was only the beginning of the rewriting of the book and that by fall 1979 the book would be “not recognizable.”⁵³⁶

⁵²⁹ *Süddeutsche Zeitung*, September 2, 1977, 13; September 3-4, 1977, 13f.

⁵³² *Spotlight* (Washington), May 8, 1978.

⁵³³ Rassinier (1978).

⁵³⁴ Rassinier (1979).

⁵³⁵ *Der Spiegel*, December 4, 1978, 14f.

⁵³⁶ *Der Spiegel*, April 9, 1979, 232ff.; *National Zeitung* (Munich), February 16, 1979, 6.

The original two pages that Diwald had published were not particularly significant in themselves; relatively little was said. There are, however, two points of major significance to note. First, Diwald does not lack credentials as an historian. He is a history professor at the Friedrich-Alexander University in Erlangen and has been well known in the historical profession since taking his doctorate under the German-Jewish historian Hans-Joachim Schoeps more than two decades ago. Second, the fact of the panic rewriting of the two pages, as a result of public pressure, definitively established points that should be made when people ask such questions as “why do even the Germans concede the reality of the six million murders?” or “why do the historians concede them?” The market in ideas in this area is not a free one. Throughout the world, there are at least informal and unofficial barriers to free expression and discussion.

In some countries, especially in Germany, there are also formal and legally enforced barriers. That fact has already been noted here, but late 1978 saw the initiation in Germany of a great new wave of repression. In that country there exists the concept of “youth-menacing media” (*jugendgefährdende Medien*). It is something like the “X rating” concept in the USA, except that its application is supervised by the government and not almost entirely restricted to pornography. In theory, the law is supposed to prevent only the availability of things to youth, but when non-pornographic matter goes on the list, the practical effect is to ban it, for the law specifies that listed literature may not be advertised or sold to private parties by mail. It can still be sold in bookstores, subject to certain restrictions, but with the exception of the Diwald book the literature that has been discussed here had never been stocked by regular bookstores in Germany anyway.

Late 1978 marked the beginning of an obviously systematic campaign in West Germany to put much of the literature I have told you about on the list of youth-menacing literature. The first was the German translation of the Harwood booklet, and the German translation of my book, entitled *Der Jahrhundertbetrug*, went onto the list in May 1979.⁵³⁷ There is also a move against the Stäglich book that is too recent to discuss further here. Such developments in the official area in Germany, together with developments in the unofficial area, such as the Diwald affair, answer conclusively the question of why even Germans concede the reality of the “exterminations.” The system that we set up there after the Second World War gives them no other choice.

Almost simultaneously with these events in Germany, things were happening in France. In late October 1978, *l'Express*, a magazine comparable to *Newsweek*, published an interview with Louis Darquier de Pellepoix, who had been commissioner for Jewish affairs in the Vichy government during the German occupation and who has lived in Spain since the war. Darquier's generally unrepentant attitude – plus his claim that the only creatures gassed at Auschwitz had been lice – set off a French uproar virtually coincident with the

⁵³⁷ *Frankfurter Allgemeine Zeitung*, June 16, 1979, 23; *New York Times*, May 22, 1979, A13.

one around Diwald on the other side of the Rhine. Most significantly for our interests, the spotlight then turned on Robert Faurisson, who was then teaching at the University of Lyon-2 and who had been almost forgotten since the relatively minor flap when he was at the Sorbonne in 1974. The disorders on the part of some of the students led to Faurisson's suspension from his teaching duties, a suspension that is still in effect, but another result of all their attention to Faurisson's supposedly outrageous views was that *Le Monde*, the French equivalent of the *New York Times*, saw itself obligated, much against its wishes, to give him space in which to express these views. It is true that *Le Monde* gave the other side much more space, but an important barrier had been broken, at least in France, and I am told that today there are a lot of questions being openly asked in that country whose expression would have been inconceivable only a year ago.⁵³⁸

As a consequence of the publicity in France, Faurisson was able to participate in a three hour debate on Italian-language Swiss television on April 17, 1979. I am told that the program generated enormous interest, that most impartial observers thought Faurisson had won the debate, and that the whole thing was rebroadcast on May 6. As a result of the television debate, a long interview with Faurisson was published in the August 1979 and following issues of the Italian magazine *Storia Illustrata*; this interview is by far the most instructive material on the Holocaust subject to be published, to date, in an "Establishment" magazine or newspaper.⁵³⁹

At the height of the Diwald and Faurisson controversies in Europe, another one broke out in Australia. John Bennett, a Melbourne civil liberties lawyer, had sent copies of my book to several Melbourne academics, together with a memo by him summarizing what seemed to him to be some of the principal arguments in support of the thesis of the book, and inviting critical comment (I understand that to date, despite the publicity there, almost no such comment had been forthcoming). Neither the memo nor anything else Bennett had written on the subject had been intended for publication, but one weekly newspaper got a copy of the memo somehow and published it, igniting a controversy that lasted several months.⁵⁴⁰

In these controversies, the guardians of the legend have said very little of intellectual content. It has, with only rare exceptions, been all name-calling – "anti-Semitic," "neo-Nazi," etc. So here are a few people who have lived well up to or into middle age without it ever having occurred to anybody to call them such things and who are now so belatedly assaulted with these political cuss words just because they asked questions about the Six Million.

⁵³⁸ *Le Monde*, November 22, 1978, 42; December 16, 1978, 12; December 29, 1978, 8; January 10, 1979, 11; January 16, 1979, 13; February 3, 1979, 10; February 21, 1979, 23; March 8, 1979, 31.

⁵³⁹ English translation published as Faurisson (1981b).

There was another important development early in 1979 and it came, oddly, from the CIA. Two photo interpreters released their study of some aerial reconnaissance photographs of Auschwitz that the U.S. made in 1944, when Auschwitz was of strategic interest as an oil target. Despite the publicity and even an historian's claims that the photographs provided some sort of evidence of exterminations, there was no such evidence in the photographs.⁵⁴¹ What was to be found in the photographs was on crucial points exactly what was predicted in my book, where it was shown in Chapter 5 (p. 202) that such photographs must exist, although I had not seen them.⁵⁴²

Negative Reactions in Academia

I have suggested that the negative reactions to revisionists of the Final Solution have been on the whole emotional, and I made no distinction between reactions of professional scholars and laymen. This was no oversight. I am sad to report that to an extent that stunned me the reactions of very many scholars have been what one might have expected from a hyperemotional Jewish grandmother. In the early stages of the public reactions to my book, one Prof. Wolfe of New York University made a fool of himself by writing to the *New York Times* that Northwestern University should bring me up on charges of "academic incompetence" and "moral turpitude" for authoring and publishing the book whose title, he reported in his letter, was "*Fabrication of a Hoax*." Clearly, he had seen the *New York Times* story about the book, which reported an incorrect title, and he had not seen the book itself.⁵⁴³

That was an extreme case, but it is still true that scholars who should know better have made a lot of noises while saying almost nothing of substance. In all of the professorial criticism of my book at Northwestern, the only point of historical weight that was raised against it, and that reached me, was that the published population statistics are in conflict with my claims. That fact is mentioned and discussed in the first chapter of my book (p. 32).

The History Department at Northwestern supposedly undertook to sponsor a series of lectures entitled "Dimensions of the Holocaust," but then the Chairman of the Department gave the show away in his introductory remarks by thanking the Hillel Foundation for rounding up the speakers for the affair. The University shortly later published the lectures in a booklet that is presumably still available.

There was another instructive development at Northwestern. There was published in the student newspaper a full-page advertisement, sponsored by the Hillel Foundation and bearing a statement of "condemnation" signed by about half of the faculty.⁵⁴⁴ There is no need to reproduce the text here. The statement mentioned "the murder of over eleven million people, among them

⁵⁴¹ *Washington Post*, February 23, 1979, A1; *New York Times*, February 24, 1979, 2; March 6, 1979, A16.

⁵⁴² Brugioni. & Poirier.

⁵⁴³ *New York Times*, February 4, 1977, A22.

⁵⁴⁴ *Daily Northwestern*, March 30, 1977, 5.

six million Jews, by Nazi Germany,” and I think the most interesting feature of this is not the six million Jews but the five million or more others, who seem to have been added to the propaganda both rather recently and rather arbitrarily, although it is said that so-called “Nazi-hunter” Simon Wiesenthal has used the figure for some time.⁵⁴⁵

There is apparently some specific propaganda point served by the five million Gentiles. Wiesenthal claims that “one of the biggest mistakes made on the side of the Jews” has been to emphasize only the six million Jews and not the others, with the result that Jews “lost many friends.” I must confess that I do not see the point at all, but apparently it has been decided to toss the five million Gentiles into the propaganda on at least selected occasions.

To return to the statement of condemnation that was signed by so many faculty members at Northwestern, there is clearly something graver involved here than mere conformity to a doctrine or established myth, for it is a certainty that the vast majority of the signers had never heard of the five million *goyim* until they were confronted with the statement to sign. Their subscription was therefore not based on mere unquestioning acceptance of a familiar historical claim. It was based on considerations even more baleful to an academic environment. I will not explore the point further here, but it is easy to get the dismal impression that many would have signed almost anything related to the controversy, provided the Hillel Foundation wished it signed.

It is dismaying to report such behavior on the part of those to whom society has entrusted the custody of its affairs of the intellect. However, there are at least some indications that it is being realized that a more serious treatment of my book, if only to attempt to discredit it, is required. It has recently been said that “Butz might succeed in delivering ammunition to more ‘revisionists’ of the Final Solution. Here lies the danger. Butz should be unmasked, not ignored.”⁵⁴⁶

Conclusions

You can see the gist of the conclusions I am going to draw from this account of the development of the controversy. What I have described to you has been a process, whereby a thesis has emerged from the underground, to which it had been assigned both on account of political pressures and on account of its seeming implausibility (given the decades of propaganda), into the light of day where it is being discussed and argued in establishment publications throughout the world. It is still a minority thesis, but the trend in favor of revisionists is obvious to anybody who is not willfully blind.

Revisionists of the Final Solution, a handful of lone individuals of meager resources, have been successful far beyond their expectations – at least I did not expect things to unfold so rapidly – and this cannot be explained entirely in

⁵⁴⁵ *Chicago Daily News*, November 12-13, 1977; *Los Angeles Times*, May 6, 1979, part 9, 4; *Los Angeles Times Calendar*, May 13, 1979, 2; *New York Times*, May 28, 1979, D7.

⁵⁴⁶ Conway (1979), 264.

terms of the quality of their efforts. It can only be explained in terms of society's being receptive to such views at this point in history. The development that I have outlined here has now gone so far that I now believe it is almost irrelevant what I and my present revisionist colleagues do, or what happens to us.

To see the reason for this, one need only return to one of my earliest points: this is a simple subject. The almost universal delusions have existed not because of the complexities of the subject but because of political factors in Western society. A corollary of the simplicity of the hoax is that it only need be questioned and discussed, in a context free of intimidation and hysteria, for the psychological reorientation spoken of earlier to be accomplished, the shattering of the delusions following in due course. That point has for all practical purposes been reached or soon will be reached.

I shall make an observation that may seem harsh. Revisionists of the Holocaust have been, to put it bluntly, victims of multifarious persecution. You know only a part of it – the part that appears in the newspapers, such as the book bannings in Germany or Faurisson's suspension at the University of Lyon-2. The other part, the more personal part, is at most only hinted at in the newspapers, is generally not known to you, and we shall not bother you with details of such painful things, but let me assure you they exist. I therefore am fully cognizant that it is harsh of me to make this observation: we should greet the fact of the persecutions, for they are symptomatic of success, and even the victims should be as elated over them as is psychologically possible in the grim personal circumstances they are in.

Sometimes it is said that the revisionist Holocaust thesis is comparable to claiming that the world is flat, but note that nobody bothers the flat earth people. It is not rough to go up against the whole world with no chance of winning, but it is very rough to go up against it with some chance of winning. That is what revisionists of the Final Solution did, and that is the reason for the persecutions, but the persecutions are too late and in vain, for as I just noted: it is almost irrelevant at this point what happens to today's Holocaust revisionists. The present inertia of the controversy has the weight to bring down the hoax even without their personal participation and deliver these mendacious and pernicious years into the trash can of shattered hoaxes.

Supplement 2: Context and Perspective in the Holocaust Controversy

Presented orally at the 1982 conference of the Institute for Historical Review. This is a slightly edited version of the paper as published in the Journal of Historical Review, vol. 3, no. 4, Winter 1982, pp. 371-405.

When we criticize somebody in the discussion of some subject, because “he can’t see the forest for the trees,” we refer to a special sort of intellectual failing. We do not mean that the object of our criticism is incompetent or that his views on the subject of interest are erroneous or irrelevant. His views may, on the contrary, be buttressed by investigations of depth and power that would be a credit to any intellect. We mean that he is so focused on details that he fails to see the subject in proper and larger context, especially from the higher perspective, which, if adopted and pursued, would solve many of the problems that excited general curiosity in the subject in the first place.

When I first addressed an IHR conference three years ago, I explicitly made reference to this problem by pointing out that on p. 28 of this book I mentioned the consideration that, if appreciated adequately, would have made much of my study superfluous.⁵⁴⁷

“The simplest valid reason for being skeptical about the extermination claim is also the simplest conceivable reason: at the end of the war they were still there.”

Through all of the controversy on the Holocaust, my thoughts have continually returned to this point. That so much controversy could have raged, with only rare occurrences of this observation, raises questions that are worth exploring.

On the one hand, my making of the above and similar general historical observations shows that I did not myopically see only the trees and not the forest. On the other hand, in some parts of the book, my focus may seem to be on obscure details and to suggest myopia. This bifocalism is the topic of this paper. For one thing, I want to develop the “forest” side of the subject further, *i.e.* I want to place the “Holocaust” subject more firmly in the context of the higher history of the Twentieth Century. On the other hand, I want to consider the fact that so much of the investigation that has been conducted in recent years, certainly including my own, has presupposed and sought to satisfy myopic demands. I will argue, partly from historical analogy, that as a practical matter this great emphasis on detail seems justified and even necessary in the times we are in, but that it is important, in order to avoid getting tripped up on points of detail, that we keep the larger context in mind.

Paper presented by Prof. Dr. Arthur R. Butz during the International Revisionist Conference in 1982, published: Butz (1982).

⁵⁴⁷ Page 28 in the present book.

Gitta Sereny

Gitta Sereny's article in the *New Statesman* of November 2, 1979, furnishes a useful illustration. She attempted to counter my arguments in only one respect. In the course of writing *Into That Darkness*, she had interviewed, in a German prison, Franz Stangl, former commandant of Treblinka (a facility in central Poland that served as a transit camp for deportations of Warsaw Jews). She wrote:

"I talked with Stangl for weeks in prison; I talked to others who worked under him, and to their families. I talked to people who, otherwise uninvolved, witnessed these events in Poland. And I talked to a few of those very few who survived.

Butz claims in his Hoax that those [hundreds] who admitted taking part in extermination were doing so as plea-bargaining, in order to get lighter sentences. But those I talked to had been tried. Many had served their sentences, and none of them had anything to gain – except shame – by what they told me. Stangl himself wanted only to talk, and then to die. And Stangl is dead. But if [...] Butz [...] were really interested in the truth, Stangl's wife, and many other witnesses are still able to testify."

Although the point is not of major importance, I note that Sereny had misleadingly reported Stangl's hopes during her interview. According to her *Into That Darkness*, Stangl was awaiting the decision on his appeal against a life sentence, so he presumably wanted to get out of jail before he died.

Anybody who has taken even a brief look at the details of the Treblinka legend (e.g. the claim that the exhausts of captured Russian tanks and trucks were used in the "gassings") would understand that history was not being served by Sereny's remarks on her interviews with Stangl. However, I am afraid that in the typical case such healthy skepticism might be accompanied by some myopia in offering an explanation for Sereny's account.

The most obvious myopic reaction would be to say or suggest that Sereny was lying, that Stangl never said anything like what she has attributed to him. Other possibilities might be to suggest that such remarks by Stangl were produced by bribery or torture. That such reactions quite miss the mark is easily seen by first considering the context, rather than the content, of Stangl's remarks. He was by then an old man. He had heard the tales of what was supposed to have happened at Treblinka for twenty-five years. Of course, he privately scoffed at them at first. Then he got accustomed to living in a culture, in which such tales were never publicly challenged. He may (as sometimes happens in such circumstances) have started to believe them himself, or perhaps he privately cultivated his knowledge that the tales were almost pure invention. It is most unlikely that we shall ever know, but we do know that in his confrontation with the journalist Sereny, the hapless old man could scarcely have reasoned that he could help himself by denying the legend as it applies to Treblinka. I am confident that Stangl told Sereny something like she reports. Of course Stangl sought to excuse himself personally, but what possible self-

serving reason could he have found for telling Sereny that the “gassings” are a myth?

Accordingly, I wrote in my letter of reply to the *New Statesman*, which was not published there but was later published elsewhere:⁵⁴⁸

“The key point is that the objective served by such statements should be presumed to be personal interest rather than historical truth. At a ‘trial’ some specific thing is to be tried, i.e. the court is supposed to start by treating that thing as an open question.

The ‘extermination’ allegation has never been at question in any practical sense in any of the relevant trials, and in some it has not been open to question in a formal legal sense. The question was always only personal responsibility in a context in which the extermination allegation was unquestionable. Thus the ‘confessions’ of Germans, which in all cases sought to deny or mitigate personal responsibility, were merely the only defenses they could present in their circumstances.

This is not exactly ‘plea-bargaining,’ where there is negotiation between prosecution and defense, but it is related. All it amounts to is presenting a story that it was possible for the court to accept. The logical dilemma is inescapable once the defendant resolves to take the ‘trial’ seriously. To deny the legend was not the way to stay out of jail.

Moreover it is not true, as Sereny implicitly asserts, that this logical dilemma no longer holds when the defendant is serving a life sentence. If he is seeking pardon or parole, he would not try to overturn what has already been decided in court; that is not the way pardon or parole works. For example, at the Frankfurt ‘Auschwitz trial’ of 1963-1965, so monstrous were the supposed deeds of Robert Mulka that many thought his sentence to 14 years at hard labor unduly light. Then, in a denouement that would amaze all who have not studied this subject closely, Mulka was quietly released less than four months later. However, if Mulka had claimed in any plea (as he could have truthfully), either at his trial or afterwards, that there were no exterminations at Auschwitz and that he was in a position to know, then he would have served a full life sentence in the former case and the full fourteen years in the latter, if he lived that long.

It is not widely known, but there have been many such instances – the subject is hard to investigate.⁵⁴⁹ In no instance would it have made any sense, in terms of immediate self-interest, to deny the exterminations. That was not the way to get out of jail.”

If one accepts, as the terms of the debate, the purely defensive attitude of responding to the specific points made by the other side, then I still believe this to be the correct way to answer Sereny. I was satisfied as I wrote those lines, but in the course of so doing, the madness of the immediate context struck me. It was 1979, not 1942, and Sereny was trying to explain to readers of the *New*

⁵⁴⁸ Butz (1980). The “Dr.” before my signature was added by the editor. I never sign that way.

⁵⁴⁹ *Los Angeles Herald Examiner*, September 2, 1979, E2.

Statesman, via her account of a lone old man's remarks, that they should believe the "extermination" tales. Continuing the letter, then, I wrote:

"We do not need 'confessions' or 'trials' to determine that the bombings of Dresden and Hiroshima, or the reprisals at Lidice following Heydrich's assassination, really took place. Now, the extermination legend does not claim a few instances of homicide, but alleges events continental in geographical scope, of three years in temporal scope, and of several million in scope of victims. How ludicrous, then, is the position of the bearers of the legend, who in the last analysis will attempt to 'prove' such events on the basis of 'confessions' delivered under the fabric of hysteria, censorship, intimidation, persecution and blatant illegality that has been shrouding this subject for 35 years."

To put it another way: In her 1979 article, Sereny was arguing the reality of the colossal events alleged by reporting what a tired old man recently told her in prison. One might as well argue that the gypsies burned down New York City in 1950, on the basis of confessions of gypsies who were living there at the time. Of course, Sereny would argue that I am seizing on only one remark of hers and making it appear to be her whole argument. However, while I concede that she has a great deal more to say on this subject, the basic observation still stands. She was taking a great deal of space in a prominent journal in presenting arguments that in 1979 were wildly incommensurate with the allegation in question. If the Jews of Europe really had been exterminated, such arguments would not be offered.

When I saw Robert Faurisson in 1980, he congratulated me on this point, *i.e.* for pointing out that we do not need "trials" in order to believe in real historical events (Hiroshima, Lidice, etc.), and said he wished he had thought of it. I knew how he felt, for, at about the time of Sereny's article, a man I had never heard of before telephoned me and raised a point I wished I had thought of, namely, why didn't those Jewish bodies outside the Axis sphere, who had so much to say about "extermination" and "murder," undertake to warn the Jews under Hitler what supposedly lay in store for them in the German resettlement programs? In all accounts we are told that the Jews packed up for the deportations and entered camps later without imagining that they were to be killed. This feature of the legend is of course necessary, for it is well known that violent resistance to the deportations was very rare (I implicitly touched this point in Chapter 4, pp. 151-152, but nowhere nearly as strongly as I should have).

The general lesson suggested by these two incidents is the subject of this paper. We see that what was involved in both incidents was temporary myopia, not merely of the bearers of the received legend, but more importantly of the revisionists, who were so busy analyzing the trees that it took some fortuitous prodding to make them notice some important features of the forest. This is not a failing of individuals. It is a consequence of the historical circumstances in which we find ourselves. I shall try to describe those circumstances, and show how we should handle them today. This is done partly by presenting my

approximation of posterity's outlook on these matters, and partly by offering several suggestions on the conduct of practical controversy.

The Donation of Constantine

The "Donation of Constantine" is the most famous forgery in European history.⁵⁵⁰ It first appeared somewhere around the year 800. It is a document allegedly in the "hands" (*sic*) of Emperor Constantine I (288? – 337), which recounts the long-standing and false legend of Constantine's conversion and baptism by Pope Sylvester I. Its principal feature is its grant to the Pope of temporal authority over "the city of Rome and all the provinces, places, and states of Italy, and the western regions." It also decrees that the Pope "shall have the supremacy as well over the four principal (holy) sees, Alexandria, Antioch, Jerusalem, and Constantinople," and makes various additional specific grants. To make it clear that the Donation is in earnest, the document then has Constantine declare his intention to transfer his own capital to "the practice of Byzantia (where) a city should be built in our name [...] for where the primate of priests and the head of the Christian religion is established by the Heavenly Emperor, it is not right that an earthly Emperor shall have authority there."

What is of the greatest interest here is that the authenticity of this document was rarely questioned before the Fifteenth Century, despite the facts that (1) according to legends and histories widely available throughout the Middle Ages and to the document itself, the city that Constantine founded on the ancient site of Byzantium, and which was later called "Constantinople," had not yet been founded, much less made the site of a principal holy see and (2) more conclusively, and in analogy with our "they were still there" observation on the Holocaust, according to records and histories available throughout the Middle Ages, imperial rule continued in Italy during the times of Constantine, Sylvester and their immediate successors.

It was certainly not lack of interest or relevance that explains the long failure to see the Donation as a fraud. Much of the political life of the Middle Ages revolved around the controversy over the relative power of Pope and Holy Roman (*i.e.* German) Emperor, and able intellects participated in circumstances, in which the Donation was considered one of the arguments on the side of the Pope. Even Dante (1265-1321), an outspoken enemy of papal temporal power, touched on the Donation in his *Inferno* only to deplore Constantine's granting of it:

*O Constantine, what great evil had as its mother
Not your conversion, but that dowry
Which the first rich father got from you!*

Thus, a wildly ahistoric forgery, approximately in the class of a letter bearing the alleged signature of George Washington, granting the Methodist Episcopal Church "authority to rule over Washington, DC and subject territories of North

⁵⁵⁰ Cf. Coleman (1914, 1922).

America,” went almost unchallenged throughout centuries of relevant controversy.

The first challenges were typically silly, off the mark, tendentious, or circumlocutory, and often, with Dante, challenged only the desirability of the Donation and not its historicity. In the middle of the Twelfth Century, the reform movement of Arnold of Brescia attacked the whole legend of Sylvester and the Donation by arguing that Constantine was already a Christian when he met Sylvester. Among the anti-papal Ghibellines of Germany, there arose around 1200 the legend that, when Constantine made the Donation, the angels cried audibly “Alas, alas, this day has poison been dropped into the Church of God.” The partisans of the Pope retorted that, sure, the weeping was heard, but it was just the Devil in disguise, trying to deceive us. Others argued that the Donation was not valid because Constantine was tainted with Arian heresy, or because the consent of the people had not been obtained, or because the grant was supposed to apply only to Constantine’s reign. Others turned the donation into a back-handed blow at the papacy by arguing that it showed papal primacy to be derived not from God, but from the Emperor. Indeed, the last argument became, until the middle of the Fifteenth Century, a standard attitude toward the Donation on the part of anti-papal spokesmen. Around 1200, two writers had pointed to the fact of the continuity of imperial rule in Italy after the alleged Donation, but their presentations were circumlocutory and did not reveal their personal conclusions on the matter, and they had no evident influence on future controversy.

What should have been a conclusive critique of the Donation came in 1433, not from an anti-papal source, but from somebody we might characterize as a liberal reformer within the Church. Cusanus, Deacon of St. Florinus of Colblenz, presented for the use of the Council of Basle a critique of the Donation, which emphasized the overwhelming historical evidence against any transfer of sovereignty from Emperor to Pope in or just after the time of Sylvester and Constantine.

Cusanus’s *De concordantia catholica* had little direct impact, partly because of its dry and dispassionate tone, and partly because it was eclipsed by the 1440 treatise of Lorenzo Valla, *De falso credita et ementita Constantini*. It is Valla’s name that is most closely associated with the overthrow of the hoax, partly because his own considerable talents were supplemented by Cusanus’s work, partly because of the oratorical and passionate nature of his treatise, and partly because the quickly succeeding developments of printing and the Reformation movement gave the treatise a massive distribution in various translations.

Valla’s basic approach was to subject the Donation to criticism from every perspective that was available to him. For example, he starts by trying to look at the matter from the perspective of Constantine, “a man who through thirst for dominion had waged war against nations, and attacking friends and relatives in civil strife had taken the government from them,” who then allegedly would “set about giving to another out of pure generosity the city of Rome, his

fatherland, the head of the world, the queen of states, [...] betaking himself thence to an humble little town, Byzantium.” After reading only a few pages of Valla, the Donation seems incredible, but the treatise runs to about 80 pages in English translation and is a classic case of “overkill.” Valla supported Cusanus’s argument that the alleged transfer of sovereignty had not taken place with the evidence of the Roman coins of the period, which were issued in the names of Emperors, not Popes. Valla analyzed the language and vocabulary of the Donation document and showed they could not have represented the sort of Latin used by Constantine. Such methods were novel for the times.

Valla was not a disinterested scholar. At the time he wrote the treatise, he was employed as secretary to Alfonso of Aragon, who was contesting the rule of Naples with the Pope. Valla left his readers in no doubt of his view that temporal power of the Pope is bad and ought to be abolished. Nevertheless, Valla’s treatise is a landmark in the rise of historical criticism, and I believe it can profitably be studied today by those engaged in “debunking the genocide myth.”

Although somebody was burned at the stake in Strassburg in 1458 for denying the Donation, Valla’s thesis was at first quite well received among educated people, although the treatise remained in manuscript. By 1500, it seemed the legend was finished; the relative quiescence of fundamental controversy on the character of the papacy was probably helpful. However, the development of the Reformation movement and the wide use of Valla’s treatise as a weapon against the papacy had the ironic effect of reviving the defense of the legend. On the one hand, Martin Luther declared in 1537 that Valla’s treatise had convinced him that the Pope was the embodiment of the Anti-christ. On the other hand, Steuchus, librarian of the Vatican, produced in 1547 a rather able attack on Valla’s treatise, which was put on the Index shortly later. The process of overthrowing the legend could only be considered completed around 1600, when the great Catholic historian Baronius declared that the falsity of the Donation had been proved.

This short sketch begs at least two fundamental questions. First, we have observed that the fraudulence of the Donation seems obvious, on the grounds that the alleged transfer of sovereignty did not in fact take place. Why then did it take so long to expose it?

I believe that the reason is fundamentally that it would have been impolitic, earlier than the Renaissance, to have drawn the obvious conclusions about the Donation. Important political and economic interests are difficult to oppose with mere observations, regardless of how factual and relevant. The two explanations that come most readily to mind, for the overthrowing of the legend at the time it was done, are, first, that the Renaissance introduced a new higher level of scholarship to Europe and, second, that the Reformation assisted anti-papal developments. I believe this interpretation is valid provided it is not thereby implied that the Middle Ages did not have the intellectual acumen to see through the fraud. The political developments of the post-medieval period were decisive in making it safe and even opportune to see the obvious.

We can elaborate on this basically political explanation by noting the old problem: we see the trees, not the forest, unless we make unusual efforts to do otherwise. To see the obvious, it must first be presented somehow. What people heard in the Donation controversy were the claims of Popes to temporal authority, references to the relevant document, and all sorts of arguments from quarters hostile to the Pope. Roman history, while known to a good extent, was not normally ably presented. For this perhaps amazing omission there are simple explanations. For one thing, the Popes represented the entrenched position, and called the tune on what was to be discussed; they could hardly be expected to encourage examination on historical grounds. For another thing, spokesmen against the Donation, on account of their dissident position, had to address familiar subjects in order to accomplish the practical objective of being heard. Moreover, as they typically represented political or religious interests rather than historical studies, they often did not know the relevant history anyway. On the other hand, the professional scholars were largely dependent upon ecclesiastic authorities for their livelihoods. Thus, the field was suitable for a reign of politically founded stupidity.

To ask a second fundamental question, if the fraudulence of the Donation should have been obvious to the unintimidated and inquiring intellect, and if political developments weakened and even removed the intimidation, then why was a lengthy treatise such as Valla's necessary to overthrow it?

The question as posed is loaded, mainly in the sense of presupposing cause and effect relationships. We cannot separate causes and effects in complex events which saw (a) the shattering of the power of the papacy in the Reformation and (b) the overthrowing of one of the impostures which supported that power and (c) the wide circulation of a book exposing that imposture.

At best, we can ask what role Valla's treatise played in these events, and a good conjecture can be made on the basis of the contents of the treatise, which were far more extensive and far more detailed than what was required to prove the thesis. It contained intellectual material of such quantity and diversity that the spread of its influence was all but irresistible. Old coin buffs got something to talk about; the specialists in Latin grammar and language were invited into the controversy; the historians of Rome saw something for them, ditto the historians of the Church. In short, articulate tongues were set wagging against a background of colossal political development.

In my Convention paper three years ago, I stressed that extra-academic controversy should not be underrated as a means of nudging scholars along on controversial subjects (see Supplement 1). That is to say – and here I am speaking from direct experience as a member of academe – the typical attitude toward “hot subjects,” on the part of the basically honest but all-too-human scholar, is evasion. To be sure, there is a small minority, the hirelings of the profiteers of the reigning thesis, who consciously lie and obfuscate. Eventually, there is a small minority that assaults the entrenched position, whose dissident utterances have the temporary effect of allying a larger minority with the conscious liars in denunciation of the heretics. However, the typical honest

scholar, who tries to maintain self-respect while paying his bills, evades the hot issue.

This evasion is made difficult or impossible if diverse members of the populace abound with challenging questions. If the popular expression goes far enough, it can transform itself from a factor making evasion impossible, into a factor making heresy relatively safe. Thus, do not underrate popularization of hot subjects as a means of nudging or even propelling those who ought to handle them.

The main points I want to make in this section are as follows. Simple and decisive arguments against the Donation of Constantine, which, it seems to us, should have been obvious to the Middle Ages, were smothered by the politics of the times. Valla's treatise, going into far more detail than seems necessary to our historical sense, played a crucial practical role in bringing down the legend of the Donation, but this process was inseparably linked to political developments favorable to Valla's thesis and its unintimidated consideration.

The Analogies

The analogies to our own Holocaust legend may seem almost too obvious to belabor. The academics of the Middle Ages and the Renaissance, who would not see the simple, stand in painful and embarrassing analogy to academics of today. However, it is worthwhile to expand on a few points.

We have seen that the legend of the Donation was overthrown in a period of political development highly unfavorable to the papacy, and this suggests another obvious analogy and expectation: that the Holocaust legend will be overthrown in a period of political development highly unfavorable to Zionism. This anticipated confluence is above all inevitable and inescapable, but it is useful to note its dangerous aspects. It will introduce dangerous pressures, political and intellectual, into the revisionist camp.

For example, as this is written, the Israeli invasion of Lebanon has made Menachem Begin the most unpopular man, and Israel the most unpopular state in the world. It can plausibly be argued that the invasion has been brutally negligent of the welfare of innocent Lebanese civilians who have died in shocking numbers or suffered the privations attendant to the Israeli attempt to destroy the PLO forces. It can plausibly be argued that Americans have been dopes or dupes for giving Israel almost everything it wanted in the past. However, I have read, even in publications friendly to revisionism,⁵⁵¹ that the Israeli policy amounts to "genocide," which it does not, either in intent or (thus far) in effect, at least not in my understanding of the meaning of the word, which is somewhat close to "extermination." While such ill-conceived cussing may be the norm for the popular press, it is upsetting to see revisionist-oriented circles do it, for they, above all, should be able to make the distinctions among the various inhumanities that are necessary to keep the historical record straight.

⁵⁵¹ *E.g. The Spotlight*, July 26, 1982, 10ff.

A recognition of real danger comes with the understanding that such confusion of issues may have an explanation in terms of politics as well as in terms of normal human inexactitude. In the coming years, there will be strong pressures on many, including revisionists, to be “for” the Arabs as distinct from fair to them. The pressure will arise partly from the fact that it will be precisely the Middle East developments that will create opportunities for the revisionists to be heard. Thus, the revisionists will have to walk a tightrope, on the one hand resisting dangerous pressures, on the other hand exploiting such openings, as political developments may make, for the expression of legitimate historical observations. We should dearly love to consider the hoax in an ivory tower, but it is not going to happen that way.

As history never repeats itself, the Donation-Holocaust analogy does not hold on all salient points. However, there is another important point of similarity worth noting, namely the excessive attention to detail in both Valla’s treatise and in contemporary revisionist investigations: overkill in both cases. The people of the Renaissance would not observe that the alleged transfer of sovereignty did not take place and let go at that, and we will not observe that the Jews were still there and let it go at that. Apparently, we must pursue the subject into areas of detail that may seem fantastic to posterity. For example, we are not satisfied that the Zyklon, allegedly used in the “gassings,” was an insecticide; we need to exhaustively analyze the technical aspects of the claim.

This preoccupation with detail is both desirable and necessary. That it is desirable has been suggested in the discussion of the Donation. A preoccupation with detail entails a great diversity and quantity of thought on the legend, which, even if it might seem myopic to posterity, will, indeed has, set tongues wagging in the practical and urgent present to the extent that those formally charged with such concerns will no longer be able to avoid them. Indeed, that this point “has” been reached is essentially admitted by Raul Hilberg, author of *The Destruction of the European Jews*, in a recent interview in a French weekly:⁵⁵²

“I will say that, in a certain manner, Faurisson and others, without having wished it, have done us a service. They have raised questions which have had as effect to engage the historians in new research. They have forced the gathering of more information, the re-examination of documents, and going further into the understanding of what happened.”

That our preoccupation with detail is also necessary in the present circumstances follows from the propaganda strategy of the promoters and defenders of the established legend. One aspect of that strategy is to evade the real and simple question of whether or not the Jews of Europe were in fact physically exterminated by the Germans, and to concentrate instead on the superficially similar and (provided enough confusion is generated) speciously equivalent question of whether or not “gas chambers” were operated by the Germans.

⁵⁵² *Le Nouvel Observateur*, July 3-9, 1982, 70+.

This is one basic trick of the hoaxers (there are others I shall mention), and too many of the revisionist camp or bent fall for it. To anticipate any misunderstanding on the point, let me give my assurance that I hold the answers to both questions to be “no”; there was no extermination program and there were no gas chambers. However, the former is the real bone of contention, and the latter is of only subsidiary importance to the Holocaust revisionist school, as I understand its implicit tenets. For example, if it turned out that, one day in 1942, ten adult male Jews were marched into Hitler’s headquarters in East Prussia, placed in Hitler’s shower (with suitable hasty mechanical modifications), and there gassed before the approving eyes of the Führer, I would have many reasons, historical and technical, for being astonished, but I would not be forced to change or withdraw any major conclusion on the “extermination” matter. The discovery would rock the revisionists for whom Hitler is of central interest, *e.g.* David Irving, but that is irrelevant.

By various tricks, *e.g.* focusing on certain types of testimonies or discussing “Zyklon” out of context, the defenders of the legend are often able to arrange the quiet substitution, in public controversy, of the “gas chamber” question for the “extermination” question, not because they confuse the two, but because by so doing they are able to take advantage of certain routine reservations that apply to nearly every historical subject.

For example, until a short time ago, if I were asked if the Japanese had gassed prisoners during World War II, I would have answered that I was unaware of any such gassings. Now I have very recently read a credible report that they gassed 404 “human guinea pigs” in connection with “research on biological warfare.”⁵⁵³ However, I continue to be certain that the Japanese did not “exterminate” any populations.

As another example, I am certain that during World War II the Allied powers did not exterminate any significant portion of the Eskimo population, and I am also confident that no individual communities of Eskimos were gassed by them, but not that I am “certain” in the former case and only “confident” in the latter. The difference arises from the fact that, while one can show that there was no extermination program for Eskimos (*e.g.* insignificant absences were noted after the war), one cannot show that no Eskimos were gassed. Of course, one can cite the lack of an evident motivation for gassing Eskimos, the lack of subsequent charges of Eskimo gassings, etc., and one can be “confident” no communities of Eskimos were gassed (of course, individual Eskimos might have been gassed for specific offenses in California). However, one must *e.g.* allow the possibility that some isolated Eskimo community, perhaps posing a security menace to some highly secret Allied military operation, was gassed in great secrecy. This is just routine historical reserve, applying to all phases of history, whose potential relevance to every historical subject is so taken for granted that it is rarely mentioned.

⁵⁵³ *Chicago Tribune*, August 5, 1982, section 1, 5.

We can prove that the Eskimos were not exterminated, but we cannot prove that no communities of Eskimos were gassed. Likewise, and at the risk of giving the opposition words which can be lifted out of context and used dishonestly, I can prove that there was no German program of physical extermination of the Jews, but I cannot prove that no Jews were gassed, although after living long with the evidence, I am confident that no Jews were gassed.

If one examines closely the arguments that are offered when the tack is to argue that Jews were gassed, it is clear that the allegation is of the “isolated Eskimo community” sort. In place of geographical isolation, there is substituted the claim of administrative isolation, *i.e.* that no written records were kept of the design of the gas chambers or of their construction or of the gassings themselves, that in order to conceal the deeds the bodies were burned and not a trace was left, and that in order to keep the number of witnesses to a minimum Jewish work parties were used in the operations, these Jews later being killed also. Why such secrecy should have been considered necessary or relevant, given rallies in Madison Square Garden against the alleged slaughter, official Allied and Presidential declarations in condemnation, etc.,⁵⁵⁴ is never explained, and few will ask such questions. The important thing is that the whole thing can then be “proved” via declarations of a few “witnesses,” upheld in court, and then used to support a preposterous allegation of a very different and even incommensurate sort, namely the physical extermination of the Jews of Europe.

It is a cheap trick. It relies on a massive dropping of context and shift of perspective, wherein the rubes are not expected to follow the simple shell game. Unfortunately, it has been successful, and this is why a preoccupation with detail, on the part of revisionists, is necessary as well as desirable. The bearers of the legend do not want to confront the “extermination” allegation directly, as easily available information makes it clear the Jews were not exterminated. However, no easily available information makes clear what happened at every location in eastern Europe during the war, especially in view of the political character of the postwar exploitation of documents, and this is where the hoaxers go to work. They offer to fill in such gaps, usually not via written records, but via alleged reconstruction on the basis of their “trials.” As they represent the entrenched position, they effectively call the tune on what is to be debated, and that is why revisionists, in the minority of instances in which their opponents engage them in superficially scholarly debate, will find themselves confronted with details assembled for mendacious ends. The hoaxers dare not focus on the real question, as it is too simple.

Context and Perspective

While the present interest in detail is desirable from the revisionist point of view, it is also necessary because the defenders of the legend have decided that, for the sake of their contrary purposes, a focus on detail can also be desir-

⁵⁵⁴ See here pp. 107-121 and 198-200.

able, when there is to be anything like a debate. This odd harmony of the two camps is of course superficial.

That the focus on detail contains dangers for the revisionist is seen by noting that the defenders of the legend take this tack, because they have thereby substituted more malleable questions for the real one. Specifically, they trick their audiences into losing context and perspective. What Stangl said to Sereny in jail cannot be understood without the perspective gained by noting Stangl's hapless position in the postwar world, particularly in postwar Germany, which has a political system imposed by the foreign conquerors who made possible the establishment of the legend in the first place. The claim that the lack of ordinary historical evidence for "exterminations" is explained by a German policy of utmost secrecy cannot be easily demolished except via some observation on the historical context of the alleged episode, such as made above. Therefore, while it is fine to focus on detail in these times, we risk losing battles, if not the war, if we forget the historical context and lose perspective.

Context and perspective constitute the theme of this paper, but it was necessary to discuss at length the nature of the need. Posterity will see this "Holocaust," this curious imposture that enthralled us for two or three decades, as a transient phenomenon involving what will appear to be utterly audacious distortions of the historical record, which we should have seen more easily than we did, as the relevant episodes will seem to have simpler interpretations than we see or at any rate emphasize. While we can, of course, not see things as posterity will, we can at least attempt to see the subject from a higher perspective. This will not only help our future reputation, but will also help us avoid getting tripped up on details in current controversy.

We can start by asking just what will draw posterity's attention as extraordinary. It will not be "exterminations" of Jews, as there were none. It will also not be the German program of expulsion of the Jews. There will of course be some interest in that program, just as today there is interest on the part of the historians in all sorts of past episodes. However, that German program was in its essentials far from unique, the Jews having been expelled from the Jerusalem area in the Second Century, and from Spain in the fifteenth, to mention only the most famous two of many expulsions. The German program may seem deplorable, but it will not seem extraordinary.

What will seem unique is the establishment in Western society of the "Holocaust" legend, its exploitation past the point of sanity, its challenge from unconventional quarters of a few decades later, and its subsequent overthrow. One implication of this, perhaps for the revisionists at once instructive and deflating, is that revisionists will themselves be objects of historical scrutiny, *i.e.* we are part of the historical process that posterity will see, not merely its pioneering investigators.

I believe they will see us that way mainly because of our tendency, explanations for which have already been given, of getting entangled in details while bypassing or downplaying the observations that, it will seem, should have been both obvious and conclusive.

A specific illustration. In order for something to be “obvious,” it ought to be figuratively before our very noses. Let us look at two of the recently published and widely discussed books in support of the extermination legend, namely *Auschwitz and the Allies* by Martin Gilbert (biographer of Winston Churchill) and *The Terrible Secret* by Walter Laqueur (Director of the Institute of Contemporary History, London, and editor of the *Journal of Contemporary History*). The two books look at the subject from similar perspectives and cover much of the same ground.

At the end of his long and copiously annotated study, Gilbert writes:⁵⁵⁵

“Between May 1942 and June 1944, almost none of the messages reaching the west had referred to Auschwitz as the destination of Jewish deportees, or as a killing centre. Nor had the name of Auschwitz made any impression on those who were building up what they believed to be an increasingly comprehensive picture of the fate of the Jews.”

On the other hand, early in this shorter but also copiously annotated study, Laqueur explains that mass exterminations at Auschwitz could not have been concealed, noting that Auschwitz was “a veritable archipelago,” that “Auschwitz inmates [...] were, in fact, dispersed all over Silesia, and [...] met with thousands of people,” that “hundreds of civilian employees [...] worked at Auschwitz,” and that “journalists travelled in the General Government and were bound to hear,” etc.⁵⁵⁶

I have no quarrel with such observations, as I made them myself, on the basis of essentially the same considerations.⁵⁵⁷ Now the reader of Gilbert, Laqueur, and Butz can make a very simple determination. He is being told that (a) in the period May 1942 to June 1944, those interested in such matters had no information of mass exterminations at Auschwitz, and (b) mass exterminations at Auschwitz could not have been concealed from the world for any significant length of time. Because he is hearing the same story from both sides then, by a process of inference necessary to those who want to form an opinion but do not have the time or means to become historians, he should assume both claims true. There was no information of mass exterminations at Auschwitz during the relevant period, and mass exterminations at Auschwitz would not have been kept secret. Therefore, there were no mass exterminations at Auschwitz.

The conclusion is inescapable, and requires only elementary logic. It is comparable to the syllogism: “I see no elephant in my basement; an elephant could not be concealed from sight in my basement; therefore, there is no elephant in my basement.”

Logic tells us that this observation should be conclusive, and yet I know that in controversies to come it will often be lost sight of. It is a good example of a point on which we shall puzzle posterity for our myopia, because it will wonder why it was so seldom raised in a heated controversy. It is not the sole

⁵⁵⁵ M. Gilbert, 340.

⁵⁵⁶ Laqueur, 22-25.

⁵⁵⁷ See Chapter 3, 124-125 and 131-133.

example of its type. The literature of the defenders of the legend is overflowing with concessions that will make posterity wonder how the legend ever could have been believed in the first place, and why a revisionist literature was necessary at all. Let us be specific.

The principal actors in the historical episode are the governments of the various powers at war, Jewish organizations operating in Allied and neutral countries, Jewish organizations operating openly under the German occupation, clandestine resistance organizations in German-occupied Europe, Jewish or otherwise, the Catholic Church (on account of its twin attributes of ubiquity and centralization), and the International Red Cross.

Prominent among the Jewish organizations were the JDC (American Jewish Joint Distribution Committee), closely associated with the American Jewish Committee, the "political organization of the non-Zionist elite of American Jewry."⁵⁵⁸ The JDC was primary in extending material assistance to Jews. In Europe, an important representative was Joseph J. Schwartz in Lisbon.⁵⁵⁹ More important from our point of view was Saly Mayer, the sometimes unofficial but always principal representative of the JDC in Switzerland. Mayer was in constant contact with the JDC in Lisbon and New York, and also with Jews in occupied Europe, eastern and western.⁵⁶⁰

Also prominent among the Jewish organizations were the JA (Jewish Agency), the unofficial Israeli government of the time, whose guiding light was Chaim Weizmann, and which was represented in Geneva by Richard Lichtheim and Abraham Silberschein. Zionism was also represented by the WJC (World Jewish Congress), whose guiding lights were Nahum Goldman and Rabbi Stephen S. Wise, and whose principal representative in Switzerland was Gerhard Riegner. The Swiss representatives of these and other Jewish organizations were in constant contact with both Jews of occupied Europe and with Jewish and other representative in the Allied countries. For example, postal and telephone communications among Jews in occupied countries and those in neutral countries such as Switzerland and Turkey were easily established.⁵⁶¹

As made abundantly clear by many books in addition to my own (*e.g.* Gilbert's book), it is from the WJC, supplemented by the JA, the Polish exile government in London, and occasionally more obscure groups, that the early extermination propaganda emanated.

Here are eight simple observations, all drawn from the literature of the defenders of the legend (sometimes via the intermediary of my book), which establish the non-historicity of the Holocaust or, more precisely, a program of mass physical extermination of Europe's Jews.

⁵⁶¹ Laqueur, 4, 170f., 188.

1. WARTIME AND POSTWAR CLAIMS

The postwar claims had their origin in the wartime extermination claims. However, the differences between the two are such that it is implied that the wartime claims were not based on fact.

There are two principal sorts of differences between the wartime and postwar claims. First, much of what was claimed during the war was dropped afterwards, only a fraction being retained. Second, the centerpiece of the postwar claims, Auschwitz, was not claimed at all until the very end of the relevant period.

Both observations were made in Chapter 3 of my book, the second was made above, and both are confirmed by more recent publications. The first is shown by listing specific examples, and those given in *Hoax* can be supplemented with some taken from the recent literature, particularly the Gilbert book, which gives numerous such examples.⁵⁶²

To discuss a specific example, it is well to focus on one Jan Karski, a non-Jewish member of the Polish resistance, who is said to have been sent from Poland by the underground, in November 1942, to report to the Polish exile government in London. His report described Polish Jews being sent to Treblinka, Bełżec, and Sobibór in railway cars packed with “lime and chlorine sprinkled with water.” On the trip, half die from suffocation, poisonous fumes, and lack of food and water. These are burned. The remainder are put to death by firing squads, in “lethal gas chambers” and, at Bełżec, in an “electrocuting station”; this remainder was buried. This report was widely publicized and circulated.⁵⁶³

Of course, the present story is that almost all the Jews were killed in gas chambers, their bodies later being burned. Also, there is nothing about Auschwitz as an extermination camp in this report of the Polish underground, which, in this instance, cannot be accused of ignoring the plight of the Jews.

Karski published his story in 1944 as a silly book, *Story of a Secret State*, which sold well. At present, he is a Professor of Government at Georgetown University in Washington, DC. Although the wild disagreement between his wartime tall tales and the postwar tall tales is not novel to a student of this subject, I thought it useful to select Karski for mention because in recent years, in the deluge of Holocaust propaganda, he has been rediscovered and feted as something of a hero. He wrote a new and sanitized version of his story in 1979, no doubt for the benefit of those of his friends embarrassed by his book.⁵⁶⁴ Then in 1981, he was a participant in a conference held at the State Department, and sponsored by the United States Holocaust Memorial Council, whose chairman, author Elie Wiesel, “organized the event in part to build a bulwark against a rising tide of revisionist history.” I have no evidence that

⁵⁶² M. Gilbert, 31, 39f., 44, 170.

⁵⁶³ M. Gilbert, 93ff.; Laqueur, 231.

⁵⁶⁴ Laqueur, Appendix 5.

anybody at the conference sought to get Karski to explain the discrepancies between his and today's received accounts of "exterminations."⁵⁶⁵

I am sometimes asked why I ignore Elie Wiesel, so here I shall give him one paragraph. I ignore him because, unlike authors I usually discuss, he is frankly a novelist, and there is next to nothing in his declarations that could be considered historical argument. Even his allegedly autobiographical *Night* is too histrionic to be entertained as a purported primary source. This does not mean that there is absolutely nothing to be gained from noticing him. That a novelist was chosen to be Director of the President's Commission on the Holocaust, a plum for which there must have been a lot of behind-the-scenes jostling, is tremendously revealing of the forces at work today. As for a short judgment of Wiesel's various writings on the "Holocaust," I think it is fair to characterize them as reaching the heights that most of us can reach only with the help of magic potions containing gin and vermouth and comparable ingredients; Wiesel does not need such help.⁵⁶⁶

To return to the point, namely "that the wartime claims were not based on fact," the logic goes as follows: The defenders of the legend could explain the retention of a small fraction of the wartime reports only by claiming that wartime exigencies made corroboration of information impracticable, and that as a consequence many inaccurate stories were passed along for public consumption. The result was a set of reports which, although originally inspired by fact, exaggerated the real situation. However, such an explanation cannot be reconciled with the fact of the absence of Auschwitz from the extermination claims. The Auschwitz aspect would be consistent with the proffered explanation only, if some story exaggerated in relation to the postwar claims had been presented during the war, e.g. extermination of Jews by means in addition to gas chambers. The logic thus leads to the conclusion that the wartime claims were not inspired by fact.

2. WARTIME RECORDS

Both the wartime records and behavior of the Jews in occupied Europe show that they had no information of an extermination program.

That resistance to deportation was rare and that Jews went to the various camps with no suspicion that they were to be killed, has been well known for many years, and recently published material has only reinforced this observation. However, its implications are usually not appreciated. Note that the observation holds for the Jewish leadership in the various occupied countries as well as for the general Jewish population.

To give some examples: Late in 1942, Slovakian Jewish leaders, negotiating with the Germans, took seriously the Germans' offers to cease deportations of Slovakian Jews from Auschwitz. In the French Jewish records, "we find a

⁵⁶⁵ *Washington Post*, October 28, 1981, A1; *Los Angeles Times*, October 29, 1981, pt. I, 20.

⁵⁶⁶ See e.g. his contribution in Wiesel *et al.* (1977). This is the published version of a lecture Wiesel gave at Northwestern in the spring of 1977. An alternative is his article in the *London Jewish Chronicle*, November 4, 1977.

wealth of documentation that tends to deny” exterminations. French Jewish leaders saw “Auschwitz as a place of work” and in November 1944 (after the Germans had been driven out of France) were thinking, in regard to the deportees, mainly of reuniting families. We are told that “Jews in Holland never really knew what was going on in Poland” and that the records of the Amsterdam Jewish Council of January 22, 1943 show that the possibility of “extermination” was not even being entertained as an explanation for the breaking up of families. Jewish leaders in Rome were unaware of any extermination program, and feared deportations only in connection with such things as “the rigors of winter and the fragile health of many deportees.” Under such conditions, it is not at all surprising that there was only one derailment of an Auschwitz deportation train engineered by Jewish resistance activities (in Belgium).⁵⁶⁷

To focus on a man who should certainly have been well informed: Rabbi Leo Bäck, the “venerated head of German Jewry,” showed via a letter he wrote in November 1942 that he had no suspicion that Jewish deportees were being killed, and by his own postwar admission, he told no other Jews of “exterminations” during his stay at Theresienstadt, from which there were many deportations.⁵⁶⁸

By the spring of 1944, right after the German occupation of Hungary, the Hungarian Jewish leaders had heard the extermination claims, including (finally) the Auschwitz claims. However, they “gave no publicity whatsoever” to such claims. “Not urgent warnings to their fellow Jews to resist deportation, but secret negotiations with the SS aimed at averting deportation altogether, had become the avenue of hope chosen by the Hungarian Zionist leaders.”⁵⁶⁹

As for Poland, there was a famous rebellion of the Warsaw Ghetto in April 1943. However, this came only after almost all the Jews of Warsaw had been deported east. The claim is that, “by March 1943 the destruction of Polish Jewry was almost complete.” During the period that they were supposedly being destroyed, there was no significant resistance to deportations.⁵⁷⁰ Moreover, Jewish record-keeping in Poland was diligent and extensive, so that “many posthumous records have come down to us.” Yet there is an “absence of vital subjects from the records.”⁵⁷¹

Thus, the Jews were not cognizant of an extermination program in the only senses that would be convincing, in the senses of resisting deportations, or at least recording the Holocaust in their confidential records.

⁵⁶⁷ See Bauer, 264, 271, 274, 371; M. Gilbert, 121; see also this book, 383.

3. WORLD JEWRY

Jewish bodies outside occupied Europe, such as the JDC, the WJC, the JA, and others did not act as though they believed their own claims of “extermination.”

There are quite a few senses in which this is the case, but the most important relates directly to the point discussed above. The Jews who, we are told, boarded deportation trains with no inkling that they were to be killed were, as was noted above, in close contact with Jewish bodies outside occupied Europe. Indeed, many of the records that show their ignorance of an extermination program are among their communications with these Jews outside Europe. Yet the Jews outside Europe did not undertake to impress on those inside what the deportations were allegedly all about, if one were to believe the remarks they were making for the consumption of others. Otherwise, the alleged ignorance would not have existed.

This is enough to prove the point, but it is useful to give some good example of the real behavior of the Jewish bodies outside Europe during their supposed Holocaust.

Chaim Weizmann used the extermination claims when he thought them useful. However, in May 1943, Weizmann complained to Churchill’s secretariat that if “an Allied press release reporting the fact that Jewish scientists were among those involved in the Allied scientific war effort [...] were repeated, the Germans would carry out further anti-Jewish reprisals.”⁵⁷² Just what reprisals could be graver than physical extermination of all is not apparent.

It was noted above that the legend claims that by March 1943 almost all Polish Jews had been killed. However, throughout the alleged period of killing and even into 1944, Jewish relief organizations in the west sent food parcels to Jews in Poland, particularly through the JUS (*Jüdische Unterstützungsstelle* or Jewish Aid Office), with the permission and cooperation of the German authorities. Money was also sent to Jewish organizations in Poland through the

Mountains of shoes: anti-Fascist atrocity propaganda already on the cover. (Left small: cover of the German edition.)

⁵⁷² M. Gilbert, 143.

London Polish exile government, again with the permission of the German authorities.⁵⁷³

By 1944, Poland had become a battlefield. Accordingly, on March 14, 1944, the WJC reminded the British, as Soviet forces were approaching Lvov, that there were “still a considerable number of Jews” in the Lvov area, and that we should issue “a fresh and emphatic warning to the Germans” and also speed up the work of rescuing Jews from Nazi occupied territory (obviously to proceed to Palestine, as the WJC made clear by its wartime statements).⁵⁷⁴ In the opinion of the WJC, the murdered Jews were still there.

Jewish newspapers in the west, while occasionally publishing massacre claims, clearly thought the claims exaggerated greatly, and tended to contradict themselves in their statements. For example, the allegedly well-informed leftist Jewish “Bund,” in its publication *The Ghetto Speaks* for October 1943, spoke of the “struggle linking the Polish and Jewish masses.” In their opinion, too, the murdered Jews were still there. However, apart from such specific incidents, it is admitted that even after the Allied declaration of December 17, 1942, the first official claim of “extermination,” “there was no forceful, unequivocal response by American Jewry, including the JDC.” As a rule, “the Jews themselves did not really press very hard for rescue, and their propaganda for Palestine often seemed stronger than their concern for immediate steps to save their brethren.”⁵⁷⁵

The historical record thus shows that, apart from their occasional public claims of “extermination,” the Jewish bodies outside occupied Europe conducted themselves as if there were no exterminations, as is most clearly shown by their failure to undertake to warn the European Jews, and by the nature of their real efforts (e.g. in connection with Palestine).

4. THE ALLIES

Allied governments and their officials did not act as though they believed the extermination claims, and their intelligence services never produced any information corroborative of the claims.

In connection with the actions of Allied governments and their officials, we can say that (a) the declarations of the governments in relation to “extermination” were inconsistent, equivocal and unconvincingly timed, (b) no concrete measures were taken to interfere with deportations of Jews or with whatever was happening in the camps, and (c) incidents involving leading officials show that they did not believe the claims.

Among relevant declarations of governments, perhaps the best known is the Allied declaration of December 17, 1942; this was unequivocally worded, although very much lacking in specific details. However, it seems unconvincingly timed. According to the legend, exterminations outside Russia are supposed to have been in progress for almost a year. Moreover, this date also

⁵⁷³ Bauer, 329-334.

⁵⁷⁴ M. Gilbert, 181.

⁵⁷⁵ Laqueur, 183-186; Bauer, 188-193, 403.

marked the first unequivocal Soviet charge of “extermination,” although such a program was allegedly in operation there since June 1941. This makes the belated Soviet statement particularly incredible, as “there is every reason to assume that the Soviet authorities were from the beginning well informed about all important events in the occupied (Soviet) territories.”⁵⁷⁶

On the other hand, the Allied “War Crimes Declaration” of November 1, 1943, condemning German atrocities, failed to mention Jews. During the drafting of the declaration, the British Foreign Office had deleted references to “gas chambers because the evidence was untrustworthy.”⁵⁷⁷

In connection with Auschwitz, there was on October 10, 1944 a broadcast from London and Washington charging the Germans with “*plans* [for the] mass execution of the people in the concentration camps” Auschwitz and Birkenau (my emphasis). The German Telegraph Service replied immediately that “these reports are false from beginning to end.”⁵⁷⁸ The first high level Auschwitz claim by the Allies that resembled the legend of today came in late November 1944, after the claimed termination of the “exterminations,” in the form of the publication of the document I have called the “WRB report” (as it was published by the War Refugee Board).⁵⁷⁹ The Russians captured Auschwitz on January 27, 1945, and did not open it for inspection even after curiosity was expressed, and even after the sensational publicity given to the captures of Belsen and Buchenwald gave the Soviets a motive to chime in. Instead, the Russians merely declared in late April 1945 that 4,000,000 had been killed at Auschwitz, and issued a more detailed “report” on May 7, 1945.⁵⁸⁰

That the Allies undertook no concrete measures to warn the Jews in Europe or to interfere with the deportation or whatever was happening in the German camps is well known. This is most strikingly illustrated by the brief and mostly confidential controversy over bombing Auschwitz for the purpose of stopping exterminations there. Chaim Weizmann had proposed such measures in the summer of 1944 (somewhat half-heartedly, it appears). The strong impression gained is that the British and Americans, while pretending to consider Weizmann’s proposal seriously, were just engaged in verbal games. For example, on July 7, 1944, Anthony Eden asked the Air Ministry to respond on the feasibility of the proposal. A response to Weizmann took a while; on September 1, 1944, Richard Law of the Foreign Office wrote Weizmann “that in view of the very great technical difficulties involved, we have no option but to refrain from pursuing the proposal in present circumstances.” This was despite the fact that at the time Weizmann’s proposals were allegedly being considered, the air forces were planning the bombing of Auschwitz as one of many oil targets, and bombed Auschwitz on August 20, 1944 and several times thereafter on those grounds. The obvious suggestion is that the Auschwitz claims were

⁵⁷⁶ See here p. 110 and pp. 263-264; see also Laqueur, 68-72.

⁵⁷⁷ Laqueur, 121.

⁵⁷⁸ M. Gilbert, 325.

⁵⁷⁹ See here p. 127.

⁵⁸⁰ M. Gilbert, 337f.

not taken seriously, and the suggestion is confirmed by the fact that the supposedly crucial “information” of what became the “WRB report” was received in London and Washington in July 1944 but simply filed away by both governments “until resurrected three and a half months later.”⁵⁸¹

Incidents involving leading officials, which show that they did not believe the claims, are numerous. The “close association between the Jewish community and the Roosevelt Administration” is well known. In September 1943 this⁵⁸²

“Administration was reluctant to accept the reports of murder centers and discounted the idea of an organized attempt to liquidate the Jews. Roosevelt explained the deportations to Frankfurter; the deported Jews were simply being employed on the Soviet frontier to build fortifications.”

It should be assumed that Roosevelt based his remarks to Justice Frankfurter on information provided by his intelligence services. Frankfurter must have been convinced, for when Jan Karski (above) later reached Washington to tell his tales, Frankfurter told Karski “that he could not believe him.”⁵⁸³

When the Auschwitz claims reached Washington, involved officials at the State Department privately commented that “Stuff like this has been coming from Bern ever since 1942. [...] Don’t forget, this is a Jew telling about the Jews. [...] This is just a campaign by that Jew Morgenthau and his Jewish assistants.”⁵⁸⁴

In Britain, we find a comparable situation. In September 1942, Churchill spoke in Commons condemning “the mass deportation of Jews from France, with the pitiful horrors attendant upon the calculated and final scattering of families.” He said nothing about “extermination.” In the Foreign Office, the extermination claims were generally not believed, and in the Colonial Office one official called them “Jewish Agency sob-stuff.”⁵⁸⁵

In November 1942, Edward Benes, exiled President of Czechoslovakia in London who was well informed on events in his homeland, wrote to the WJC that the claims coming from Riegner in Switzerland were false, and that the Germans had no plans to exterminate the Jews.⁵⁸⁶ The Swiss Government considered the Allied Declaration of December 17, 1942, “foreign rumor propaganda of the worst type.”⁵⁸⁷

Of great importance to our subject is what Allied intelligence had to say on these matters. After quite a few years of living with the literature of this subject, I have not encountered an instance of corroboration of “extermination” by any wartime intelligence source. What we have from intelligence sources militates strongly against the legend. For example, on August 27, 1943, “William Cavendish-Bentinck, Chairman of the Joint Intelligence Committee (Britain),

⁵⁸¹ *Ibid.*, 267-273, 290, 299-311, 341.

⁵⁸⁶ Laqueur, 162ff.

⁵⁸⁷ Bauer, 229.

whose task it was to evaluate the truth or falsehood of all such reports from Nazi Europe,” declared confidentially that the stories being circulated “tend to exaggerate German atrocities in order to stoke us up.”⁵⁸⁸

A U.S. counterpart, John Beaty, one of the two editors of the daily secret “G-2 Report,” which was issued each noon to give persons in high places the world picture as it existed four hours earlier, ridiculed the six million legend in a book published in the Fifties.⁵⁸⁹

The only really important data that we have from an intelligence source are the Auschwitz aerial reconnaissance photographs that were published by two CIA photo interpreters in 1979. Many of the photographs examined were taken in the spring of 1944 when, according to the legend, about 10,000 Hungarian Jews entered the camp every day to be killed. Because it must be conceded that the crematories at Auschwitz did not have such a massive capacity, the legend claims that “corpses were burned day and night” out-of-doors.⁵⁹⁰ No evidence of this is to be found in the photographs, and the photo interpreters remark that even the crematory chimneys appear inactive.⁵⁹¹

Thus, the Allies also did not take the extermination claims seriously enough to give them more than occasional lip service.

5. THE VATICAN

The Vatican did not believe the extermination claims.

It is agreed that the far-flung nature of the operations of the Catholic Church guaranteed that the Vatican would have known what was happening to the Jews.⁵⁹² Nevertheless, no unequivocal condemnation of exterminations of Jews ever came from the Vatican, even after the Germans had been driven out of Rome or even after Germany’s defeat. This is despite strong pressures put on the Vatican by the Allies to issue such a declaration.

There was an equivocal statement in the Pope’s Christmas message of 1942, but it was issued only after the British had strongly suggested that the issuance of such a statement might help to dissuade the Allies from bombing Rome. However, the Pope made it clear to the Allies, even as his declaration was issued, that he did not believe the stories: “he felt that there had been some exaggeration for the purposes of propaganda.”⁵⁹³ That Vatican spokesmen of today support the legend in their public statements is irrelevant to the historical point.

⁵⁸⁸ Laqueur, 83, 86; M. Gilbert, 150.

⁵⁹¹ Brugioni. & Poirier.

⁵⁹² Laqueur, 55-58.

⁵⁹³ See here p. 423 (Appendix E); see also M. Gilbert, 104f.

6. THE INTERNATIONAL RED CROSS (IRC)

The actions and reports of the International Red Cross do not harmonize with the extermination claims.

As with the Vatican, the statements of IRC spokesmen of today do support the legend, but that is irrelevant to the historical point. Also, general editorial remarks in books of documents published by the IRC right after the war do harmonize with the legend. However, all the historians should be interested in are the actual content of the reports and activities of the IRC during the war.

That the actions and reports of the IRC do not harmonize with the legend, was discussed at length earlier, and it seems pointless to repeat the material here.⁵⁹⁴ A couple more points I noticed recently are worth mentioning.

On April 14, 1943, the IRC made it clear that it considered Auschwitz a labor camp for deportees, to whom parcels could be sent.⁵⁹⁵

There were two highly publicized visits of the IRC to Theresienstadt, the Jewish settlement in Czechoslovakia. The IRC reports were relatively favorable in both cases. What is seldom noted is that the IRC delegate in the second visit in the spring of 1945 was George Dunant, who described Theresienstadt “as an experiment by certain leaders of the Reich, who were apparently less hostile to the Jews than those responsible for the racial policy of the German Government.” Because Dunant was guided around Theresienstadt by Adolf Eichmann, he must have known that Theresienstadt was an operation of Himmler’s SS. Dunant, moreover, was evidently in close contact with Jewish representatives. For example, early in 1945, he went to Bratislava, partly at the urging of Saly Mayer, in order to supply hiding Jews with funds.⁵⁹⁶

7. GERMAN DOCUMENTS

The German documents speak not of extermination, but basically of a program of expulsion and resettlement in the east. There is nothing about “gas chambers” in the concentration camp or other German records.

That the German documents do not speak of extermination is well known. For example, there exists no written order of Hitler to kill the Jews.⁵⁹⁷ The documents speak of the “Final Solution” as the ultimate expulsion of all Jews from Europe, and of a wartime process of resettling Jews in the occupied east.⁵⁹⁸

The defenders of the legend of course claim that the Germans merely exercised commonplace circumspection and evasion regarding what they committed to writing. This excuse fails on the grounds that such attempts at concealment would make sense only in regard to something it was possible to conceal. It would have been obvious that the physical extermination of Europe’s Jews, whatever the outcome of the war, would not have remained secret. Indeed, for

⁵⁹⁴ See here p. 108 and pp. 181-197.

⁵⁹⁵ M. Gilbert, 129.

⁵⁹⁶ Bauer, 430f.

⁵⁹⁷ Laqueur, 152.

⁵⁹⁸ E.g. see Chapter 7, 269-280.

reasons discussed above, it would have become widely known while it was happening. Even if we hypothesize incredible stupidity of the Germans on this point, we surely must grant that they were aware of the atrocity claims being made in the Allied countries, and would have seen that documentary masquerade was of no avail.

There is also nothing about “gas chambers,” in the sense of the legend, in the German documents. What the legend does at this point is produce the insecticide Zyklon B or other fumigation means, show us pictures of quite ordinary looking showers (alleging extraordinary concealed features), make references to the use of exhausts of diesel engines (apparently unconscious that the exhaust of a diesel is mainly carbon *dioxide*, not carbon *monoxide*),⁵⁹⁹ or play games with the concept of a “gas oven” (crematory ovens, like most kitchen ovens, are “gas ovens,” and the crematories in the German camps were no exception).

All of this is so idiotic as to be torturing to discuss further. There is also no record of the design or construction of gas chambers. On the basis of my engineering experiences, it seems quite out of the question to suppress all normal historical records of engineering projects of the scope that could have produced the great “gas chambers.” Documents must not only be produced, but also distributed to the great number of individuals charged with specific details; there is no other way to achieve coordination. Even if major documents are closely controlled (as is supposed to happen with “classified” material in the U.S.), the various individuals would later be able, one way or another, to supply details that, taken together, would cohere credibly. We do not have such coherence with the Holocaust. Indeed, we have incoherence at not one but two levels. On one level, we have the mutual incoherence, in relation to “gas chambers,” of the authentic records dealing with crematories and disinfection measures. On another level, this attempt on the part of the hoaxers to supply specific technical details does not cohere with the feature of the legend, according to which the “gas chambers” were improvised in a slapdash fashion by local non-technical German personnel.⁶⁰⁰

It is of interest that two of Heinrich Himmler’s closest aides, SS Generals Gottlob Berger and Karl Wolff, both testified that they had known nothing of an extermination program during the war. It is of greater interest that toward the end of the war Himmler told a representative of the WJC:.⁶⁰¹

“In order to put a stop to the epidemics, we were forced to burn the bodies of incalculable numbers of people who had been destroyed by disease. We were therefore forced to build crematories, and on this account they are knotting a noose for us.”

Are we to believe that the essential agreement between this attempt at self-exculpation on the part of Himmler, on the one hand, and on the other hand the picture formed by the documents that Himmler’s enemies assembled in the

⁵⁹⁹ Editor’s note: on the absurdities involved with Diesel gas chambers claims see Berg.

⁶⁰⁰ See the statement of Rudolf Höss, Chapter 4, 142-152.

⁶⁰¹ For Berger, see here p. 256; for Himmler’s remark, see here p. 307; see also Laqueur, 18.

three year period after his death was either accidental or arranged by Himmler through superhuman diligence and prescience? Are we to believe likewise of the essential agreement between the German documents on Jewish policy and the real wartime behavior of Germany's enemies?

8. GERMAN RESISTANCE TO HITLER

The German resistance to Hitler, including the substantial part that was lodged in German military intelligence, was not cognizant in any way of a program of exterminating Jews.

Part of the German resistance was of course opposed to the Hitler regime for reasons related to its anti-Jewish stance. Moreover, the *Abwehr*, German military intelligence, was headed until 1944 by Admiral Wilhelm Canaris, a conscious traitor. Next in command in the *Abwehr* was Hans Oster, who handled financial and administrative matters, and kept the central list of agents. Both Oster and one of his subordinates, Hans von Dohnanyi, an "Aryanized" part Jew, made it their "business to deal with all kinds of operations unconnected with their immediate tasks." Among these operations were involvement in the anti-Hitler opposition and illegal assistance to various Jews. Both were executed for participation in the abortive coup of July 20, 1944.⁶⁰²

In the various accounts of the activities of the anti-Hitler resistance in Germany, for example *The German Opposition to Hitler* by Hans Rothfels, there is no evidence that this opposition was in any way cognizant of a program of exterminating the Jews, or passed any such information on to the Allies. If there had been knowledge of such a program, it is a certainty that the information would have been passed on, because the anti-Hitler opposition was in contact with the Allies and attempted, without success, to get promises of some sort of Allied support in the event they succeeded in removing Hitler.⁶⁰³

Even if we grant the possibility that some Germans involved in the anti-Hitler opposition could have been ignorant of a program of physical extermination of the Jews, even if one had existed, are we to believe this possible of high officials of the *Abwehr*?

This concludes the discussion of the "eight simple observations [...] which establish the non-historicity of [...] a program of mass physical extermination

⁶⁰² Laqueur, Appendix 1. The cases of the politician-journalist Lemmer and the economist Sommer, who are said to have passed information about exterminations to Swiss contacts, are of dubious import. Lemmer was not associated with the *Abwehr* and, as Laqueur notes, there is nothing in his autobiography about passing on information about extermination. Sommer was an army liaison officer between the General Staff and the *Abwehr*, and also travelled to Switzerland in connection with trade relations. One can infer from M. Gilbert, 56ff, that Sommer's association with a summer 1942 report that "camps are being prepared where all the Jews of Europe and a great part of the Russian prisoners-of-war will be exterminated by gas" has been claimed not by Sommer, who died in 1965, but by two Jewish intermediaries. It is also worth noting that neither Lemmer nor Sommer appear to have been seriously involved with the anti-Hitler opposition; both survived the war.

⁶⁰³ Rothfels (1962), 125-151.

of Europe's Jews." The allegation fails every relevant historical test, and entails a level of audacity or "chutzpah" that would have staggered the imagination before the war. It is *demande*d that we believe that these "events continental in geographical scope, of three years in temporal scope, and of several million in scope of victims," all transpired without one relevant party being cognizant of them. It is like telling me that, while I saw no elephant when I looked in my basement, he was there anyway. Also, while I was sitting in my living room I did not notice that the elephant managed to come upstairs and romp about awhile, relevant stairways, door openings, and floors having suddenly miraculously become compatible with such activities. Then the elephant dashed outside into a busy mid-day shopping district, and then walked several miles back to the zoo, but nobody noticed.

Rassinier said somewhere, in connection with the extermination claim, "this is not serious." I am not in accord with that evaluation. This is mad. However, that is not the point of this discussion. The point is that these observations can be considered to lie "figuratively before our very noses" because most have been made in books published recently, not by revisionists, but by the defenders of the legend, and the minority that were not made can be readily inferred from those books anyway. On account of the "Holocaustomania" of the past several years, their existence and general contents have been widely publicized. Perhaps these books have not served up the observations as succinctly and forthrightly as I have, but they have served them up. It would therefore be a case of myopia, of a sort posterity will find it hard to understand if, while pursuing "Holocaust" controversy, we allow ourselves to get so wrapped up with the little details that the defenders of the legend will raise that we allow ourselves to be diverted from taking into account the extraordinarily simple historical observations, which really settle beyond doubt any question of the existence of a program of physical extermination of the Jews of Europe.

Concluding Remarks

In controversies to come, the partisans of the received legend will try mightily to confuse and complicate the subject with all the tricks that we can anticipate, and perhaps then some. We have the precedent of the Donation controversy showing that simple observations that establish the wildly ahistorical nature of a reigning legend can get smothered. Thus, my most important advice to those who enter the controversy is that they not lose sight of the fact that the real bone of contention, the extermination allegation, has been laid to rest beyond peradventure by ordinary historical analysis.

It follows that the basic tactic of the defenders of the legend, in controversies to come, will be to attempt to make claims that cannot be tested by the normal method of placing them as hypotheses in appropriate historical context and seeing if they cohere. That this process is under way can be seen from the remarkable *New Statesman* article of Gitta Sereny that is discussed above. She

makes it clear that she would rather discuss places such as Bełżec, Sobibór, and Treblinka than Auschwitz.

There are good reasons for this. Sereny puts it this way:

“Auschwitz [...] combined enormous labour installations and nearby facilities for extermination. Auschwitz, because so many people survived it, has added most to our knowledge, but also most of our confusion as between the two types of camps.”

There is a valid distinction here. Auschwitz was a huge, multi-faceted operation, while the other alleged extermination camps were obscure facilities that functioned only for short times for the virtually exclusive purpose of serving as transit camps for Jews. Thus, we have a great deal of information about Auschwitz but much less about the others. For example, there probably do not exist relevant aerial reconnaissance photographs of the others,⁶⁰⁴ nor were there any western prisoners of war at the others, nor were hundreds of ordinary civilians employed at the others, nor did inmates at the others come into contact with diverse people over a large territory, nor was there apparently any IRC cognizance of the others, nor were there nearly as many transports of west European Jews to the others (there were transports of Dutch Jews to Sobibór).

The consequence is that it is much easier to disprove the legend as it applies to Auschwitz than as it applies to the others, when we for the sake of discussion forego the general historical arguments against “extermination.” That is really why the defenders of the legend would rather discuss Bełżec, Sobibór, and Treblinka. There is much less directly contradicting their supposed “evidence,” which consists mainly of postwar testimony. That postwar testimony was mostly given before German courts and under the present legal and political conditions in Germany, revisionists cannot examine it anyway.⁶⁰⁵ That is neat.

However, the defenders of the legend are in an impossible position here. They cannot concede Auschwitz without conceding the whole issue, for the reason that there is no sort of evidence they offer for the others that is not also offered for Auschwitz. If the “confession” of Auschwitz commandant Rudolf Höss is fanciful,⁶⁰⁶ then who will believe the “confession” of Treblinka commandant Franz Stangl? If the Auschwitz accounts of Rudolf Vrba and Miklos Nyiszli are not credible, and their books sick jokes, then who will believe the equally sick Treblinka accounts of Jankiel Wiernik and other obscure peo-

⁶⁰⁴ Editor’s note: For aerial photographs of Bełżec, Lublin-Majdanek, Sobibór and Treblinka, see Ball (1992), Rudolf (2020a).

⁶⁰⁵ Under German law, the records of a trial are not open to the public. Exceptions are granted to those who are somehow involved personally in the case or to those considered to have a scholarly interest in aspects of the trial. Dr. Wilhelm Stäglich, retired German judge and author of *Auschwitz: A Judge Looks at the Evidence*, was denied permission to consult trials testimonies. See Stäglich (2015b), 411-416. Dr. Robert Faurisson interprets remarks, made in a letter by Justice Ministry official Dr. Hans de With to *Die Realschule* (October 1981), as suggesting that, if Faurisson sets foot in Germany, he will be arrested and sent back to France.

⁶⁰⁶ See Chapter 4. For the final solution of the Höss confession question, see Faurisson’s discussions in Faurisson (1980b, 1981a & b, 1986b).

ple?⁶⁰⁷ If the Nuremberg and postwar German trials have not established the truth about Auschwitz, then who will believe that they have established the truth about Treblinka? If the large numbers of Jews admittedly sent to Auschwitz were not killed there, then who will believe that the large number of Jews sent to Treblinka were killed at that camp? Much advice, then, to those who would engage in controversy is to not permit the defenders of the legend to get away with ignoring Auschwitz. The fact is that it is very easy to bring down the legend as it applies to Auschwitz, and Auschwitz in turn, on account of the nature of the evidence involved, brings down the rest of the legend with it.

Raul Hilberg

There is another type of argument resorted to by the defenders of the legend. It was very recently offered by Hilberg in the remarkable interview referred to above, which I recommend to those who want to get a good idea of the contemporary line:

“[...] the critics [i.e. the revisionists] do not account for a quite simple fact: what then became of the people who were deported? The deportation was not a secret event. It was announced. Several million people were displaced to definite places. Where are those people? They are not hidden in China!”

It may seem incredible, at a time when scarcely a day goes by that the press does not discover some hitherto obscure Jew who was deported from his home but survived, at a time when events in the Middle East cannot fail to remind people of the great Jewish exodus from Europe after the war (and even during it), and at a time when the revisionist literature is recalling the various ways Jews were moved around during and after the war,⁶⁰⁸ that Hilberg would say such a thing. There seems to be no difficulty in accounting for the Jews. A reader's first impulse might be to assume that Hilberg had been misquoted.

However, while he does not elaborate on the point, I can think of two interpretations of Hilberg's remarks. He had an argument here, but as usual, its plausibility is only illusory, and depends on myopia and a loss of context and perspective.

What Hilberg probably has in mind is the fact that, while there is a great deal of documentation available that proves that Jews were deported to the camps in Poland, such as Auschwitz, Treblinka, etc., there is not available comparable documentation that proves that they proceeded on through those

⁶⁰⁷ Donat.

⁶⁰⁸ See Chapter 7.

camps to points further east. At least, I have not seen such German records. I would be astonished to see them today. Admitted that the legend was thrown together in a sloppy fashion, mainly because some continuity with wartime propaganda was desired, it is nevertheless the case that the people who came into control of the German documents after the war, and who put selections of them into evidence at the Nuremberg trials, were not operating under such handicaps. They could suppress very effectively.

One must certainly note who “the people who came into control of the German documents” were. There are many ways to make it clear by historical-political argument or by specific example. My favorite among the latter is that the David Marcus who was prominent in making the U.S. occupation policy in Germany during and immediately after the war, and who headed the War Crimes Branch in Washington in 1946-1947, was the same David Marcus who commanded the Jewish forces in Palestine in the first (1948) war with the Arabs. One could go on.⁶⁰⁹

Hilberg’s point would have some weight, if we were talking about virgin historical records, but what he is in effect saying (if I interpret him correctly) is that we should trust the architects of the Nuremberg trials, which presupposes more than he is trying to prove (I presume he would want to argue only that these architects were right in this instance). The attempt to drop context at this point stands logic on its head. All that is being noted is that the hoaxers have not handed over the materials that directly expose their hoax.

Hilberg might argue that such wholesale suppression is not possible, and that traces of deportation of Jews further east would be left. That is true; moreover, there are such traces and scraps. If this is indeed Hilberg’s point, then he ought to answer the following question: Where are the German records that deal with the deportations to and administration of the settlement (not concentration camp) near Riga that is described in Jeanette Wolff’s article in Boehm’s book? I do not know. I am not saying that they will never turn up, but I know that they were not available to those who looked for such things at the Nuremberg trials.⁶¹⁰

There is a second possible interpretation of Hilberg’s remark. While little weight can be given to postwar Jewish population figures claimed for eastern Europe, it must be conceded that the number of Jews in postwar Poland is only some fraction of the very large number (perhaps 3 million) that lived in prewar Poland (not quite the same territory). This is not because we must believe population figures that are offered. It is because Poland, unlike the Soviet Union, is not a large country, and such large communities of Jews would certainly have been noticed if they were still there.

Thus, if one drops all historical context, the argument seems simple. They are not in this territory we today call Poland; therefore, they were killed. To those familiar with fairly commonplace history, the conclusion is as much a *non sequitur* as would be the observation that because there were many mil-

⁶⁰⁹ See Chapter 1, 52-55.

⁶¹⁰ See Chapter 7, 285-287.

lions of Germans and ethnic Germans living east of the Oder-Neisse before the war, and today almost none, then they were all killed. In fact, the period was one of massive population movements, and the Jews were no exception. The Soviets deported many into the interior of the Soviet Union, and in the period after the war, the Polish Jews pouring into west Germany to proceed on to the U.S., Palestine, and other destinations became a widely publicized problem.⁶¹¹

I have little more advice at this time on prosecuting “Holocaust” controversy, and I cannot anticipate every trick. I cannot even promise that the Sereny and Hilberg expositions discussed here will be representative of what the reader might encounter as argument in support of the legend. Even today one runs into the argument that the American and British troops who captured Belsen, Buchenwald, and Dachau “saw it with their own eyes.” They saw dead bodies, and it has been relatively easily available knowledge since 1945 that the deaths were due to the privations entailed in Germany’s collapse, but the reigning confusion is so great that we still hear the argument anyway. All I can add is that one should keep current with the revisionist literature and the more important pieces of literature in support of the legend and, in controversy, be mindful above all of preserving historical context and perspective and not getting trapped with myopic historical vision.

⁶¹¹ See Chapters 1 and 7.

Supplement 3: A Response to a Major Critique of Holocaust Revisionism

Presented orally at the 1992 conference of the Institute for Historical Review. This is a slightly edited version of the paper as published in the Journal of Historical Review, vol. 13, no. 3, May-June 1993, pp. 23-37.

Why Another Critique of Jean-Claude Pressac?

Jean-Claude Pressac's 1989 book, *Auschwitz: Technique and Operation of the Gas Chambers*, has been examined at length in *The Journal of Historical Review*⁶¹² and elsewhere. Pressac's principal, almost sole target is Robert Faurisson, and I expect that Faurisson's critique will become the definitive one. Accordingly, this presentation is not meant to be a thorough critique of Pressac's book.

I do, however, wish to supplement what has already been written and said with some reactions of my own. What will be illustrated is something that I observed long ago and for which Pressac's book is a wonderful example. The Holocaust is such a gigantic fraud that it is a cornucopia of absurdities. One has only to contemplate it from a slightly different perspective to see new absurdities tumble out. Alternatively, one can view it from the same perspective after some time has elapsed (or one can ask another person to observe it), with the same results.

Also, Pressac has commented on my work, and I think it appropriate to reply.

What Pressac Has Done

It is generally agreed that Pressac did history a service in gathering and publishing documents that were previously unknown or at least not easily available. He then interpreted these documents in the outlandish ways analyzed in the earlier critiques.

He also accepted the chemical analyses reported by Fred Leuchter in 1988 (and since confirmed by accredited chemist Germar Rudolf),⁶¹³ and the implication that the alleged mass gassings with the pesticide Zyklon did not leave cyanide traces as were left in the delousing gas chambers (although he is not entirely consistent about this).⁶¹⁴ Thus, he invented a gassing procedure that, he claimed without offering evidence, would leave no such trace, declared it to

⁶¹² For reviews and analysis of Pressac's 1989 book see Weber (1990); Mattogno (1990, 2019); Faurisson (1991a & b).

⁶¹³ Rudolf (2020). This report also discusses various other contributions in this matter, e.g. by the Cracow Institute for Forensic Research. Editor's note.

⁶¹⁴ Pressac (1989), 133.

be the one followed at Auschwitz, and found that he was consequently obliged to reject important details in the accounts of two star “witnesses”: Commandant Rudolf Höss, who was supposedly in charge of the whole operation, and Dr. Nyiszli.⁶¹⁵ In the course of his exposition, he notes additional problems with the standard testimonies. I am reminded of one of those old cartoons showing a man sawing off the tree branch he’s sitting on. As we shall see, even on the basis of the concerns he raised in his book, Pressac should have come down much harder on the alleged eyewitnesses.

In summary, what Pressac offers is (a) an admission that the gassings at Auschwitz cannot be proven by forensic means, (b) admissions that the usual alleged witnesses to exterminations are at least unreliable, and (c) a collection of German documents, ambiguous when taken out of context, that provide what he calls “criminal traces” of exterminations. These three points have been the foci of the earlier critiques of Pressac’s book.

Pressac’s book is entirely dedicated to supporting his claim that the war-time German authorities at Auschwitz constructed and operated homicidal gas chambers there. He cannot, and does not even try, to connect such operations to any policy emanating from Berlin. Nor does he try to show that there existed a three-year program employing trains continuously crossing Europe and carrying Jews to their deaths, unobserved by Allied intelligence agencies, by German military intelligence, by the Red Cross, by the Vatican, by the Jews facing transport under German policies, or even by the Jewish leaders outside occupied Europe who were publicly wailing about “extermination.”⁶¹⁶ Such major historical bounds having long been established, an opus such as Pressac’s, with its strict focus on local questions, is the only kind of anti-revisionist essay possible.

Such an author is in the position of a man who would prove that there was a recent war between Illinois and Indiana by scouring the countryside for spent firearms casings. It is not necessary to play his game of dropping all historical context in order to focus on a purely local matter, but a review of his book can do naught else. Nevertheless, I shall show that the objection that Pressac has dropped context holds even if we agree to play his game. That is, given the restriction of his view to Auschwitz, Pressac still focuses on local matters out of context, this time of the concentration camp in its full dimensions.

The Crematories

In my view, page 184 of Pressac’s book is crucial. Here we are told:⁶¹⁷

1. Mass gassings of Jews in “Bunker 1” (located near the newly built Birkenau section of the Auschwitz camp), commenced in 1942, possibly in January but certainly by mid-May.

⁶¹⁵ *Ibid.*, 16, 53.

⁶¹⁶ See Supplement 2 here.

⁶¹⁷ Pressac (1989), 132.

2. On February 27, 1942, it was decided that the new 15-muffle Crematory II would be built at Birkenau rather than at the *Stammlager* (main or original camp).
3. On some unknown date in May or June 1942, it was decided that an “industrial” extermination of the Jews would be undertaken. The new crematories were accordingly modified for this purpose, this being indicated by the first “criminal element” to appear on an engineering drawing: the separation of the drainage of the alleged gas chamber from the drainage of the rest of Crematory II. (Pressac has a very low threshold in detecting a “criminal element.”)
4. In the summer 1942, it was decided that four new crematories, rather than one, would be built at Birkenau for extermination purposes: Crematory III, a mirror image of Crematory II with 15 muffles, and the mirror image Crematories IV and V, each with eight muffles, for a total of 46 muffles (not counting Crematory I). Construction of these Birkenau crematoria was completed in spring 1943, and Crematory I in the *Stammlager*, with its six muffles, was shut down permanently in July 1943.

Pressac expects the reader to assume, as he does, that such great cremation capacity could only be to support an extermination program. Accordingly, he goes on to invite us “to imagine a village of 4,000 inhabitants with [...] a crematorium equipped with three 3-muffle furnaces. [...] We need not dwell on this picture.”

This point is repeated and emphasized elsewhere in the book. Regarding the crematories, Pressac writes: “THEIR CAPACITY WAS EXCESSIVE IN RELATION TO THE REAL NEEDS OF THE CAMP” (Pressac’s emphasis).⁶¹⁸ He argues that the cremation capacity was excessive for a normal community of this many residents. However, nobody maintains Birkenau was a normal community. Indeed, on page 177, I conceded that it could properly be called a “death camp.”

In making his argument, Pressac tries to ignore the catastrophic typhus epidemics at Auschwitz – an impossible task because the documents emphasize the importance of this matter. The first catastrophic epidemic – during the summer of 1942 – is not mentioned at all by Pressac on page 184 of his book, which is devoted to arguing (or at least asserting) that a decision was made in spring-summer of 1942 to launch an industrial extermination of the Jews, and to expand accordingly the capacity of the cremation facilities then under construction.

Consider how horrible and devastating the summer 1942 typhus epidemic at Auschwitz was. The number of recorded male deaths in the period July 1 through August 19, 1942, was 8,236. The records for female deaths in the period are not available, but judging from the registration numbers, the female camp population was about 25 percent of the male. Therefore, the combined male/female recorded deaths for the period July 1 through August 19, 1942,

⁶¹⁸ *Ibid.*, 200, 206.

was about 10,000.⁶¹⁹ The Höss order of July 23 quarantining the camp⁶²⁰ was a necessary response to an extraordinary situation. These are the events that Pressac ignores, as he considers, on page 184 of his book, the changes in crematory construction plans that were made in summer 1942. He invites us “to imagine” an ordinary village in considering these crematories. Why should one try? What Pressac would have us ignore at this point is the virtual hellhole of catastrophic epidemic at Auschwitz. Dishonesty on this scale is rare; only a spinner of the “Holocaust” yarn could hope to get away with it.⁶²¹

At first, I considered this a most shocking instance of intellectual dishonesty. Continuing to read, I noted that on page 187 he does mention the typhus epidemic, and then, on page 188, I found the prize of the whole book. On that page, Pressac finally offers a relation of the measures being taken at Auschwitz against typhus to the alleged extermination of the Jews. He wrote there:

“The SS used the extermination of the Jews, about which their superiors had a general knowledge, without being informed of the practical details, to hide the terrible hygienic conditions in the camp, and to cover up their enormous consumption of gas for disinfection purposes.” (Pressac’s emphases.)

The SS therefore must have hidden the catastrophe from Himmler during his visit to the camp on July 17-18, 1942. (My guess is that Himmler suggested, or at least informally approved, the quarantine order that was issued on July 23.)

Since the typhus epidemics cannot be ignored, Pressac mentions them on subsequent pages. On one he notes: “it was necessary at all costs to stop the epidemic,” while on another, he ludicrously writes that in mid-September, almost two months after the quarantine order, “the deaths caused by the typhus epidemic were becoming a real problem” – the great understatement of the book.⁶²² That, which every minimally discerning reader will see, a presumptive link between the epidemics and crematory construction, is evaded. Here Pressac argues an extraordinary role for the crematories by maintaining that final approval for construction rested with the RSHA (the security/police branch of the SS), rather than the WVHA (the camp administration agency). If true, all that is indicated is some procedural point, or perhaps the generally acknowledged inequality of the two departments.⁶²³ Pressac makes no effort to convey the full horror of the typhus epidemic of 1942. These reluctant admissions of a typhus catastrophe amount to evasions performed in order to strengthen, in the reader’s mind, the “industrial extermination” interpretation of the crematories. Pressac in fact thus engages in whitewashing the true horrors of Auschwitz.

⁶¹⁹ Czech (1960), 68-76. Also Czech (1975), 27ff.

⁶²⁰ Czech (1960), S. 73.

⁶²¹ Pressac (1989), 217-218, repeats this amazing evasion. On p. 384 he hurriedly suggests a very weak relation between crematory construction activity and the epidemics.

⁶²² *Ibid.*, 188, 202.

⁶²³ Nobody believes Oswald Pohl was equal in influence to Reinhardt Heydrich while the latter was alive. It was RSHA head Ernst Kaltenbrunner who, toward the end of the war, issued the order opening the camps to the International Red Cross. See here p. 69.

Pressac's reluctant and dispersed acknowledgment of the typhus epidemics could be viewed as yet another instance of a feature that has bothered every reviewer of the book: its poor organization. Many times, I have come back to the book to reread some point I remember having read somewhere, only to find that the point is not at all where, logically, it ought to be, but rather in some unexpected place. Normally, such a lack of organization would be due to sloppy craftsmanship, and would be rightly regarded as a nuisance that does not carry argumentative weight against the author's analysis. Further on, I will offer another interpretation of the poor organization that does carry such weight.

I wonder if Pressac's evasions should be viewed as "dishonesty." If I were to put on an odd-looking hat like the one that Napoleon wore, and then go around claiming to be the French emperor, would that be "dishonesty"? That is, when the disguise is easily seen through by anybody not eager to self-deceive, should that be regarded as a disguise at all? Pressac may be king of the clowns; he is not king of the hoaxers.

Pressac does not bother to consider the notion that the camp's large cremation capacity was appropriate for the epidemic conditions. In Chapter 4 (pp. 162-175) I made the following point, but in view of Pressac's book, it seems necessary to belabor it. In considering cremation capacity, it is difficult to reach conclusions on a purely technical basis because of the distinction that must unavoidably be made between what is physically possible and what is practically attainable. For example, although I am told that my car can move at about 100 miles per hour, I know I cannot drive the 20 miles that separates my home in Evanston from the University of Chicago in twelve minutes; too many obstacles intervene. The technical data provides two numbers from which only an irrelevant conclusion can be drawn, whose only value is that the arithmetic is correct.

Pressac cites some documents on cremation capacity that he admits could not relate to practical conditions.⁶²⁴ In the case of the crematoria in the concen-

⁶²⁴ Pressac (1989), 108, cites a letter from Topf (reproduced in Schnabel, 346). This letter asserts that one of the firm's double muffle furnaces can reduce "in about 10 hours 10-35 corpses" (that is, the average time claimed to reduce one corpse in a muffle ranged from 34 minutes to two hours), and can be operated day and night, an assertion not borne out by later experience at Auschwitz, as Pressac notes (227-247, esp. 244). I believe this document is authentic, and the exaggerations are the usual ones of people trying to sell something. I note that it clearly specifies that corpses are supplied to the furnace serially ("*hintereinander*"), in contradiction to the usual "witness" who claims that three or even more were fed into a muffle together. Witnesses also assert that the crematories belched flames from the chimneys, certainly not the operational mode of modern crematories. Pressac accepts such tall tales without protest (251, 253). I have far more trouble with the document reproduced by Pressac on p. 247, ostensibly a letter of June 28, 1943, from the Auschwitz construction department claiming that the 52 muffles at Auschwitz could reduce 4,756 corpses in 24 hours of operation. That works out to an average of 16 minutes per corpse. The date of the document was when the breakdowns of the crematories and consequent attempts at emergency repairs gave the SS no reason to exaggerate the efficacy of Topf's products (for example, Pressac (1989), 100, 227, 236). Moreover, according to another document reproduced by Pressac (224), the crematories operated only 12 hours per day. On p. 91, Pressac gives the provenance of the June 28, 1943,

tration camps, the two main obstacles to such apparently simple calculations are (1) that the cremation equipment was not – and could not have been – used continuously, and that (2), as I noted on p. 66 (Chapter 2), the camp inmates who routinely operated the crematories were normally “working with a lethargy taught them by the Russians.”

Although the term “extraordinary” is applicable when referring to numbers, I shall henceforth term as “ordinary” those camp deaths from non-homicidal causes, mainly disease but including execution for specific offenses, virtually all of which were at some point recorded in German documents, and which are admitted by all sides. (Some of the “ordinary” deaths that occurred in 1945, during the chaos of the final months of the war, were not recorded.)

An “extermination camp” is then a hypothetical camp where unrecorded deaths – in homicidal “gas chambers” – vastly exceeded recorded deaths. Revisionists hold that, while some German wartime documents may be lost, the ordinary deaths were essentially all the deaths, and that there were no “extermination camps.” Consistent with the extermination legend, Pressac would agree that all the deaths in such camps as Buchenwald and Dachau in Germany were essentially ordinary deaths. However, he would assert that at Auschwitz in Poland large-scale unrecorded “extermination” deaths of anonymous people were carried out and that, consequently, only a fraction – perhaps one-tenth – of the total deaths there were “ordinary” recorded deaths.

What we need to do is consider the recorded death rates in relation to the cremation capacities. The most effective method, I think, is to compare the (“non-extermination”) camps of Buchenwald and Dachau with the (“extermination”) camp of Auschwitz in this respect. This is more convincing than citing estimates of the amount of time required to cremate a corpse. To return to the analogy of driving the 20 miles between my residence in Evanston and the University of Chicago, I must essentially disregard technical data about the speed capacity of my car and the distance between the two locations, and instead refer to experience – either my own or another’s – to accurately estimate the time required.

If it can be shown that the cremation capacity in each camp was proportionate to the numbers of “ordinary” and recorded deaths in each camp, then there must be an assumption that the crematories at Auschwitz played, and were intended to play, the same ordinary role as the crematories at Buchenwald and Dachau (which by universal agreement were not extermination camps).

There are a few difficulties in such a comparison, but they are surmountable. For one thing, there is a lack of complete and formal documentation of “ordinary” deaths at Auschwitz, despite the widely publicized release of the

document as the “Committee of Anti-Fascist Resistants of the German Democratic Republic.” I am in the position of a man staring at an authentic-looking German document that states that a Volkswagen broke the sound barrier. If it is not a forgery, then it must have been some sort of joke. In one of his neo-Pythagorean exegeses that Faurisson has noted (1991b, 145-149), Pressac says (110, 244) that such figures should be divided “by a factor of 2 to 5.”

Auschwitz “death books” three years ago by Soviet authorities. Coincidentally, in a review published in 1989, I gave figures that had been given to me by the International Tracing Service in Arolsen during my visit there in 1977: 45,575 recorded deaths in 1942, and 36,960 in 1943, with death books missing for 1940, 1941, 1944 and January 1945 (when the camp was evacuated).⁶²⁵

Although my information was not complete, it is – as we shall see – satisfactory for the present purpose. Another problem is the significance of the ca. 69,000 deaths recorded in the death certificates of the (incomplete) “death books” announced by the Soviets in 1989. Fortunately, this is not important for the present purpose. I continue to maintain that the total number of “ordinary” deaths at Auschwitz from 1940 through January 1945 is “in the range 100,000-150,000, probably closer to the former, because the camp population was small in 1940-1941 and by 1944 the Germans had made some progress against typhus.”⁶²⁶ As we shall see, this total is not the crucial point.

The totals for Buchenwald and Dachau, camps in Germany rather than Poland, are fairly well established. The International Tracing Service report of 1977 specified 36,550 for Buchenwald and 31,951 for Dachau. In each case, though, the figure does not include an undetermined number of “persons who died shortly before the liberation and during the evacuation transports.”⁶²⁷

The cremation facilities at the two camps are also fairly well known. Buchenwald had a six-muffle crematory, installed in 1942, and perhaps two additional muffles installed earlier. Moreover, Buchenwald had access to the civilian crematories that existed in nearby Weimar. Dachau had a two-muffle crematory before 1942, when a four-muffle crematory was constructed.⁶²⁸ We may therefore assume that Buchenwald and Dachau had at least six muffles each.

At first, it may appear that, by comparison, Auschwitz had an excessive number of muffles: while the number of “ordinary” deaths at Auschwitz was about three to four times those at Buchenwald and Dachau, there were about eight times as many muffles. However, when the calculation is done correctly, it can be seen that Auschwitz in fact had less relative cremation capacity.

The figures for total deaths at the two camps in Germany have entirely different interpretations from those for Auschwitz. The latter was evacuated under generally orderly conditions in January 1945. Consequently, the Auschwitz total, whatever it is, does not include “ordinary” deaths during the complete chaos of spring 1945. The worst period for Auschwitz was not 1945, but 1942, when its crematory construction project was defined.

⁶²⁵ Editor’s note: 46 volumes of the Auschwitz death registers were found so far with a total of 67,283 deaths (2,988 in 1941; 36,796 in 1942; 27,499 in 1943); Archiwum Państwowego Muzeum w Oświęcimiu, ꝑ 502-4; Staatliches Museum Auschwitz... (1995); Mattogno (2023a), Part 2.

⁶²⁶ Butz (1989), 369f. (My review of Arno Mayer’s book, *Why Did the Heavens Not Darken?*)

⁶²⁷ A. de Cocatrix, “The number of victims of the National-Socialist persecution,” Arolsen: International Tracing Service, April 1977.

⁶²⁸ See here p. 177; see also Pressac (1989), 94f, 106.

By contrast, most of the deaths in the camps in Germany proper were in 1944 and the chaotic first four months of 1945 during the disintegration and final collapse of German industry. Concentration camp personnel knew that any plans for fundamental expansion of cremation capabilities that might have been drawn up in 1944 stood little chance of being implemented. Indeed, such construction was scant in 1944 and 1945. All significant and effective decisions about crematory construction were in fact made before 1944, and could have been determined only by conditions existing prior to 1944. Consequently, in order to judge German intentions regarding the construction of crematories, we must look to the 1942-1943 period. Therefore, the incomplete figures cited here for Auschwitz are all that are required for the present purpose.

Available figures of “ordinary” deaths in the three camps break down as shown in Table 18 (it being noted that the figure for Buchenwald is only for the first three months of 1945):⁶²⁹

Table 18: Recorded deaths in the Auschwitz, Buchenwald and Dachau camps

YEAR	AUSCHWITZ	BUCHENWALD	DACHAU
1940	?	1,772	1,515
1941	?	1,522	2,576
1942	45,575	2,898	2,470
1943	36,960	3,516	1,100
1944	?	8,644	4,794
1945	?	13,056	15,384
TOTALS	?	31,408	27,839
TOTALS?	125,000?	37,000?	32,000?

The crucial years are 1942 and 1943, because those are the latest years that could be considered to have determined German decisions about the construction of crematories in the camps.

The ratio of projected muffles to “ordinary” deaths is presented in Table 19. I have assumed 52 muffles for Auschwitz (46 for Birkenau and six for the *Stammlager* (Auschwitz I camp)), not because Auschwitz ever in fact had 52 operational muffles, but because the purpose of this calculation is to help interpret intentions in building the crematories rather than capabilities actually attained. We see, in fact, that the ratio of cremation muffles to deaths somewhat disfavors Auschwitz: that is, it was decided that Auschwitz would be less well equipped with crematories than Buchenwald and Dachau (two camps that,

⁶²⁹ Nuremberg document 2171-PS, published in Office of the United States Chief of Counsel..., vol. 4, 800-835; Berben, 281. I have not used Mauthausen in this comparison because, although the recorded deaths are fairly well known (see, for example, Marsálek), the extent of cremation means is uncertain. Mauthausen was more decentralized than the other camps; for example, the satellite camp Gusen experienced about as many deaths as the main camp, and it and other satellite camps had their own crematoria of uncertain extent (see Pressac (1989), 108-114, and, Marsálek, 157). In addition, Mauthausen on occasion used ordinary municipal crematoria, such as the one in Steyr.

by universal agreement, were not extermination camps). Perhaps budgetary constraints excluded more crematories for Auschwitz.

Table 19: Number of projected muffles per thousand recorded deaths

YEAR	AUSCHWITZ	BUCHENWALD	DACHAU
MUFFLES	52	6	6
1942	1.14	2.07	2.43
1943	1.41	1.71	5.45

On page 184 of his book, Pressac readily interprets the summer 1942 decision to provide 46 cremation muffles in Birkenau as a phase of an extermination program. In doing so, however, he ignores the figures of ordinary or recorded deaths (given here), which contradict his interpretation. The decision to shut down Crematory I with its six muffles in the Auschwitz main camp (*Stammlager*) is, therefore, inexplicable from Pressac’s point of view.

Actually, the entire story was unraveled at its beginning by Heinrich Himmler who stated on April 21, 1945:⁶³⁰

“In order to put a stop to the epidemics, we were forced to burn the bodies of incalculable numbers of people who had been destroyed by disease. We were therefore forced to build crematoria, and on this account, they are knotting a noose for us.”

Unfortunately, Himmler did not live to say this at the Nuremberg trials. It is scandalous that it still has to be said today.

With regard to Pressac’s exertions to find a homicidal gas chamber in (Birkenau) Crematory II, I refer the reader to Faurisson’s critique. In his effort to prove a thesis, the falsehood of which is (or should be) obvious at the outset, Pressac in fact plays down or simply ignores the decisive facts. Nevertheless, he claims that it is we who are “maniacs who spend their lives trying to demonstrate that something never existed.”⁶³¹

The “*Vergasungskeller*” (gassing cellar)

Earlier, I considered a widely-cited document dated January 29, 1943, in which Karl Bischoff, head of the Auschwitz construction department, reported to Hans Kammler, head of the SS engineering office in Berlin, on the operational status of Crematory II:⁶³²

“The Crematorium II has been completed – save for some minor constructional work – by the use of all the forces available, in spite of unspeakable difficulties, the severe cold, and in 24 hour shifts. The fires were started in the ovens in the presence of Senior Engineer Prüfer, representative of the contractors of the firm of Topf and Sons, Erfurt, and they are working most satisfactorily. The formwork for the reinforced concrete ceil-

⁶³⁰ See here p. 307; see also *Moment* (Jewish monthly published in Boston), vol. 11, no. 1, (Dec. 1985), 51.
⁶³¹ Pressac (1989), 216.
⁶³² See here p. 162; see also Pressac (1989), 211. This 1943 communication is Nuremberg document NO-4473. Original German-language text is given in: Kogon, *et al.* (1986), 220.

ing of the mortuary cellar [Leichenkeller] could not yet be removed on account of the frost. This is, however, unimportant, as the gassing cellar [Vergasungskeller] can be used for this purpose [...]"

In his book, Pressac wrote that my interpretation of the term *Vergasungskeller* "though perfect in its literary form, was technically worthless."⁶³³ He interprets the term *Vergasungskeller* in this 1943 document to mean a homicidal gas chamber, and made this number one in his list of 39 "criminal traces" of extermination gassings at Auschwitz.⁶³⁴

Although my translation of the term was technically correct, I would now say that Pressac showed that, in this case, my interpretation was not correct. However, Pressac's interpretation is also incorrect, as shown by the evidence he himself reproduces. It is necessary to consider this matter in detail.⁶³⁵

The two important German words in this regard are *Begasung*, treatment with a gas, and *Vergasung*, gasification or conversion of something into a gas, even in the loose sense; for example, the German word for carburetion is *Vergasung*. Thus, although "fumigation" should normally be "*Begasung*," for no clear reason, German often allows "*Vergasung*" to substitute for "*Begasung*."⁶³⁶ Thus, gas attacks in World War I were referred to as *Vergasung*, and professional fumigators often speak of their operations as *Vergasung* rather than *Begasung*. However, it appears that *Begasung* never substitutes for *Vergasung*, and that a fumigation or delousing gas chamber is normally a "*Gaskammer*," not a "*Vergasungskammer*" or "*Vergasungskeller*." Accordingly, the delousing gas chambers at Auschwitz were called "*Gaskammern*."⁶³⁷ These are the sorts of arbitrary conventions of usage, not deducible from a dictionary, that occur in any language.

Despite all this, the normal meaning of *Vergasung*, in a technical context, is gasification, gas generation, or carburetion. In view of that, and knowing that some cremation ovens were of a design requiring a combustible gas-air mixture to be introduced by blowers located outside, I interpreted the *Vergasungskeller* mentioned in the 1943 document as a place where coke or coal was converted into a combustible gas, mixed with air, and then introduced under pressure into the cremation ovens.

While this interpretation is not "technically worthless," Pressac shows that it is not correct in this instance. His proof consists of (1) many engineering drawings of Crematory II in various stages of design, which show no such fa-

⁶³³ Pressac (1989), 548.

⁶³⁴ *Ibid.*, 432.

⁶³⁵ Compare with Faurisson's discussion of this point: (1991a), 55ff.

⁶³⁶ The German prefix *ver-* indicates a strong, at times permanent – and often negative – change of condition or location, which is difficult or even impossible to revert, whereas the prefix *be-* indicates a neutral treatment or change of condition, a contact or occupation with something. *Begasung* thus refers to the treated object touched by gas (building, room, clothes etc.), whereas *Vergasung* indicates a drastic (negative) change of condition (liquid to gaseous or impairment/killing of organisms). Cf. <http://en.wiktionary.org/wiki/ver->; <http://en.wiktionary.org/wiki/be->; Editor's note.

⁶³⁷ Pressac (1989), 27f, 31. Puntigam *et al.* normally uses "*Gaskammer*" but "*Begasungskammer*" is also used.

cility, and (2) engineering drawings of, and other technical data on, typical Topf company crematory ovens, which show that they were not of the design I assumed, and which used as fuel coke supplied directly behind the ovens.⁶³⁸

On the basis of a newly discovered document, Pressac shows that the basement morgue (*Leichenkeller*), which was not available due to the frost, was *Leichenkeller 2*. He thus concludes that the *Vergasungskeller* must be *Leichenkeller 1*, and that it was designated a "*Vergasungskeller*" in this document as a result of an "enormous gaff [sic...] the first of the 'slips' that SS and civilians could not help making" in the alleged preferred policy of not committing incriminating words to paper.⁶³⁹ While it is true that the normal German term for a homicidal or delousing gas chamber would be "*Gaskammer*," "*Vergasungskeller*" is linguistically possible.

As noted by others, Pressac is in the strange position of claiming that a room consistently designated *Leichenkeller 1* on all engineering drawings was to be used only temporarily as a *Leichenkeller*, either instead of normally as a gas chamber, or simultaneously as a gas chamber and a morgue. In the latter case, the unsuspecting victims must presumably stand on or next to the corpses. In the former case (the only interpretation worth considering), the implied delay in the use of the building for extermination was "unimportant," a major contradiction if one claims, as Pressac does, that the primary role of the building was for mass gassing.

Because this document confirms that in January 1943 the Germans were working, under great pressure, to make this installation operational as an ordinary crematory, I regard it as further evidence against the claim that it had been decided in the summer of 1942 that the primary purpose of these crematories was extermination by lethal gassing.

The use of the *Vergasungskeller* as a morgue not only did not interfere with bringing Crematorium II into operational status, it advanced it. Here I am arguing, in passing, for a focus on what the document says rather than on the term *Vergasungskeller* mentioned in it. I suspect that the realization of what the document really says is the basis for Hilberg's failure to make more than a hurried and superficial reference to it.⁶⁴⁰ Pressac, in effect, would have us ignore what the document says.

In any case, Pressac's logic in interpreting the *Vergasungskeller* as a gas chamber depends entirely on the assumption that there was a gas chamber in Crematory II. Without that assumption, we have the following situation:

1. One (and apparently only one) document concerned exclusively with the operational status of Crematory II makes reference to a *Vergasungskeller* to be temporarily used, in support of the crematory, as a morgue, and not for its intended or normal function.

⁶³⁸ Pressac (1989), 106-113, 222-225. Early in 1989, Faurisson also told me that my interpretation of the *Vergasungskeller* was not correct, but as far as I can recollect, he did not raise the matter of the design of the furnaces. Thus, I was not convinced at that time.

⁶³⁹ Pressac (1989), 217.

⁶⁴⁰ Hilberg (1985), 885, n. 67. (1961: 566, n. 52.)

2. In the many engineering drawings of the crematories that Pressac has examined, there is no mention of a *Vergasungskeller*, *Gaskammer*, or anything similar,⁶⁴¹ and
3. nothing in those engineering drawings implies or calls for something describable as a *Vergasungskeller*. For example, the cremation ovens have been shown to be of a design not calling for such a facility.

The appropriate conclusion, I believe, is that the *Vergasungskeller* was not in Crematory II at all. I assume that it was somewhere in the vicinity, but in the light of current knowledge, the only basis for inferring that it was in the crematory building is an assumption that there was a gas chamber there. In the absence of the massive documentation presented by Pressac, it seemed logical to assume that the *Vergasungskeller* was located in Crematory II. I made just that assumption in writing my book, and the assumption seemed confirmed for me by the observation that crematory technology could call for such a facility. However, Pressac has shown, without realizing it, that the *Vergasungskeller* was not in Crematory II, because it does not appear on the many engineering plans, and is not implied or called for by anything that appears on those plans. Only an unfounded or arbitrary prior assumption can place it there.

If the *Vergasungskeller* was not in Crematory II, then the questions of what and where it was are only of limited importance. It suffices, I believe, to show that the term could have applied to operations that transpired, or may have transpired, elsewhere in the camp.

To give my favored interpretation first, it is unlikely that the town of Auschwitz had preexisting means for production and/or distribution of fuel or town gas sufficient for the needs of the huge complex of camps we call "Auschwitz." Such needs could have been for cooking, heating, or incineration of waste, and so forth. On account of the paucity of natural gas but abundance of coal in Europe, the Germans had extensively developed the gasification of coal.⁶⁴² In the Auschwitz region, coal was particularly abundant, so processes of coal or coke gasification were suited for the conditions there.

In offering my earlier interpretation of the *Vergasungskeller* as a fuel gas generator for the crematory ovens, I wrote on p. 167 (Chapter 4):

*"The two most common methods of producing fuel gases from coal or coke are, first, by passing air through a bed of burning coke to produce 'coke oven gas' and second, by passing steam through the coke to produce 'water gas'."*⁶⁴³

I now offer almost the same interpretation, but modified so that the specific location of the *Vergasungskeller* is no longer known, and the gas generated is for general application and not specifically for cremation. This seems entirely justified by the engineering plans that indicate no *Vergasungskeller* in the crema-

⁶⁴¹ Pressac (1989), 429.

⁶⁴² Foster & Lund, 68-97.

⁶⁴³ The remark on the method of generation of coke furnace gas can be improved. See: Foster & Lund, 41. In any case, the German processes were sufficiently advanced that they did not necessarily fall into classic categories. See: Foster & Lund, 68f.

tories, by the great likelihood that the camp required fuel gas and in view of the easy availability of coal there.⁶⁴⁴ Incidentally, it is unimportant, from the present point of view, if such a *Vergasungskeller* were operational or only in a state of construction; only the possibility of its temporary use as a morgue is relevant. So much the better, if such a facility was not yet operational, because then nothing would interfere with use as a morgue.

As I say, this is my “favored” or preferred interpretation, but there are a few other possibilities that are worth noting.

It has already been remarked that fuel gas generated in the camp could have been used, among other things, in waste incineration. That is, the fuel gas could have served as the auxiliary fuel. There is also a second sense in which “*Vergasung*” can apply to waste incineration, because the technology views the waste as a combustible fuel being turned into gases. Incineration (or *Verbrennung*) is actually a special case of gasification (or *Vergasung*) in which all combustibles are oxidized to the highest degree possible, for example, producing carbon dioxide (CO₂) instead of carbon monoxide (CO, a combustible gas, in which case it would be said that *Vergasung* had taken place). Since perfect incineration does not exist in this sense, the line between *Verbrennung* and *Vergasung* can be blurred. What is termed waste gasification, or *Müllvergasung* in ordinary technical German, was developed as a practical process only after the war.⁶⁴⁵ It appears that during the war, *Vergasung* could have been used in the waste incineration context only in the sense of one of many specific processes taking place inside a plant viewed as performing *Müllverbrennung*.⁶⁴⁶ Thus, this second sense of application of “*Vergasung*” to waste incineration does not seem to apply, and it is very unlikely that at Auschwitz any waste incinerator would have been spoken of as performing *Vergasung*.

This possibility is nevertheless worth mentioning. There was a waste incinerator in what I would call the chimney housing behind the cremation ovens in Crematory II. The effluent gases from this incinerator combined with the effluent of the ovens in sharing the chimney and the suction type forced draft system.⁶⁴⁷ I do not believe that the “*Vergasungskeller*” was this chimney housing because, apart from the reasons already given, it was not referred to as such on the drawings, and seems to have had insufficient free space to serve as a plausible temporary substitute for the huge *Leichenkeller 2*.⁶⁴⁸ All the same, it is at least worth noting that “*Vergasung*” could apply as an inclusive description for the two processes (cremation and waste incineration) involved there.

⁶⁴⁴ A summary of various gas generation processes is given in Franke, vol. 7 (1965), 484+. Gasification of oil, or *Ölvergasung*), as contrasted to gasification of solid fuels, or *Vergasung fester Brennstoffe*, had also been practiced in Germany since the late Nineteenth Century. See: Franke, vol. 4, 390.

⁶⁴⁵ *Ibid.*, vol. 16, 337.

⁶⁴⁶ *Ibid.*, vol. 7, 89.

⁶⁴⁷ Pressac (1989), 277, 281ff, 287, 306.

⁶⁴⁸ Such objections also apply against the hypothesis that one room of the small *Leichenkeller 3* (Pressac (1989), 285, 295) was the *Vergasungskeller*. See Faurisson (1991a), 55ff.

However, I do not consider a waste incineration interpretation of the *Vergasungskeller* a likely possibility.

In the vicinity of the crematories at Birkenau, there were three sewage treatment plants (*Kläranlagen*) in various stages of completion.⁶⁴⁹ Sewage treatment amounts basically to the acceleration of the natural processes, in which bacteria metabolize solid waste into gasses and inoffensive solids (sludge) and to the disposal or use of these products. There are several senses, in which *Vergasung* could arise. A short outline is helpful:

1. Aeration (*Belüftung*)
2. Chlorination
3. Methane production
4. Prevention of sewer gasification (*Kanalvergasung*)
5. Sludge incineration (*Schlammverbrennung*)

Sludge gasification (*Schlammvergasung*) was a postwar development and is not relevant here.

In the technical literature, aeration of sewage is classified as one form of “gas transfer,”⁶⁵⁰ because a specific biochemical effect of the oxygen is sought; the specific purpose of the aeration is to make the aerobic bacteria more vigorous. This biochemical motivation is so emphatic that I have seen the word “*Begasung*” used to designate *Belüftung*.⁶⁵¹ In this connection, I have also seen the terms “*Belüftungskammer*” (aeration chamber) and “*Belüftungsschacht*” (aeration shaft).⁶⁵²

Chlorination is normally accomplished by converting stored liquid chlorine to the gaseous form, that is, *Vergasung*,⁶⁵³ and then injecting the gas into the sewage or effluent, that is, *Begasung*.

In the anaerobic digestion of sewage, a number of gases are produced (sludge gas or *Faulgas*), especially methane, which has various uses as a source of energy. This gas production is normally referred to, however, as *Gaserzeugung* rather than *Vergasung*. Moreover, since the gas is produced at the top of a digestion tank, it is not likely that the process could be viewed as taking place in any sort of “*Keller*.” However, the process of useful gas production does not end there, and there are sufficient complications to allow various combinations and hence appearances of diverse technical terms. After the digestion, the removal of impurities, especially hydrogen sulfide, is required, if the methane is to have practical use. The removal was normally via dry scrubbing in a “*Raseneisenerzfilter*,”⁶⁵⁴ that is, filtering in iron oxide, as was common in the gas industry.

As already remarked, sewage treatment consists of the acceleration of natural processes, so gas production also occurs spontaneously in the very sewers

⁶⁴⁹ See Pressac (1989), 51, 165-170, 420f., 542f., for limited data.

before the sewage reaches a treatment plant. This process is called “*Kanalvergasung*,” and was studied in Germany before the war. For example, there was a 1933 doctoral dissertation on the subject.⁶⁵⁵

Ventilation is often adequate to prevent unwanted effects, such as explosions, but in the event ventilation does not suffice, there was the Gerlach device, which removed gases by suction, and had both mobile and stationary versions.⁶⁵⁶ In this case, the role of the plant was not to perform *Vergasung* but to counter it, that is, it did *Entgasung* because of the undesired *Vergasung*.

Sludge incineration was practiced in Germany since early in the century, but greater interest in this method of sludge disposal was aroused when large and economic plants were built in the U.S. during the Thirties.⁶⁵⁷ In this case, “*Vergasung*” arises in the same way it did at the outset of this discussion, that is, in fuel gas generation, because the sludge cannot be burned without the application of some auxiliary fuel, at least for preheating. Indeed, sludge gas is a highly convenient energy source in such a process.⁶⁵⁸ A postwar development was incineration using oil as fuel in an “*Ölvergasungsbrenner*.”⁶⁵⁹

I have not located the *Vergasungskeller* in the sewage plants. Rather, I have listed five senses in which generation of, or treatment with, a gas comes up in sewage technology. I have not found the term “*Vergasungskeller*” or “*Vergasungskammer*” in the German literature on wastewater treatment, but that is not necessary. The document in question was not written by a sewage engineer; it was written by a construction engineer for the information of another construction engineer, and the author never imagined that half a century later people would be poring over his hurried note. Nevertheless, I still favor the first interpretation offered, namely, that the *Vergasungskeller* was a generator of fuel or town gas intended for general use.

Only the study of complete engineering plans for the camp could settle this question. Alas, that may be difficult. Some of the documentation provided to Pressac by the Auschwitz State Museum (the Panstwowe Muzeum Oświęcim, or “PMO,” whose help Pressac copiously acknowledges) had earlier been provided to the Auschwitz State Museum by the Israelis.⁶⁶⁰ I assume the Israelis also have some documents they will not part with. In response to my inquiry for more information about the sewage treatment plants, the Museum replied to me, on August 26, 1991, that it “has several construction plans” of the plants, one of which is reproduced in Pressac’s book, but that “abundant documentation on the construction of the sewage treatment plants in Birkenau you will find in the Central State Archives in Moscow.” Thus, precisely locating the *Vergasungskeller* may be a big job.⁶⁶¹ At this point, the only thing that seems assured is that the *Vergasungskeller* was not in the crematory building.

⁶⁶¹ In his Introduction to the new American edition of *Hitler’s War*, David Irving says that “the

The War Refugee Board Report

On April 7, 1944, two Slovakian Jews, Walter Rosenberg and Alfred Wetzler, escaped from Auschwitz-Birkenau after two years' captivity there. Their escape was reported on April 9 in a Gestapo telegram to Berlin and elsewhere.⁶⁶²

Rosenberg and Wetzler are said to be the principal authors of the document on Auschwitz that was published by the U.S. War Refugee Board in November 1944. Supplements to the report are said to have been contributed by two Jews (Czeslaw Mordowicz and Arnost Rosin) who escaped on May 27, 1944, and by a non-Jewish Polish major who also escaped. In writing this book, I thought the document, which I call the WRB report, was important to the subject because it marked the first major commitment of an Allied power to the Auschwitz extermination claim.

A booklet published in New York in March 1944 with the endorsement of the U.S. government's Office of War Information and the National CIO War Relief Committee, and purporting to be a compilation of reports about Auschwitz received through the Polish underground, illustrates what was being said about Auschwitz at the time. The camp is portrayed as a "camp of death" but not as a site of mass exterminations of Jews. Such exterminations are claimed, but only as taking place at Bełżec, Sobibór and Treblinka.⁶⁶³ This is an example of the failure of the Allies to claim that Auschwitz was an extermination camp even two years after its alleged attainment of that status, despite its being a huge and not at all secret operation. (The great extent of involvement by non-SS personnel ruled out secrecy for whatever transpired there.)

A chapter of Pressac's book is devoted to arguing the essential accuracy of the WRB report, despite various errors and contradictions that he notes (mainly the number and arrangement of the crematorium ovens at Birkenau).

The authorship of the WRB report remains a problem, but not an important one. What is indisputable is that it came from the circle of Rabbi Michael Dov Ber Weissmandel in Slovakia, whose members claimed to have received the story from the escaped Jews. The five escapees allegedly did a lot of name changing. According to an article by Erich Kulka in a book published in 1967,⁶⁶⁴ in order to live under cover after escape, Rosenberg became Rudolf Vrba, Wetzler became Jozef Lánik, Mordowicz became Petr Podulka, and Rosin became Jan Rohác. Rosenberg remained Vrba after the war, and at present is on the Faculty of Pharmacology at the University of British Columbia in Canada. The other three Jews might have dropped their aliases, although Wetzler retained Lánik as a literary pseudonym.

diaries of Himmler have vanished – partly said to be in Moscow and partly known to be in Tel Aviv, Israel; Chaim Rosenthal, a former attaché of the Israeli Consulate in New York, obtained the Himmler diaries by the most questionable means." See Irving, 402. See also the *IHR Newsletter*, No. 83, November 1991, 2-3.

⁶⁶² Iwaszko, 67; Kulka (1975), 205.

⁶⁶³ Polish Labor Group, esp. 45f.

⁶⁶⁴ Kulka (1975).

In his 1967 article, Kulka did not mention the Polish major, who is sometimes identified as a Pole named Jerzy Wesolowski who escaped and changed his name to Jerzy Tabeau. In a 1964 article, Auschwitz State Museum (PMO) official T. Iwaszko mentioned Wesolowski/Tabeau, reporting that he was registered as prisoner No. 27273 on March 26, 1942, escaped from the camp on November 19, 1943, and made some contributions to underground literature, but Iwaszko did not quite make him the Polish major.⁶⁶⁵ In 1979, John S. Conway wrote that the Polish major's "identity has not been revealed thus far. It is also not known by what route this last section of the report fell into the hands of the Jewish leadership in Geneva."⁶⁶⁶ In his 1981 book *Auschwitz and the Allies*, Martin Gilbert mentions that the report of the "Polish major" was appended in June 1944 to the reports of the Jews by Richard Lichtheim of the Geneva office of the Jewish Agency.⁶⁶⁷ Oddly, in a television documentary based on Gilbert's book that was made a few years after its publication, we see the Polish major's face but do not learn his name. In a 1985 article mainly about Rosenberg and Wetzler, Kulka mentioned Tabeau only as an escapee from the gypsy (*sic*) camp at Auschwitz⁶⁶⁸ and then, in a 1986 article very similar to the 1985 one, Kulka identified the Polish major as Wesolowski-Tabeau.⁶⁶⁹

The WRB report contains a major contradiction of Pressac's version of the extermination thesis. Not surprisingly, Pressac ignores this contradiction. According to the Report, there were no gassings at the *Stammlager* (main camp, identified as "Auschwitz," as distinct from "Birkenau"). This is not stated explicitly in the WRB report, but it is clearly implicit.⁶⁷⁰ Gassings are portrayed as taking place only at Birkenau or in the birchwood ("Brezinsky") or the "bunkers" near Birkenau. Wetzler's part of the WRB report says he was sent to Birkenau immediately on arrival on April 13, 1944.⁶⁷¹ However, Vrba and the part of the WRB report attributed to him say he was quartered at the *Stammlager* from arrival on June 30, 1942, even while working at the Buna plant (Monowitz or Auschwitz III), until he was transferred to Birkenau in December 1942.⁶⁷² In his postwar book, Vrba presents himself as being deeply involved in resistance activity, and says that Wetzler's "knowledge of the camp was deep and wide," on account of his great popularity.⁶⁷³ Although I would be the last to believe Vrba, the point here is that the authors of the Report had extensive and detailed information about the camp. There is much in

the Report that confirms this, such as the mention of the quarantine order of July 23, 1942,⁶⁷⁴ the general layout of the camp, and a rough correspondence of the listed transports and registration numbers with the presumed correct ones.⁶⁷⁵ As I wrote on p. 130 (Chapter 3):

“One must assume that much of the material in the report is true. [...] there is no question of the competence of the authors of the report.”

The authors were acquainted with the interior of the camp (although not, as Pressac acknowledges, with the interior of the crematories at Birkenau).

Thus, Pressac should confront a major contradiction here. Pressac notes various contradictions in the testimonies of the usual alleged eye witnesses (such as Commandant Höss), but continues to believe that they were at least speaking of real events. However, if he is to accept the WRB report, then he must throw out (I won't say “we” because I did so long ago) the testimonies of the alleged eyewitnesses Höss, Fajnzylberg (Jankowski), Müller, and Broad, as they claimed to have witnessed mass gassings at the *Stammlager*,⁶⁷⁶ and, according to Pressac, the lack of documents and “the present state of the premises” make their testimonies the only “evidence to establish the reality of homicidal gassings at the *Stammlager*.”⁶⁷⁷ This is not a contradiction of detail. By this I mean that one can no longer continue to hold that they were at least speaking of real events. Because they are so unreliable, their testimony on mass exterminations in other parts of the camp complex must be rejected. But because that testimony is no less reliable than the others, Pressac ought to reject all alleged eyewitness testimony. Thus, Pressac has a mass extermination program that was witnessed by no credible person.

As I said, we are dealing here with a “cornucopia of absurdities,” and it is easy to overlook the significance of this point, for which the question of the authorship of the WRB report is unimportant. The sole objective of the well-informed authors in composing and propagating the Report was to claim that

⁶⁷⁴ US-WRB (1944), 30.

⁶⁷⁵ Compare with Czech (1960, 1961, 1964).

⁶⁷⁶ Editor's remark: For a critique of several witness testimonies about alleged homicidal gasings inside the *Stammlager* crematorium (Stanisław Jankowski, Erwin Bartel, Filip Müller, Hans Aumeier, Rudolf Höss, Pery Broad, Maximilian Grabner, Hans Stark) see Mattoño (2016b), 27-71; for a more-detailed critique of Jankowski's various statements, see Mattoño (2021a), 160-179.

⁶⁷⁷ Pressac (1989), 123. Pressac writes on p. 132 that the *Stammlager* “gas chamber was used sporadically from the end of 1941 to 1942.” In view of the testimonies he cites, he should say rather “from the end of 1941 to at least through 1942.” For example, the Fajnzylberg testimony cited by Pressac on p. 124 speaks of a gassing of “400 Jews brought from Birkenau” on a date not earlier than November 1942, when he was assigned to the Sonderkommando of Crematorium I. The other testimonies – in Bezwinska & Czech, 114ff., 174ff., and in Müller, 31-49 – also claim not merely gasings, but mass gasings of Jews in the mortuary of Crematorium I during much of 1942. One of the many contradictions in Pressac's work is that on p. 133 he also asserts, on the basis of logic that I can't see at all, that from the data given in the Leuchter Report we can infer “use as a homicidal gas chamber” for Crematorium I. Another contradiction I noticed is that on p. 106 he contrasts the oil-fired furnaces of Buchenwald with the coke-fired furnaces of Auschwitz, but on p. 259 he says they were “identical.” Faurisson reviews additional contradictions (1991a & b).

Jews were being exterminated *en masse* at Auschwitz. It is a piece of war propaganda, and there is no obligation to believe such claims. Nevertheless, there is no way that Pressac or anybody else may deny that, if there had in fact been mass gassings in the *Stammlager*, then they would have been spoken of in the WRB report. Therefore there were none. And yet the testimonies for the *Stammlager* are equivalent, in terms of credibility and the circumstances under which they were delivered, to the testimonies of mass gassings in other parts of the camp complex.

In contemporary exploitation of the affair of the WRB report, Vrba is really the star. Since he first publicly identified himself as Rosenberg (probably in 1958), he has published a book (in 1964) about his wartime experiences, *I Cannot Forgive*, testified at the first Zündel trial in Toronto in 1985, and appeared on various television documentaries.⁶⁷⁸

Vrba is obviously lying about experiences at Auschwitz. This can be seen by examining his book, and by considering his 1985 testimony in Toronto that his book is only “an artistic picture [...] not a document for a court.”⁶⁷⁹ I have previously noted the major factual errors of his book:⁶⁸⁰ his belief that there were virtually no escapes from Auschwitz before April 1944,⁶⁸¹ and his claim that there was an air raid on Auschwitz when he escaped in April. Actually, the first air raid was on August 20, 1944.⁶⁸²

I also remarked that “the general tone of [Vrba’s] book and his description of how various people behaved” further demolish his credibility, if that were possible. I did not give the best examples in my book out of fear that I might not be believed, but here I will mention some of these fantasies. Vrba claims, for example, that at the Novaky camp the Slovakian guards would hold a rifle muzzle on the tummy of a poor persecuted Jew when he was sitting on the potty, while at Auschwitz he had “seen twenty dollar bills used as toilet paper.”⁶⁸³ He means U.S. twenty dollar notes, not German mark notes. Poetic license permits a dramatist of the john at Auschwitz to depict a pistol being held against the head by a Gestapo colonel, who would politely hand the Jew a twenty when done – which is no more incredible than what Vrba actually wrote. (Incidentally, scatological fantasies are also a striking feature of the *Talmud*.)⁶⁸⁴

⁶⁷⁸ In the documentary based on M. Gilbert’s book, Vrba says that in May-June 1944 Hungarian Jewesses were arriving at Auschwitz in mink coats. At that time, he is supposed to have been hiding in Slovakia.

⁶⁷⁹ *Toronto Sun*, Jan. 24, 1985, 52.

⁶⁸⁰ See Chapter 3, 135-139.

⁶⁸¹ Vrba & Bestic (1964), 217, 220.; Kulka (1985), 295, specifies 55 successful escapes until the end of 1942, 154 in 1943, and 167 in 1944. Kulka (1975), 201, gave lower figures, but the 1985 paper used the figures given by the Auschwitz State Museum (PMO) in 1964 (Iwaszko, 49).

⁶⁸² See here p. 205; see also Vrba & Bestic (1964), 233.

⁶⁸³ Vrba & Bestic (1964), 35, 209.

⁶⁸⁴ To learn what the *Talmud* says happened to Jesus, read Gittin 57a in Epstein (1936), 261 (with note referring to the Munich codex) or the edition by Goldschmid (1932), 368.

On the other hand, Vrba's description of the rackets run by the SS and inmates in charge of the "Kanada" section, "the commercial heart of Auschwitz"⁶⁸⁵ where inmates' possessions were stored, seems unusually candid to me, however embellished with inanity.

I note with gratitude that the Wetzler/Lánik book about Auschwitz is frankly acknowledged to be a novel.⁶⁸⁶

Because I focused on Vrba in Chapters 3 and 5, John S. Conway, a historian and colleague of Vrba at the University of British Columbia, published an article on the WRB report in 1979.⁶⁸⁷ In 1981, Conway also published a German text of the WRB report, and in 1984, he published an article relating to the WRB report (and particularly to Rudolf Vrba) and Hungary.⁶⁸⁸

Conway was overdue for criticism. In his 1967 article, Kulka had not criticized Vrba's 1964 book, but by 1985, Holocaust revisionism was in full vigor. Kulka scolded Conway for being willing "to accept uncritically and as fact Vrba's distorted statements" and complained that Vrba's "contradictory and problematic statements [have been] misused [...] to prove that the [WRB] report was a distortion and that the description of the gas chambers in Auschwitz were simply a figment of the imagination."⁶⁸⁹

I would have thought that, as a result of his admission in 1985 that his book was not true, Vrba would have been finished as a player in the traveling Auschwitz show. However, it is a sad commentary on the present state of public controversy that the silly thing was actually reissued in 1989, with certain supplements, under the title *44070: The Conspiracy of the Twentieth Century*.⁶⁹⁰ It appears that the original text, with all its inanities, was reproduced in this new edition. There were also additions as appendices. The part of the WRB report attributed to Wetzler and Rosenberg is reproduced, there is an appendix on "trials of Auschwitz SS-officers," there is an essay by Vrba on the economic aspects of the German persecutions of the Jews, a short vita of Vrba (not mentioning "Rosenberg"), and an essay by Conway, drawing from and supplementing his 1979 article.

Nowhere in the new edition is there an attempt to correct, explain or apologize for the inanities and factual errors in the original edition of the book, or for Vrba's 1985 admission that the book was only "an artistic picture," that is, not true. Conway does not hint at any problems or at any of the criticism he received for his gullibility with respect to Vrba. He does not apologize for his implicit endorsement of a book that all sides, including Vrba, have told him is not true. It seems that he will not or cannot learn. Nor will the publishers of "Holocaust" literature learn; there seems to be an assumption among them that critical examination of this literature is unnecessary. They seem quite willing to

slap between covers almost anything as long as criticism is confined to relatively esoteric writings.

In 1990, Vrba was squabbling with Raul Hilberg, Shmuel Krakowski of Yad Vashem, and Yehuda Bauer over numbers exterminated.⁶⁹¹

Conclusion

To return to Pressac, his blindness to the implications of the WRB report is the rule for his whole work. I have heard revisionists speak as though Pressac's work is a respectable historical effort. The basis for this is easy to see. Having the support of influential people eager to help, Pressac was able to make available to the public documents, mainly of an engineering nature, that had previously been in the category of extreme esoterica, either unknown or known only to a few researchers.

We are better off on account of the book, but the gain is comparable to, say, the publication of an index or bibliography. The value is purely in the factual information. The analytical part of the book is a transparent charade by an actor who is confident in advance that the people he is serving will cooperate in the sham and will not call attention to the obvious disguise that renders him, in fact, a clown in the eyes of his targets. How else can we react to a man who insists on treating as irrelevant, at a time when it was decided to build large crematories, the fact that there was a documented catastrophic death rate? Even Pressac's formal sin on this point – of presuming that, which he is trying to prove, in order to find "traces" of it – is minor compared to the comedy of his gainfully pirouetting around and away from the central points.

I began this paper with a promise to show how Pressac seeks to have his reader focus entirely on local matters while ignoring the context of the Auschwitz concentration camp in its full dimensions. I have shown three specific important senses in which this is true.

First, in his treatment of the decisions to build crematories at Auschwitz, he fails to acknowledge the relevance of the catastrophic typhus epidemics that prevailed at the time of the decisions. Second, his "criminal trace" number one is a highly questionable interpretation of a single word occurring in a document that disproves, or at least renders implausible, his major claim. Third, his discussion of the WRB report disregards the account given there, and consequently the decisive consequences of that account in evaluating the reliability of the so-called witnesses, in favor of a focus on a very picayune detail.

One should ask: how are such procedures possible in a work as replete with documentary detail as this bulky tome? That is what the notorious disorganization of the book contributes; it is a means of avoiding a focus on the simple essentials. The disorganization is there not because of the bad style of the author, but because of the bad logic applied by the author and desired of the reader.

⁶⁹¹ *IHR Newsletter*, No. 74, July-August 1990, 3. Source cited: JTA dispatch in *Jewish World* (Broward, Florida), March 9-16.

It is fair to say that one message of Pressac's book is that, yes, the revisionists and particularly Faurisson are right in their rejections of the traditional or accepted evidence for homicidal gas chambers at Auschwitz. He does not put it that bluntly, but it is there. He then claims that he, almost half a century after the alleged events, has finally gotten the evidence right. The procedure is the usual one; flip through the mountains of documents, rejecting all clearly exculpatory material as the result of deceptive German practices in keeping written records and then, when something that can be given an incriminating interpretation is found, declare it an "enormous gaff[e]" or an unintended confession.

I think I could do the equivalent for any establishment or agency that generates voluminous written records. In these days of "affirmative action" in employment, perhaps I should look for Northwestern University's gas chambers for white males, while taking the precaution of developing an explanation why I survived. Likewise, a future Pressac can concede that our Pressac is wrong, but that *he* has finally gotten it right. Thus, this game can go on forever; it represents the future, if there is one, of the legend, and remains the only kind of anti-revisionist essay possible.

Supplement 4: Zyklon B and Gas Detectors in Birkenau Crematorium II

The main content of this supplement first appeared in print in the Journal of Historical Review, vol. 16, no. 5, Sept.-Oct. 1997, pp. 24-30.

Zyklon B

In *The Hoax of the Twentieth Century*, I remarked that typhus was a great killer for the Germans in World War I, giving a reference published shortly after that war.⁶⁹² The typhus of World War I, like that of World War II, was carried by lice. In response to this specific problem, the German company DEGESCH (*Deutsche Gesellschaft für Schädlingsbekämpfung* – German Pest Control Co.) developed the Zyklon B pesticide,⁶⁹³ and made it available for commercial use in 1923.

Zyklon B, referred to here merely as Zyklon, is a very effective pesticide consisting of liquid hydrogen cyanide (HCN, an acid) absorbed into some inert material such as wood pulp, with an irritant added to warn bystanders of its presence. HCN is also called “prussic acid” and in German “*Blausäure*” (blue acid), because HCN tends to leave blue stains in the presence of iron compounds like rust; the resulting insoluble and non-toxic iron salt of HCN, Iron Blue, is commonly used in blue dyes.

In its gaseous or liquid form, HCN is very deadly, and is used in American execution gas chambers, where it is traditionally generated by mixing an acid (normally sulfuric acid) with potassium cyanide or sodium cyanide, resulting in rapid release of HCN in its gaseous form.

HCN is useless as a battlefield gas because it is a true gas, slightly lighter than air, and disperses too rapidly for that application. World War I battlefield gases were actually dusts that hovered about the target area.

The pesticide Zyklon works somewhat differently. It is supplied in a very tightly sealed container. When a space (e.g. a barracks or building) is to be treated with it, that space is tightly sealed, and trained personnel empty cans of Zyklon on the floor, preferably spreading the Zyklon out as much as possible. They then leave the space, close it, and wait the time required for the liquid HCN to pass into the gaseous form by evaporation, fill the space, and kill the target pests. Then the space is opened and ventilated.

This is a very time-consuming process because the evaporation is slow, and for safety reasons the time required for ventilation is lengthy. The boiling point of HCN is 25.6°C (78°F). That does not mean the space must have that ambi-

⁶⁹² Chapter 4, 177, citing the *Encyclopedia Britannica*, 12 ed., vol. 32, (1922 – third volume supplementing the 11th edition), 157.

⁶⁹³ Dwork & van Pelt, 219.

ent temperature in order for the gas to be released; water does not have to be brought to its boiling point in order to evaporate. However, the process is slow at any lower temperature, and especially slow in winter temperatures.

An information booklet for Zyklon⁶⁹⁴ gives typical times of 2-72 hours for the gassing process, and at least 10 hours for ventilation; the former depends very much on the temperature, and the target pests and the latter on the physical properties of the space and its contents. For example, clothing and bedding should be beaten even after ventilation.

Another step recommended at the end of a Zyklon gassing and ventilation process is the test for residual HCN gas. The typical test uses a mixture of copper acetate and benzhidene acetate, and test paper which turns dark blue if the HCN level is dangerously high. A temperature of at least 15°C (60°F) is required to perform this test, so there are many circumstances under which it cannot be performed.⁶⁹⁵

Use of Zyklon is inherently dangerous, and during the war there existed a German regulation that it could be used only by, or under license from, DEGESCH, which was officially responsible for training all operators using it.⁶⁹⁶

There have also been gas chambers designed specifically to use Zyklon to disinfest articles, such as clothing, with HCN, especially in Germany.⁶⁹⁷ With few exceptions, the interiors of these gas chambers are heated, in order to accelerate the development of the gaseous HCN from the liquid form, and for other reasons. Gaseous HCN is water soluble, so high temperature is desired to reduce moisture in the gas chamber. Also, lice and some other pests are easier to kill at higher temperatures, because their metabolism rates are higher. Desired temperatures are in the range 25-35°C (77-95°F).

In such gas chambers, the air/gaseous HCN mixture is expelled from the top when the gassing process is completed, for safety reasons and perhaps because fresh air that enters during the ventilation is cool and the warmer air/HCN gas mixture tends to the top of the chamber (as already mentioned, gaseous HCN, by itself, is only slightly lighter than air).

A related point is that the standard German Zyklon gas chamber of the time used a circulatory system developed by DEGESCH. In this system, the air/HCN mixture is continually recirculated, *i.e.* it continually exits and re-enters the gas chamber. Circulation greatly reduces the length of time required to generate the gas from the Zyklon and work on the target pests. At the conclusion of the gassing, expulsion of the gas and the introduction of fresh air are accomplished by opening and closing the relevant ports in this circulatory system. Overall, a gas chamber with circulation is about three times more effec-

⁶⁹⁴ Booklet *Zyklon for Pest Control*, published by DEGESCH, apparently during the 70s. Similar information is also given in a German document that appeared at the Nuremberg trials as document NI-9912 and is presented in English translation by Pressac (1989), 18-20.

⁶⁹⁵ Puntigam, 21. DEGESCH booklet (*op. cit.*, 7, 24).

⁶⁹⁶ Tew, 57, 96.

⁶⁹⁷ On these gas chambers, see mainly the book by Puntigam *et al.*, 9-68. There is also information in the aforementioned DEGESCH booklet.

tive than one without, *i.e.* can do about three times more work.⁶⁹⁸ The practical minimum time required to kill lice (among the most difficult and resistant creatures) with Zyklon is about 3/4 of an hour. In a heated gas chamber with circulation, a total time of about an hour for gas generation and killing of the lice, followed by a ventilation period of about 20 minutes, is attainable under practical operational conditions.⁶⁹⁹

The best material for a gas chamber using HCN is steel. If bricks or concrete are used, then the interiors must be coated with a sealant to prevent retention of the gas in the walls of the gas chamber.⁷⁰⁰

Gas Detectors

The extermination legend claims that the pesticide Zyklon B was used to exterminate Jews in a “gas chamber” within Auschwitz Crematorium II at Birkenau (see Fig. 33), specifically, in Leichenkeller 1 (morgue cellar 1), whose alleged real purpose was concealed by being so designated.

In his 1989 book, Pressac⁷⁰¹ remarked on a telegram of 26 Feb. 1943 from the Auschwitz construction department to the furnace maker Topf. At that date, the construction of Crematorium II was nearing completion. The telegram requested delivery of 10 gas detectors for Crematorium II, as had been earlier discussed. The specific gas to be detected was not stated, but by a process of tortured reasoning, Pressac concluded that the detectors were for HCN gas, rather than for “the products of combustion, such as CO or CO₂, in the furnace room,” and classified this document as one of his so-called “criminal traces.” Robert Faurisson wrote, in reply, that Pressac himself had solved this problem, and that there was no reason to believe the detectors were for HCN.⁷⁰²

Pressac did more research, and published a new book in 1993, in which he produced a document newly discovered in the recently opened Moscow archives.⁷⁰³ It is a letter dated 2 March 1943 from the Topf company (by Senior Engineer Prüfer and a Topf colleague) to the Auschwitz construction department, and it shows that HCN was indeed the specific gas to be detected by the detectors. It reads:

“We confirm receipt of your telegram specifying ‘Immediately send 10 gas detectors as agreed, price quote to follow.’

We hereby inform you that two weeks ago we inquired, of five different companies, concerning the residual HCN detection devices sought by you. We have received negative responses from 3 companies, and 2 have not yet answered.

⁶⁹⁸ Puntigam *et al.*, 33.

⁶⁹⁹ *Ibid.*, 31f, 60f.

⁷⁰⁰ DEGESCH booklet, *op. cit.*, 25.

⁷⁰¹ Pressac (1989), 371, 432f.

⁷⁰² Faurisson (1991a), 59.

⁷⁰³ Pressac (1993). The document is reproduced, together with an English translation, in Pressac & van Pelt, 230f.

If [Wenn] we receive information on this matter, we shall immediately contact you, in order to put you in touch with a company that makes these devices."

Faurisson's reply was that Zyklon B was used for delousing operations throughout the camp and of course in Crematorium II. Naturally, HCN gas detectors would have been required in such operations, in which they are standard equipment.⁷⁰⁴

A Problem

In both cases Faurisson gave the simple, obvious replies that I would have given under the circumstances. However, I believe this interpretation is wrong, for reasons that may be seen by examining the document. The main obstacle to interpreting this letter in terms of Zyklon B is the roles of Topf and Prüfer.

Zyklon was a product of the DEGESCH company; Zyklon and associated equipment such as gas detectors and gas mask filters were also manufactured by other companies such as Tesch & Stabenow and Drägerwerke. At Auschwitz, delousing operations with Zyklon were such major and continuous tasks that there existed a special department, the *Referat für Schädlingbekämpfung* (Pest Control Office), that conducted them. This department on occasion even communicated directly with DEGESCH.⁷⁰⁵

Topf was a furnace maker with crematorium ovens as a sideline, and was the principal civilian contractor in the construction of crematoria at Auschwitz. Prüfer was the main Topf contact of the Auschwitz construction department, and of course was not associated with the special SS delousing squads that regularly worked with Zyklon B. Why should Prüfer have been searching, indeed with great difficulty, for devices that were standard equipment for the delousing squads and were readily available from the DEGESCH and other companies, which had developed and supplied Zyklon? The standard DEGESCH detector for HCN required exposing a test paper, and observing the color assumed. The Prüfer letter even implies that he does not know whether the desired devices exist, was confronting this specific need for the first time, and does not know very much about it, inferences that are very important in interpreting the letter. I do not believe the letter had anything to do with Zyklon.

There may however have been one connection between Topf and Zyklon. Robert Faurisson has brought to my attention an anti-revisionist, Pressac supporting book published in France in early 1997. A footnote declares:⁷⁰⁶

"The study of the history of the Topf and Sons company of Erfurt would be essential to show the progression to mass crime. Topf made, in the Twenties, crematoria but also grain silos. In the after sale services and maintenance for these silos, Topf also involved itself in HCN disinfestation,

⁷⁰⁴ Faurisson (1994), 23.

⁷⁰⁵ Hilberg (1961), 571; (1985), vol. 3, 892. Hilberg cites a letter from the Referat to DEGESCH.

⁷⁰⁶ Forges, 28.

and furnished all necessary material. Thus, the two branches of activity of the firm converge in a striking manner toward the crematoria – gas chambers of Birkenau. On this particular sort of study, the works of Pressac are of the greatest utility, and it is in this way that they should be used.”

The author gives no sources, but I think the claim of such Topf involvement with HCN, presumably via Zyklon, is quite plausible. Under conditions where Topf would have been the only company that a farmer dealt with in constructing his silo, it would have been natural for Topf to serve as retailer of supporting materials and equipment made by DEGESCH and other companies. However, such a Topf role had no bearing on conditions at Auschwitz in 1941-1945, where a special department regularly conducted operations with Zyklon. Their personnel would have been responsible for declaring when a treated facility was again safe to use. Is it plausible that Prüfer could have been involved in this when, as his letter shows, he didn't know very much about it?

There remains one possibility. Perhaps some unusual feature of the cremation process, not understood by the Zyklon delousing personnel, raised a novel problem with the Zyklon that Prüfer was asked to solve. I can't imagine such a feature, since cremation with coke seems basically like any other use of coke. However, if such an unusual feature existed, would it not have come up earlier in the six muffle crematorium, also supplied by Topf, that existed in the *Stammlager* or Auschwitz I? In 1942, this sole crematorium was working at capacity, and the disastrous typhus epidemics were being fought with Zyklon. However, the February to March 1943 correspondence marked the first confrontation of Prüfer with the problem involved. Some novel feature of Crematorium II had to be the problem.

It is also clear that the letter has nothing to do with gas detectors as defenses against chemical warfare. The German chemical warfare services were highly competent and organized, and would not have sent a furnace maker on a quest for such equipment.

From one point of view, the problem raised has little to do with the “extermination” allegations. If the Zyklon were being used to kill people, rather than lice, then presumably the same specially trained squads would have been used or at least consulted, and the usual HCN gas detectors would have been used in the last stages of gassing operations. There would have been no problems in acquiring such standard equipment. Those who believe Zyklon was used for homicidal purposes should be as puzzled by this document as I was.

From another point of view, this problem is very relevant to the claim of “extermination,” as explained below.

An Alternative Interpretation

The Topf letter of 2 March 1943 is strange, and for a while I suspected its authenticity. However, I have found an interpretation, which may be correct, and the main purpose of this article is to propose it. After I have done that, I shall

return to the question of the relevance of this problem to the “extermination” allegations.

“HCN” is of course a compound of hydrogen, carbon and nitrogen, and may be generated whenever materials containing these elements are burned. For example, the fuel used for the crematorium ovens was coke, and it is well known that HCN gas is a possible by-product in the process of making coke from coal. However, there is apparently no danger of HCN release when coke, of whatever grade, is burned as a fuel; otherwise it would not be in such common use. HCN gas could not have been thus generated in the crematorium.

A remaining possibility is that HCN release was possible in the waste incinerator, which shared the chimney with the cremation ovens. Many materials may release HCN when burned. Among these are many fabrics, a highly relevant observation, because the waste incinerator was most likely used to incinerate used camp fabrics (*e.g.* inmate uniforms and bed linen and mattresses). For example, silk and wool can release HCN when burned, a fact that has been known since the Thirties.

As shown in Fig. 34, the chimney of Crematorium II was divided into three ducts. Six furnaces used this chimney, namely the waste incinerator and the five cremation furnaces (each with three muffles). The waste incinerator was on the opposite side of the chimney in relation to the cremation furnaces. These six furnaces used the three ducts on the basis of two per duct; thus, the waste incinerator shared one of the three ducts with one of the cremation furnaces (the flues leading from the furnaces to the chimney were underground).⁷⁰⁷ The waste incinerator was also supplied by Topf,⁷⁰⁸ and it could have been Prüfer’s responsibility to take into account any HCN danger arising from it. Also, a gas detector differing from that used in the Zyklon delousing operations would seem fitting; perhaps a detector generating an audible alarm was desired.

While a concern for HCN release in combustion is routine today, it would have been novel in 1943, a fact that could explain the novelty for Prüfer of the desire for an HCN detector. Another thing that could account for this novelty is that the waste incinerator design was itself novel. I have no expertise in the field, but I would think intuitively that a waste incinerator design sharing a chimney with other equipment, at which people are working, is dangerous.

The question of the quantities of HCN released in the burning of materials is complicated and depends on “the chemical nature of the material, temperature, oxygen availability, and burning time.” Since HCN is itself combustible, it makes a difference whether the combustion is “static” or “dynamic,” an example of the latter being when there is forced air blowing and the HCN is

⁷⁰⁷ Pressac (1989), 284-287 (drawings of 23 Jan. 1942, on which my Fig. 34 is based); 306-312 (drawings of 19 March 1943, showing the same duct arrangement as in earlier drawings). Pressac (1989), 288 also reproduces a profile drawing for this arrangement; this profile drawing is also reproduced by Czech (1990), 193. The “*Ofen*” is a cremation furnace; if the reader uses a magnifying glass and squints hard, the badly lettered word “*Müllverbrennungsofen*” (waste incinerator) can be seen.

⁷⁰⁸ Pressac (1989), 217.

swept away from the hot zone before it can itself be decomposed in any way. However, HCN can be released under either condition. Another complication is that HCN can be released in the smoldering after a fire has been extinguished.⁷⁰⁹

The term “residual” that appears in the letter in question could apply to either released HCN that, ideally, would have been consumed during the incineration process but wasn’t, or to HCN released after incineration during smoldering. The chimney of Crematorium II used, as of 29 January 1943, a forced draft system based on suction, but on 25 March 1943, Topf ordered this system removed due to overheating of its motors.⁷¹⁰

A Specific Possibility

It remains to suggest a specific potential source for HCN development in the waste incinerator. In wartime Germany, many articles had to be ersatz (artificial or synthetic), because of shortages of materials normally imported. Cotton was in very short supply, and little was used for fabrics. Wool was available but not in normal quantities. In fact, Germany relied heavily on the manufacture of rayon, and during the war, army uniforms contained as much as 65% rayon. One must assume concentration-camp uniforms and other fabrics used in the camps had high rayon content. Could the incineration of such rayon have produced HCN gas? It may seem not, because rayon has no nitrogen in its chemical composition. In making these statements, I am using the word “rayon” in the normally accepted sense; rayon is regenerated cellulose made from natural cellulose extracted from materials such as cotton linters or wood pulp. Cotton was scarce in wartime Germany, so almost all rayon was made from wood pulp.⁷¹¹

The burning of rayon can generate HCN gas, if the rayon is impregnated with, but not chemically bound to, compounds of ammonia, which supply the necessary nitrogen. This was established some years ago by T. Morikawa, who conducted experiments that established that ammonia and its compounds, combined with “cellulosic materials,” can indeed result in the evolution of HCN when burned. The general conclusion was that such evolution was about the same as for substances having nitrogen in their chemical compositions in comparable amounts.⁷¹² It is of great relevance, for this discussion, that Morikawa’s study of this point was motivated by the fact that ammonium compounds are added to many fabrics to make them flame retardant (this is sometimes called “fireproofing,” but that cannot be done literally with ordinary fabrics). Thus, Morikawa’s experiments used, as the source of nitrogen, diammonium phosphate, a common flame retardant for fabrics.

⁷⁰⁹ Ballantyne; Tsuchiya.

⁷¹⁰ Pressac (1989), 214, 230, 306-310, 488. Pressac & van Pelt, 232f.

⁷¹¹ Urquhart, 13-16, 275.

⁷¹² Morikawa.

During World War II, diammonium phosphate was commonly used in Germany to make fabrics, particularly rayon, flame retardant. Two such products were marketed by I.G. Farben under the trade names Akaustan N and Akaustan N 1139. Another product, Akaustan K, used other ammonium compounds as the flame retardant.⁷¹³ A disadvantage of such flame retardants is that they are water soluble and gradually “leach” out when the fabrics are washed. Thus, such soluble flame retardants “are applied with the idea of periodic reprocessing in order to maintain the desired properties [by] simple immersion in aqueous solutions” of the retardant.⁷¹⁴ That is, washing is followed by immersion in a solution of the flame-retardant substance, then drying out. Another defense against leaching, employed by the Germans, used sulfamide (strictly speaking sulfuryl amide, $\text{SO}_2(\text{NH}_2)_2$) in conjunction with a standard waterproofing agent, thus making reprocessing unnecessary.⁷¹⁵ Sulfamide is obtained by treating sulfuryl chloride with ammonia, and one gets the impression from Morikawa that one could also expect evolution of HCN in burning of cellulose impregnated with it.

While I do not have a document that says so, I consider it very plausible that many concentration camp fabrics were treated with flame retardants for security reasons, *i.e.* to limit the effects of fires started by inmates. This would have been particularly the case with bed linens and mattress fillings. Thus, I am proposing the possibility that fabrics used in the camps, destined to be disposed of by incineration, were known to present a danger of evolution of HCN in such incineration.

The favored German process for rayon manufacture was the viscose, which is also the favored process today. However, two German factories used the older and simpler cuprammonium process. That the cuprammonium process involved a solution of ammonia does not appear relevant to the present problem. What may be relevant is that a price of its simplicity was that the cuprammonium process required celluloses of a high degree of purity. Thus, cotton linters were considered the standard cellulose source for cuprammonium rayon, but on account of wartime shortages, the two German cuprammonium factories used wood pulp instead. This resulted in an inferior quality rayon. Much of the cuprammonium rayon was used for army uniforms, but there were other uses, for example military upholstery, mattress fillings, and parachutes. I have no source saying that it was used in concentration camp fabrics, but in view of its inferior quality, this is a very admissible conjecture. One version of the cuprammonium rayon used for mattress fillings was impregnated with urea and formaldehyde, with ammonium nitrate as a catalyst, in order to impart springiness to it.⁷¹⁶ It is known that urea can cause some ammonium-based

⁷¹³ Urquhart, 272.

⁷¹⁴ Little, 167-170.

⁷¹⁵ Urquhart, 272.

⁷¹⁶ *Ibid.*, 15ff., 28, 150-159, 273ff.

flame retardants to react with cellulose, thus giving a fabric so treated resistance to leaching.⁷¹⁷

Summary

In summary I am saying

- it is certain the Topf letter has nothing to do with Zyklon.
- It is almost certain that the HCN danger referred to arose from the waste incinerator. I would be astonished if it were shown that such was not the case.
- It is probable that the HCN detectors were wanted because of a potential danger of HCN development in the incineration of fabrics, particularly rayons treated with flame retardants. However, I am far from certain on this, and I will not be astonished if other materials, consumed in the waste incinerator, were shown to have been suspected by the Auschwitz management as potential sources of HCN development.

Observations

Above I promised to return to the question of the relevance of the problem treated here to the “extermination” allegations. The mass of documents shows that Auschwitz was a large concentration camp with a disastrous death rate, due mainly to typhus carried by lice. In response to such problems, the Germans made great use of the pesticide Zyklon B, and constructed large crematoria. There are no records showing that Jews were “gassed” or “exterminated.” That is clear, and it ought not be necessary to argue that such was not the case. The documentation is immense, and the physical facts concerning the camp are conclusive. For more detail, see the remarks I delivered at the 1992 IHR Convention on the death rates and the crematoria capacities at Auschwitz and other camps.⁷¹⁸

Another approach uses the normal historical method; you study what the people of the time were doing. I have discussed elsewhere the trap that the historian Walter Laqueur got himself into by applying this normal historical method to Auschwitz.⁷¹⁹ For a more general and introductory discussion, see Faurisson’s tutorial.⁷²⁰

For practical purposes, the entire “extermination” legend rests on the claim that Auschwitz was an “extermination camp” where about a million Jews were gassed with Zyklon B in otherwise-designated rooms within the crematorium buildings. Since that is emphatically not what the historical record says, the promoters of the legend are highly selective in choosing documents, which Pressac calls “criminal traces,” which, it is claimed, prove their thesis. The

⁷¹⁷ *McGraw-Hill Encyclopedia...*, vol. 7, 139f. (article on “Flameproofing”).

⁷¹⁸ Butz (1993), 23-37. Supplement 3 here.

⁷¹⁹ Butz (1982), 371-405. Supplement 2 here.

⁷²⁰ Faurisson (1997).

HCN gas detectors are one of the “criminal traces” on Pressac’s pathetically short list.⁷²¹

In historiography, there is an alternative and more commonplace description of Pressac’s procedure with “criminal traces.” It is bad historiography of the simplest sort: tendentious selection of a very small part of the data, resulting in grossly distorted history.

Normally, one cannot get away with this. But today, a Pressac, waving aside historical reasoning and the mountain of documentary evidence, comes rushing forward waving some document and saying, in effect, “but how about this?”, and he is respected instead of being ignored or laughed at.⁷²² He is credited by some with finally proving the extermination allegation as it relates to Auschwitz, although it had for years been claimed that it had been proven, and that there was nothing to argue about.

Thus, to the person who objects that I have treated petty details here, which are incommensurate with the scale of the historical claim involved, I reply: you are right, but it isn’t my fault! Ordinary historical reasoning observes that nobody acted, during the war, as though “extermination” was going on, and that the Jews were still there at war’s end.⁷²³ However, a lot of influential people won’t accept ordinary historical reasoning, and the debate, to the extent that it exists, has revolved around the petty details.

The promoters of the legend may get away with such practices for a while in arguing the reality of physical exterminations of Jews during World War II. There are two leading reasons for this. Most obvious is the fact of the entrenched status of the legend. What ought to require proof has been allowed to flourish unproved, and the revisionists have in effect been forced to try to argue a negative. Another reason, less obvious but very simple, is that the revisionists may not be able to immediately offer correct replies to the sallies of the defenders of the legend. This appears to me to have been the case with the Topf letter. I don’t believe Faurisson’s immediate replies (which I would also have made) were correct. In fact, nobody could be relied on to be correct under the circumstances and in the time frame involved. A comparison: there is much building activity at Northwestern University now. Does anybody believe that, fifty years from now, perhaps after some cataclysm, anybody could reliably interpret individual documents that were records of this construction? Of course not. Nobody could do that, and nobody could infallibly interpret every Auschwitz document from the period 1941-1945. Indeed, the hypothesis I have advanced here may be wrong, even though I have had a few years to consider the solitary document in question.

⁷²¹ Pressac (1989), 432-457.

⁷²² On Pressac’s 1989 book see e.g. the *NY Times*, 18 Dec. 1989. On his 1993 book, which reproduced the Topf letter in question here, see (all 1993) *l’Express*, 23 Sept., 76-87; *Libération*, 24 Sept., 28f; *Le Monde*, 26-27 Sept., 7; *Die Welt*, 27 Sept., 1; AP report in the *Denver Post*, 2 Oct., 6A; *Die Woche*, 7 Oct., 8; *NY Times*, 28 Oct., A3 and 31 Oct. sec. 4, 2 and 8 Nov., A14; *Chicago Tribune*, 28 Nov. sec. 1, 25 and 13 Dec. sec. 5, 1.

⁷²³ For some Jewish demography see Chapters 1 and 7 herein. Much more is to be found in Sanning; Rudolf (2024a).

Some years ago, I warned of these dangers.⁷²⁴ It is not out of the question that, some day, an authentic Auschwitz document might utterly confound the revisionists, *i.e.* raise some apparently relevant question of detail which they will be unable to answer. I can only urge that the context, that is, the massive documentation and historical circumstance supporting the revisionist position, be kept in mind in the event of such a development.

Reply to Carlo Mattogno and the Editor on the Gas Detectors⁷²⁵

I wish to reply to Carlo Mattogno's articles on gas detectors for the crematorium at Auschwitz,⁷²⁶ and the editor's prologue to those articles. In 1998, Mattogno and I wanted to air this issue in the *Journal of Historical Review*, but the editor declined to carry the exchange. I am grateful for this opportunity to do so. I shall assume the reader has studied the issue, not only in the aforementioned article, but also, and especially, in my original article,⁷²⁷ and in Mattogno's rebuttal of it.⁷²⁸

THE PROBLEM

In the correspondence relating to the construction of Crematorium II, the Central Construction Office telegraphed the furnace and crematorium oven maker Topf, on 26 February 1943, as follows:

"Send off immediately 10 gas testers [Gasprüfer] as discussed. Hand in estimate later."

Topf's reply was sent on 2 March and reads as follows:⁷²⁹

"Erfurt, 2 March 1943

Regarding: Crematory [II], gas testers.

We confirm the receipt of your telegram, saying: 'Send off immediately 10 gas testers as discussed. Hand in estimate later.'

In this regard, we inform you that already two weeks ago we asked 5 different firms about the display devices for hydrogen cyanide residue [Anzeigegeräte für Blausäure-Reste] requested by you. We received negative answers from 3 firms, and from two others, an answer is still outstanding.

In case we receive notification in this matter, we shall get close to you immediately so that you can get in contact with the firm producing these devices."

In Mattogno's present paper and its prologue, there are three translations of "Anzeigegeräte," namely "display devices" (pp. 140, 150), "indicators" (p. 141), and "gauges" (caption to Fig. III.6, p. 148). I have used the first here, though I used "detection devices" in my original paper. Note that there is a

⁷²⁸ Mattogno (1998).

⁷²⁹ Pressac (1993). The document is reproduced, together with an English translation, in Pressac & van Pelt, 230f.

substantial distinction, since the terms “display devices” and “gauges” suggest continuous measurement, while “indicators” and “detection devices” suggest activation only at some critical threshold.

I want to especially note a feature of this letter that is as important as the reference to HCN (hydrogen cyanide): it expresses a failure to find a supplier of the desired devices. Mattogno expressed this as “Topf’s difficulty in locating them.”⁷³⁰ However, Mattogno effectively ignored this feature of the document, both in formulating his theory and in critiquing my theory. A second fault of his critique is that he inexplicably ignored a point that I took some pains to present clearly.

MATTOGNO’S PROPOSED SOLUTION AND ITS PROBLEMS

Mattogno’s style is prolix, possibly because he has available a wealth of documents, and one must read long and carefully to discern his main thesis. It is this: the document as it comes to us makes no sense because it would have us believe that the furnace maker Topf was asked by the Central Construction Office to supply detectors of, or testers for, residual HCN from use of the pesticide Zyklon. That is the wrong department at Auschwitz going to the wrong source. This is so implausible that Mattogno believes that the document is a forgery, produced by taking an original document and substituting alternative words. Thus he would substitute “*Rauchgasanalyse*” (flue gas analysis) for “*Blausäure-Reste*” to have the document make sense.⁷³¹ His grounds are that for Topf a concern for flue gas was routine, and thus “simple flue gas analyzers,” as he puts it, for CO or other familiar gases must have been in question.

Mattogno’s analysis is masterful as regards the Zyklon, but nowhere in the present paper does he consider the possibility of a source of HCN other than Zyklon. Of course, we cannot believe the document in his interpretation, for the reasons he gives. However, by altering the document so that Topf is trying to fill a routine need, he worsens the situation because the document says the opposite. It says that what was being sought was not routine for Topf. It is wildly illogical to argue that we must replace a reference to an unusual need, with a reference to a routine need, when the document says it was unusual. While it is indeed not credible that Topf was asked to supply detectors of HCN generated by Zyklon, it is even more incredible that Topf said, as Mattogno would have us believe, that it can’t fill an order for, or even figure out a source of, “simple flue gas analyzers” for carbon monoxide (CO) or other common products of combustion. Topf would have had no trouble finding such things. I should add that even if, despite all the considerations Mattogno has adduced, Topf had been asked to supply detectors for HCN as a product of Zyklon, then Topf would have been able to figure out how or where to get them, despite the matter being outside its field.

⁷³⁰ Mattogno (2004), 148.

⁷³¹ *Ibid.*, 148f. Mattogno’s term was translated as “smoke gas” but the combustion product he is talking about is called “flue gas” in English.

Mattogno claims that if we make the substitution he proposes then “all problems discussed above disappear instantaneously!”⁷³⁰ The problems disappear because he has replaced them with a new, insoluble, problem. He has thrown the baby out with the bathwater!

The document makes less sense if we make Mattogno’s substitution. For the forgery thesis to work, the whole received document must be thrown out. I can’t see any grounds for that, and Mattogno has not found such grounds.

AN ALTERNATIVE SOLUTION

My hypothesis is that the Central Construction Office asked Topf to supply detectors of HCN as a combustion product, a hazard that in 1943 had been known for only about a decade. On the last point I could have given more dates and documentation. The already cited 1977 paper by Y. Tsuchiya gives the historical background, at least for the USA.⁷³² After a great loss of life in the Cleveland Clinic fire due to fumes from burning X-ray films, J.C. Olsen conducted laboratory investigations that determined amounts of HCN generated by the incineration of nitro-cellulose film, wool, and silk, and reported the results in papers published in 1930 and 1933. In this regard, I should note an error I made when I wrote “nylon and wool can release HCN when burned, a fact that has been known since the Thirties.” I should have written “silk and wool.” Nylon was not cited in the literature, apparently, until 1962.

The HCN detectors used with Zyklon would have been useless for the detection of HCN as a product of continuing combustion, because, as Mattogno explained, they were chemical kits designed to be used at specific times, i.e., immediately after disinfestations with Zyklon. If residual HCN as a combustion product was a concern in the crematorium/waste incinerator installation, then continuous monitoring of some sort would have been desired. Mattogno agrees that in context the Topf letter suggests a device for such continuous monitoring.

Topf’s failure to find a source of the detectors must be taken into account in interpreting some of the things I wrote earlier. My style is terse, and this perhaps leads to misunderstandings. For example, Mattogno ridiculed my suggestion that “perhaps a detector [of HCN] generating an audible alarm was desired,” on the grounds that such devices did not exist. But that would explain perfectly why they weren’t found! I never said they existed. I have surmised that in 1943 a concern for HCN as a combustion product was relatively novel, and practicing engineers could have been somewhat uncertain on how, or what was available, to deal with it.

Another point I have emphasized in this controversy is the odd design of the Crematorium II chimney. I attempted to clearly lay this out in my original article, via the reproduction of an engineering drawing of the flues and ducts for the crematorium. In order to make this clear, I again refer to this drawing (Fig. 34 in the appendix). The duct running between the waste incinerator (the

⁷³² Tsuchiya.

“*Müllverbrennungsofen*” that appears as the uppermost part of the installation) and one of the cremation ovens is clearly visible on the right side of the drawing. The chimney stands between the waste incinerator and the five cremation ovens, and a common duct conducts the effluents of the waste incinerator and the right-most of the five ovens to the chimney. When I said that the design of the waste incinerator was “novel,” I meant with respect to the chimney flues; I didn’t mean the combustion chamber was novel.

Mattogno ignored this crucial point and argued that for my suggestion to work the flue gases of the waste incinerator would have to exit the chimney at a height of 16 m and then somehow make their way back into the crematorium. That is impossible. I argued, or at least I clearly implied, that the odd design of the chimney flues raised the danger of HCN reaching the crematorium ovens and furnace room directly from the waste incinerator.

SCIENCE AND ENGINEERING PRACTICE.

Another feature of Mattogno’s critique is that he assumes an overly simplistic model for the transmission and application of scientific developments. For example, he argues on the one hand that a concern for HCN as a combustion product could not have been novel in 1943 if scientific investigations established the danger in papers published a decade earlier. He also argues that an effect involving burning rayon with impregnated flame retardants could not have been known by the Germans in 1943 because the first scientific paper on the effect in question was published in 1978.

In fact it can, on the one hand, take years for a fact established in a laboratory to be taken into account by practicing engineers, especially when the design and manufacture of special devices are required.

On the other hand, certain facts may be available to the practicing engineers long before a formal paper is published laying them out. Scientific publication is closely related to Ph.D. dissertations, and I can testify that I have examined many such dissertations which were worthy in relation to what had already been formally published, but which I knew must have been surpassed by work not published for reasons of either national security (“classified” work with military or intelligence applications), or commercial proprietorship, or just preoccupation with practice over publication.

In fact, it can be very difficult to discern, from the outside, what engineers practicing in a given area, at a given time, knew or believed. Even the initial recognition of HCN as a combustion product is somewhat cloudy, as the earliest source that Y. Tsuchiya cites is an anonymous report in a 1929 engineering journal. Even he does not know to whom the initial apprehension should be credited, and there is no proof that somebody didn’t know it before 1929. Y. Tsuchiya, incidentally, lists no prewar German sources, but there must have been some.

CONCLUSION

I think 1943 was about the right time for practicing German engineers to have been concerned with, but not quite sure what to do about, HCN as a combustion product. My theory depends on this idea that the authors of the correspondence were not sure what they should do, but I have not postulated the uncertainty to shore up my theory. It is in the document in question, even the part of the document that Mattogno would retain.

All I am suggesting is that the reason the Central Construction Office turned to a furnace maker for HCN detectors was that what was involved was a concern for HCN as a combustion product, not a pesticide. I am bewildered that such a simple interpretation of the document in question should meet such resistance.

Editor's Remark

Both Arthur Butz and Carlo Mattogno have ignored a very early critique of the Topf letter of March 2, 1943, authored by Austrian civil engineer Walter Lüftl. It was first published in 1994 in Lüftl's contribution to the anthology *Grundlagen zur Zeitgeschichte* (using the pen name Werner Rademacher), and later translated in various English editions of this book.⁷³³ Most of the observations made by Lüftl were also pointed out by Mattogno and Butz, although some were evidently overlooked.

I take this opportunity to bring Lüftl's missed arguments back into focus, and I add a few more observations.

FORMAL ASSESSMENT

Part 2 of Mattogno and Deana's three-part study on the cremation furnaces of Auschwitz (subsequently abbreviated as MD) contains many reproductions of letters, estimates and invoices issued by the Topf Company prior to and during World War II. Other works by Mattogno contain several more such document reproductions. From analyzing these documents and comparing them to the Topf letter in question (subsequently abbreviated as TL), the following observations are worth noting:

1. The letterhead of TL states in the subtitle line beneath J.A. Topf & Söhne: "*Maschinenfabrik · Feuerungstechnische Bauunternehmung*". This line has a grey bar on top and below. Most other documents originating from Topf either simply state "*Maschinenfabrik*" or "*Maschinenfabrik und feuerungstechnisches Baugeschäft*." I found only two examples using "*Maschinenfabrik · Feuerungstechnische Bauunternehmung*," both of 1943 (MD 338, 357). None of the known letterheads have grey bars on top and below the subtitle.

⁷³³ Gauss (1994), 41-60, esp. 55-57; Rudolf (2024), 59-80, esp. 74-76.

2. Topf's stationery had its address field delimited by four angle brackets, making sure that the typist places the address correctly. TL does not have this.
3. The address is typed too high on TL, with the first line almost running into the lower grey bar of the subtitle.
4. All known letterheads list on the top right side the company's contact and payment details (telegram, phone, bank accounts, PO box and street address; see MD 265, 274, 277, 300, 316, 319, 325, 331, 389, 411, 413, 468). TL has only the company's PO box given, but no street address. All other details are in the document's footer, with two of them worded differently:
 - TL: "*Telegramme: Topfwerke*" rather than "*Drahtwort: Topfwerk Erfurt*"; this incomplete address could have led to telegrams not reaching their destination.
 - TL: "*Fernsprecher: Sammelnummer 251 25*" rather than "*Fernruf 251 25*".
5. The PO box is given on all letterheads as "*Postfach 552/8*," with the digit 8 lowered. On TL, the line with the PO box number is partially obstructed by the stamp placed on top of it, but it is clear that no digit has been lowered. The number probably is 552/8, not 552/g.
6. TL is signed "*ppa. Sander I.V. Prüfer*." Sander was Prüfer's boss. "*ppa.*" = "*per procura*" indicates that this person signing is acting as the company's representative with far-reaching powers, while "*I.V.*" = "*In Vertretung*" (in substitution) means that the signer signs on behalf of another person, usually a superior. However, this letter is signed by Prüfer's boss, hence Prüfer was not signing "*in Vertretung*" at all. This signing by an authorized officer of the company and by Prüfer is an overkill for a mere response to a brief telegram.

LINGUISTIC ASSESSMENT

All of Topf's wartime correspondence shows the proper use of the German special character "ß" where needed. In TL, we read "*dass*" rather than the correct "*daß*".

TL states:

"Wenn wir in dieser Angelegenheit Mitteilung erhalten, kommen wir ihnen sofort näher, [...]",

which translates to:

"When we receive notification in this matter, we shall get closer to you immediately, [...]"

If this sounds awkward in English, it is even more awkward in German. The proper English expression would be "we shall approach/contact/get in touch with you immediately." The proper German would be, "*werden wir sofort auf Sie zukommen.*" "*näher kommen*" cannot be used in the German language to denote a person trying to get in touch with someone. This points to the author of these lines not being a native German speaker, who has translated a similar expression from his own language, such as the English verb "to approach",

which can mean both to get in touch with someone, and to get physically closer to someone. This verb *can* be translated to the German verb “*näher kommen*.” However, “*näher kommen*” can only be used to denote approaches in terms of spacial or numerical distance, not in terms of getting in touch.

ASSESSMENT OF CONTENTS

There is a strange disconnect between the terse telegram by the Central Construction Office and Topf’s alleged response to it with a lengthy letter. The telegram refers to a previous discussion between Topf (probably Topf’s cremation expert Kurt Prüfer) and an Auschwitz official (probably the camp’s heating technician Rudolf Jährling). The telegram expresses the expectation that Topf could and would “[s]end off immediately 10 gas detectors as discussed.” In other words, Prüfer left Jährling with the impression during their discussion that those devices were readily available and could be shipped instantly. It is rather unlikely that Prüfer would have given that impression if both men had discussed a novel problem, for which they did not yet know the solution. However, that is exactly the impression which TL gives.

It is perfectly conceivable that the mounting of flue-gas analyzers (“gas detectors”) in the flues of cremation furnaces which were just getting fired up (Crematorium II, late February/early March 1943) was an urgent matter to be addressed “immediately.” However, it seems rather unlikely that the obscure possibility of some HCN developing inside the waste incinerator, which was also merely finished around that time, hence can hardly have been used by that time, would have induced the Central Construction Office to hurriedly procure completely unknown devices.

Furthermore, Topf was expected to ship the devices right away, and submit a cost estimate later. This was in violation of procedural regulations requiring the Central Construction Office to request estimates from various companies, before being allowed to place an order. While such a procedure for known devices of marginal costs is conceivable, this is not the case for unknown devices of unknown manufactures and unknown prices. In such a case, it would have been particularly prudent to insist on cost estimates before placing an order, let alone having them shipped.

In stark contrast to the telegram, TL indicates that Topf would neither submit a cost estimate nor ship anything at all. TL suggests instead that Topf was only trying to locate a potential manufacturer, then convey their contact information to the Central Construction Office, so they “can get in contact with the firm producing these devices.”

In other words, these two documents very evidently deal with completely different events and/or expectations. TL’s reference to the telegram appears forced and out of place. Short of a complete forgery of TL, this can be explained only by a major misunderstanding between what the Central Construction Office expected of Topf, and what Topf was doing.

No follow-up correspondence has been found in this regard – neither the requested cost estimate, nor the promised “getting closer” to convey manufacturer contact information.

CONCLUSION

TL is a highly suspicious document. Only a forensic analysis of the original can give more clues as to whether it is a forgery or not.

Gerhard Rudolf, March 2024

Supplement 5: *Vergasungskeller*

An early version of this supplement appeared in the Journal of Historical Review, vol. 16, no. 4, July-Aug. 1997, pp. 20-22.

Veteran revisionists recognize that an outstanding small problem has been the “*Vergasungskeller*” that was evidently in or near Crematorium II in the Birkenau part of the Auschwitz camp.

Crematorium II (and its mirror image Crematorium III) had two huge underground morgues, *Leichenkeller* 1 (LK 1) and LK 2, and a smaller morgue LK 3. LK 1 and LK 2 were simple concrete morgues in which bodies were simply laid on the floor. See Fig. 33. Essentially everything said here concerning Crematorium II should be presumed to hold also for Crematorium III. With one exception to be noted, nothing said here applies to Crematorium I (in the *Stammlager* part of the Auschwitz camp, rather than Birkenau, and taken out of service in July 1943). Apart from remarks near the end about the work of Samuel Crowell, nothing said here applies to Crematoria IV or V at Birkenau.

A letter to SS headquarters Berlin, from the Auschwitz construction department, dated 29 January 1943, when the construction of Crematorium II was nearing completion, reports that frost prohibits removal of the formwork for the ceiling of the “*Leichenkeller*” (without specifying which of the three is meant) but that this is unimportant, since the “*Vergasungskeller*” can be used for that purpose, *i.e.* as a morgue. The document had the number NO-4473 at the Nuremberg trials. Specifically, NO-4473 reads:

“The Crematorium II has been completed – save for some minor constructional work – by the use of all the forces available, in spite of unspeakable difficulties, the severe cold, and in 24-hour shifts. The fires were started in the ovens in the presence of Senior Engineer Prüfer, representative of the contractors of the firm of Topf and Sons, Erfurt, and they are working most satisfactorily. The formwork for the reinforced concrete ceiling of the Leichenkeller could not yet be removed on account of the frost. This is, however, unimportant, as the Vergasungskeller can be used for this purpose.

The firm of Topf and Sons was not, on account of the unavailability of rail transport, able to deliver the aeration and ventilation equipment on time, as had been requested by the Central Building Management. As soon as the aeration and ventilation equipment arrive, the installing will start so that the complete installation may be expected to be ready for use by 20 February 1943.

A report of the inspecting engineer of the firm of Topf and Sons, Erfurt, is enclosed.”

When NO-4473 is interpreted with the help of some documents reproduced by Pressac,⁷³⁴ it is shown that the “*Leichenkeller*” is LK 2. Pressac believes that the “*Vergasungskeller*” is LK 1 and that a “slip,” indeed “enormous gaff” (sic), caused the author of the document to betray the true purpose of LK 1, referring to it as a “gassing cellar” (although the usual German word for such a concept is “*Gaskammer*”). On no known set of engineering drawings is a “*Vergasungskeller*” indicated.⁷³⁵

Many of those who would have us believe that there were homicidal gas chambers at Auschwitz insist on this interpretation. An interesting exception has been the Austrian-born Raul Hilberg. He cites and even quotes from NO-4473 in the “Killing Center Operations” chapter of *The Destruction of the European Jews*, but he is silent on the “*Vergasungskeller*.”

In my 1976 book *The Hoax of the Twentieth Century*, I offered that the *Vergasungskeller* was a part of the crematorium building devoted to generating a combustible gas for the ovens.⁷³⁶ This interpretation was linguistically correct and could be technically correct, depending on the design of the ovens. The primary meaning of “*Vergasung*” is gas generation or carburetion, *i.e.* turning something into a gas (a “*Vergaser*” is a carburetor). A secondary meaning is application of a gas as in fumigation or in gas warfare. It is also the word Germans use today to refer to the alleged gassing of Jews; however, they use “*Gaskammer*” rather than “*Vergasungskammer*” or “*Vergasungskeller*” for the facility imagined to have accomplished this. Such usage also applies in the literature on fumigation.⁷³⁷

By 1989, Robert Faurisson realized that my original interpretation was wrong, and later in 1989, Pressac⁷³⁸ conclusively showed that it was wrong, based on the design of the cremation ovens. In 1991, Faurisson offered a theory⁷³⁹ that the *Vergasungskeller* was a storage area for fumigation supplies within LK 3.

In 1992, I showed that there were many ways “*Vergasung*” can come up in sewage treatment technology and offered that the *Vergasungskeller* might be found in the sewage treatment plant next to the crematorium. However, I favored the interpretation that the *Vergasungskeller* was simply a facility for generating fuel gas for the camp.⁷⁴⁰ NO-4473 suggests, but does not require, that the *Vergasungskeller* was located within the crematorium building.

The purpose of this note is to offer another interpretation, which I now believe is more plausible than any earlier offered by me or anybody else. Before I do that, I should remark that the problem here is what the *Vergasungskeller*

⁷³⁴ J.-C. Pressac (1989), 548.

⁷³⁵ Pressac (1989), 211, 217, 432, 548.

⁷³⁶ Chapter 4 herein.

⁷³⁷ An example of the two usages is in one paragraph in Rückerl, 12, where we are told that “*Judenvergasung*” (Jew gassing) took place in “*Gaskammern*.” About the same distinction in usage held in the fumigation field, as can be inferred from Puntigam *et al.*

⁷³⁸ Pressac (1989), 106-113, 222-225, 548.

⁷³⁹ Faurisson (1991a), 55ff.

⁷⁴⁰ Butz (1993), 27-31.

was, not whether it was a homicidal gas chamber. Those who claim it was a homicidal gas chamber focus their attention entirely on that one word in the document. If they would instead focus on what the document says, they would realize that it is impossible to make that interpretation work. The document shows that in January 1943 the Germans were in a great rush to use the building as an ordinary crematorium.

As Faurisson discussed earlier,⁷⁴¹ during World War II the combatants paid great heed that new structures be considered, if possible, as air-raid shelters. There were two principal dangers that such shelters were to provide protection against: bombs and gas attacks. On account of World-War-I experiences, the possibilities of the latter were taken very seriously. Indeed, many simply assumed that gas would be used, despite treaties outlawing its use. Typically, a gas shelter was conceived of as a bomb shelter, preferably underground and very strong structurally, with some features added to make it secure against gas; a gas shelter had to be gas tight but allow people to breathe. Since in many cases it was not economic to provide such structures for at most only occasional use, it was recognized that such shelters could exist in the form of embellishments to structures that exist for other purposes. However, the number of suitable such structures was limited. For example, the typical underground cellar belongs to a building with several stories; the collapse of these in an air raid could prevent people from leaving the cellar.⁷⁴²

Germany started its air-raid gas-shelter program early with a 10 October 1933 decree of the Ministry of Finance providing financial incentives for the construction of shelters. The decree was followed by the *Luftschutzgesetz* (Air-Defense Law) of 26 June 1935. Three German decrees in May 1937, in application of the *Luftschutzgesetz*, alarmed the British Chargé d'Affaires in Berlin, who compared the earnest German attitudes on air defenses to British apathy. The provision of shelters advanced far in Germany before the war, and of course was accelerated with the outbreak of war. On defense against gas, Germany was deeply committed to the shelter approach in its civil defense program, in contrast to the British, who put more emphasis on distribution of gas masks. However, it should be stressed that in World War II thinking, bomb and gas defenses went together, and provision of the one was unlikely without the other.⁷⁴³

Since the 1991 Persian-Gulf War, Israel has had a law requiring that every newly constructed domicile have a room equipped as a gas shelter.⁷⁴⁴

My proposal is that the *Vergasungskeller* was a gas shelter. It need not have been located within Crematorium II, but I believe it most likely was, on account of the fact that Crematoria II and III, with their large concrete cellars, were obviously ideal for adaptation as air-raid shelters. Indeed, when this

⁷⁴¹ Faurisson (1991a), 52f.

⁷⁴² Prentiss; Woker.

⁷⁴³ Watt, 252; O'Brien, 102ff, 329; Ambrose, 518. The last is a reproduction of a book issued in March 1945 by the U.S. Army.

⁷⁴⁴ *Chicago Tribune*, 7 Sept. 1996, sec. 1, 2.

problem is looked at from the point of view of defense against air raids, it seems there was no better choice at Auschwitz. The German authorities responsible for providing air-raid shelters would have insisted that the necessary embellishments be made to these structures, which were far more suited to such purposes than, *e.g.*, Crematorium I at the *Stammlager*, which despite being above ground was converted to an air-raid shelter after it was taken out of service as a crematorium in July 1943.⁷⁴⁵ My reading of some of the relevant chemical warfare literature convinces me that Crematoria II and III were conceived of by the Germans as having this additional role.

I have never seen the word “*Vergasungskeller*” in a lexicon; indeed, I have seen it only in discussions of NO-4473!⁷⁴⁶ I have seen two German-Russian dictionaries, one a military dictionary, that say “*Gaskeller*” means “gas shelter.”⁷⁴⁷ However, we should not consider ourselves bound to dictionaries on this. If one asks the question: In a World-War-II military context, what might “*Vergasungskeller*” and/or “*Gaskeller*” mean? I think that “gas shelter” is the answer that comes naturally to mind, and that other meanings are somewhat strained. Of course, other meanings come naturally to mind in non-military contexts.

As a personal example, I can report that I have been unable to find the term “control lab” (or “control laboratory,” “controls lab,” “controls laboratory”) in my *IEEE Standard Dictionary of Electrical and Electronics Terms* (edition of 1972), although every university Dept. of Electrical Engineering in the USA has a “control lab,” and that is how we normally refer to such a place. I have also been unable to find the term in an unabridged *Webster’s*, in an on-line version of the *Oxford English Dictionary*, and in several other dictionaries I have.

If this interpretation of the *Vergasungskeller* of NO-4473 is correct, then we should view all three cellars in Crematorium II as air-raid shelters, with only one being provided with the additional measures to make it effective as a gas shelter. That could only be LK 1, since NO-4473 implies it is not LK 2, LK 3 was very small and, conclusively, because LK 1 was the only one of the three provided with a gas-tight door.⁷⁴⁸ Moreover, while all parts of the building had motor driven air extraction systems, it appears that only LK 1 had a motor driven air intake system.⁷⁴⁹

⁷⁴⁵ Pressac (1989), 132f, 144, 156f. The engineering drawings Pressac reproduces are dated 21 & 24 September 1944, but I do not know the actual date of the conversion. Pressac erroneously places the first Allied air raid on 13 September 1944; it was on 20 August 1944.

⁷⁴⁶ Dictionaries are somewhat politicized, so do not assume that “*Vergasungskeller*” will never appear in one that defines it as equivalent to “*Gaskammer*”. For example, my Wahrig (1973) defines “*Gaskammer*” only as something for killing people in concentration camps with poison gas, although the word was used in the fumigation field long before World War II. The justification that would be claimed for defining “*Vergasungskeller*” thus is that it was used that way in NO-4473! Orwell, anyone?

⁷⁴⁷ Parparov; Lepinga & Strakhovoi.

⁷⁴⁸ Pressac (1989), 223, 231.

⁷⁴⁹ *Ibid.*, 284ff., 290f., 355-374.

The extermination legend claims that homicidal gas chambers existed at Auschwitz, and employed the pesticide Zyklon B, which releases HCN gas (hydrogen cyanide). Pressac also believes the *Vergasungskeller* was LK 1, but he interprets it as a gas chamber employing Zyklon B. Under my theory, he is then right on location but wrong on function. LK 1 had the basic features of a gas shelter.

Pressac admits that the air exhaust (at the bottom) and air intake (near the top) systems of LK 1 were misplaced for a gas chamber employing HCN.⁷⁵⁰ Although HCN is only slightly lighter than air, there are various practical reasons why gas chambers employing it normally expel the gas from the top when the gassing process is completed.⁷⁵¹ Carbon dioxide is much heavier than air, and is most naturally expelled from the bottom of the relevant space. Moreover, preferred German practice of the time used a circulatory system for disinfection gas chambers that employed Zyklon B, rather than a simple system of intake/exhaust. Another feature of any serious Zyklon gas chamber, lacked by LK 1, was a heating system, required to accelerate the development of HCN gas from the Zyklon carrier material (usually gypsum). LK 1 had whatever temperature the elements gave it,⁷⁵² a tolerable situation for an air-raid/gas shelter. For explanations, see Supplement 4. The construction of LK 1 was exactly that of a gas shelter. One must stand on one's head to interpret it as a gas chamber.

The reader should understand that here I am only considering the physical details of the construction of LK 1 that oblige us to interpret it as a gas shelter rather than gas chamber. There is much more evidence that LK 1 was not a gas chamber. The purpose of this note is only to interpret the word "*Vergasungskeller*" as used in one document.

Why would the author of NO-4473 not refer to a *Leichenkeller* as a *Leichenkeller*? I don't think a slip is involved. We normally do not consider ourselves bound to use only formal designations. More commonly, we refer to things according to their function or in any case the function that happens to be in mind at the time. The gas shelter features of LK 1 were its principal structural distinction from LK 2, and those features were being taken into account in the construction at the time. It was natural that LK 1 might be referred to as the gas shelter.

As another example of a use of terminology suggested by function, the engineers Jährling and Messing referred to LK 2 of Crematoria II and III, during

⁷⁵⁰ *Ibid.*, 224, 274, 289ff., 322, 338.

⁷⁵¹ Puntigam *et al.*

⁷⁵² Pressac (1989), 221, 223, 230, notes that at one point consideration was given to "pre-heating" LK 1, but the idea was dropped 3 weeks later. LK 1 was not heated. I have an idea on the purpose imagined for the pre-heating, but it would be premature to present it. In any case, heat was not considered vital to the function of LK 1. The notion that a crowd of people in LK 1 would provide the necessary heat for efficient gassing is a fig leaf that doesn't work, because they would not generate that much heat, and because according to the legend the Zyklon would have been strewn about the floor, thus assuming a temperature close to that of the floor.

construction, via the terms “*Auskleideraum*” and “*Auskleidekeller*” (undressing room or cellar), another one of what Pressac considers “slips” that betrayed a criminal purpose.⁷⁵³ This has been another point raised by those who would put a homicidal interpretation on Crematoria II and III; according to this theory, the victims would undress themselves in LK 2, and then be gassed in LK 1.

It seems hard to believe these were “slips,” because they were so frequently committed. Jährling used this designation in a document of 6 March 1943, and then Messing used it in three documents later in March. If these were “slips,” it would seem that by this time the bosses would have told them to clean up their language. They evidently didn’t, because Messing used the designation in two more documents in April.⁷⁵⁴

The truth about the undressing is much more prosaic. Pressac believes that, when the Germans viewed Crematoria II and III as ordinary crematoria, then the sequence of processing bodies was contemplated to be LK 3 to LK 2 to LK 1, but that LK 3 was eventually eliminated from the regular sequence.⁷⁵⁵ However that may be, if the dead bodies were contemplated to start in LK 2, they would then be undressed there.⁷⁵⁶ They would be stored in LK 1 while awaiting cremation. Presumably, LK 3 was only used when a body needed some sort of special processing, *e.g.* dissection or the famous extraction of gold fillings from teeth.

I am struck by the humorous simplicity of the theory offered here.

In March 1997, Samuel Crowell also proposed an interpretation of LK 1 as a gas shelter that goes far beyond, and in some respects departs on secondary levels from, the interpretations proposed here. Crowell’s theory is to be found at the Web site of CODOH (Committee for Open Debate of the Holocaust)⁷⁵⁷ and since 2011 even as a book.⁷⁵⁸ He went beyond my theory in two principal respects. First, he attributed to Crematoria II and III a broader role within the air-raid/gas-shelter paradigm. For example, showers and undressing are interpreted by him in terms of “decontamination,” a feature of that paradigm. Second, he interpreted features of Crematoria IV and V in terms of air-raid and gas shelters, matters on which he cites much contemporaneous German literature. Crowell has bitten off a big piece, and evaluation of his theories will take

⁷⁵³ *Ibid.*, 223, 373.

⁷⁵⁴ *Ibid.*, 431–435, 438f.

⁷⁵⁵ *Ibid.*, 284ff. Of course, revisionists hold that they always were ordinary crematoria.

⁷⁵⁶ Faurisson (1991a), 49f., advanced this interpretation but only tentatively, because he had not been able to verify that the word “*Auskleideraum*” is used that way in the special terminology of morgues (that seems to be what Faurisson meant). I do not think the question is important, because there is no reason to assume that Jährling (a heating technician employed by the SS) and Messing (a fitter employed by the Topf company that was providing the crematorium furnaces) cared very much about the special terminology of morgues. I have spent many years with engineers, and I know they tend to express themselves without great concern for lexical standards, especially outside their own fields. Jährling and Messing could never have suspected that their hasty words would be subject to such contentious scrutiny half a century later!

⁷⁵⁷ Crowell (1997); printed and abridged Crowell (1999).

⁷⁵⁸ Crowell (2011).

time. I believe he tends at points to over-hasty interpretation in terms of air-raid and gas shelters, without adequate consideration of alternative interpretations, but my hunch is that he is mostly right.

Vergasungskeller R.I.P.

The Nuremberg trials document NO-4473 (the “*Vergasungskeller*” document) has been a nagging problem for decades. My original interpretation, first published in 1976, of the document is retained here in Chapter IV for historical reasons. That interpretation, though technically and linguistically correct, turned out to be wrong. A second interpretation was probably wrong.⁷⁵⁹

The third interpretation, which led directly to the final interpretation I offer here, was that the *Vergasungskeller* was a gas shelter, constituting a secondary usage of what was otherwise a *Leichenkeller* (morgue) in the crematorium. I refer the reader to my 1997 paper⁷⁶⁰ presenting that third interpretation, whose web version⁷⁶¹ first appeared in August 1996, and which is retained here as Supplement 5. I documented that the meaning of the word “*Gaskeller*” is, or at least was in a military or civil defense context, “gas shelter.” However, the word in the document is “*Vergasungskeller*,” and criticisms⁷⁶² of my gas shelter interpretation raised linguistic objections. For example, the delousing gas-sings elsewhere at the camp were done in a “*Vergasungsraum*.”⁷⁶³ Shortly after the appearance of my gas shelter interpretation of NO-4473, the theory that the crematoria were designed and built with air-raid and gas-attack defense in mind was presented in depth and breadth by Samuel Crowell.⁷⁵⁷ However even Crowell expressed discomfort to me over such an interpretation of the word “*Vergasungskeller*,” but I believed that even his research left little room for any other interpretation.

Much of the difficulty has been that the word “*Vergasungskeller*” has no established meaning. I have seen it only in NO-4473 and in discussion of that document. The apparent failure of the Germans to use the word forced us to make only speculative interpretations of its meaning. “*Vergasung*,” alone, means either converting something into a gas, as in a carburetor, or applying a gas to something, as in a delousing chamber or in battle. All we can be sure of is that a *Vergasungskeller* is to be thought of as a below-ground-level facility relating to such activities, and therefore it could, as far as I could see in 1996, mean an underground shelter to retreat to, in the event of an enemy attack involving or generating gas. At that point, I was not trying to replace the word *Vergasungskeller* with *Gaskeller*, but now I am trying to effect the replacement or at least make an equivalence, for good reasons I shall present.

Another difficulty in interpreting NO-4473 is best appreciated by an engineering professor, and I am one. Engineers are very sloppy with words. To

Ill. 1: The Topf *Gaskeller* document.

give an example, I like to call to the attention of electrical engineering students, consider that in the basic courses we stress for students the difference between current and voltage, and the need to not confuse the two. We also teach that “DC” means direct current, and “AC” alternating current. Then they hear, from seasoned electrical engineers and electricians, and without apology, oxymoronic terms such as “DC voltage” and “AC voltage.” Thus, the *Vergasungskeller* could be just sloppy wording.

The case that the *Vergasungskeller* can be interpreted as a clumsy reference to a *Gaskeller* can be supported by accepting something that the orthodox historians have claimed, and a document posted by the Buchenwald Museum. This final (I assume) interpretation was posted on the web in 2007,⁷⁶⁴ and this Supplement essentially presents that interpretation, supplemented by more recent work by Samuel Crowell, who has done valuable work in this area. Earlier interpretations should be considered obsolete.

I note in passing that the first known interpretation of features of an Auschwitz crematorium, in terms of gas and bomb shelters, was offered by the late Dr. Wilhelm Stäglich.⁷⁶⁵

Ill. 2b: The same document, with slightly different handwritten remarks and underlinings, from the archives of the Auschwitz State Museum, file BW 30/34, p. 100.

Gas shelters are routine as wartime defense measures, and the Germans were industrious in building them. Since the 1991 Persian Gulf War, Israel has had a law requiring that every newly constructed domicile have a room equipped as a gas shelter.⁷⁶⁶ Moreover in 2010, Israel ordered gas masks distributed to all citizens, in a program to start in Feb. 2011, expected to last about three years.⁷⁶⁷ However, early in 2014, Israel announced that it will stop the distribution of gas masks.⁷⁶⁸

Only two months after my web posting, on 16 Oct. 1996, an anonymous article appeared in the French magazine *L'autre Histoire*. The author was understood at the outset to be Jean-Claude Pressac.⁷⁶⁹ The article triumphantly announced (p. 13) the discovery of a Topf (crematorium builders) company document, dated 17 Feb. 1943, showing that there was a “*Gaskeller*” in what was clearly Crematorium II at Auschwitz. Pressac interpreted the *Gaskeller* as a gas chamber. I assume he had not seen my slightly earlier posted article. Incidentally, if I had first seen the word *Gaskeller* out of useful context, then I, too, would have assumed it meant an underground *Gaskammer*.

Pressac’s *Gaskeller* document remained unpublished until 2005, when it was published by the Buchenwald museum, which had been bequeathed Pressac’s papers (Illustration 1). The matter is well summarized elsewhere.⁷⁷⁰ The supervisors of the Buchenwald museum, contemporary Germans, think a “*Gaskeller*” was an underground “*Gaskammer*,” but during World War II, it was a gas shelter, as Crowell has confirmed.⁷⁷¹

The document NO-4473 as it comes to us, the “*Vergasungskeller*” document, is shown in Fig. 2 (copied from an anti-revisionist web site⁷⁷²). The orthodox interpretation of the handwritten notations, wherein the word “*Vergasungskeller*” was underlined by hand and “Kirschneck!” was written in the top margin, has been advanced by Robert Jan van Pelt, Deborah Lipstadt’s expert witness in the 2000 Irving-Lipstadt trial. According to his interpretation, the notations were intended to draw Kirschneck’s attention to the underlined word because the use of the word “*Vergasungskeller*” was a “slip” that the authorities objected to, because it exposed the criminal intent of the building.⁷⁷³

⁷⁶⁶ *Chicago Tribune*, 7 Sept. 1996, sec. 1, 2.

⁷⁶⁷ *Ha'aretz*, 1 May 2010. www.haaretz.com/print-edition/news/idf-to-blanket-israel-with-gas-masks-1.260813

⁷⁶⁸ www.forward.com/articles/191189/israel-to-stop-distributing-gas-masks-ending-decad/

⁷⁶⁹ I find it intriguing that Pressac may have delivered his swan song as early as 1995, about a year before his *L'autre Histoire* article, in an interview which Valérie Igounet published in her 2000 book *Histoire du négationnisme en France* (pp. 613-652). Since Pressac was allowed to edit the text before its publication it is not clear when he made or wrote the remarks despairing of the irreparable mess of the historiography on the orthodox side.

⁷⁷⁰ CODOH (2006).

⁷⁷¹ Samuel Crowell (2011), appendix entitled “The Bomb Shelter Thesis Revisited: A Postscript to ‘Bomb Shelters in Birkenau’.” Crowell also interprets NO-4473 in a way related to the presently offered interpretation.

⁷⁷² www.holocaust-history.org/auschwitz/19430129-vergasungskeller/; cf. <https://codoh.com/library/document/vergasungskeller-document-no-4473/>

⁷⁷³ van Pelt (2002), 297. In the trial, David Irving was ambiguous on whether the *Vergasungskeller* was a delousing facility or a gas shelter (<http://cgi.stanford.edu/group/wais/cgi->

The idea that the construction workers at Auschwitz engaged in a systematic masquerade to conceal evidence of mass exterminations, going about their daily business while figuratively winking at one another, is both a staple and a necessity of the “Holocaust” legend, and I consider it completely ridiculous. Could I calculate that the burning down of New York City could be concealed by hiding the matches? Would I calculate that my accomplices would be equally diligent about those matches?

However, the interpretation of the hand notations as expressing objections to the use of the word “*Vergasungskeller*” in the document is reasonable, and I wonder why it took me so long to see it. Those who accept the premise of van Pelt’s interpretation of the notations, thereby also accept a hypothesis of my present theory, which is a clarification and reinforcement of the “third interpretation” referred to above.

If we accept van Pelt’s interpretation of the notations – that the use of the word “*Vergasungskeller*” was for some reason considered inappropriate, and that in the opinion of the management at Auschwitz the word should not have been there – we are not obliged to accept van Pelt’s idea as to the nature of management’s objections.

It is reasonable to propose that something like “*Gaskeller*” or “*Gasschutzkeller*” should have been there, because the use of a related concept mitigates the document’s error, because there was in fact a *Gaskeller* there, because the author of the unusual word “*Vergasungskeller*” could have had that meaning in mind, and because of the many other indications we have that the crematoria were designed and built with air-raid and gas-attack defense in mind. Those are strong reasons.

Of course, the relevant space was not a dedicated *Gaskeller*. It was primarily a *Leichenkeller*, i.e. morgue. It was common that bomb and gas shelters were provided in spaces primarily dedicated to other uses.

Carlo Mattogno does not accept the above interpretation of the handwritten notations, but he shows conclusively that the *Vergasungskeller* and the *Gaskeller* were the same thing.⁷⁷⁴ He insists that both were for emergency disinfection or delousing, despite his reference to an online source that reproduces the *Gaskeller* document as a reference to a gas shelter. It appears that his reason for designating the *Vergasungskeller* thus is that, in all other Auschwitz contexts in which he has seen “*Vergasung*,” it means disinfections. The reasoning doesn’t hold. For example, my original interpretation of the *Vergasungskeller*, as a facility to generate a combustible gas for the crematorium ovens, seemed linguistically correct to Wilhelm Stäglich, a highly literate German jurist.⁷⁷⁵

I have certainly gotten a good lesson on the perils of documents interpretation. We have been struggling, I since 1972, with an at least enigmatic document!

bin/?p=725). The word “*Gaskeller*” does not seem to have come up there.

⁷⁷⁴ Mattogno (2019), 52-65.

⁷⁷⁵ Stäglich (1976), 71; (2015a), 102f.; (1986), 46f. (2015b), 88.

Revisionists should not apologize for a struggle with one document. The orthodox side dismisses or distorts huge mountains of documents. For example Chapter 7 here reproduces German documents speaking only of emigration, expulsion and resettlement of Jews, but that mountain of documents is waved away with a few words.

August 2014

Walter Schreiber on the “Gaskeller”

The following contribution appeared in 2000 under a pen name used by the accredited civil engineer Walter Lüftl.⁷⁷⁶ Between 1990 and 1992, Lüftl was the president of the Austrian Federal Association of Civil Engineers. Due to his prominence and his revisionist involvement,⁷⁷⁷ he managed to gain the trust of various individuals who would otherwise have remained silent forever due to their fear of persecution. Among them was also the court-appointed engineer who, during the 1972 Auschwitz trial in Vienna, submitted an expert report, in which he determined that the rooms of the Auschwitz crematories which are said to have been homicidal gas chambers could not have been used for that purpose. This expert report was one decisive factor leading to the acquittal of the two defendants—the architects who had been responsible for the construction of the crematories. This expert report was never published, and today it can no longer be found in the case files. But Lüftl’s public support for revisionism motivated said expert witness to finally speak out. When Lüftl published this case in 1997, the public at large learned for the first time about this vanished document.⁷⁷⁸

The following interview was conducted by Lüftl with the superior of the two architects who sat in the dock in Vienna back in 1972: Oberingenieur Dr. Walter Schreiber. He, too, contacted Lüftl on his own accord, and agreed to entrust to him his knowledge which he did not want to take to his grave. Since he had justified fear of persecution and prosecution, he refused to speak out during his lifetime about his knowledge of the crematories at Auschwitz.

Schreiber’s statements support the theses by Arthur Butz and Samuel Crowell that the morgues of Crematories II & III in Birkenau served as air-raid shelters as their auxiliary function. This is why we reprint this interview here.

The Editor

WHO IS WALTER SCHREIBER?

Walter Schreiber was born in 1908, and died in 1999 at the age of 91 in Vienna. He studied civil engineering at the Technical University in Vienna, and worked first on the construction of the alpine high altitude road “Großglockner-Hochalpenstraße” as assistant to the construction manager. After an extended period of unemployment, he emigrated to the Soviet Union in 1932, and worked on the construction of refrigeration buildings and alcoholic-beverage factories in Bryansk, Spassk and Petrofsk until 1935. In 1936, Schreiber went to Germany, where he worked first for the Tesch Corporation, and then, from 1937 to Aug. 31, 1945 for the Huta Corporation. Schreiber was employed

⁷⁷⁶ Rademacher (2000), 104f.

⁷⁷⁷ Cf. about this the politicized statements at http://de.wikipedia.org/wiki/Walter_Lüftl; see also Lüftl’s contributions listed at www.codoh.com.

⁷⁷⁸ Gärtner (1997); Lüftl (2004).

as a senior engineer in the branch office in Kattowitz from Jan. 11, 1943 until the evacuation of Upper Silesia in 1945.

After the war, Schreiber worked for the Municipal Construction Office Directorate (*Stadtbauamtsdirektion*) Vienna, the Austrian Danube Power Plants Society (*Österreichische Donaukraftwerke AG*), the Jochenstein Danube Power-Plant Society (*Donaukraftwerk Jochenstein AG*) and the *Verbundgesellschaft* Vienna. After well-deserved retirement, he lived in Vienna, mental capacity fully intact, until his death.

WHY IS SCHREIBER INTERESTING?

What is so interesting in the professional life of this Austrian civil engineer? He worked as a senior engineer in the branch office in Kattowitz for the construction activities of his firm, and was also responsible for constructions in the concentration camp Auschwitz and its sub-camps.

He was interviewed about Auschwitz in the year 1998 by Dipl.-Ing. Walter Lüftl, who had been President of the Austrian Federal Association of Civil Engineers until 1992. Answers that are of interest for historiography are found in the following:

Lüftl: *In which areas were you active?*

Schreiber: *As senior engineer, I inspected the civil project of the Huta Corporation, and negotiated with the Central Construction office of the SS. I also audited the invoices of our firm.*

L.: *Did you enter the camp? How did that happen?*

S.: *Yes. One could walk everywhere without hindrance on the streets of the camp, and was only stopped by the guards upon entering and leaving the camp.*

L.: *Did you see or hear anything about killings or mistreatment of inmates?*

S.: *No. But lines of inmates in a relatively poor general condition could occasionally be seen on the streets of the camp.*

L.: *What did the Huta Corporation build?*

S.: *Among other things, Crematoria II and III with the large morgues.*

L.: *The prevalent opinion (considered to be self-evident) is that these large morgues were allegedly gas chambers for mass killings.*

S.: *Nothing of that sort could be deduced from the plans made available to us. The detailed plans and provisional invoices drawn up by us refer to these rooms as ordinary cellars.*

L.: *Do you know anything about introduction hatches in the reinforced concrete ceilings?*

S.: *No, not from memory. But since these cellars were also intended to serve as air-raid shelters as a secondary purpose, introduction holes would have been counter-productive. I would certainly have objected to such an arrangement.*

L.: *Why were such large cellars built, when the water table in Birkenau was so extremely high?*

- S.: *I don't know. Originally, however, above-ground morgues were to be built. The construction of the cellars caused great problems in water retention during the construction time and sealing the walls.*
- L.: *Would it be conceivable that you were deceived, and that the SS nevertheless had gas chambers built by your firm without your knowledge?*
- S.: *Anyone who is familiar with a construction site knows that is impossible.*
- L.: *Do you know any gas chambers?*
- S.: *Naturally. Everyone in the east knew about disinfestation chambers. We also built disinfestation chambers, but they looked quite different. We built such installations, and knew what they looked like after the installation of the machinery. As a construction firm, we often had to make changes according to the devices to be installed.*
- L.: *When did you learn that your firm was supposed to have built gas chambers for industrial mass killing?*
- S.: *Only after the end of the war.*
- L.: *Weren't you quite surprised about this?*
- S.: *Yes! After the war, I contacted my former supervisor in Germany, and asked him about it.*
- L.: *What did you learn?*
- S.: *He also only learned about this after the war, but he assured me that the Huta Corporation certainly did not build the cellars in question as gas chambers.*
- L.: *Would a building alteration be conceivable after the withdrawal of the Huta Corporation?*
- S.: *Conceivable, sure, but I would rule that out on the basis of time factors. After all, they would have needed construction firms again, the SS couldn't do that on their own, even with inmates. Based on the technical requirements for the operation of a gas chamber, which only became known to me later, the building erected by us would have been entirely unsuitable for this purpose with regard to the necessary machinery and the practical operation.*
- L.: *Why didn't you publish that?*
- S.: *After the war, first, I had other problems. And now, it is no longer permitted.*
- L.: *Were you ever interrogated as a witness in this matter?*
- S.: *No Allied, German or Austrian agency has ever shown an interest in my knowledge of the construction of Crematoria II and III, or my other activities in the former Generalgouvernement [German occupied Poland]. I was never interrogated about this matter, although my services for the Huta Corporation in Kattowitz were known. I mentioned them in all my later CVs and recruitment applications. Since knowledge about these facts is dangerous, however, I never felt any urge to propagate it. But now, as the lies are getting increasingly bolder, and contemporary witnesses from that time like myself are slowly but surely dying off, I am glad that someone is*

willing to listen and to write down the way it really was. I have serious heart trouble and can die at any moment, it's time now.

We are grateful to this contemporary witness, who asked us to wait to publish his testimony posthumously.

Other contemporary witnesses, like the SS-leader Höttl, who also died in 1999, took their knowledge about the origin of the six million lie with them into the grave, without even caring whether the truth they held would at least be made known posthumously.

We will keep Herrn Dipl.-Ing. Dr. techn. Walter Schreiber in honorable memory.

Dipl.-Ing. Baurat h.c. Walter Lüftl

German Extermination Camps —
Auschwitz and Birkenau.
(page 33)

Careful estimate of the number of Jews gassed
in BIRKENAU between April, 1942 and April, 1944
(according to countries of origin).

Poland (transported by truck)	approximately	300,000
" " " train)	"	600,000
Holland	"	100,000
Greece	"	45,000
France	"	150,000
Belgium	"	50,000
Germany	"	60,000
Yugoslavia, Italy and Norway	"	50,000
Lithuania	"	50,000
Bohemia, Moravia and Austria	"	30,000
Slovakia	"	30,000
Various camps for foreign Jews in Poland ..	"	300,000
		approximately 1,765,000

Fig. 25: A page from document 022-L, as reproduced in the 42nd volume record of the International Military Tribunal.

Fig. 26: Said to be a photograph of the furnace room of crematorium II at Auschwitz.¹⁸

Fig. 27: A can of Zyklon B.¹⁹The label says "POISON GAS!"

Fig. 28: Several cans of Zyklon B: top: in the camp Lublin-Majdanek as found by the Red Army; bottom: from an advertisement of the DEGESCH firm.²⁰

Fig. 29: Plan of Birkenau. The location of the "Red House" or "Bunker," top left, is claimed by "eyewitnesses," but unconfirmed.

*Fig. 31: The crematorium at Lublin-Majdanek camp.
This crematorium had five muffles, three of which are visible here.²¹*

Fig. 32: A collection of medical specimens allegedly found at Buchenwald.²²

Fig. 33: Plan of Auschwitz Crematorium II.

1. Leichenkeller 1. Below ground level morgue.
2. Leichenkeller 2. Below ground level morgue.
3. Leichenkeller 3. Below ground level morgue.
4. Furnace room. Ground level only. 15 cremation muffles.
5. Corpse elevator. Only the small central part of the building, where the furnace room joined Leichenkeller 1 and 2, had two levels.
6. Corpse chute.
7. Cellar entrance.
8. Cellar entrance.
9. Ground level entrance.
10. Chimney and waste incinerator.
11. Supervisor's office, worker rest room, toilet, shower, tools, urn storage, fuel (coke) storage.

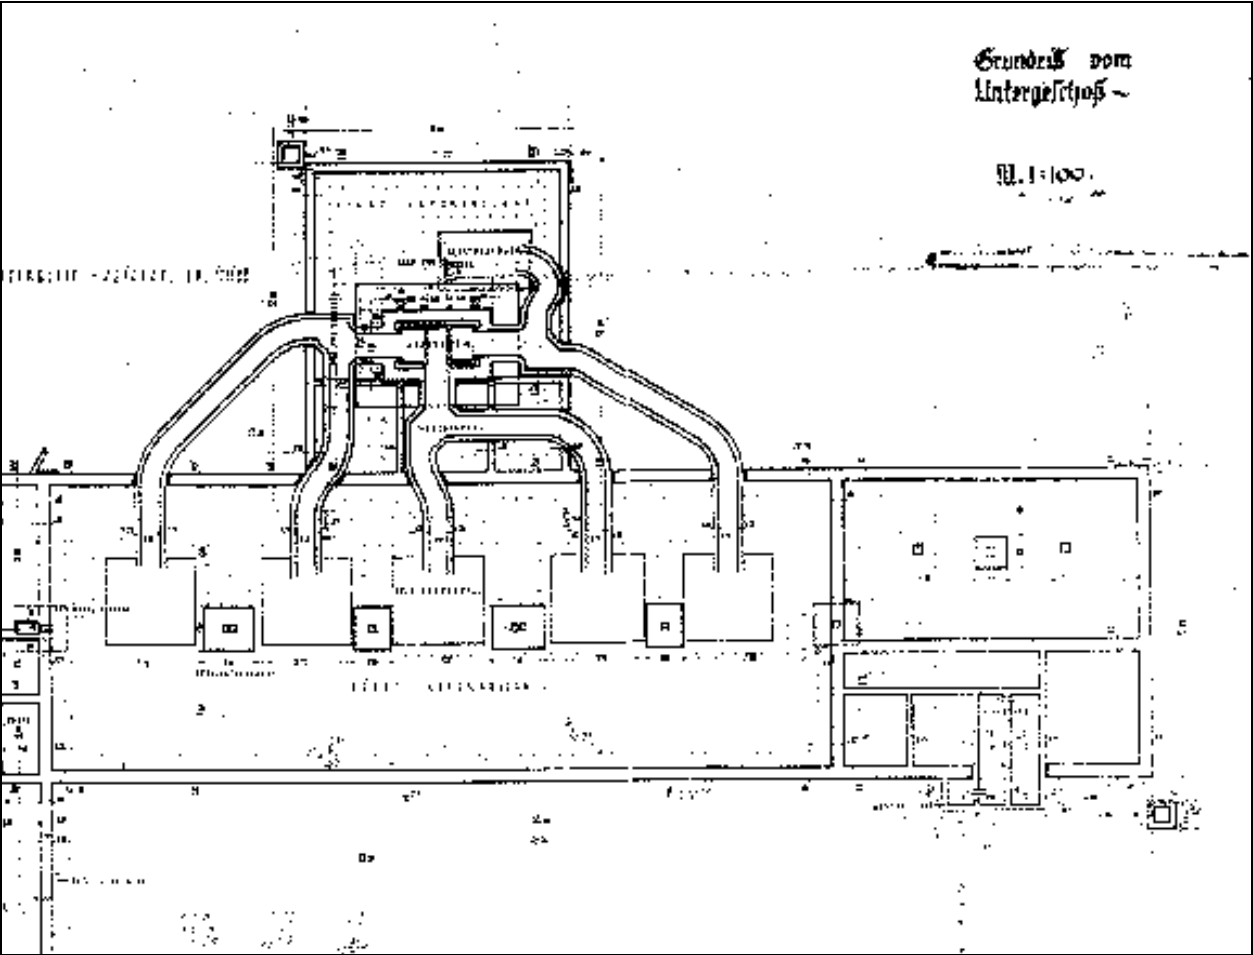

Fig. 34: Arrangement of flues and ducts for Auschwitz crematorium II.²³

References

In the present book frequent reference is made to documents used in war crimes trials. There are many ways to get copies. One source that will work but may not be the simplest, fastest or least expensive is found at

www.archives.gov/research/captured-german-records/

which is a general guide to all such materials. For example, the documents for Case XI (Wilhelmstrasse case) are indexed at

www.archives.gov/research/captured-german-records/microfilm/m897.pdf

which tells us the Steengracht defense documents are in the National Archives record group 238, microfilms 115, 116 and 133.

However, there is a good chance that a simpler and less costly procedure will work for a researcher who has the services of a good inter-library loan department. For example, I used the ILL department at the library of Northwestern University. Typically, they got documents for me in about two days, from an archive quartered near the University of Chicago. That was during the 1970s, and I am writing this in August 2014.

“The Natural sciences [like other scholarly disciplines] are extremely conservative and dogmatic. Any corroboration of a paradigm is welcome, whereas any innovation or revision will long meet with resistance; the instinct for preservation (including self-preservation!) is stronger than the search for truth. Therefore, new findings usually gain acceptance only when sufficient numbers of researchers vouch for them: then the dogmatic status quo topples, a ‘scientific revolution’ occurs, a new paradigm replaces the old. [...] The bottom line is that no student, no researcher and no layman should believe any facts to be ‘conclusively proven,’ even if the textbooks present them as such [...].”

Professor Walter Nagl, Ph.D., *Gentechnologie und Grenzen der Biologie*,
Wissenschaftliche Buchgesellschaft, Darmstadt 1987, pp. 126f.

“The error [of a vastly exaggerated Auschwitz death toll], though committed a long time ago and by others, remains tendentious. And it was ‘our’ error, if ‘our’ refers to the enemies of fascism and racism. [...] I admit that it is sometimes necessary to conceal the truth – i.e., to lie – at times even for noble reasons, for example out of pity or tact. But it is always profitable to know why one does so, and what such deviations from the truth entail. [...] While truth is not always good, lies are much more often evil.”

Ernest Skalski, *Der Spiegel*, No. 30/1990, p. 111

“A democracy requires free citizens who are willing to say publicly unpopular things to provoke critical debate.”

Robert Reich, *Los Angeles Times*, May 13, 1998, p. B13

Preface to the 2019 Edition

GERMAR RUDOLF

Toward the end of 1990, I began my research on the “Chemistry of Auschwitz”, that is to say, whether the misuse of Zyklon B for mass murder as alleged for Auschwitz would have left any chemical traces, and if so, then what kind(s) of traces. After several months of literature research on the chemistry involved, I came to the conclusion that the topic was exceeding my personal competence.. I needed the advice of engineers, architects and historians. My cries for help were answered to some extent, but I realized that most of these professionals were no less groping in the dark than I. The entire field of forensic Auschwitz and Holocaust research seemed to be treated like an unwanted orphan.

Before I could even think of summarizing my chemical research in writing and preparing it for publication or for an expert opinion to be used in court cases, I realized that it would not be enough to research and write about just a small – chemical – aspect of the alleged mass murder of Auschwitz, which in itself represented only a small part of the Holocaust. The entire research field was huge. Other helpful researchers, both professionals and laymen, had a similar impression, but no one took the initiative to tackle the whole issue. Well, if nobody else does it, then I will, I thought.

As a 26-year-old doctoral student, I therefore gathered seasoned graduate engineers, PhD scholars and professors around me, and tried to persuade them to either summarize or even create the most-recent forensic-research results on certain aspects of the Holocaust. It took three years to assemble this work from the pens of very different, strong-willed authors who moreover wrote in different languages.

The result – greatly revised – lies before you.

What I saw as the culmination of my publishing activities in 1994, however, turned out to have been just their beginning. From this literary sprout, over the next 25 years, a multitude of special studies and summarizing overviews on the Holocaust has grown which are unparalleled in the world: the bilingual series *Holocaust Handbooks* (see the introduction to the series at the end of this book), the first volume of which is the present work.

The first German edition of this book sold about 15,000 copies within four months. Then the police struck. In over 100 house searches throughout Germany, all copies were confiscated that the authorities could lay their hands on. The publisher organized a protest initiative in which ultimately more than 1,000 German intellectuals protested in newspaper appeals against this police-state censorship¹ – but in vain. In the subsequent judicial proceedings, the confiscation and immolation of the book was decided. However, when the publisher Wigbert Grabert sought to appeal the decision, the prosecutor’s office threatened that his publishing outlet would be destroyed by constant house searches and confiscations if he did not withdraw the appeal. The publisher gave in to save his business.

It took 25 years for a new German edition of this one-time bestseller to appear, and 16 years for this third English edition. The reason for this is primarily that the other 40 books of this series absorbed all my energy; 25 years and 40 books of research and learning. Only now that the series has reached a certain maturity – and I along with it – am I able to offer the present book as a thoroughly revised, corrected and expanded new edition.

Unfortunately, many of my co-authors and friends have since died: Prof. Dr. Robert Faurisson, Dr. Claus Jordan, graduate engineer Willy Wallwey, Dr. Franco Deana, graduate

Kosiek, to me on Nov. 17, 2000, and May 2, 2001; http://germarrudolf.com/wp-content/uploads/2012/04/ListPos19_d.pdf; translated in http://germarrudolf.com/wp-content/uploads/2012/04/ListPos19a_e.pdf and http://germarrudolf.com/wp-content/uploads/2012/04/ListPos19b_e.pdf.

engineer Arnulf Neumaier and Dr. Herbert Tiedemann. The ravages of time have rendered several other contributors unable to assist me in updating their contributions: Ingrid Weckert, graduate engineer Friedrich P. Berg, graduate political scientist Udo Walendy.

When comparing this edition with the first edition, the attentive reader will realize that the names of some authors have changed in the current edition, and that some of the articles originally listed as having been written by only one author now have two authors listed. Let me explain this.

First of all, I gave up my various pen names after I successfully emigrated to the US and thus am now safe from the German persecution machinery. Ernst Gauss and Manfred Köhler therefore mutated to their real ego Germar Rudolf.

The contribution by Walter Lüftl, originally labeled with the pen name Werner Rademacher, has not been revised. Therefore, Mr. Lüftl is no longer in danger of being prosecuted due to the statute of limitations.

The contribution by Willy Wallwey used to carry the pseudonyms Hans Jürgen Nowak and Werner Rademacher. Since Mr. Wallwey is dead, he no longer needs to be protected from the German censors.

The contributions by Udo Walendy, John C. Ball and Arnulf Neumaier, originally signed by only their names, now have me as a co-author. Already for the original contribution of the 1994 edition, Udo Walendy had asked me to write the article myself based on his various publications on photo forgery. In the course of this work, I have added case studies and entire sections to this contribution which I compiled myself or took from the work of others. My share of this contribution grew with each revision, so that by now the parts based on Mr. Walendy's material are in the minority.

The situation was initially similar with John Ball's contribution, which I authored on his behalf and later revised progressively, even if this contribution contains little material I added. However, Mr. Ball has even asked me to use only my name for this article. But because it would be unfair not to mention him, the pioneer of this work, both our names are listed.

Mr. Neumaier submitted a complete article, but it was only about half as long as it currently is, because I revised, expanded and provided it with better source references three times. Since the last two revisions took place after Mr. Neumaier's passing, it is only appropriate to take public co-responsibility for this contribution as well.

Mr. Berg's contribution is based on his original 1984 paper, which was completely revised, corrected and extended by me with Mr. Berg's assistance for the first German edition of this book. Already back then, as well as for the first and second English editions, Mr. Berg encouraged me to take co-responsibility as a co-author for this paper due to my decisive contributions to improve the quality of his paper (see the initial footnote text of his paper with his own remark about this), but I rejected it at that time. Some more revisions and additions were made to this edition again, but Mr. Berg was unable to participate in the revision procedure because of illness and injury, so it would be dishonest to conceal my co-responsibility for this article.

If the book now looks very much Germar-Rudolfish, that's exactly the impression I wanted to avoid at all costs back in 1994, so as not to get even more into the crosshairs of the German opinion dictators. But now I couldn't care less.

Germar Rudolf, Red Lion, Pennsylvania, September 2019

Preface to the 1994 Edition¹

ROBERT FAURISSON

Historical revisionism is the great intellectual adventure of the end of the 20th Century.

Despite its size, the present volume offers only a glimpse of that adventure; and so it seems necessary here first to specify the precise historical problem upon which the revisionists have concentrated their research, then how revisionism arose in the 1940s and how it developed in the years 1950 to 1978; and finally how it really took off in the years 1978 to 1979, to experience such an increase in the present day that nothing any longer seems likely to halt its onward march.

During the Nuremberg International Military Tribunal (1945-46), Germans were judged and condemned for “crimes against peace,” for “war crimes” and for “crimes against humanity.” The revisionists have been led in a way by their successive discoveries concerning these three points to call for a revision of the judgment of the Nuremberg Trial. Regarding the first two points, the revisionists have been able to present their arguments without too much difficulty, and it is probable that no serious historian today would contend that anyone is in a position to lecture Germany concerning “crimes against peace” and “war crimes”: as a matter of fact, it has become evident that the Allies bear their share of responsibility in the starting of the war, and that they themselves committed innumerable “war crimes” (if that expression has any meaning, given that war itself may be held a crime). On the other hand, concerning the third point, that is with regard to “crimes against humanity,” they keep on dinning into our ears that Germany attained a peak of horror all her own with the ‘genocide’ of the Jews. It is on the study of this particular point that the revisionists have specifically concentrated their efforts. And so, by degrees, historical revisionism has become what the Americans now call ‘Holocaust revisionism.’

According to the accusers, Germany was not content just to persecute the Jews, to deport them and put them into concentration camps or forced-labor camps; those ‘crimes’ – as every historian knows – are unfortunately frequent in the history of mankind, and we have only to turn on our TV sets today to note that all kinds of human societies continue to suffer such ‘crimes.’ Germany, her accusers still contend, went far beyond that. Taking a giant leap in horror, in 1941-1942 she allegedly decided on the total extermination of the European Jews, and in order to perpetrate this *specific* crime, supposedly devised and utilized a *specific* weapon: the homicidal gas chamber (or gas van). Making use of abominable chemical slaughterhouses, she allegedly began a collective assassination of industrial proportions. That crime (the genocide) and that weapon used in the crime (the homicidal gas chamber) are in that sense inseparable, and it is consequently impossible to maintain, as some do, “that whether or not there were any gas chambers makes no fundamental difference.” Germany thus presumably committed an intrinsically evil crime against the Jews. The Jews say further that the whole world *knowingly* allowed the Germans to perpetrate that crime. The paradoxical result of so enormous an accusation is that today in the dock of the defendants, ‘criminals’ Hitler, Himmler, and Göring are joined by their ‘accomplices,’ Roosevelt, Churchill, Stalin, Pope Pius XII, and the International Committee of the Red Cross, as well as the representatives of many other countries and organizations.

Things are such that in the United States, for instance, from Los Angeles to Washington, they hammer away at it in the ‘Holocaust museums,’ where today’s Jews have set themselves up as accusers of the whole world; they go so far as to incriminate the Jews in positions of responsibility who were living in Europe, in America, or in Palestine during the war: they have the effrontery to reproach them for their collaboration or their indifference, or for the spinelessness of their reaction to the ‘systematic extermination’ of their co-religionists.

The earliest rumors of a gassing of Jews by the Germans apparently circulated in December of 1941 in the Warsaw Ghetto.² But throughout the war such rumors found only a feeble

¹ This preface was translated from the French original by Tom Kerr.

² “Stockholm, Dec. 21 (JTA). – More than 1,000 victims of spotted fever in the densely crowded Warsaw

echo in circles hostile to Germany. One has only to read a book such as that of Walter Laqueur's *The Terrible Secret*³ to realize that the skepticism was general. People still held long-lived memories during the Second World War of the invention of atrocities during the First World War, when stories were already being spread about the gassing of civilians (in churches or elsewhere), as well as stories about corpse factories. The British Foreign Office saw the new rumors of the Second World War only as Jewish inventions, and many in American circles shared that conviction.⁴ Edward Beneš, President of Czechoslovakia (in exile in London), announced in November 1942, *after inquiry by his staff*, that the Germans, contrary to what had been reported to him, were not exterminating the Jews.⁵ The American Jew, Felix Frankfurter, a Supreme Court judge, stated to Jan Karski on the subject:⁶

"I can't believe you."

In August of 1943, Cordell Hull, Secretary of State, warned the U.S. ambassador in Moscow by telegram that in planning a joint Allied statement on "the German crimes in Poland," it would be advisable to eliminate any mention of the gas chambers, since, as the British pointed out, there was "insufficient evidence" in the matter.⁷

Even after the war, high-ranking Allied officials such as Eisenhower, Churchill and de Gaulle, in their respective memoirs, would refrain from mentioning the existence and operation of 'Nazi gas chambers.' In a manner of speaking, all these skeptics were in their own way revisionists. Neither the Vatican, nor the International Committee of the Red Cross, nor the anti-German Resistance acted as if they put any faith in the rumors which, moreover, took the most fantastic forms: invariably the Germans were said to be exterminating the Jews, but the claimed methods of extermination were most varied: steam, gas, electricity, fire, acid, an injection of air, drowning, vacuum pump, etc. Why gas wound up the winner in the *Gräuelpropaganda* (atrocities propaganda) competition is not exactly known.

The Frenchman Paul Rassinier was the first true revisionist of the postwar period. In 1950, this former deportee began to denounce the "myth of the gas chambers" in *Le Mensonge d'Ulysse*⁸ and in a whole series of works. In 1976, the American engineer Arthur Robert Butz published *The Hoax of the Twentieth Century*⁹ which is the most profound revisionist work written to date on the subject of the alleged genocide and the gas chambers. In 1979, a German judge, Dr. Wilhelm Stäglich, in turn published *Der Auschwitz Mythos*,¹⁰ a study devoted principally to the manner in which the German courts of law were able to collaborate in the fabrication of a myth, somewhat the same way that the judges of the witchcraft trials in the past, above all from 1450 to 1650, lent their support to even the most preposterous stories told about the stake, the grill and Satan's ovens.

Without wishing to diminish the great importance of Paul Rassinier, of Arthur Butz, and of Wilhelm Stäglich, I hope I may be permitted to say that, at the end of the 1970s, revisionism would finally become physical and scientific with the research conducted on the ground by Ditlieb Felderer, the Swedish revisionist, as well as with my own discoveries at Auschwitz proper, my observations on the use of Zyklon B for disinfestation (delousing),

ghetto have been put to death by gas [...], it is learned today from reliable sources," *The Jewish Telegraphic Agency Bulletin*, December 22, 1941, p. 1.

⁸ *Le Mensonge d'Ulysse*, La Librairie française, Paris 1950.

⁹ *The Hoax of the Twentieth Century. The Case Against the Presumed Extermination of the Jews*, Institute for Historical Review, Newport Beach, 1977. It is advisable to read the current edition which contains five more-recently written supplements, among them three lectures given by the author in 1979, 1982, and 1992. In the 1982 lecture, I recommend the dazzling demonstration contained on pages 414-427 about "The story of the invisible elephant."

¹⁰ *Der Auschwitz-Mythos. Legende oder Wirklichkeit? Eine kritische Bestandsaufnahme*, Grabert-Verlag, Tübingen 1979; the work was destroyed on orders of the German authorities. The current 2015 English (*Auschwitz: A Judge Looks at the Evidence*) and German edition of this book are available from Castle Hill Publishers.

and my reflections on the utilization of hydrogen-cyanide gas in the gas chambers of US-American penitentiaries for the execution of convicts sentenced to death. Neither Rassinier, nor Butz, nor Stäglich had gone to Poland to the supposed sites of the crime, and none of them, moreover, had really utilized to their fullest extent the arguments of a physical, chemical, topographical, and architectural nature which today, following the investigations of D. Felderer and my own inquiries, are currently employed by the younger generation of revisionist researchers. As for the Jewish researchers who defend the theory of the extermination of the Jews, they have resolutely remained what I call *paper historians*: Léon Poliakov and Raul Hilberg have stayed with paper and words and in the realm of speculation.¹¹

It is surprising that this vast field of properly scientific argument was not seen by Germany, which has so many chemists and engineers, and by the USA, itself with no lack of scientific minds who even had the examples right there before them of their own gas chambers using hydrogen cyanide. In 1976 at Auschwitz, I discovered both the exact configuration of the crematories that were supposed to contain homicidal gas chambers, of the delousing gas chambers (*Entlausungsgaskammern*), and the plans (hidden until then) of certain crematories. In 1978/1979, I published two articles in *Le Monde*¹² in which I summarized some of my discoveries. In 1979, at the first conference of the Institute for Historical Review, in Los Angeles, I presented those discoveries in detail. Among those present in the audience was one Ernst Zündel, a German then living in Toronto. From 1985 on, this man would prove to be the most ardent, the most effective, and also – though many seem not to know it – one of the most innovative minds among all the revisionists. He was the first to understand why I so insisted on the chemical argument and, in particular, on the importance that the technology of the American gas chambers in the 1930s and 1940s had for us. He understood why I wanted a specialist in these American gas chambers to go and examine the alleged execution gas chambers on the spot, in Poland. Thanks to my correspondence with American penitentiaries in the 1970s, I had already discovered such a specialist in the person of Fred Leuchter, but it was Ernst Zündel, and he alone, who had the brilliant idea of asking him not only to make an examination of the buildings, but to take constituent samples of material from the disinfestation gas chambers on the one hand and from the alleged execution gas chambers on the other. In February of 1988, he took the risk of sending Fred Leuchter and an entire team to Poland at his own expense to study the alleged gas chambers of Auschwitz, Birkenau and Majdanek. The results of the study of the buildings and of the analysis of the samples taken proved spectacular and totally in favor of the revisionist thesis. In the following years, other reports would confirm the basic accuracy of the *Leuchter Report*:¹³ first the very-learned report of Germar Rudolf,¹⁴ then the involved and secret specialist's report of the Poles,¹⁵ and finally the study of the Austrian Walter Lüftl.¹⁶

It only remains to be said that if Germany's accusers are not satisfied with these studies, they are at liberty to initiate their own specialist's report. What has kept them from doing it publicly, in broad daylight, these past fifty years?

We must understand the disarray of Germany's accusers in the face of revisionism's successes. For half a century they have sincerely believed that the tragedy undergone by the Jews during the Second World War was of exceptional seriousness and magnitude, whereas, when reduced to its proper proportions – that is, without genocide and without gas chambers – their tragedy was just one of many other tragedies of that terrible conflict. Under the thrust of revisionist inquiries, their historians step by step have had to admit

- that there was neither an order, nor a plan, nor a budget for the alleged genocide of the Jews;¹⁷
- that 'Wannsee' was at best only a "silly story";¹⁸
- that there existed no specialist's report on the weapon of the crime concluding that 'the building (whether intact, "reconstructed," or in ruins) served as a homicidal gas chamber';
- that there is no autopsy that would allow us to conclude: 'This is the corpse of a deportee killed by poison gas';
- that the confession of Rudolf Höß was no longer of any value ("Höß was always a very weak and confused witness"¹⁹);
- that their alleged witnesses had probably never seen gas chambers or gassings inasmuch as the best of them, the famous Rudolf Vrba, in 1985, had been obliged to admit before a Canadian judge and jury that in his famous book on the subject he had made use of "poetic licence" or "*licentia poetarum*";²⁰
- that the "Jewish soap" had never existed;²¹
- that the figure of four million victims at Auschwitz was only a fiction²²;
- and that the

*"sources for the study of the gas chambers are at once rare and unreliable [...]. Besides, from 1942 to 1945, certainly at Auschwitz, but probably overall, more Jews were killed by so-called 'natural' causes [starvation, disease, sickness and overwork] than by 'unnatural' ones."*²³

¹⁷ In 1961, in the first edition of *The Destruction of the European Jews* (Quadrangle Books, Chicago, p. 177), Raul Hilberg calmly affirms the existence of an order (and even of two consecutive orders!) for the extermination of the Jews. In 1985, in the second edition of his book (Holmes and Meier, New York), he totally changes his explanation of the facts; he no longer mentions any order; he writes that there was no "basic plan" (p. 53) and that "no single organization directed or coordinated the entire process [of destruction]" (p. 55); he adds: "No special agency was created and no special budget was devised to destroy the Jews of Europe" (p. 62). He explains the whole supposed business of the extermination of the Jews by ... thought transmission or telepathic divination within the German bureaucracy: "an incredible meeting of minds, a consensus-mind-reading by a far-flung bureaucracy" (remarks made in a lecture on 22 February 1983 and confirmed by R. Hilberg at the time of his cross-examination during the Zündel Trial in Toronto in 1985, per shorthand transcription, pp. 846-848)!

¹⁸ Yehuda Bauer, Professor at the Hebrew University in Jerusalem, states precisely: "The public still repeats, time after time, the silly story that at Wannsee the extermination of the Jews was arrived at," *The Canadian Jewish News*, 20 January 1992, p. 8, reproducing a dispatch of the Jewish Telegraphic Agency in London.

¹⁹ Professor Christopher Browning, a contributor to the *Encyclopedia of the Holocaust*, to Christopher Hitchens, "Whose history is it?," *Vanity Fair*, December 1993, p. 117. The professor had the gall to add: "The revisionists use [R. Höß] all the time for this reason, in order to try and discredit the memory of Auschwitz as a whole."

²⁰ Zündel Trial in Toronto in 1985, transcription, pp. 1447-1448, 1636. The book in question is: R. Vrba, *I Cannot Forgive*, Bantam Books, Toronto 1964.

²¹ Shmuel Krakowski, archives director of Yad Vashem, and Professor Yehuda Bauer finally admitted in 1990 that "the Nazis never made soap from human fat," *The Jerusalem Post International Edition*, 5 May 1990. In a cemetery of Nice (France), there is a monument which bears the following inscription: "This urn contains soap from human fat manufactured by the Germans of the Third Reich with the bodies of our deported brothers."

²² In Jean-Claude Pressac's opinion, the total number of deaths at Auschwitz, in round numbers, lies between 630,000 and 710,000; among them we must count 470,000 to 550,000 Jews who were gassed: *Die Krematorien von Auschwitz. Die Technik des Massenmordes*, Piper-Verlag, Munich 1994, p. 202.

²³ Arno J. Mayer, *Why Did the Heavens Not Darken? The "Final Solution" in History*, Pantheon Books,

Since 2 July 1982, at the end of an international symposium the exterminationists had organized at the Sorbonne (Paris) to attempt to answer me, they had shown themselves incapable of producing the slightest proof of the existence and the operation of a single gas chamber. In March of 1992, I hurled my challenge:

“Show me or draw me a Nazi gas chamber!”

Jean-Claude Pressac, on whom the exterminationists so much counted, had proven himself incapable of bringing forth anything but what he called “traces of the crime,” and he had taken great care not to provide us with a total physical representation of the weapon used in the crime.²⁴

On 31 August 1994, I had a meeting with Michael Berenbaum, at that time the scientific director of the Holocaust Memorial Museum in Washington, in his office and in the presence of four witnesses (two on his side and two on mine). I forced him to admit that, paradoxically, his museum contained no actual representation of a ‘Nazi gas chamber’ (the model of Krema II being only an artistic creation bearing no relation to reality). I asked him why. He finally replied:

“The decision had been made [by us] not to give any physical representation of the Nazi gas chambers.”

His response was equivalent to that of a Catholic priest – Mr. Berenbaum is a Jewish theologian – who decided to eliminate any representation of the cross from his church. To be driven to such extremes, one must surely feel that he has his back to the wall.

I think that the co-religionists of Mr. Berenbaum will at last abandon the gas chamber as they have abandoned the Jewish soap and the Auschwitz 4 million. They will go farther than that. As in the two previous cases, they will present themselves as the discoverers of the myth and accuse the Germans, the Poles, or the Communists of having fabricated the ‘myth of the gas chambers.’ In support of their impudent thesis, they will then invoke the names of Jews who are revisionists totally or in part (J.G. Burg, Jean-Gabriel Cohn-Bendit, Roger-Guy Dommergue, Arno Mayer, David Cole, Christopher Hitchens, Joel Hayward ...). They will then assign themselves the starring role.

At the same time, however, transforming the ‘Holocaust’ of the Jews into a religious belief, this time divested of all material content, they will be only the more insistent in denouncing authentic revisionists as ‘deniers,’ or ‘negationists,’ as being intolerant, heartless, basely materialistic and hostile to the free expression of religious sentiments. For those Jews, the true revisionists will thus continue to be diabolical in spirit even if they must be acknowledged to be in the right from a factual point of view.

The revisionists are neither diabolical nor negative. By no means are they ‘naysayers.’ They are positive in outlook. At the conclusion of their research – which is positivist in character – they affirm that certain beliefs are just myths. *Such myths are harmful in that they feed hatred.* The revisionists strive to describe what has taken place and not what has not taken place. In sum and substance, what they proclaim to a wretched humanity is good news. Seeking only historical accuracy, they find themselves fighting against calumny and for justice. They have suffered and they will continue to suffer, but I believe, all things considered, that history will declare them right and thus render them justice.²⁵

ROBERT FAURISSON, September 23, 1994

New York 1988, pp. 362, 365. The author, of Jewish origin, was a professor of history at Princeton University (USA).

²⁴ It is noteworthy that although he knows how to draw, in none of his works does J.-C. Pressac venture to offer us a concrete representation of an entire gas chamber with an explanation of its “technique and operation.” In his huge book (*Auschwitz: Technique and Operation of the Gas Chambers*, The Beate Klarsfeld Foundation, New York 1989), he says that no “direct proof” exists but only “criminal traces” or “indirect proofs” (p. 429).

²⁵ A basic work, indispensable for the study of historical revisionism, is that of Canadian trial lawyer Barbara Kulaszka (ed.), *The Second Zündel Trial: Excerpts from the Court Transcript of the Canadian “False News” Trial of Ernst Zündel, 1988*, 2nd ed., Castle Hill Publishers, Uckfield 2019.

The Controversy about the Extermination of the Jews

An Introduction

GERMAR RUDOLF

“No student, no researcher and no layman should believe any facts to be ‘conclusively proven,’ even if the textbooks present them as such.”¹

1. A German-Jewish Vision of the Future

When the cultural and social integration of the Jews in Germany became a reality in the course of the 19th Century, this development also heralded one of the greatest and most fruitful symbioses that ever connected two peoples. For one, the identification of the Central and partly also of the Eastern European Jews with German culture and even with the German nation could not be overlooked. The high points of Jewish participation in the fate of the German nation no doubt include the many Jewish soldiers of World War I, some of whom were highly decorated for their valor.² Another manifestation of this solidarity, however, was the opinion widely shared among Zionists that the official language of the future State of Israel should be German.³

But the interconnectedness of these two peoples goes much deeper than that. Who still remembers today the name Eduard von Simson, the son of formerly Jewish parents who later converted to the Protestant faith? He was the one who played decisive roles in all stages of Germany’s state unification in the 19th Century, a process in which he was far more important than, for example, King Wilhelm I or Heinrich von Gagern.⁴

Who could forget the great and immensely important Jewish sector of the German intelligentsia, the philosophers and poets, scientists and artists who contributed so decisively to Germany’s world-wide fame in art and science for the past three centuries?⁵ An examination of a list of Nobel laureates for the first part of the 20th Century reveals not only the striking predominance of German scientists, but among these also the large numbers of Jews.⁶

Could this symbiosis, so profitable for the whole world, be possible once again today?

If it seems a distant, utopian dream: why?

Today, German-Jewish relations are dominated by the accounts of suffering between 1933 and 1945. These years seem to have irretrievably poisoned German-Jewish relations, which are marked by a pattern of never-ending accusations on the one side and equally never-ending penitence on the other. What falls by the wayside is any recollection of such events of our shared history that have positive value and could serve as a model for future co-existence.

⁵ Amos Elon, *The Pity of It All: A Portrait of Jews in Germany 1743-1933*, Penguin, London 2004.

⁶ Until 1933 there were 38 German Nobel laureates, of which five were of Jewish faith, that is 13%; much less than 1% of all Germans were Jewish at that time.

It is my wish that both peoples should come together again in a partnership of mutual respect, so as to take up the traditions of an era that brought the world, Jewry, and the German people such immense benefit. It is also my wish that the time may come, at long last, where all the reciprocal contempt or disdain, mutual distrust and fear are reduced and ultimately removed. I long for the end of an era that has brought the world, Jewry, and the German people more misfortune than perhaps any era before.

Michael Wolffsohn, professor of history at the University of the German Bundeswehr in Munich, realized that the Jewish side in particular considers the constant remembrance of the Holocaust⁷ to be the third main pillar of Jewish identity today, right next to the Jewish religion and Jewish nationalism.⁸ This attitude, however, can result in the Jewish side's perpetual consideration of Germany and the German people as 'the enemy,' which can only detract from the peaceful co-existence of the two peoples.⁹ A discussion thus seems called for regarding the part which the Holocaust should play in the way Jews see themselves, so that both peoples may share a future relationship based on partnership.

A reconciliation between both peoples, however, requires more than that. Reconciliation can progress only in a climate which fosters candor and listening with an open mind and spirit; where opinions are expressed rather than choked back or even suppressed; where points of contention are discussed in a civilized manner and not hidden by hushing-up, distractionism, or violence.

Therefore, it is not only a matter of a discussion of the Holocaust's proper place in Jewish self-perception; it is also a matter of the question whether historical accounts as they are presented today are correct. It is a question of whether the tendency, pointed out by Professor Wolffsohn, to remodel the Holocaust into a new transcendental pillar of Jewish identity, might have contributed to exaggerations and hence distortions of the way in which the events in question are themselves portrayed.

With this anthology of free scientific expression of opinion regarding the historiography of the Holocaust, I wish to extend a general invitation to an open discussion of these matters among equals, despite – or because of – the fact that, unlike most other publications on this topic, the position taken here is a much-contested one. For the sake of such a discussion it is imperative that neither party disputes the other's honesty and desire for reconciliation. The first and foremost goal of this discussion is the joint and sincere search for truth, in order to contribute to a reconciliation between Jews and Germans, which may perhaps result in the realization of my dream of a revival of the German-Jewish symbiosis.

2. The Central Taboo of Our Time

But should this dialogue, conducted in a spirit of partnership, also include the Holocaust? Whatever happened to the Jews in Hitler's sphere of control between 1941 and 1945, was it not bad enough in any case? Does any specific how and how-much even matter? Mightn't any discussion of it be superfluous?

Let us assume for a moment that how and how much do not matter; to an extent, this view is certainly morally justified. Why then is there a need today for official insistence, backed up at least in most countries of Europe with threats of criminal prosecution, that things were exactly as we are commonly told they were, and not a whit different? If the details really do

⁷ The word 'Holocaust' itself is an ambiguous term. Frequently this word is used to denote all anti-Jewish measures taken by the German National Socialist government and its allies, but since persecution has unfortunately not been unusual in history, this definition seems far too broad. Used here, it means the intentionally committed, or only implied, *genocide* of the European Jews (allegedly) by the National Socialists, mainly with the murder weapon 'gas chamber.'

⁸ Michael Wolffsohn, "Eine Amputation des Judentums?," in *Frankfurter Allgemeine Zeitung*, April 15, 1993, p. 32; for the psychological significance of the Holocaust, cf. also H. F. Stein, "The Holocaust and the Myth of the Past as History," *The Journal of Historical Review* (JHR) 1(4) (1980), pp. 309-322; M. A. Hoffman, "The Psychology and Epistemology of 'Holocaust' Newspeak," *JHR* 6(4) (1985), pp. 467-478.

⁹ Moshe Zimmermann as well has recognized the conversion of the Holocaust into a mythical entity – a conversion that accelerates as time goes on – as an obstacle to any return to German-Jewish normalcy; cf. Zimmermann, "Die Folgen des Holocaust für die israelische Gesellschaft," *Aus Politik und Zeitgeschichte* 42(1-2) (1992), pp. 33-43, esp. p. 34.

not matter very much at all, then why is there such adamant refusal to discuss them and to consider other opinions? If no one questions the morally reprehensible nature of the persecution of the Jews *per se*, why should it not be possible to discuss individual aspects of this persecution in a controversial manner? Is it a social taboo that must be respected, as Professor Arnd Simon said?¹⁰

In the mid-1980s, the theories of the German historian Professor Ernst Nolte caused a stir because he not only demanded a scientific comparison between National Socialism and Stalinism,¹¹ but also introduced arguments regarding the motivation behind the National-Socialist persecution of the Jews which had previously been the sole province of right-wingers, and which therefore were frowned upon.¹² That alone sufficed to warrant criticizing Nolte severely for these breaches of taboo. Since historical and political developments as well as recent findings following the opening of the archives of former Eastern Bloc nations confirmed Nolte's position, the hue and cry has now died down.

However, Ernst Nolte was not content with this, and elaborated his point further: in 1993 he published his work *Streitpunkte*, an overview of the topics which are still in dispute regarding the historiography of the Third Reich.¹³ He included not only such points of contention as are accepted by establishment historians, but also focused emphatically on the theories of 'radical revisionism' which dispute, and attempt to refute, any planned genocide of the Jews by the Third Reich, specifically through the use of poison gas in stationary or mobile gas chambers. According to Nolte this thesis "can no longer be dismissed as merely absurd or malicious [...]"¹⁴ After careful examination of the revisionist body of literature, which he outlines in part, along with its theses or claims, he grants that the revisionist school of thought is based on a scientific standard which, as far as mastery of source materials is concerned, is at least equal to that of the establishment historians,¹⁵ even though he concludes that he does not embrace the opinions of the revisionists.¹⁶ No doubt the statements he made in his book represent a much-greater breach of taboo than did those which led to the 'Historians' Dispute,' since after all in this book he made the revisionists and their theories and arguments appear socially acceptable – something which, according to Nolte, had been carefully avoided previously by means of rejection, slander or simply hushing-up. The same, of course, happened to his book as well: it was hushed-up and ignored, and the radical leftists took counter-measures – not in the form of published rebuttals, but in the form of violence. When Nolte was to give a lecture in Berlin in early February 1994, he was attacked and prevented from speaking by some 30 persons; not by anarchists, but by 'normal' intel-

¹⁰ In a conversation with Gernar Rudolf on May 3, 1993, at the Max-Planck-Institute for Solid State Research, Stuttgart. Compare with that the very interesting experiments conducted by Robert Hepp, Professor of Sociology, with his students. Exposing them to revisionist theses during his lectures resulted in reactions that resembled very much the reactions of members of 'primitive' cultures when their social taboos are violated: R. Hepp, "Die Kampagne gegen Hellmut Diwald von 1978/79. Zweiter Teil: Richtigstellungen," in Rolf-Josef Eibicht (ed.), *Hellmut Diwald. Sein Vermächtnis für Deutschland. Sein Mut zur Geschichte*, (ed.), Hohenrain, Tübingen 1994, endnote 46, p. 140. In Germany, everything concerning Jewish matters is indeed a very strong taboo. One can establish this by asking Germans what they think is the greatest taboo of German society. In most cases, they would not even dare to spell out the word "Jew," but would name other topics, like 'sex' or 'foreigners.' In a society that claims to have no social taboos, naming a subject 'taboo' is identical with an accusation of this society, and that equals a violation of selfsame taboo most people don't dare to commit.

¹¹ The comparability of the two totalitarian regimes has long been a central theme in Nolte's research; cf. Nolte, *Der Faschismus in seiner Epoche*, Piper, Munich 1963 (English: *Three Faces of Fascism*, Holt, Rinehart & Winston, New York 1966); also Nolte, "The Third Reich's Place in History: A Conversation with Professor Ernst Nolte," *JHR* 14(1) (1994), pp. 15-22.

¹² High point: E. Nolte, *Der Europäische Bürgerkrieg 1917-1945*, Ullstein, Frankfurt am Main / Berlin 1987. For a synopsis of the so-called Historians' Dispute, together with a comprehensive bibliography, cf. I. Geiss, *Der Hysterikerstreit*, Bouvier, Bonn 1992; cf. R. Kosiek, *Historikerstreit und Geschichtsrevision*, 2nd ed., Grabert, Tübingen 1988.

¹³ E. Nolte, *Streitpunkte*, Ullstein, Frankfurt am Main/Berlin 1993; cf. also my response: "Im Streit mit Professor Nolte," in: G. Rudolf, *Auschwitz-Lügen*, 3rd ed., Castle Hill Publishers, Uckfield 2016, pp. 133-185.

¹⁶ *Ibid.*, pp. 9, 290, 297.

lectuals who attacked him verbally with cries of “This is a Nazi!,” as well as physically with tear gas, blows and kicks. The *Frankfurter Allgemeine Zeitung* correctly called it “terrorism of conviction” in the Federal German capital.¹⁷ I wonder whether Professor Nolte still accuses Robert Faurisson, the French professor of text and document criticism, the best-known revisionist world-wide, of being himself partly to blame for the violent assaults against him, since after all Faurisson had allegedly phrased some of his theories in a polemical and aggressive manner?¹⁸

3. Germany’s Paralysis by Political Correctness

Non-German readers are probably not the only ones who will need an explanation regarding the continuing decay of constitutional values in Germany and how this came about.¹⁹

In a recent speech, Günther H. Rehak, Austrian Social Democrat and formerly personal secretary to Austrian Federal Chancellor Dr. Kreisky, showed how the anti-Fascist movement – which fights so vehemently against any critical assessment of historiography, especially that of the Third Reich – differs from the other ‘anti’-movements.²⁰ Whereas anti-Capitalism or anti-Communism, for example, were always a matter of personal convictions and never became institutionalized, anti-Fascism has become organizationally firmly entrenched and structured on all social levels, especially in the German-speaking countries. There are, for example, anti-Fascist cafés (such as in Vienna and Berlin), anti-Fascist bookstores, and an almost endless number of organizations that incorporate the term ‘anti-Fascist’ in their name or at least somewhere in their by-laws. While one’s reply to the question ‘are you anti-Communist?’ or ‘are you anti-Capitalist?’ has few noteworthy social repercussions, how to reply to ‘are you anti-Fascist?’ has become a virtually “existential” question for people especially in German-speaking countries: anyone who then fails to clearly establish his anti-Fascist attitude has all but disqualified himself morally.

Gerard Radnitzky has given an excellent account²¹ of the origin, mechanisms and effects of German anti-Fascist opinion terrorism, a phenomenon which is also generally downplayed as ‘political correctness’ (PC). While PC has shown social effects in the United States, it has remained largely without pronounced consequences in the political and especially the legal arena there, and has also prompted considerable countermovement.²² Primarily in German-speaking countries, on the other hand, it has increasingly become the yardstick by which all political and legal decisions are measured. The origins of this development are complex. For one thing, by means of the provisions for compulsory licensing²³ the so-called re-education program of the post-WWII American government in West Germany ensured that socially influential positions, particularly those in the major print and broadcast media, in historiography, and in sociology, were held by decidedly anti-Fascist, *i.e.*, pronouncedly leftist persons, and that anti-Fascist and anti-national attitudes were deliberately fostered there. There was no free press and no academic freedom at the universities until 1955, when West Germany was granted partial sovereignty. Conservative or right-wing publications could not counterbalance the economic advantages held in 1955 by the media that had been established in 1945 or shortly thereafter. The same goes for certain academic circles in German colleges and universities, where ideologically defined elements continually

¹⁷ *Frankfurter Allgemeine Zeitung*, Feb. 4, 1994, p. 4, and Feb. 5, 1994, p. 27.

¹⁸ E. Nolte, *op. cit.* (note 13), p. 306.

¹⁹ The German intolerance of Scientology, which raised some eyebrows in the United States, also belongs in this category.

²⁰ G.H. Rehak, “Wandlungen des Antifaschismus,” *Kommentare zum Zeitgeschehen* (Vienna), Nr. 33, August 1997.

²¹ G. Radnitzky “Die ‘Politische Korrektheit’ gefährdet die Meinungsfreiheit. Totalitäre Tendenzen im Rechtsstaat,” in R. von Schrenck-Notzing (ed.), *Freiheit braucht Mut*, Kronos, Munich 1997, pp. 125-176.

²² Cf. J.F. Garner, *Politically Correct Bedtime Stories*, McMillan, New York 1994.

²³ Until 1955, a newspaper or broadcast media could be operated in Germany and Austria only if one had been licensed by the victors to do so. To be licensed, openly anti-national and anti-Fascist leanings were imperative, cf. C. von Schrenck-Notzing, *Charakterwäsche. Die Politik der amerikanischen Umerziehung in Deutschland*, Ullstein, Berlin 1993; G. Franz-Willing, *Umerziehung*, Nation Europa, Coburg 1991.

perpetuate themselves. And to make sure that the situation could not change in political respects either, the so-called Office for the Protection of the Constitution was established in West Germany; besides combating openly Communist political parties, this agency does all it can to shunt all conservative, nationalist or right-wing parties and their members into a juridical void. Consequently, to this day Germany has no major conservative or right-wing media, next-to-no such university or college professors, and no such political parties of any significance.

The second break which Radnitzky identifies in West-German post-war history is the so-called ‘Student Revolt’ of 1968, in the course of which West-German students, incited by the leftist or even Communist teachings of their professors whom the Allied occupation armies had installed in the German universities two decades earlier,²⁴ provoked severe riots with their pro-Communist slogans.²⁵ A small part of this movement descended into left-wing terrorism that kept West Germany on tenterhooks in the 1970s, while the majority of these leftists began their march into the country’s various institutions.²⁶ Around the turn of the millennium, this generation with its Socialist-to-Communist ideas was at the height of its power. Its members and their like-minded disciples are strongly represented in all facets of German society²⁷ and are very adept indeed at bringing public opinion under their control by means of the so-called ‘Fascist Two-by-Four,’²⁸ i.e., the way in which any and all opposition is silenced by the automatic fear of being accused of Fascist leanings. Radnitzky exposes the methods with which this manipulative, mendacious and falsifying elite uses media campaigns to bring about the downfall of persons holding dissenting opinions, and how this elite does not even balk at using or at least tolerating violence, for example in the form of assassination and arson of (insignificant) right-wing politicians or publications. The voices warning that the intellectual climate in Germany is becoming more and more poisoned by this opinion terrorism and that Germany’s democracy is in grave danger are now growing louder,²⁹ but of course the German media, those “enemies of free society,”³⁰ keep these voices from the public, and the rest of the world also studiously ignores them. Obviously, as was already the case before World War Two, a weak and self-destructive Germany, descending into a new totalitarian state in whose internal affairs the powers-that-be meddle at will, is again preferred to a strong German democracy, which would obviously present unwelcome economic, political and moral competition.

The chief mechanism with which these leftist circles psycho-terrorize the German people and drive it to hysteria is the so-called theory of ‘collective guilt,’ sometimes veiled as ‘col-

²⁴ Names such as Max Horkheimer, Theodor Adorno, Herbert Marcuse etc.

²⁵ Communist leaders such as Ho Chi Minh, Che Guevara and Mao Tse Tung were brazenly cheered in those days.

²⁶ One of the more prominent figures of this movement was Germany’s foreign minister in the late 1990s/early 2000s: Josef Fischer. Many members of Germany’s government around the turn of the century – the administrations of Chancellor Gerhard Schröder between 1998 and 2005 – actually have their ideological roots in left-wing extremism of the 1968 student-protest movement.

²⁷ According to M. Behrens, R. von Rimscha, *“Politische Korrektheit” in Deutschland. Eine Gefahr für die Demokratie*, Bouvier, Bonn 1995, p. 112, at least 48% of all leading opinion-makers in Germany describe themselves as leftist to leftist-radical, 19% as liberal and only 10% as Christian-socialist to conservative – and this in a political opinion-climate which for 50 years now has been shifting the zero coordinates of the political spectrum permanently towards the left. An analysis of this success story is presented, for ex., by Rüdiger Proske, in *Vom Marsch durch die Institutionen zum Krieg gegen die Wehrmacht*, Von Hase & Köhler, Mainz 1997.

²⁸ Hans-Helmuth Knütter, *Die Faschismus-Keule*, Ullstein, Frankfurt/Main 1993.

³⁰ G. Bacher, according to G. Radnitzky, *op. cit.* (note 21), p. 139.

lective shame' or 'collective responsibility.' Radnitzky²¹ gives excellent examples describing how this method attempts to hold the German people morally, politically, and economically liable for Hitler's actual or merely claimed crimes until the end of time. The prerequisites for the successful implementation of this concept are: 1. the absolute acceptance of all allegations of German historical guilt, as well as 2. the moral (and increasingly, the legal) rejection of all attempts at historical revision and 3. the blacking out of similar or even worse crimes committed against the German people by others. By now this behavioral pattern has won out not only in large sectors of German historiography and the media, but is also practiced almost without exception by the German people's political representatives. And once such practices have morally branded Germany's history and the German people in their capacity as its carriers as being 'Fascist,' the self-proclaimed anti-Fascists are in an unassailable position, morally speaking, from which they can get away with almost anything.

An excellent analysis of the situation of the historians engaged in exploring German contemporary history was presented by Backes, Jesse and Zitelmann in 1990.³¹ They describe the sheer impossibility of getting public attention for new findings – much less getting them published – as soon as they are considered by public (or rather published) opinion to improve the image of the Third Reich. Many historians are more interested in preserving the politically correct (that is anti-Fascist) image of this period of history than in supporting impartial research.³² Unfortunately, the situation has worsened in most European countries during the last two decades, perhaps because more and more historians as well as non-historians are no longer willing to accept these illegal social restrictions, and as a result, the media as well as the political and legal systems in Europe react with an ever growing massive anti-Fascist propaganda campaign and with steadily increasing social persecutions and legal restrictions against historical dissidents.

4. Total Juridical Blockade

If terrorism against one's convictions or opinions were the only problem we had to wrestle with today, we might almost consider ourselves lucky, since, after all, one might expect that the authorities would protect us from this if they care to be acknowledged as authorities of a legitimate 'state under the rule of law.' However, the problem is much greater than that, at least in most parts of Europe and, *e.g.*, lies hidden in Article 5 of the German Basic Law, which covers the right of free expression of opinion, academic freedom, and freedom of research and teaching.

According to Nolte, and in accordance with the UN Human Rights Convention, science and research must be permitted to question everything without exception.³³ Anyone wishing to criminalize such doubts, formulated as theses and evidence and published in an objective manner, violates the principle of academic freedom in a way which must be sharply rebuffed.³⁴ But what is the situation in reality? Can one be sure of the protection of German law if one postulates that certain aspects of the complex described as the Holocaust of the Second World War did not take place? Let's look at some relevant court decisions. Regarding freedom of opinion and of research, these verdicts indicate that the same are limited by the basic right of the inviolability of human dignity (Article 1 of the Law), which certainly no one will contest. If someone makes slanderous statements, or explicitly advocates the public to turn violent, this is beyond the legal pale of the free expression of opinion. But now it has become the rule for German courts to decree that even the mere supposition that

Vergangenheitsbewältigung und Tabus," p. 543; Uwe Backes, "Objektivitätsstreben und Volkspädagogik in der NS-Forschung. Das Beispiel der Reichstagsbrand-Kontroverse," p. 614.

³³ Following Karl R. Popper, one of our most renowned contemporary philosophers, this is the central point of human dignity, cf. Karl R. Popper, *Objective Knowledge*, 4th ed., Clarendon Press, Oxford 1979. For more detail cf. G. Rudolf, *Resistance Is Obligatory*, 2nd ed., Castle Hill Publishers, Uckfield 2016.

³⁴ E. Nolte, *op. cit.* (note 13), p. 308.

certain specifics of the Holocaust did not take place constitutes an insult to the victims of the Holocaust. For this reason, they state, such claims are not protected by Article 5 of the Law.

The question arises, of course, whether the thesis that not as many Jews died as had been presumed, and particularly not in the manner believed, can possibly constitute an insult to our Jewish fellow citizens. To reword this in neutral terms: can a person who to date has believed that all his five missing siblings lost their lives in some horrible events be insulted by a third party advancing the claim that four of the five siblings did not die in said gruesome events, but rather had been dispersed throughout the world by the upheavals of war, and had assumed different names, which makes them impossible to trace today? One might at least expect the person in question to listen to the arguments presented, and then to draw new hope from, or even rejoice in, this piece of potential good news. The question, in other words, is whether it can be an insult to someone to claim that a certain injustice or misfortune did not befall him or his relatives. Is it not rather the case that if the theory proved to be correct, one should be mutually happy that the injustice did not occur? In other words, the situation hinges on the proof.

But will German courts permit such proof? The German justice system works on the presumption that the Holocaust, both in its entirety and in specifics, is ‘self-evident,’ and unrebutted by public life and events, and that therefore any claims to the contrary are considered patently false until proven otherwise.³⁵ In such cases of ‘self-evidentness’ the German Code of Criminal Procedure exempts the prosecuting attorney’s office and the court from the obligation to bring evidence in their own case.³⁶ In fact, however, the courts go even farther, by interpreting the paragraph in question in such a way that the defense is not permitted to bring counter-evidence against the officially sanctioned tenet!

§245 of the German Code of Criminal Procedure, however, offers a theoretical possibility for overcoming the court’s refusal of evidence. The paragraph states that evidence already present in the courtroom may only be rejected if:

- that which *is to be established* by the evidence has already been established or *is self-evidently true*, or
- the evidence is *utterly unsuitable*.³⁷

But the German judiciary claims that the *opposite* of revisionist motions to introduce evidence is true. Hence, they cannot reject these motions for being self-evidently *true*. In other words, if the defense moves to hear an expert witness who is present in the courtroom and who has been summoned by the defense in accordance with proper procedure, the court can refuse to hear the evidence only if an examination of the expert witness’s background reveals that he is not properly qualified to testify on the issue at hand due to a lack of professional qualifications or experiences.

In actual fact, however, German courts as a rule refuse any kind of evidence present in the courtroom, including expert witnesses, rejecting them on the grounds of self-evidentness or of utter unsuitability without even bothering to look into the expert’s qualifications. To date there has only been one exception where an expert witness was even so much as questioned

³⁵ In the USA and Canada, the situation is in some respects similar; cf. the case of Institute for Historical Review v. Mel Mermelstein, as described in *IHR Newsletter*, No. 82, October 1991, and M. Weber, “Declaration of Mark Edward Weber,” *JHR* 3(1) (1982), pp. 31-51; see also Michael Collins Piper, *Best Witness. The Mel Mermelstein Affair and the Triumph of Historical Revisionism*, Center for Historical Review, Washington, D.C., 1994; Theodore J. O’Keefe, “History and Memory: Mel Mermelstein’s ‘Eyewitness’ Evidence,” *JHR* 16(4) (1997), pp. 2-13; cf. the verdict of the second Zündel Trial in Toronto (Queen v. Zündel), Barbara Kulaszka (ed.), *The Second Zündel Trial: Excerpts from the Court Transcript of the Canadian “False News” Trial of Ernst Zündel, 1988*, 2nd ed., Castle Hill Publishers, Uckfield 2019, pp. 451f.; even though the Canadian Court admitted physical evidences, it completely ignored them in its verdict.

³⁶ §244, Section 3, Clause 1, German Code of Criminal Procedure: “A motion to introduce evidence has to be rejected if [...] the taking of evidence is superfluous due to self-evidence, [...]”

³⁷ §245, Section 2, Clauses 1+3.: “The court is obligated to include in its taking of evidence [...] expert witnesses who have appeared in court, summoned by the defendant [...], if a motion to introduce evidence was filed. [...] Other than that, it [the motion] may be rejected only, if the fact to be established has already been established or is self-evident.”

on his qualifications. The court decided that the educational status of the witness as *Diplom-Chemiker* (academically accredited chemist) was insufficient to allow him to give expert testimony on questions relating to chemistry. That, they decided, would require at least a PhD title³⁸ which is nonsense, plain and simple. It is important to note that this accredited chemist is the author of this article and that, following my appearance at the court, the Central Council of German Jews intervened with my employer in order to put a stop to my activities as expert witness.³⁹ There can be no doubt that this intervention contributed to my subsequent dismissal without notice from my term position with the Max-Planck-Society.⁴⁰ Further, the University of Stuttgart denied me my doctorate despite the fact that I had met all formal and qualitative-academic criteria. It is very likely that the aim of all these backstage arrangements was to ensure that I would not cause even more trouble for standard historiography.⁴¹

But back to ‘self-evidentness.’ Since the law generally accepts that matters considered by our society and hence our courts to be self-evident are not necessarily always true – old ‘truths’ are forever being upset by new findings – written German law grants the defense the right to disestablish ‘self-evidentness’ and thus to open the doors for further hearing of evidence. This may be done in two ways:⁴²

- The defense must show that the evidence it wishes to present is superior to all evidence previously presented in German courts, which was used to justify the ruling of self-evidentness, or
- the defense must prove that there is marked public dissent regarding the opinion deemed self-evident. A few publications from questionable sources are not enough – a considerable portion of the public establishment must hold a contrary opinion.

In fact, however, in recent years all motions by defense counsels to prove the superiority of new evidence have also been refused on the grounds of the self-evidentness of the Holocaust, even though the Holocaust itself was not even the point at issue in the motions; the point having been merely the claim that the new evidence was superior to the old.⁴³

Anyone who considered this suppression of evidence to be a violation of the German Code of Criminal Procedure had to face the fact that even the German Federal Supreme Court does not deign to respond to appeals brought by the defense against this state of affairs. In 1993 this court in fact decided that motions to examine the qualitative superiority of new over old evidence can be dismissed on grounds of the self-evidentness of the Holocaust, because such a dismissal concurs with the decision-making process of all Federal German courts.⁴⁴ In other words, the German courts cite each other in defense of their own practices.

Just recently the German Federal Constitutional Court took an especially easy way out when it decided that one particular researcher’s scientific theses pertaining to the same subject represented an allegation of fact which, not being a statement of opinion, was not protected by the right of free expression thereof and hence could be banned outright.⁴⁵ Even the testimony of an expert witness who is to appear in court to testify with regard to the topic at

⁴³ Revealing in this context are the admissions of a judge of the Munich County Court who said to the defense lawyer Dr. Klaus Goebel on July 22, 1992:

“You don’t believe yourself that your motions to introduce evidence will be accepted, do you? You have to know that there is a political guideline. This guideline demands that already those who merely doubt the gas chambers have to be put on trial and sentenced. You will never succeed with this.” (Personal communications of Dr. K. Goebel to me).

⁴⁴ Ref. 1 StR 193/93.

⁴⁵ Federal Constitutional Court, decision of June 9, 1992, Ref. 1 BvR 824/90, *Neue Juristische Wochenschrift* 1993, p. 916.

issue is no longer free today, even disregarding for the moment the aforementioned professionally ruinous consequences which such activity entails. Presiding Judge Peter Stockhammer of the Nuremberg District Court, for example, cautioned the author of the present article that he might be committing a criminal offence if he were to support the thesis of the defendant, Artur Vogt, which proposed that the gas chambers in Auschwitz had not existed.⁴⁶ This was the first time that a German court stated outright that an expert witness on the subject of the Holocaust must always arrive at a pre-determined conclusion if he wishes to avoid committing a criminal offense. But what are the implications of this for the value of all those expert reports drawn up to date on this subject of history, if the experts writing them never had any choice but to conform to Allied and German political strictures? An indirect answer to this was given by a renowned expert witness, the historian Hans-Heinrich Wilhelm:⁴⁷

“Today the history of the Holocaust is considered to be by far one of the best-researched chapters of recent history. A closer look at this subject, however, usually reveals very quickly that our understanding is still based on a very unstable foundation. Often the congruity of the various research can only be explained by the historians’ practice of uncritically copying each other’s work [sic!] – while at the same time court files, which to this day are not generally accessible, continue to harbor undiscovered documents which even the prosecutors who dealt with the ‘case’ at the time may not remember today. Demands requiring historical expert witnesses to keep silent also at times cause the ‘state of research’ to lag behind the state of knowledge and awareness held by some few individuals.”

So, what are “demands requiring historical expert witnesses to keep silent”? This appears to be nothing less than the admission of a renowned expert witness that incomplete and thus biased testimony by those witnesses is the rule rather than the exception, *i.e.*, that they all commit perjury, probably partly because they are convinced that this is morally (in other words, politically) correct, or because they are simply afraid of the public reaction that is to be expected if they break the unwritten (or subsequently also codified) rules of Germany’s strongest taboo.

In light of these circumstances it seems sheer mockery that the courts state that one of the prerequisites for the disestablishment of ‘self-evidentness’ is that there must be noticeable public dissent, especially since anyone who dissents is mercilessly prosecuted in court and has not even the shadow of a chance to prove his objections, as he is denied the right to bring any evidence towards this end. In late March 1994, Federal Minister of Justice Leutheusser-Schnarrenberger, comprehensively slandering all dissidents as ‘neo-Nazi’ liars, stated that the underlying purpose of declaring the Holocaust to be self-evident was precisely to make it impossible for those disputing certain aspects of official historiography to explain their theses and present their evidence in court and in public:⁴⁸

“Hearing evidence [regarding the Holocaust] is therefore [i.e., due to its self-evidentness] superfluous. To many this may seem trivial, but it prevents the neo-Nazi liars from gaining a forum in the courts and the public.”

The German Federal Supreme Court decided in 1994 that, contrary to previous court practices, simply denying the destruction of the Jews in the Third Reich does not in itself constitute public incitement (§130, German Criminal Code) or incitement to racial hatred (§131). Rather, it must be proven that such denial was related to the National-Socialist school of thought regarding the Jews, or alternatively that it was insinuated that the Jews had set up the ‘Holocaust Lie’ in order to blackmail, plunder or destroy the German people, etc. (the “qualified Auschwitz Lie”). In its decision, the German Federal Supreme Court confirmed again the ‘self-evidentness’ of the murders in the gas chambers.⁴⁹ In other words,

⁴⁶ Ref. 6/38 Ns 341 Js 31951/92, cf. *Süddeutsche Zeitung*, March 17, 1994, p. 52; more details about this entire juridical scandal: Karl Salm, “Der Justizskandal in Fall Thomas-Dehler-Stiftung,” Part 1, *Staatbriefe*, 6(2) (1995), pp. 11-22; Part 2, *ibid.*, 6(3-4) (1995), pp. 18-36; Part 3, *ibid.*, 6(6) (1995).

objective revisionist research into the Holocaust and the publication of resultant findings would not come under the threat of prosecution under §§130f., even though they cannot be presented as evidence against the ‘self-evident truth’ about the Holocaust. Following a massive uproar in the media,⁵⁰ the Federal Supreme Court stated in its written opinion that the mere denial of certain National-Socialist mass murders – whether presented in a scholarly way or not – certainly could disparage the memory of the people (supposedly) killed in these mass murders, as well as insulting Jews living today, and might thus be punishable under §§185 and 189 of the German Criminal Code.

5. From Juridical Blockade to Juridical Terror

Following this German Supreme Court decision, it was to be expected that German legislators would endeavor to render even the so-called “basic Auschwitz Lie” – the objective scientific disputation of the Holocaust – a criminal offense under §§130f., as was already the case in Austria and France at that time and as several German political parties had also demanded for Germany following the Supreme Court decision.⁵¹ And indeed, Section 3 of the revision of §130, which came into effect on December 1, 1994, provides that anyone is guilty of incitement of the people

“[...] who, publicly or at an assembly, approves, denies or downplays, in a manner suited to disturbing public law and order, any act committed under the National-Socialist regime which comes under §220a Section 1 [genocide; G.R.]”

In the years following the adoption of this revised law, Germany saw a wave of criminal prosecutions against historical dissidents, which I will deal with farther below. In order to deny those dissidents any opportunity to present their views and arguments during their trials in court, this loophole was closed as well as a next step: First, the German Code of Criminal Procedure received a new rule designed to prevent that defendants and defense lawyer could use public trials to publicly explain undesired arguments. Ever since, German courts have wielded the power to gag the defense as they see fit. Here is the text of the scandalous Section 257a:

“The court may require participants in the proceedings to file applications and proposals regarding questions of procedure in written form.”

With this, the right to a public hearing guaranteed as a civil right is eviscerated, since once a judge has denied the defense its voice, the public thereafter may learn only whatever the prosecutors and the judge happen to mention. Further, one may confidently assume that many motions that in the course of argument often arise spontaneously and are therefore rendered orally, by effect of this ruling of the judge, are never made.

Section 249, Paragraph 2, of the German Code of Criminal Procedure is a perfect match for this, as it allows judges to prevent documents introduced into the proceeding from being read out in court:

“Reading [a document] into the record can [...] be dispensed with if judges and lay judges have taken note of the document’s contents and if the other participants have had the opportunity to do so.”

In extreme cases, this means that the public finds out absolutely nothing about the contents of any evidence. This also makes a mockery of the principle of public hearings.

Of both of these muzzling provisions, Dr. Dr. Uwe Scheffler, Professor of Criminal Justice at Europa University in Frankfurt upon Oder, wrote:⁵²

Rechts, 48(6) (1994), pp. 599-601.

⁵⁰ Cf. publications of the German daily press of April 22, 1994.

⁵¹ *Münchener Merkur*, March 17, 1994, p. 4. H. Däubler-Gmelin, SPD Vice Chairwoman and Minister of Justice of the SPD shadow cabinet, was particularly active in her support of this; *Süddeutsche Zeitung*, April 21, 1994; cf. also the Federal Minister of Justice (note 48). The *Frankfurter Allgemeine Zeitung* took a counter-position (April 7 and 27, July 7, 1994).

⁵² See Uwe Scheffler, “Strafprozeßrecht, quo vadis?,” *Goltdammer’s Archiv für Strafrecht* 1995, pp. 449-467, here p. 457; www.rewi.europa-uni.de/de/lehrstuhl/sr/krimirecht/lehrstuhlinhaber/Publikationen/Aufsaeetze/Strafprozessrecht_quo_vadis.pdf.

“According to this rule [Section 257a], the court can now deprive the parties to the trial of their voices and confine them to written form. How convenient: Since earlier laws had already provided for the option to read out documents by not reading them out, that is, by giving the parties to the action the opportunity to ‘become familiar’ with the text of the documents in quiet seclusion, this means that one can now maintain the silence of the grave in the courtroom. In addition to frequently voiced criticisms, the following may be pointed out: the legislature has clearly stated that this new regulation ‘streamlines’ the trial. Because writing and reading what was written takes longer than an oral argument, this means that the legislature expressly aims at dispensing with the right to a legal hearing.”

Next, the German courts set out to drag any defense lawyer into court who dared to file a motion to introduce evidence designed to challenge the orthodox version of the Holocaust narrative. The case of the late German lawyer Jürgen Rieger, who in the eyes of the establishment was a notorious right-wing extremist, served as a precedent in this regard. In 1996, Rieger had filed a motion during a court case to hear me as an expert witness on chemistry about the question, whether or not homicidal gas chambers had existed at Auschwitz. For this, the public prosecutor indicted him for Holocaust denial, but the Hamburg District Court acquitted him in 2000, stating that he merely served in the justified interest of his client.⁵³ The German Supreme Court, however, overturned this decision two years later and demanded that Rieger be convicted.⁵⁴ Ever since, in similar cases, several other German defense lawyers have been sentenced who had the audacity to file motions for the introduction of evidence designed to prove the veracity of their client’s views.

At this point in time, the German authorities had outmaneuvered the defense lawyers, but legal experts were still claiming that §130 of the German penal law was unconstitutional. This criticism was based on earlier decisions by the German Federal Constitutional Court, according to which laws which prohibit only certain opinions, attitudes or ideologies are unconstitutional and therefore illegal.⁵⁵ But the revised §130 created a special law which does exactly this: it provides for the punishment of approval, denial or downplaying of specifically and exclusively those acts of genocide actually or allegedly committed under the National-Socialist regime. If at all, such a revision might be constitutional only if it prohibited the approval, denial or downplaying of any and all acts of genocide ever committed.⁵⁶ In addition, the legitimate question arises why merely trivializations and minimizations are outlawed, whereas dramatizations and exaggerations are permitted. If a government prescribes history by penal law – in and of itself an absurd concept – then it must punish deviations from it in any direction, not just one.

Complaints to this effect by German judicial experts, stating that this special law against freedom of speech,⁵⁶ which was not thought through to the end,⁵⁷ is an “assault against the intellectual freedom of all dissidents”⁵⁸ and that its “legitimacy is at least questionable,”⁵⁹

were generally ignored. Even a doctoral dissertation written by a student of a fervent anti-revisionist professor of law, which solely focused on the “Punishability of the Auschwitz Lie” and concluded that outlawing radical revisionism is unconstitutional, went totally unheeded.⁶⁰

It got even worse, because 11 years after the 1994 toughening of the law, this §130 was tightened yet again. This time a paragraph was added which basically bans anything shining a positive light on National Socialism in any way:

“(4) Whosoever publicly or in a meeting disturbs the public peace in a manner that violates the dignity of the victims by approving of, glorifying, or justifying National-Socialist rule of arbitrary force shall be liable to imprisonment not exceeding three years or a fine.”

Although this may sound harmless, the German Administrative High Court decided in 2008 in a precedent-setting verdict that this offense is already committed,⁶¹

“if the perpetrator implicitly gives a positive assessment of the human rights violations committed under the rule of National Socialism – for instance by way of [positive] value judgments about responsible personalities [organizations, achievements or events of the Third Reich].”

Ever since, anyone could be prosecuted in Germany who states anything positive about the Third Reich in public, provided it can be assumed that the defendant has any affinity to right-wing ideologies. Safety from convictions can be gained only if one can either prove one’s anti-Fascist leanings or if statements about positive aspects of the Third Reich are nicely and credibly embedded in (anti-Fascist) litany of moral condemnation.

Of course, this tightening of the law did not change anything about the dubious legitimacy of this penal law. The critical legal experts holding this view were slapped in their faces by the German Constitutional High Court, though, when its judges decided in 2009:⁶²

“In general, restrictions to the freedom of opinion are permissible only on the basis of general laws according to Art. 5, Para. 2, Alternative 1, Basic Law. A law restricting opinions is an inadmissible special law, if it is not formulated in a sufficiently open way and is directed right from the start only against certain convictions, attitudes, or ideologies. [...] Although the regulation of Art. 130, Para. 4, German Penal Code is not a general law [...] even as a non-general law it is still compatible with Art. 5, Paras. 1 and 2, Basic Law, as an exception. In view of the injustice and the terror caused by the National-Socialist regime, an exception to the prohibition of special laws [...] is immanent.”

An exception from the prohibition of exceptions is therefore made here due to the historically exceptional case of National Socialism. But why is National Socialism an exceptional case? Because of claims which are such extreme exceptions that by exception we are not allowed to doubt them ...

That High Court decision was pretty much the last nail in the coffin for German freedom of expression with regard to the historiography of the Third Reich.⁶³

By now, clearly even historians perceive the politicians’ and jurists’ efforts to grossly restrict contemporary historians’ freedom of research as very oppressive. For example, the

⁶³ For a more thorough analysis of the repressive German criminal and procedural law, see my documentary *Germany, Country under the Rule of Law: Role Model or Illusion?*, July 27, 2017; <https://codoh.com/library/document/4872/>.

late historian Joachim Hoffmann of the German Armed Forces' own Research Center for Military History wrote:⁶⁴

"The efforts of the political parties to restrict the legally guaranteed freedom of scientific research are gradually taking on truly grotesque proportions. The result [...] would be that controversies relating to contemporary history would, in the future, be laid before the court, and decided by criminal courts under criminal law."

Elsewhere he becomes even more explicit with respect to measures of censorship, for example on p. 185:

"The Auschwitz problem has recently become the object of intensive journalistic debate, generally conducted both knowledgeably and intelligently in all its aspects, both in Germany and abroad, even if many groups zealously exceed the proper bounds of this debate due to their political motivations. This controversy is being conducted less in the 'official' literature than in rather obscure publications, and is not a little influenced by official prohibitions against certain forms of thought and speech, suspiciously watched over by a system of political denunciation. The related prevention of free discussion of an important issue of contemporary history, no matter how unfortunate it may be today, will, of course, be ineffective in the long run. Experience shows that free historical research can only be temporarily hindered by criminal law as it exists in many European countries. Historical truths usually continue to exert their effects behind the scenes, only to emerge triumphantly at a later time."

These and other politically incorrect views prompted the leftist press to call Hoffmann's book "a scandal."⁶⁵ Since Hoffmann's former superior, Manfred Kehr, who was still in office at the time, had written the preface to this book, certain circles attempted to initiate penal or at least disciplinary action against him, but their efforts failed.⁶⁶ Perhaps the most noteworthy comment of the 1990s was that of Daniel J. Goldhagen, who repeatedly stated in German-language media that the undemocratic German "Auschwitz-Lie law" ought to be abolished, and the sooner the better.⁶⁷ Heinz Höhne, for many years an editor at the leftist German weekly news magazine *Der Spiegel*, around the same time also commented critically on the ever-intensifying inquisition to which his colleagues were subjected.⁶⁸

"But if historians, in the course of their research, touched on this Manichaeian idea of good and evil, they could easily end up in a minefield of taboos and forbidden thoughts, where bizarre coalitions of 'pedagogues for the people,' self-proclaimed 'High Court judges of history,' and paragons of political correctness jealously guard their own brand of historical truth. They are driven by the gnawing suspicion that, given professional historiographers' penchant for revision, there will eventually be little or nothing left of the once so solidly established view of the Fascist regime of terror."

As a result of the first, 1994 tightening of criminal law, the spring of 1995 saw a wave of book destruction in Germany, in which history books of a revisionist persuasion as well as political books went the way of the state shredder; these books were exclusively of a right-wing nature, some of them even only allegedly so.⁶⁹ The fact that books with historical or political content can be destroyed in Germany on the order of a court is largely unknown. This may be due to the fact that such campaigns of book destruction are not generally publicized – in other words, they are carried out in secret. Since book confiscations are accompanied by corresponding criminal proceedings against all persons involved in the produc-

tion, importation and/or distribution of forbidden literature – *i.e.*, against authors, editors, publishers, booksellers, printers, and multiple-copy purchasers, even in cases where the books were produced, distributed or bought at a time when they were not yet banned⁷⁰ – the list of persons being prosecuted for “thought crimes” in Germany was growing at an alarming rate in those years. These account for a considerable portion of those cases which have led to an enormous increase in the category of alleged “right-wing crimes” in Germany in the mid-1990s.⁷¹

The first seize-and-destroy order that was issued after the tightening of Germany’s censorship law of December 1, 1994 was carried out in late March 1995 against the 1994 German edition of the very book you are holding in your hands, *Grundlagen zur Zeitgeschichte*.⁷² Though some 1,000 German academics protested against this book-burning,⁷³ and two distinguished historians even testified in court in favor of the book,⁷⁴ the court nevertheless decided that the book has to be destroyed, the publisher to be fined (30,000 DM), the editor jailed, some authors imprisoned, and several booksellers and purchasers fined or imprisoned as well. Though apparently supported by the German Federal Constitutional Court,⁷⁵ this ruling is quite obviously a violation of human rights, for this interpretation strikes at the heart of the fundamental right to freedom of inquiry, *i.e.*, the right to freedom of choice in the selection of one’s theses and the right to openness of research findings (cf. Karl R. Popper³³).

In light of the aforementioned experiences with mainly German courts and the reactions of the public it must seem downright miraculous that there are in fact members of the establishment who dare to challenge the taboo surrounding the Holocaust. Walter Lüftl, president of the Austrian Federal Chamber of Engineers until spring 1992, is certainly one of these. When he expressed his doubts about details of the Holocaust due to technical considerations, the Austrian justice system struck as mercilessly as is the rule in France or Germany. Since the academically accredited engineer Lüftl, being an ‘average’ citizen and exceedingly well qualified in his area of specialization (architecture), had not expected such behavior from his ‘state under the rule of law,’ this meant a painful learning process for him. Walter Lüftl describes his own case as an introduction to our topic, to show how John Doe and respected public personalities alike can suddenly find themselves caught up in the gears of a malicious state-administered justice system bent on safeguarding a taboo. At the same time, he shows

⁷⁰ German legislators simply assume that books are not made illegal by a state decree, but rather that they start out that way, by virtue of their contents.

⁷¹ Regarding the suppression and persecution of German patriots in general, cf. R.-J. Eibicht, *Unterdrückung und Verfolgung Deutscher Patrioten*, Hutten Verlag, Viöl 1997. On censorship in Germany, see my booklet *Eine Zensur findet statt! Redeverbote und Bücherverbrennung in der Bundesrepublik Deutschland*, 2nd ed., Castle Hill Publishers, Uckfield 2018. Hopefully, this book will soon also be available in an English edition. Since it is an expanded, updated version of the article that was featured as Appendix 3 in the first and second edition of the present book, this paper was omitted from this present edition.

⁷² We cannot discuss all cases here, but would like to refer to some publications about the probably most prominent cases: U. Walendy, “Ausgehebelte Grundrechte,” *Historische Tatsachen* no. 69, Verlag für Volkstum und Zeitgeschichtsforschung, Vlotho/Weser 1996; G. Rudolf, *op. cit.* (41); H. Schmidt, *Jailed in “Democratic” Germany. The Ordeal of an American Writer*, Guderian Books, Milton/FL 1997; G. Anntohn, H. Roques, *Der Fall Günter Deckert*, DAGD/Germania Verlag, Weinheim 1995; furthermore, the periodicals *VffG* and *The Revisionist* reported about censorship and other kinds of intellectual suppression in general quite frequently.

⁷³ “Appell der 100 Die Meinungsfreiheit ist in Gefahr,” *Frankfurter Allgemeine Zeitung*, May 17, 1996; in the *Stuttgarter Nachrichten* and the *Stuttgarter Zeitung* on July 19, 1996, with 500 signatures; in the *Westfalen-Blatt* on Sept. 13 and 18, 1996, with 1,000 signatures each.

⁷⁴ Expert reports by Prof. Dr. Ernst Nolte and Dr. Joachim Hoffmann, Tübingen County Court, Ref. 4 Gs 173/95; the former was published in G. Rudolf, *op. cit.* (note 33), pp. 263–292, the latter in *VffG*, 1(3) (1997), pp. 205ff.; see Appendix 2 at the end of this volume for the English translation.

⁷⁵ Cf. note 62 above. In a not quite comparable, but at least similar case, the German Federal Constitutional Court (ref. 1 BvR 408f./83) approved the confiscation of Wilhelm Stäglich’s book *Der Auschwitz Mythos. Legende oder Wirklichkeit? Eine kritische Bestandsaufnahme*, Grabert-Verlag, Tübingen 1979 (Eng.: *The Auschwitz Myth: A Judge Looks at the Evidence*, Institute for Historical Review, Newport Beach, Cal. 1986), see the appendix in Wigbert Grabert (ed.), *Geschichtsbetrachtung als Wagnis*, Grabert, Tübingen 1984, pp. 287ff.

the contrast between the treatment accorded to expert witnesses in trials pertaining to National-Socialist crimes and to similar witnesses in normal trials, and acquaints the reader with our topic by means of some technical explanations.

6. Dubious Evidence for the Holocaust

What kind of evidence is it that provides the foundation for those verdicts which German courts cite time and again in their rulings of self-evidentness? To date, in its trials of the so-called National-Socialist mass murders of Jews, the Federal German justice system – and others as well – has concerned itself merely with convicting individual accused persons of sole or joint guilt. The crimes themselves were never investigated by any court, but presumed to be self-evident, namely on the basis of the conclusions of the Nuremberg War Crimes Tribunals. These too, however, dispensed with any on-site investigations of the presumed crimes and based their conclusions on documents and “eyewitness” testimony obtained by dubious means, as we will learn later.

The legal self-evidentness of the National-Socialist genocide of the Jews, therefore, exists even though neither the whole of the genocide nor any part thereof was ever investigated by a court, *e.g.*, by means of examining the remains of victims, the murder weapons, perpetrators, or even the crime itself. But if the Holocaust is considered to be self-evident from the start and any court investigation thereof is thereby automatically obviated, no court can or may ever come to any conclusion other than that the crimes attested to were in fact committed. Under these conditions it is especially important to view eyewitness testimony in a critical light, for it is to be expected that testimony disputing a crime or a set of crimes will be rejected *prima facie* as worthless, while incriminating testimony is also *prima facie* accepted as truth. For the courts, in other words, the overall factuality of the crimes is settled from the start at any trial, and evidence is superfluous except for purposes of determining the degree of guilt for particular defendants and their punishment.

In the second contribution to this volume, I will outline the conditions under which eyewitness testimony and confessions came about in the decades that have passed since the Second World War. I have deliberately refrained from a critique or even an assessment of the testimony itself. My subjects were strictly the surrounding conditions of the post-war trials, whether conducted under Allied or especially under Federal German auspices, as well as the social atmosphere particularly in the Federal Republic of Germany. The results are perforce shocking, as they are remarkably similar to the conditions of the 16th and 17th Century witch trials: a general persuasion of the infallibility of official views, and a profound disgust and consternation at the alleged crimes which through its intensity inhibits any ability to think critically. Especially during the Allied post-war trials, these two factors necessarily led to an extensive undermining of the legal framework of any state under the rule of law, which is indispensable to the defeat of ill-founded charges. The verdicts handed down by the International Military Tribunal and in the related other trials erected the historical norm which no one questioned even in Federal German courts until quite recently. In other words, self-evidentness practically came into existence as early as 1946, and Federal German courts have sought ever since to reinforce this view of history unquestioningly without encountering opposition from any quarter. And what is more: the mental climate prevailing in Germany as well as everywhere else in the world, molded by the story of the Holocaust, inhibited any doubts, even nipped them in the bud with methods which can readily be compared with the violent attacks employed against Professor Nolte, as described previously.⁷⁶

⁷⁶ Professor Robert Faurisson, for example – the revisionist known the world over – was physically attacked ten times, four of which times he was injured severely and once even near-fatally. Not to mention the many ruinous trials which invariably end in convictions (fines and imprisonment), the professional dismissals and the revocations of academic degrees to which revisionists everywhere must submit. For a summary of the anti-revisionist oppression cf. R.-J. Eibicht, *op. cit.* (note 71), and R. Hepp, *op. cit.* (note 10). In early 1998 this book was confiscated in Germany because of a endnote written in Latin (!!!), in which the author expressed his doubt about the generally accepted orthodox narrative regarding the NS gas chambers. Cf. DGG, “Lateinischer Satz quält Staatsanwälte. Neue Groteske der Political Correctness,” *Deutschland in Geschichte und Gegenwart* 46(2) (1998), pp. 13f.; *VffG* 2(1) (1998), pp. 1, 81.

Of course, all this does not necessarily mean by itself that the thousands of eyewitness reports and confessions regarding the Holocaust are false. But our justice system knows from centuries of experience that eyewitness testimony is the least valuable evidence, being the most unreliable kind. Therefore, it must not be forbidden under any circumstances to seek or to demand other, better evidence before accepting a certain view of history as correct.

That there is also more than a little wrong with eyewitness testimony where content is concerned is easily proven by a critical examination of these witness statements. In my paper on witness statements, I show concisely that revisionists have been doing this for decades, so that we will dispense with a comprehensive study in the present volume, even though much research is certainly still needed in this area before all relevant testimony has been adequately assessed. A vitally important subsection of such testimony, however, will be discussed in detail – namely, the witnesses, *i.e.*, their testimony regarding the gassing of human beings in the alleged execution gas chambers of Auschwitz and Birkenau. Professor Faurisson specialized his studies on this problem for some time, for this is the heart of the Holocaust story. The results of an analysis of the pertinent testimony, however, are shocking: as soon as the alleged eyewitnesses are questioned more closely, for example in cross-examination in a courtroom, they fall apart entirely. What remains is a mere skeleton of a testimony which a Canadian court granted the quality of a mere work of fiction – or perhaps even the quality of a fairy-tale? A study by the author of this article shows a similar result: In an interview with a former SS physician of Auschwitz he could establish that accounts of eyewitnesses 50 years after the end of the war are inconsistent, mixed up with rumors, biased due to media impressions, incongruent with reality and therefore absolutely unreliable.⁷⁷

Subsequently we are shown the trial of an alleged National-Socialist criminal, from the perspective of the friends of the defendant's family. To date the literature about the Federal German trials of alleged National-Socialist criminals has been written almost exclusively from the perspective of prosecutors and judges; only Servatius and Laternser have reported from the position of the defense.⁷⁸ The defendants themselves, or their relatives and friends, have never yet been able to tell how such a trial appears from their perspective.⁷⁹ The report included here represents the first step towards rectifying this deficit. It is admittedly subjective in its approach, but in light of the enormous preponderance of no-less-subjective portrayals by judges and prosecutors it is no more than a necessary corrective to be welcomed in a pluralistic society.⁸⁰ If one accepts as correct the facts brought to light by Claus Jordan in his years-long, self-sacrificing struggle for fair treatment for the defendant Gottfried Weise – as one will have to do until and unless these facts are refuted – then one can but hope that the tragic miscarriage of justice which resulted in an innocent old man being sentenced to imprisonment for life is an isolated case. Like almost all other verdicts in trials of National-Socialist crimes, the verdict of life imprisonment handed down against Weise is based primarily on the testimony of witnesses for the prosecution, who – as Claus Jordan proves – were mistaken at the least.

Unfortunately, the actions of federal German courts – as they are graphically demonstrated in my contribution on witness testimonies and borne out by the experiences of many defense counsels in such trials – allow only the opposite conclusion, namely that the trial of Gottfried Weise is nothing short of a model for thousands of other cases. Only the facts that Herr Weise had many courageous friends who helped him every minute of their spare time and that his trial continued into a time where new evidence has come to light through the opening of many Eastern Bloc archives as well as through the advanced researches of historians, among which revisionists number not a few – only these facts render this case different from

the others. However, our hope that the requested retrial would end like the trial of Demjanjuk did,⁸¹ namely with an acquittal, was disappointed. Gottfried Weise was released from jail in April 1997 on grounds of mercy (he was severely ill), and died in early 2000.

7. Six Million Jews Are Missing, So Who Cares about Details? Or: Even One Victim Is One Too Many

Once the first hurdle in a discussion with John Doe has been taken – in other words, once a realization of the inadequacy of eyewitness testimony has been achieved and understanding gained for the fact that a charge as horrendous as that of the destruction of the European Jews requires supplemental and better evidence – the question usually crops up whether it is even appropriate to quibble about details of this destruction and its provability, since after all the disappearance of six million Jews during the Second World War is an undeniable fact.

Examining the literature which discusses the statistics of Jewish losses during World War II, one soon finds that there are only two detailed works on this topic: the revisionist publication *The Dissolution of the Eastern European Jewry* by Walter N. Sanning (1983)⁸² and the 1991 compilation edited by Wolfgang Benz, *Dimension des Völkermords*.⁸³ Whereas Sanning's work places the number of unexplained losses of European Jews at about 300,000, Benz's findings agree with the beliefs of the status quo and cite a loss of approximately six million. The contradiction between the two works is clearly apparent and undeniable, and hence a comparison is imperative.

It is interesting to note that it was once again the revisionists who were the first to present a study regarding a central aspect of the Holocaust.⁸⁴ Even though the work by Wolfgang Benz was clearly a reaction to the revisionist book, Nolte's observation regarding the treatment that the establishment historians accord the revisionists also applies in this instance: they are either ignored or defamed. At no point in Benz's book is there any objective discussion of the arguments presented by Sanning. Hence, all we can do is juxtapose both works by comparing the statistical material presented and by assessing the arguments of the authors. The results of this comparison, as they are presented by me in this volume, are, first of all, that the two works give completely different definitions of what constitutes a victim of the Holocaust. While Sanning tries to sum up only those victims who died as a direct result of National-Socialist measures of persecution, Benz credits all European Jewish casualties to the Holocaust, *i.e.*, including those Jews who died in the service of the Red Army, those who fell victim to Soviet deportation and forced-labor camps, and those population decreases resulting from the rise in natural mortality rates, religious conversion, etc.

What is more important, however, is the fact that Benz did not research the matter of population migrations during and after the Second World War. But this is the core of our statistical investigation. Benz simply ignores the emigration of Jews from Europe that has become known as another Exodus and which began prior to World War II, was largely interrupted in 1941 and reached its high point between 1945 and 1947. Benz also largely disregards the migrations of Jews in eastern Europe, as well as the questions of how many Polish Jews managed to evade the German army and how great a number of Jews was deported by the Soviets in 1941 and 1942. These are points where Sanning's survey shines with a wealth of documentation, so that one cannot avoid the impression that Benz, not knowing with what to counter Sanning, simply jettisoned the uncomfortable topic.

Of course, this does not answer the question: Which of these two works comes closer to the historical truth? This decision I leave to the reader, since far more-detailed research is needed before much can be stated with confidence where the touchy subject of Jewish world

⁸¹ See A. Neumaier's contribution for that.

⁸² W. N. Sanning, *The Dissolution of the Eastern European Jewry*, Institute for Historical Review, Newport Beach, Cal. 1983; German: *Die Auflösung des osteuropäischen Judentums*, Grabert, Tübingen 1983.

⁸³ W. Benz (ed.), *Dimension des Völkermords*, Oldenbourg, Munich 1991.

⁸⁴ The revisionists also acted as pioneers in terms of expert criticism of testimony and documents as well as in the call for and provision of material evidence.

population statistics is concerned. An example may serve to clarify: whereas David B. Barrett, a missionary statistician working in the United States, asserted for many years that the number of people professing the Jewish faith stagnated at some 18 million worldwide,⁸⁵ – a figure strikingly similar to pre-war figures – the *American Jewish Yearbook* had given the number of Jews worldwide as being static at only 14 million as early as 1979.⁸⁶ After an intervention by the statisticians of the *American Jewish Yearbook* in 1994, Barrett reduced his number of the worldwide Jewish population down to just under 13.5 million.⁸⁷ The reason for this reduction is that the responsible editors of the *American Jewish Yearbook* do not recognize Jews of certain races such as Jews with black skin or Indian Jews, whose communities include several hundred thousand members.⁸⁸ Whoever approaches population statistics with such different and – regarding the statisticians of the *American Jewish Yearbook* – arbitrary methods, must be questioned as to whether his goal is to deceive the public rather than to inform it.

Already we are confronted with the next objection: it really doesn't matter how many Jews lost their lives in the German sphere of influence, through whatever circumstances, because even one victim is too many. Doubtless it is morally correct that even one victim is already too many, and really one must go even farther than that: even those measures of Third Reich persecution which did not result in outright deaths were in every respect unacceptable. But this is not a valid argument against the statistical investigation of the 'whether' and 'how' of the destruction of the Jews, and for three reasons.

First of all, this objection does not satisfy simply for the reason that it is precisely the number of victims that has been considered sacrosanct for decades. If the number of victims did not matter, it would not be deemed necessary to protect it as a social and even criminal taboo. Evidently there really is more to the six-million figure than merely the fact that it includes a great many individual fates: what is at stake is a symbol not to be easily relinquished, since justified doubts about the number might quickly lead to further undesirable skepticism about further subsections of the Holocaust complex. While not wishing to deny the victims the tragedy of their individual fates in any way, any science must nevertheless insist that numbers must always be open to discussion. It is downright irrational that those, on the one hand, who express doubt of the six-million figure are socially persecuted or even subjected to criminal litigation while society and the justice system, on the other hand, react to valid arguments against this selfsame six-million figure by suddenly declaring this figure to be irrelevant and insisting instead on the dignity of even the very first victim. Is the six-million figure a standard deserving of protection by criminal law, or is it irrelevant? It cannot be both at once.

Secondly – and this is the most important argument – the ethically correct evaluation that even one victim would be too many must not be a pretext for prohibiting scientific research. This is intolerable for the simple reason that science must always be allowed to find precise answers. What would we think of an official who demanded that a physicist not be allowed to determine the exact value of his stress experiment, because even a small value would be bad enough? A physicist subjected to such an absurd demand would quickly arrive at incorrect results and would be a threat to any company that hired him. The same holds true for the historian. If the historian is forbidden to conduct critical investigations because they might be considered morally untenable, then we have to assume that the results of such skewed historiography are unreliable. And since our knowledge of contemporary history exerts a direct influence on politics, our public policies are mistaken and unreliable as well. It is the key function and responsibility of every branch of science to provide accurate figures and values. The principles which hold true for engineering, physics, and chemistry cannot

suddenly be abandoned in historiography for political reasons – unless one is intellectually prepared to retreat deep into the darkest Middle Ages.

Thirdly and finally, the morally correct view that even one victim is too many cannot on principle be a barrier to the scientific investigation of a crime which is generally called so morally reprehensible as to be unique and unparalleled in the history of mankind.⁸⁹ An allegedly uniquely reprehensible crime must be open to a procedure that is standard for any other crime as well, namely that it is – and must be – investigated in detail. I would go even further: anyone who postulates a crime to be unique must be prepared for a uniquely thorough investigation of the alleged crime before its uniqueness is accepted as fact. If a person or group blocks investigation of an allegedly unique crime on grounds of moral outrage, then that person or group is guilty of a unique crime itself. This unique crime consists of first denying defense against preposterous allegations, then disallowing criticism of such tyrannical methods on a pretext of unusual guilt. This was the precise fate of Germany following World War II, with the result that Germans were first brutalized, then slandered and finally denied all opportunity to defend themselves. The treatment of vanquished Germany by the victorious Allies has been truly unique in modern times, since the same Allies otherwise allow even the most notorious murderers the opportunity to defend themselves in court.

8. Largely Uncontested Matters of National-Socialist Injustice

In discussing the postulated murder of the Jews, the historians of the *status quo* identify the technical and organizational origins of this mass murder as to be found in the program of euthanasia which was implemented at the beginning of the war – the killing of so-called ‘life unworthy of life,’ in other words, mentally and/or physically severely disabled people. The reason for this assumption is the considerable overlap, *i.e.*, continuity of staff in both areas.⁹⁰ However, it seems to me a very dubious practice to attempt to construe this continuity as evidence for mass murder, since it may very well mean only that the leadership had wished to retain staff which had previously proven loyal in one socially extremely controversial operation, for a subsequent, no-less-controversial purpose. And whether this controversial purpose was the resettlement, ghettoization, or mass murder of the Jews, is still an open question.

To the best of my knowledge there have been no doubts advanced by the revisionist side regarding the factuality of those killings effected within the scope of euthanasia;⁹¹ these killings number some 100,000.⁹² The moral assessment of such an elimination of totally incapacitated persons is a different matter. In the western democracies in particular, this topic was the subject of much controversial discussion and in some cases was even practiced right until the end of the war,⁹³ and only recently the question whether passively and actively assisted suicide should be expanded, in severe cases, to include euthanasia as well, has once again taken center stage.⁹⁴ Far be it from me, a non-specialist, to advance an opinion of my

⁸⁹ By E. Nolte as well, by the way, even if the opposite has occasionally been alleged; cf. *Der europäische Bürgerkrieg 1917-1945, op. cit.* (note 12), p. 516; *Streitpunkte, op. cit.* (note 13), Section II. 5., pp. 381ff., also pp. 421ff.

Schmuhl, in M. Prinz and R. Zitelmann, *Nationalsozialismus und Modernisierung*, Wissenschaftliche Buchgesellschaft, Darmstadt 1991, pp. 239-266.

⁹³ See D. Bronder, *op. cit.* (note 4), pp. 312-323; cf. also André N. Sofair, Lauris C. Kaldjian, “Eugenic Sterilization and a Qualified Nazi Analogy: The United States and Germany, 1930-1945,” *Annals of Internal Medicine*, 132 (Feb. 15, 2000), pp. 312-319.

⁹⁴ The starting point for this more recent debate was the comparison of human euthanasia with the practice of mercy-killing of animals; cf. the British author Peter Singer’s book *Practical Ethics*, Cambridge UP, Cambridge 1979, esp. pp. 127f. (pp. 175f. in 2nd ed., 1993). Only recently a German translation of a British book supporting the principle of euthanasia was cancelled by a northern German publisher due to

own on this explosive topic. Like Nolte,⁹⁵ however, I cannot help but remark in amazement that people today are morally outraged by the killing of 100,000 generally severely disabled persons for perhaps dubious reasons of ‘genetic public welfare’ during the 12 years of National-Socialist dictatorship, whereas those same people are not shocked in the slightest by the arbitrary killing of unborn, but healthy persons numbering in the tens of millions since the legalization of abortion – killings in most cases motivated solely by materialistic and selfish considerations. Clearly the moral standards by which we judge today are completely different than those between 1933 and 1945 in Germany. I doubt that they are better.

But back to the supposed genocide of the Jews. Aside from some aspects of the so-called *Reichskristallnacht* of November 9, 1938,⁹⁶ the revisionists and the historians of the establishment do not differ very much in their accounts of the various stages of National-Socialist persecution of the Jews up to the alleged start of extermination in the summer of 1941 – although there are occasional differences in the accounts on specifics regarding the extent and the intentions behind individual measures: exclusion from professions, dismissals, ‘Aryanization’ of commercial enterprises, freezing of assets, forced labor, expulsion, *i.e.*, resettlement into ghettos, confiscation of property and assets, identification with the Star of David, allocations of foodstuffs, and deportation to transit and concentration camps.⁹⁷ The revisionists, of course, also accept that negligence, at the least, cost thousands of Jews their lives especially in the context of deportation, ghettoization and forced labor. But even the question as to whether there were also deliberate murders of Jews due solely to their being Jewish has no consensus among the revisionists; personally, I consider such murders as given, but cannot comment on their number or whether they were approved or even decreed from higher-up.

As far as the conditions are concerned that prevailed in the camps and ghettos established by the National Socialists, the question arises as to the degree to which we can believe the witnesses. Those who cannot believe the usual witnesses because of revisionist mistrust may well be able to bring themselves to believe in the founder of Holocaust revisionism: Paul Rassinier has outlined his own experiences as an inmate in the Buchenwald and Dora Camps in his book *The Lie of Ulysses*. I published an annotated German edition of this book in 2018 with a foreword,⁹⁸ and a similar English edition is on my wish list of things to do. I can only advise anyone who is suspicious of orthodox historiography to read this book every now and then, because it gives you a solid foundation in order to understand that the camps and ghettos of the Third Reich really were places of horror, suffering and crimes for long stretches of their existence, although often in a different way than commonly portrayed: The inmates were largely put in charge of the camps’ and ghettos’ internal administration, which criminal and reckless elements among them often exploited in order to terrorize their fellow inmates. Of course, this does not release the SS in particular and the leadership of the Third Reich in general from the ultimate responsibility for what happened there. But it makes it more understandable, and takes a portion of the blame off the shoulders of the traditional villains.

massive public pressure; cf. Ch. Anstötz *et al.*, *op. cit.* (note 29).

⁹⁵ E. Nolte, *op. cit.* (note 13), p. 285.

⁹⁶ For the position taken by the establishment, cf. H. Graml, *Der 9. November 1938. “Reichskristallnacht,”* 6th ed., Schriftenreihe der Bundeszentrale für Heimatdienst, Heft 4, Bundeszentrale für Heimatdienst, Bonn 1956; H. Lauber, *Judenpogrom “Reichskristallnacht” November 1938 in Großdeutschland*, Bleicher, Gerlingen 1981; for an older revisionist position, cf. I. Weckert, *Flashpoint: Kristallnacht 1938 – Instigators, Victims and Beneficiaries*, Institute for Historical Review, Newport Beach, Cal. 1991, who doesn’t believe the NS-government was the instigator. Contrary to this thesis are the entries in Goebbels Diary, cf. D. Irving, *Die geheimen Tagebücher. Der unbekannte Dr. Goebbels*, Focal Point, London 1995, esp. pp. 407–411; Irving, *Goebbels. Mastermind of the Third Reich*, *ibid.*, 1996. With regard to Hitler’s reactions, he must have agreed with this pogrom, and its results must have been too mild in his eyes, since he prevented German insurance companies from paying any compensation to the Jews and forced the German Jews to pay an additional fine of 1 billion (!) Reichsmark. This *post facto* behavior alone explains enough.

⁹⁷ As an example, cf. the accounts given in the standard work of Holocaust history by R. Hilberg, *The Destruction of the European Jews*, Quadrangle Books, Chicago 1961; 2nd ed., Holmes & Meier, New York 1985.

⁹⁸ Paul Rassinier, *Die Lüge des Odysseus*, 5th ed., Castle Hill Publishers, Uckfield 2018.

Even where the National Socialists' plans regarding the future of the Jews in their sphere of influence up to mid-1941 are concerned, there certainly are similarities in the views held by the revisionist and the so-called functionalist school of historians. In light of the actual policies of the National Socialists, M. Broszat pointed out in 1977 that, aside from verbal threats on Hitler's part, there is no evidence in political events until mid-1941 for any National-Socialist plans for extermination. Rather, documents as well as the actual effects of Hitler's policies proved that until October and November 1941 all measures were aimed at removing the Jews from the German sphere of influence by means of resettlement.⁹⁹ In this respect, the contemporaneous documents which mention evacuation, deportation, resettlement etc. of the Jews are in no way examples of any 'code' language; they simply mean exactly what they say. This view was also supported by Jerusalem historian Yehuda Bauer.¹⁰⁰

So let us consider this part of the National-Socialist injustice towards the Jews on which revisionists and exterminationists agree in the light of the legal definition of genocide of post-war legislation – which is defined in the current German Criminal Code of International Law (*Völkerstrafgesetzbuch*) as follows:

“§6. *Genocide. Anyone who, in the intent to completely or partially destroy a national, racial, religious or ethnic group per se,*

1. *kills a member of said group,*
2. *inflicts [...] severe physical or mental harm on members of said group,*
3. *subjects said group to living conditions suited to bringing about its complete or partial physical destruction,*
4. *institutes measures designed to prevent births within said group,*
5. *forcefully removes a child of the group to another group,*

shall be punished with imprisonment for life.”

Accepting this definition, one could indeed consider that the crime of genocide would exist even without a planned, industrial-style mass extermination of the Jews, especially through poison gas and mass executions. Revisionists do not deny that the National-Socialist regime deliberately, or at least through gross negligence, subjected the Jews in its sphere of influence to conditions which, in part, inflicted severe physical and mental harm, resulted in part in their physical destruction, and caused a deliberate reduction in their birth rate through the segregation of the sexes. Certainly, there is disagreement among revisionists about to what extent the government of the Reich was aware of the conditions in the concentration camps and ghettos, to what degree it approved them, failed to adequately improve them, or perhaps even promoted them, all of which would affect the judicial valuation of the National-Socialist measures against the Jews. But these interesting and important questions are beyond the scope of this volume. I am sure that a lot of research still has to be done in that field.

But even if Points 2. to 5. of the above-quoted §6 would apply, could the National-Socialist government have been punished for this after the war? The above definitions of genocide, especially the Points 2. to 5., were introduced into the German Penal Code and accepted internationally some years after the end of WWII. This means: it was not considered a crime until after the final defeat of the Third Reich. And since in a state under the rule of law nobody can be punished due to a law made *ex post facto*, Hitler and his comrades could not have been punished under this law, but only under then-existing laws, a fact which caused German post-war trials in such cases some difficulties. Additionally, one must consider that the leaders of the victorious powers made sure that they could not be punished for similar or

⁹⁹ Martin Broszat, “Hitler und die Genesis der ‘Endlösung’,” *VfZ* 25(4) (1977), pp. 739-775, esp. pp. 748ff., in response to D. Irving, *Hitler's War*, Hodder & Stoughton, London 1977; for the intentionalist school of thought which claims that Hitler cherished plans for mass murder from the start, see for ex. Christopher Browning, “Zur Genesis der ‘Endlösung’,” *VfZ* 29(1) (1981), pp. 97-109; also Erich Goldhagen, “Weltanschauung und Endlösung,” *VfZ* 24(4) (1976), pp. 379-405; and S. Friedländer, *Nazi Germany and the Jews*, Vol. 1: *The Years of Persecution*, Harper & Collins, New York 1997; for a discussion of the decision-making process, cf. E. Jäckel and J. Rohwer (eds.), *op. cit.* (note 90); cf. also Seev Goshen, “Endphase des Verbrechens am europäischen Judentum,” *Zeitgeschichte* (Vienna), 14 (1986/87), pp. 221-243.

¹⁰⁰ Y. Bauer, *Jews for Sale?*, Yale University Press, New Haven 1994.

even worse crimes: post-war treaties with Germany have determined that no citizen of the Allied nations can be prosecuted by German authorities, and amnesty declarations put an end to any prosecution in many countries. Thus, neither Stalin nor Roosevelt, neither Churchill nor Tito, neither de Gaulle nor Edward Beneš and their millions of “willing executioners” could have been punished for the genocides they committed against the German people during the war (by air raids) and mainly after the war (‘ethnic cleansing’ of eastern Europe, POW camps, GULag). Subsequently, the genocide against the German people, perhaps the biggest genocide in the history of mankind, is nearly forgotten.¹⁰¹ Under this perspective, the entire ‘Nazi’-witch-hunt, which has lasted more than 50 years, is nothing other than a gigantic hypocrisy.

Thus, even if one cannot doubt the National Socialists’ persecution of the Jews in principle, doubts about issues subsumed within this topic must be permissible, such as specific killing measures or higher-up intentions, plans and orders to implement mass murder.

9. Of Documents Ignored to Date, or Accepted without Question

In the functionalists’ opinion, it was not until mid- to late-1941 when the German war situation had become desperate and it had proven impossible to expel the Jews from Europe, that the National Socialists resorted to murdering the Jews. This is where revisionist criticism comes in, as documental evidence for this theory is beyond scarce or even indicates that the opposite is true. Arthur Butz has shown how the authorities of all major powers during WWII, including the western Allies, the Vatican, the Red Cross, Jewish organizations as well as resistance fighters in occupied eastern Europe, acted throughout the war as if they *knew* that the Jews were *not* exterminated.¹⁰² As early as 1987, Carlo Mattogno pointed out that the series of documents emanating from high German governmental authorities that reported on evacuations, deportations, resettlements etc. by no means broke off even after November 1941.¹⁰³ On the other hand, not a single bureaucratic document exists dealing with the summary extermination of Jews, specifically no order signed by Hitler which states the like.¹⁰⁴ Attempts to explain this fact relate it to the strict secrecy surrounding this mass murder; in other words, the supposed criminals avoided creating any documental evidence, or carefully saw to its destruction.¹⁰⁵ If one tried to reconstruct the Holocaust story only on the basis of documents, one would have to assume that as of autumn 1941 the documents no longer really mean what they say and that at about this time a code language came into effect

¹⁰¹ Though it may not be the biggest mass murder of the history of mankind, because communism certainly has killed more people since 1917 in Russia as well as in China, and even the mass murder against the Indians in America or the victims of the slave trade may exceed the number of killed Germans. But in none of these cases has there been a plan of ‘ethnically cleansing’ America of the Indians, Africa of the Blacks, China of the Chinese or Russia of the Russians. Perhaps the famine of the Ukraine in the 1930s may be considered a genocide comparable to German losses in and after WWII; cf. R. Conquest, *The Harvest of Sorrow*, Oxford University Press, Oxford / New York 1986.

¹⁰⁵ Aside from M. Broszat, *op. cit.* (note 99), cf. also W. Scheffler, “Zur Entstehungsgeschichte der ‘Endlösung’,” *Aus Politik und Zeitgeschichte*, 32(43) (1982), pp. 3-10.

in whose terminology formerly innocuous words, like ‘resettlement’ and ‘special treatment,’ meant ‘murder.’ This is exactly the interpretation of today’s historians and has found the ultimate expression in the book by E. Kogon, H. Langbein and A. Rückerl, where the section “Unmasking the Code Terms” enlightens the reader to the effect that he can only understand the documents correctly if he interprets them as saying something other than what they actually say.¹⁰⁶

Now it may well be that in many cases terms such as ‘special treatment’ were demonstrably used as euphemisms for an execution.¹⁰⁷ On the other hand, it is also true that this was not always the case. Rather, the term referred to many different measures, for example disinfection and quarantine, punishments as well as preferential treatments of all kinds, and much more.¹⁰⁸ It is thus impossible to use a number of proven cases as basis for a generalization about all those other cases that have not been cleared up to date. Such a practice would require genuine documents giving guidelines for the general use of a code language, *i.e.*, the exact definition of the terms to be used.¹⁰⁹ However, no such key has ever yet been found. After all, one must wonder how the recipients of coded orders would know when to take the wording of an order literally and when to go against it, and in which way – and all this in light of the fact that acting against orders carried at times very severe punishments in the Third Reich. This point of utmost significance was raised many years ago by this author,¹¹⁰ but as is the norm in matters of factual revisionist questions, the opposing side completely ignored this point in their reply.¹¹¹ However, the establishment’s view of history, based as it is on the anti-literal interpretation of these documents, stands or falls with the answer to this question.

The question of the meaning of “special treatment” and similar terms with regard to the Auschwitz Camp has been answered in detail by two monographs. In them, Carlo Mattogno proves that at Auschwitz these terms usually referred on the one hand to the deportation of Jews in general, and on the other very often to hygienic measures implemented in order to reduce the camp’s mortality.¹¹² The situation is much more complex, however, when dealing with the meaning of such terms in the context of the treatment of Soviet Jews and also regarding Jews deported to the European East. From the documental context results sometimes that they referred to killings, but also at times that this was not the case.¹¹³ When the context is unclear or contains no clues as to the meaning of the terms used, any interpretation is necessarily speculative in nature.

¹⁰⁶ E. Kogon, H. Langbein, A. Rückerl *et al.* (eds.), *Nationalsozialistische Massentötungen durch Giftgas*, Fischer Taschenbuch, Frankfurt am Main 1985, Section II; English: *idem*, *Nazi Mass Murder*, Yale University Press, New Haven/London 1993.

¹⁰⁷ Cf. for this additionally to E. Kogon *et al.*, *ibid.*; Joseph Wulf, *Aus dem Lexikon der Mörder. “Sonderbehandlung” und verwandte Worte in nationalsozialistischen Dokumenten*, S. Mohn, Gütersloh 1963; both books have obviously selected only those documents which support their thesis.

¹⁰⁸ See the examples quoted by A. R. Butz, *The Hoax of the Twentieth Century: The Case against the Presumed Extermination of European Jewry*, 4th ed., Castle Hill Publishers, Uckfield 2015, 157-160.

¹⁰⁹ A document frequently quoted to be such a definition is IMT doc. 3040-PS, from *Allgemeine Erlassammlung* (general compendium of decrees) (AES), part 2, A III f (Treatment of foreign civilian workers), issued by the RSHA. It includes regulations for the punishment of foreign civilian workers in case of severe criminal offenses (including “Sonderbehandlung” as capital punishment which “takes place by hanging”). However, this can not be applied automatically to all other cases, and certainly not to Jews being deported to ghettos and concentration camps.

¹¹⁰ *DIE ZEIT lügt!*, Remer-Heipke, Bad Kissingen 1992, pp. 18f.; more recent and updated in G. Rudolf, *op. cit.* (note 13), pp. 73-118.

¹¹³ For a discussion of these documents see especially J. Graf, T. Kues, C. Mattogno, *Sobibór*, 2nd ed., Castle Hill Publishers, Uckfield 2020, Chapter 9.4. (pp. 311-330), as well as C. Mattogno, T. Kues, J. Graf, *The “Extermination Camps” of “Aktion Reinhardt”* 2nd ed., Castle Hill Publishers, Uckfield 2015, where this discussion is scattered throughout the entire book. It is recommended to search the book’s PDF file, available free of charge, for terms such as “Sonderbehandlung”/“special treatment.”

Of course, there are also other documents and subsections of the Holocaust complex which orthodox Holocaust historians believe provide evidence for the entirety of the postulated extermination of the Jews. There have been many revisionist critiques of these arguments,¹¹⁴ so that this anthology will give only a few examples. What is most astonishing in this context is that the establishment historians almost entirely neglect their most-important task – criticism of the documents on which they base their view of history. The unquestioning acceptance of any and all documents which may incriminate Germany is a common phenomenon, a scandal, which reached its high point in the scandal of the forged Hitler diaries.

Historians should take general warning from the fact that the Allies and their accessories found every conceivable means for forgery at their disposal after the war – original letter-head stationery, typewriters, rubber stamps, printing presses etc. It is all the more amazing to see how credulous and naive today's historians – mostly Germans, but others as well – are in their approach to purported documents of those days.¹¹⁵

Almost every one of the authors contributing to the present volume encountered, in the course of their chapter(s), the need for critical analysis of a wide range of documents which cannot all be enumerated here, so that I will limit myself to a brief review of those chapters dealing predominantly with document criticism. The various revisionist critiques of the so-called 'Wannsee Conference Protocol' are one example. They were summarized in the original 1994 German edition of the present book by Johannes P. Ney, but his contribution had to be omitted here due to the author's rescission.¹¹⁶ I have given a more up-to-date summary on the topic elsewhere.¹¹⁷ One could argue that it doesn't even matter whether this 'protocol' is genuine or not, because its contents don't support the orthodox narrative at all, for the document does not mention mass murder in any way, shape or form. This highlights that there are always two sides to documents criticism: the first asks whether a document is genuine or not, the other asks whether it has been interpreted correctly. In a telling case of confirmation bias, partisans of the orthodoxy tend to jump to conclusion that support their preconceived notions when interpreting documents dealing with the Third Reich's policies toward Jews. A sounder approach, however, looks at the wider historical and documental context of a document and at material facts rather than the question of whether it fits into the narrative the mainstream considers "established."

A fine work of source criticism is presented in the present volume by Ingrid Weckert regarding documents dealing with the alleged ordering, modification and use of the so-called gas vans in which, it is claimed, countless thousands of Jews were murdered by means of exhaust fumes. The evidence adduced by her strongly indicate that the crucial 'incriminating documents' are forgeries. Ms. Weckert also discusses the credibility of the eyewitness testimony accompanying this topic.

Next, Udo Walendy examines the alleged visual documents – photographs – that are claimed to prove the atrocities perpetrated by the National Socialists against the Jews. The question at issue is what the pictures are showing exactly, whether they were retouched or whether they may even be completely fabricated, *i.e.*, montages or drawings. A pile of dead bodies or an open mass grave, for example, can be presented as evidence for gas-chamber murders, but what is there to prove that the pictures do not in fact show the German victims of Allied air raids, or the victims of starvation or epidemics in German or Allied camps, soldiers killed in action, victims of pogroms, or even persons killed by the Soviet secret service? Udo Walendy discusses the criteria by which an altered or completely forged photo can be identified as such, and then shows with some examples that the falsification of pho-

¹¹⁴ See most of the monographs forming the series *Holocaust Handbooks* as listed at the end of this book.

¹¹⁵ As examples for documents that are today generally accepted to be forgeries: The Hitler Diaries, Rauschning's talks with Hitler (both: Karl Corino (ed.), *Gefälscht!*, Rowohlt, Reinbek 1992; cf. Eberhard Jäckel, Axel Kuhn, Hermann Weiß, "Neue Erkenntnisse zur Fälschung von Hitler-Dokumenten," *VfZ* 32(1) (1984), pp. 163-169), Katyn (Franz Kadell, *Die Katyn Lüge*, Herbig, Munich 1991), SS-identity card of John Demjanjuk (D. Lehner, *Du sollst nicht falsch Zeugnis geben*, Vohwinckel, Berg, undated).

¹¹⁶ As a paleo-National Socialist, he didn't like this my introduction, hence denied any future inclusion of his work in any of my print books; his paper can be read in English online at www.vho.org/GB/Books/dth/fndwannsee.html.

¹¹⁷ G. Rudolf, *Lectures on the Holocaust*, 4th ed., Castle Hill Publishers, Bargoed 2023, pp. 128-135.

tographs in order to incriminate the Third Reich is rather more the rule than the exception. It is astonishing to note that there are usually many different versions of a forged photograph, which makes it easy to spot cases of alteration. Proof of the commonness of such forgeries does not, of course, indicate anything one way or the other about the factuality of the crimes in whose support the faked photographs are cited, so that the criticism of photo documents cannot refute such claims. But really it should be the case that accusations must be proven with incontestable evidence before one must accept them as fact. The photo documents known to us, however, do not serve the purpose of incontestable evidence, even if the modern-day public and especially our magazine- and television-oriented consumer society often rashly accepts them as proof, on the premise that ‘if I saw it with my own eyes, it must be true.’ What is commonly overlooked in this reasoning is that it is not only the eye that determines what one believes to have seen, but that, rather, certain associations with the pictures are responsible for the viewer’s interpretation of the pictures’ context. These associations are as a rule provided by accompanying text and commentary which, however, are often belied by scientific scrutiny.

Of course, there are also photo documents which have taken us a good step further in the investigation of the supposed Holocaust. These are the aerial photographs which were taken by German or Allied reconnaissance planes in areas and at times where the alleged extermination of the Jews is claimed to have taken place. In his chapter, the mineral-exploration geologist John Clive Ball presents the most-important air photos of Treblinka, Babi Yar and Auschwitz-Birkenau and shows that the allegations of mass exterminations at these sites, while decreed to be correct by court verdicts, not only cannot be proven by the aerial photographs, but are even in some cases conclusively refuted by them. Ball’s original work on which his present contribution is based, originally published in late 1992,¹¹⁸ has since been republished in expanded and corrected editions,¹¹⁹ and the interpretation of air photos has since become a common feature of revisionist research, in particular concerning Auschwitz.¹²⁰

Ball’s discovery of German air photos taken over Kiev, covering the area where some 30,000 Jews are said to have been killed, buried and then exhumed and burned on large outdoor fires – although the relevant photos show no trace of any of it – has even received some mainstream acknowledgment: A former director at the German federal Research Center for Military History (*Militärgeschichtliches Forschungsamt*, based in Freiburg and Potsdam) called into doubt in his book *Stalin’s War of Extermination 1941-1945* that the National Socialists committed a mass killing of Jews in Kiev in 1941.¹²¹ Most other mainstream historians either ignored the air photos or, in rare cases, made fools of themselves trying to dismiss them.¹²²

Here is what I wrote at this point of my argument in the first (German) edition of this book back in 1994:

While the greater part of the revisionist research presented here was generally aimed to attack and refute establishment notions – to be destructive, as it were – its future focus will no doubt shift to constructive research, i.e., to resolving the questions of how things really were if traditional accounts are false. The predominantly destructive nature of re-

¹¹⁸ J.C. Ball, *Air Photo Evidence*, Ball Resource Services, Delta, BC, 1992.

¹²² Michael Shermer discussed Ball’s claims by referring to things he was *told* by alleged air-photo experts! Michael Shermer, *Why People Believe Weird Things*, Freeman & Co. New York 1997; see also Michael Shermer, Alex Grobman, *Denying History: Who Says the Holocaust Never Happened and Why Do They Say It?* University of California Press, Berkeley/Los Angeles/London 2000; cf. C. Mattogno’s refutation: *Bungled: “Denying History”: How Michael Shermer and Alex Grobman Botched Their Attempt to Refute Those Who Say the Holocaust Never Happened*, Castle Hill Publishers, Uckfield 2016. Even worse is Brigitte Bailer-Galanda, who simply distorts facts without even trying to prove anything: Brigitte Bailer-Galanda, Wolfgang Benz, Wolfgang Neugebauer (eds.), *Wahrheit und Auschwitzlüge*, Deuticke, Vienna 1995, p. 25; see the critique of G. Rudolf, “Lüge und Auschwitz-Wahrheit,” in *idem*, *op. cit.* (note 13), pp. 187-227.

visionist research in the past decades was frequently the result of the fact that revisionists, working as they were individually and with ridiculously meager financial means and even under conditions of massive state repression, were dependent for their material on the crumbs that fell to them from the banquet tables of the establishment historians who enjoy worldwide organizational support and countless millions in state funding. This will change in the future, if only because access to archives is becoming ever easier in both the East and the West, and because the numbers of revisionists as well as their means are increasing with their growing public acceptance. After all, once it has been proven that the view taken to date of this historical complex is not quite correct, it cannot but dawn even on state and academic circles that there is a need for new, constructive research and that new explanations must be sought and found.

The boost to historical research triggered by the dissolution of the Eastern Bloc in the early 1990s came to a sudden end in the late 1990s, however, due to worldwide-increasing government repressions spearheaded by reunited Germany.

And yet, today we still find ourselves right in the middle of the radical change-over from the desperate defense of the old, to the search for new approaches. On the one hand, much of the work of revision pertaining to the evidence on which historiography has been based to date has not yet been done – due to the dearth of qualified researchers willing to do such revision, the means for its implementation and, most importantly, access to the evidence. On the other hand, most revisionists have already begun to work on new approaches. As early as 1990, for example, Steffen Werner postulated that even after 1941 there was a continued National-Socialist emigration policy with respect to the Jews, which resulted in a massive Jewish settlement in White Russia and the Ukraine.¹²³ Once again, establishment historians do not see fit to even comment.¹²⁴ The documents from the Central Construction Office of the Police and Waffen SS Auschwitz, made generally accessible for a few years during the 1990s, also provide completely new perspectives, showing that the German authorities invested tens of millions of *Reichsmark* in the construction of the Birkenau Camp – which hardly indicates extermination to have been the purpose of this camp, but certainly does suggest that the complex was a straightforward forced-labor camp.¹²⁵ Aside from these documents there are still extensive records to be gone through in the United States, in Moscow, Prague, Warsaw, Lublin and Auschwitz. Research into these archives has only been begun so far by such supporters of the extermination theory as G. Fleming¹²⁶ and J.-C. Pressac.¹²⁷ In their studies, however, these researchers only ever search for documents that might serve to strengthen the establishment position, and particularly the findings of Pressac are tellingly scant.¹²⁸ No establishment researcher has ever gone through the enormous wealth of these archives with an eye to find materials in support of new approaches, or even only different interpretations than that of the extermination theory.

10. What Material Evidence Can Reveal

Time and again, the Federal German justice system, and hard on its heels historiography, concluded that the National Socialists had covered up the evidence of their crime so well that no clues remained to be found today: all gas chambers and gas vans were destroyed, mass graves dug up, the bodies contained therein burned and no traces left, and evidence of the graves was destroyed by filling-in and landscaping.¹²⁹

But is it really conceivable for a number of people almost twice the population of Berlin to vanish from the face of the earth without leaving a trace?

Some of the alleged gas chambers in, for example, the concentration camps of the original Reich (borders of December 31, 1937), Austria, and Alsace are in fact still in fairly good condition where on-site investigations could be performed. Straightforward checks regarding the authenticity and functionality of the facilities presented as gas chambers or other execution sites in all sorts of camps formerly under German control would therefore be an easy matter for architects, construction engineers etc. to perform. But the authorities never so much as lift a finger towards this end, preferring instead to lop off, figuratively speaking, the fingers of revisionists if they get ahold of them. It is a fact, after all, that any exposure of a massive gas-chamber fraud in the concentration camps of the original German Reich would beg the logical question: Why should the eyewitness testimony and reports about camps of the East, which have been locked away behind the Iron Curtain for decades, be any more trustworthy than those reports about western camps which would then have been exposed as false statements or downright lies?¹³⁰ This is why the establishment's view of history cannot afford to question the existence of even one gas chamber of the Third Reich, and it is also the reason why even the official German *Institut für Zeitgeschichte* (Institute for Contemporary History) persists in the claim that there were gas chambers even in the concentration camps of the original German Reich, even if it concedes that no *mass* gassings actually took place there.¹³¹

I am proud that Jürgen Graf has contributed an article to this book. He takes a look at the National-Socialist concentration-camp system in general, that is, primarily at the conditions prevailing in them, and at mortality rates and causes, and also addresses false allegations about extermination of prisoners in concentration camps located in the Reich proper, with some more details about the Sachsenhausen Camp north of Berlin. Showing how false atrocity stories about these camps came into being, how they are refuted and lead to a general revision of the historiography of these camps, teaches us something about the alleged extermination camps in eastern Europe, as the propaganda history of the western camps is often a mirror image of that of the eastern camps.

Not only the camps of the original German Reich, but also those of Auschwitz, Birkenau and Majdanek still have more or less well-preserved remnants of buildings where mass murders are alleged to have taken place, and even where such buildings have been completely destroyed, experts can still come to very important insights based on building plans and blueprints.

In this regard it should be pointed out that the only expert report about the possible interpretation of the blueprints of the alleged gas chambers of the Auschwitz and Birkenau crematoria ever presented to a court to date concluded that it was neither possible to identify those rooms as homicidal gas chambers nor to repurpose them as gas chambers. This sensational

¹²⁹ A classic example of this is the verdict of the Auschwitz-Trial in Frankfurt (Ref. 50/4 Ks 2/63), which saw itself forced to admit that it lacked “almost all the means of evidence available in a normal murder trial,” including “the bodies of the victims, autopsy reports, expert reports on the cause and time of death, [...] evidence as to the criminals, murder weapons, etc.” (I. Sagel-Grande, H. H. Fuchs, C. F. Rüter (eds.), *Justiz und NS-Verbrechen*, Vol. XXI, University Press, Amsterdam 1979, p. 434)

¹³⁰ The best summary of revisionist arguments against all kinds of gas-chamber claims for a plethora of German war-time camps is currently C. Mattogno's *Inside the Gas Chambers: The Extermination of Mainstream Holocaust Historiography*, 2nd ed., Castle Hill Publishers, Uckfield 2016.

¹³¹ M. Broszat, in *Die Zeit*, August 19, 1960; cf. E. Kern, *Meineid gegen Deutschland*, 2nd ed., Schütz, Preußisch Oldendorf 1971, pp. 233ff.

report was given in the early 1970s in Austria, but was covered up by the media, and the court files about this report have vanished.¹³²

With the help of technical advice by friendly engineers, the Italian historian Carlo Mattogno and the late German architect Willy Wallwey began to solve technical and architectural questions regarding this complex. The basis for this is vast archival resources mainly in eastern Europe, especially in Moscow, Prague, and Warsaw. Two contributions from these research efforts are included in the present volume.

The first contribution by Willy Wallwey gives, in its first part, a fascinating insight into how the camp authorities in Auschwitz tried to save the lives of their inmates by using high-tech devices to combat lice. During World War II the Germans developed microwave ovens, and the only place where this technology was used during the war was inside the reception building of the Auschwitz Main Camp – for the purpose of disinfesting and disinfecting inmate clothing.

The second part of this contribution addresses the vexing question of what the infamous “gas-tight” doors were really all about which the SS authorities ordered for the Auschwitz Camp. In fact, the original German documents, discovered by Wallwey in the files of the former Auschwitz Central Construction Office, show that there is nothing sinister about these gas-tight doors.

The second technical contribution by Carlo Mattogno and Franco Deana explores the question of whether the cremation furnaces of Auschwitz and Birkenau were able to cremate the claimed corpse piles from the attested-to mass murder. On the basis of a whole range of considerations supported by documents, the authors conclude unequivocally that these facilities were barely able to cremate the corpses of those who had died of “natural” causes at Auschwitz. These facilities would have been unable to handle the additional masses of corpses of a mass murder atop those of the natural deaths.

Aside from these technical studies, studies in the fields of toxicology, chemical engineering and motor technology are required to determine which poison gas would have brought about which results through which methods and under which circumstances, whether the scenarios of mass murder attested to were technically even possible, and whether there ought to be evidence surviving to the present.

The chemical and toxicological portion of this volume is carried by this author. In it, I describe the discussion initiated by Fred A. Leuchter¹³³ about the issue of the formation and detectability of iron-cyanide compounds produced by the poison-gas product Zyklon B, which are characterized by their long-term stability. The central questions are: a) could such long-lasting compounds have formed in the masonry of the claimed homicidal gas chambers; b) are they sufficiently long-lasting under the prevailing circumstances to be detectable to this day; and c) how much of these compounds can be detected in the alleged homicidal gas chambers at Auschwitz, Birkenau, Majdanek and Stutthof?

The question, under what sorts of conditions it would have been possible to use Diesel engines – the murder weapon alleged for Treblinka and Belzec – to suffocate people to death, was already addressed in detail by Friedrich Paul Berg in 1984, but, in keeping with tradition, the orthodox Holocaust literature ignored this paper for many decades.¹³⁴ Berg’s analysis was updated and expanded for this volume, and concludes that the conditions attested

¹³² Cf. Walter Lüftl, “A Somewhat Different Auschwitz Trial,” *The Revisionist* 2(3) (2004), pp. 294f., and personal conversation with the expert in charge, Baurat h.c. Dipl.-Ing. Gerhard Dubin. Prof. Robert van Pelt had access to these court files, but he did not mention that an expert report on architectural matters was included: *The Pelt Report*, Irving v. Lipstadt (Queen’s Bench Division, Royal Courts of Justice, Strand, London, David John Cawdell Irving v. (1) Penguin Books Limited, (2) Deborah E. Lipstadt, Ref. 1996 I. No. 113; p. 135, fn 59.

¹³³ See on this more recently: F. A. Leuchter, R. Faurisson, G. Rudolf, *The Leuchter Reports: Critical Edition*, 5th ed., Castle Hill Publishers, Uckfield 2017.

¹³⁴ F. P. Berg, “The Diesel Gas Chambers: Myth within a Myth,” *JHR* 5(1) (1984), pp. 15-46; only in 2011 did the mainstream acknowledge that Berg is essentially correct: Achim Trunk, “Die todbringenden Gase,” in: Günter Morsch, Bertrand Perz, (eds.), *Neue Studien zu nationalsozialistischen Massentötungen durch Giftgas: Historische Bedeutung, technische Entwicklung, revisionistische Leugnung*. Metropol, Berlin, 2011, pp. 23-49; to solve his dilemma, Trunk simply changed the motor type from Diesel to gasoline, throwing out all the evidence in the process: an emperor with his new clothes...

to for the alleged gassings with Diesel-exhaust fumes would not have produced successful mass killings, and also that it would have been ridiculous, if not to say downright idiotic, to resort to this method in the first place, considering that a method using wood-gas generators was available and both cheaper as well as hundreds or even thousands of times more effective. In Berg's opinion, the tale of Diesel-exhaust gassings is an instance of Soviet propaganda that backfired. The direct implications of this analysis for the alleged extermination camps Treblinka and Belzec are obvious.

In his chapter, Arnulf Neumaier considers problems of construction engineering associated with the alleged gas chambers of Treblinka, and particularly the issues of whether the methods which witnesses claim were used to destroy the evidence – in this instance, the complete incineration of almost one million people – were at all technically possible, what sorts of evidence one ought to expect anyway, and how these expectations compare with the evidence that has been found. The bottom line is devastating: the scenarios described by the witnesses are ridiculous and completely unrealistic, and do not agree even remotely with the results of on-site investigations.

Next, Herbert Tiedemann introduces us to a different field: The alleged mass shootings by German armed forces in Russia during World War Two. He presents a critique of eyewitness testimony and media representation of the alleged mass execution of Jews from Kiev by German task forces (*Einsatzgruppen*) in the ravine of Babi Yar in autumn of 1941. Since his study incorporates critiques of eyewitness testimony and documents as well as technical elements, it represents, in a way, a methodological synopsis of revisionist criticism on the basis of one specific example, and is thus a fitting conclusion to our anthology.

The extreme variation and inconsistency of the testimony and accounts of this case alone practically demand extreme skepticism, and the absolute lack of any such skepticism on the part of our mainstream historians, journalists, and politicians makes us doubt their capacity for common sense. Unfortunately, this is only a prototype for many other subsections of the Holocaust complex as well.

Babi Yar is also a starting point for the critique of a body of documents which revisionist research has only recently started to seriously deal with: German reports about the mass executions of Jews on Soviet territories transitorily occupied by the Germans. These reports are divided into two main groups:

1. The so-called *Ereignismeldungen* (Incident Reports) which were drawn up by German authorities and collected in Berlin, where they were found by the Allies at the end of the war and were subsequently presented as evidence at the Nuremberg trials. These "Incident reports" give very detailed accounts of the Babi Yar incident, without mentioning the location of this alleged massacre, however.
2. A number of radio reports which were sent by the *Einsatzgruppen* from Russia to Berlin and which were deciphered by the British Intelligence Service. These documents were released only in 1996, which led to some speculations about whether the western Allies may have known much earlier about a German policy of extermination of the Jews and whether perhaps even more than 6 million Jews were killed by the Germans in World War Two.¹³⁵

However, no mainstream scholar took much notice of a similar case where the British Government published excerpts from exactly these documents as early as 1981.¹³⁶ Perhaps this was because the publication of these excerpts conveyed the exciting revelation that the British Intelligence Services had succeeded in 1942 and 1943 in deciphering top-secret radio messages from the administration of the German camps, in which details about deceased and killed prisoners were reported to Berlin, including the method of their execution and

other circumstances of death. The reason for this cover-up by the orthodoxy may be rather simple, as the following shows:¹³⁷

“The messages from Auschwitz, with 20,000 prisoners the largest of the camps, mentioned illness as the main cause of death, but also included references to shootings and hangings. There were no references in the decrypts to gassings.”

These Bletchley Park decrypts were released in the early 2000s, and a detailed analysis of them showed that they are in stark contrast to the orthodox extermination narrative.¹³⁸ Why should the persons responsible for the radio messages have reported to Berlin about shootings and hangings, but kept silent about gassings?

In fact, the gas chambers seem to be ever decreasing in importance as a killing method, as opposed to mass shootings. The Dutch historian Michel Korzec was the first to offer the theory that not more than a few hundred thousand Jews were killed in gas chambers, but that many millions were killed by mass shootings in Russia.¹³⁹ This theory would require that many more Germans were involved in these mass killings than would have been necessary if one assumes the gas chambers as the main weapon. Consequently, this theory would better support a collateral theory, *i.e.*, that of the collective guilt of at least the German soldiers of the eastern front, if not of all Germans, for the Jewish Holocaust. This logical conclusion was drawn by Daniel J. Goldhagen,¹⁴⁰ who merely repeated Korzec’s theses and added a new aspect: an anti-Semitic gene that led specifically the German people to commit such a heinous deed. The reaction of the German historians in particular was appropriately furious, even if some of those historians had backed somewhat similar theses in the previous decades.¹⁴¹ They simply harvested what they themselves had sown.

The tendency in orthodox historiography seems to be more and more to de-emphasize the gas chambers, since sources for them are “at once rare and unreliable,” as Prof. Arno J. Mayer put it,¹⁴² or for which there are absolutely no “documents, traces or material evidence”

¹³⁹ M. Korzec, “De mythe van de efficiente massamoord,” *intermediair*, December 15, 1995, pp. 19–23; in an interesting private communication with S. Verbeke prior to the publication of this article, Korzec told him quite frankly that he no longer believes in the gas chambers but is afraid to write this, so he will simply reduce the number of victims in a kind of “policy of small steps”; cf. this and even more admissions by other Holocaust historians: H. Verbeke, “Aufgeschnappt,” *VffG*, 1(2) (1997), p. 59.

¹⁴⁰ D.J. Goldhagen, *Hitler’s Willing Executioners*, Little, Brown & Co., New York 1996, p. 521: “In fact, the Germans continued to shoot Jews en masse throughout the war. It is not at all obvious that gassing was a more ‘efficient’ means of slaughtering the Jews than shooting was. There were many instances in which shooting was clearly more efficient. The Germans preferred gassing for reasons other than some genocidal economic calculus. Understanding this suggests that, contrary to both scholarly and popular treatments of the Holocaust, gassing was really epiphenomenal to the Germans’ slaughter of Jews. It was a more convenient means, but not an essential development. Had the Germans never invented the gas chambers, then they might well have killed almost as many Jews.”

¹⁴¹ dpa, “Holocaust, Historiker und der PR-Zirkus,” *Allgemeiner Anzeiger*, August 5, 1996: in a survey “German historians accuse Goldhagen of self-righteousness and of ignoring arguments”; M. Wolffsohn “spoke of a PR-circus and of vain quarreling among colleagues”; “‘Yowling’ over Hitler-book,” *Allgemeine Zeitung*, August 23, 1996: “The Allgemeine Jüdische Wochenzeitung described the local reactions to Daniel Goldhagen’s book as ‘collective yowling’”: “‘The grandparents were horrible, the grandchildren are just pathetic’”; N. Chaitkin, “Goldhagens Buch: Eine ‘britische Provokation’ aus Harvard,” special reprint from *Neue Solidarität*, no. 36, September 4, 1996; cf. the critique by former colleague of D. J. Goldhagen, R. B. Birn, “Revising the Holocaust,” *The Historical Journal*, (Cambridge University Press), 40(1) (1997), pp. 193–215; cf. N.G. Finkelstein, “Daniel Jonah Goldhagen’s ‘Crazy’ Thesis: A Critique of Hitler’s Willing Executioners,” *New Left Review* (London), no. 224, July 1997, pp. 39–88; cf. N.G. Finkelstein, Ruth Bettina Birn, *A Nation on Trial: The Goldhagen Thesis and Historical Truth*, Metropolitan Books, New York 1998.

¹⁴² A.J. Mayer, *Why Did the Heavens Not Darken? The “Final Solution” in History*, Pantheon Books, New York 1988, pp. 362, cf. the preface by Robert Faurisson in this book, his note 23.

at all, as French historian Jacques Baynac expressed it in 1996.¹⁴³ This is no doubt the result of past revisionist research, which forced orthodox historians to concede that their old story is wrong. In an attempt to salvage their damaged reputation, they seek to rescue the ‘Holocaust’ by sidestepping into a field where they hope revisionist criticism cannot reach them: into the endless Russian steppe. But I am not certain that they will succeed. Hans-Heinrich Wilhelm,¹⁴⁴ one of the most renowned experts regarding the *Einsatzgruppen*, stated as early as 1988 that he is not sure that the numbers given in these Incident reports are correct. As a result of his skepticism, he warns his colleagues:¹⁴⁵

“If the reliability [of these reports] is no greater in non-statistical respects – something which could be corroborated only by a comparison with other sources from the same region – then historical research would be well advised to make much more cautious use of SS sources than it has done to date.”

This was only logically consistent, since in his first book about this topic he had already raised a few doubts about the reliability of those documents, *i.e.*, he suspected the figures given in them to be exaggerated.¹⁴⁶

In late 2018, the intrepid Italian Holocaust researcher Carlo Mattogno had his research results on the *Einsatzgruppen* published in an English translation.¹⁴⁷ On more than 800 pages he documented not only the many numerical inconsistencies and contradictions of the various *Einsatzgruppen* reports, but also the by-and-large physically impossible propaganda claims made by Soviet “investigative” commissions who claim to have exhumed and examined numerous alleged mass-murder sites after the Red Army had reconquered the pertinent territories starting in 1943.

When the Soviet Union finally collapsed in 1991, there would have been opportunities to finally form independent research commissions with the aim at investigating these past events. These commissions should have systematically verified in at least a representative number of cases whether the number of murder victims attested to by the *Einsatzgruppen* reports can be confirmed by exhumations, or if mass cremations took place as claimed by many witnesses, whether the ineluctable traces of such large-scale fires can be detected. That there is plenty of justification for skepticism regarding these mass cremations can be gleaned from the fact, amply demonstrated by Mattogno, that the many witness testimonies on these claimed events are themselves riddled with physical absurdities to the point of being ludicrous. All the more so, independent research into this would have been imperative.

But no such research ever happened. Primarily responsible for this lack of activity, as Mattogno shows, is the obscurantism of Jewish lobby groups who prevent with all their influence that any such large-scale excavations and exhumations take place. Hence, we may never find out what exactly happened behind the German-Russian front.

But back to Babi Yar. From the air photos discussed by J. C. Ball, it is apparent that the mass murder of Jews allegedly committed by the *Einsatzgruppen* in a ravine called Babi Yar, near Kiev, never took place. Some such may have taken place elsewhere, for all we know, since the German documents about this event do not mention the precise location:

¹⁴³ *Le Nouveau Quotidien* (Lausanne), September 2 and 3, 1996, pp. 16 & 14; cf. R. Faurisson, “Keine Beweise für Nazi-Gaskammern!,” *VffG*, 1(1) (1997), pp. 19-21.

¹⁴⁴ Together with Helmut Krausnick, co-author of the famous book *Die Truppe des Weltanschauungskrieges. Die Einsatzgruppen der Sicherheitspolizei und des SD 1938-1942*, Deutsche Verlags-Anstalt, Stuttgart 1981.

¹⁴⁵ H.-H. Wilhelm, Lecture given at the International History Conference at the University of Riga, September 20-22, 1988, p. 11. Drawing on this lecture, Wilhelm wrote his contribution “Offene Fragen der Holocaust-Forschung,” in Backes *et al.*, *op. cit.* (note 47), in which this passage is not included. I owe this information to C. Zaverdinos, who provided it in his opening speech at a historical conference held on April 24, 1995, at the University of Natal, Pietermaritzburg, and to Robert H. Countess, who got Wilhelm’s paper from Wilhelm personally.

¹⁴⁶ H.-H. Wilhelm, *op. cit.* (note 144), p. 515, states that it seems likely “that even here several tens of thousands of exterminated Jews were added in order to ‘improve’ the results of the destruction of partisans, which otherwise apparently seemed to be unacceptably low.” On p. 535 he notes that one of the Incident Reports was manipulated by inserting a zero to the number 1,134, resulting in 11,034.

¹⁴⁷ C. Mattogno, *The Einsatzgruppen in the Occupied Eastern Territories: Genesis, Missions and Actions*, 2nd ed., Castle Hill Publishers, Uckfield 2022.

Babi Yar isn't mentioned in them. But if it didn't happen there, what are we to think of all the witness statements claiming it did? And if the German documents are telling the truth, but it happened somewhere else near Kiev, then where did it happen? And what if those German documents aren't telling the truth? What if someone made up a wild story, and several other German units reported this rumor as fact?

To allow for an idea of the cruel conditions under which the Germans were forced to fight on the eastern front, and which rules of warfare were generally accepted regarding partisan actions and reprisals, we have translated an excellent expert report by Karl Siegert about the legitimacy of reprisals in occupied territories during wartime. This report was prepared in the 1950s for the defense of a German soldier accused of having committed war crimes in Italy by shooting civilians as reprisal for partisan attacks. In order to understand the historical context of German reprisals in eastern Europe, this author has written an introduction and some concluding remarks about the cruel und illegal partisan warfare as it was initiated and conducted mainly by the Soviet Union.¹⁴⁸

Of course, the evidence presented in this volume is but a bare introduction to what else is possible – and necessary – for a comprehensive resolution of the Holocaust complex. Other, similar studies could support our findings – or refute them. With today's technology, it is no doubt possible to improve considerably upon our present level of knowledge. Archaeologists, for example, are able today to apply the techniques of aerial photography to locating the remnants of human settlements, deserted for many millennia and at times located well beneath the ground surface. Archaeologists are also able, on the basis of very meager remnants of Stone Age fire sites, to determine from which period the fire dates and under what sorts of conditions it burned (kind of wood, size and kind of camp, diet based on the presence of certain animal bones, degree of civilization based on the presence of tools and refuse, etc.).

We firmly believe, therefore, that the aerial photographs taken by German as well as by Allied reconnaissance planes during World War II, which in part still reside untouched in the archives today, are a source of reliable insight into the events of those days, and further that air photos taken today would still allow scientists to determine the size of former mass graves, or even the foundations of buildings no longer extant. What is more, excavations and the analysis of sediments and residue can certainly still determine the size of mass graves or the kind and quantity of residue from burning sites – if only anyone cares to investigate.

Starting in the late 1990s, several attempts to find material traces of the claimed events were indeed made on the grounds of the former camps of the so-called "Aktion Reinhardt": Belzec, Chelmno, Sobibor and Treblinka. Although disturbed soil was located in each of these cases, no large-scale excavations to determine the nature of the soil disturbances were conducted. In addition, even if the worst-case scenario is assumed – that the entire volume of disturbed soil found represents (former) mass graves – their combined volume does not suffice in the cases of Treblinka and Belzec to accommodate the number of victims claimed to have been buried in them (some 700,000 in Treblinka and some 600,000 in Belzec).

While no traces of former buildings matching even remotely what witnesses have described as homicidal gas-chamber facilities were located in Belzec and Treblinka, excavations at the former Sobibor Camp actually succeeded in locating foundation walls which roughly match what witnesses have claimed about it. Although this looks like a striking confirmation of the orthodox narrative for that camp on first sight, nothing proves that these foundation walls belonged to a building that contained homicidal gas chambers operated by engine exhaust. After all, the revisionist theory claiming that these camps were mere transit camps also requires the existence of buildings in those camps, one of which could have been used for hygienic purposes, such as giving deportees showers and/or disinfesting their clothes. It is unclear how the archeological record could be used to decide which of these two contrasting uses claimed is actually true.

While an update to Arnulf Neumaier's contribution on Treblinka deals briefly with the archeological research performed at the site of that former camp, the other camps have not

¹⁴⁸ For an enhanced German version see Germar Rudolf, Sibylle Schröder "Partisanenkrieg und Repressaltötungen," *VffG*, 3(2) (1999), pp. 145-153.

been covered in the present anthology. The interested reader may consult the respective monographs on these camps dealing with the issues at hand.¹⁴⁹

11. The Purpose of This Book

The trend pointed out by Nolte – that the establishment historians, the media, justice system and even society in general accuse revisionist authors of being followers or at least sympathizers of a National-Socialist ideology – can be traced through a series of publications¹⁵⁰ that culminates in the work by Kogon, Langbein and Rückerl, where the revisionists are slandered outrageously and implicated in all sorts of things, while neither their names are ever mentioned nor any revisionist publications cited, which would enable the reader to verify the editors' allegations.¹⁵¹ In the end, this type of pseudo-argumentation by establishment historians always comes down to the same thing, namely to impute to the revisionists an apologia for the National-Socialist system, in other words, the categorical resolution to defend the National-Socialist system even against supposed reality. Anyone who stands up for something considers that something worth defending, *i.e.*, in this case must be a sympathizer of the National-Socialist system.

It must be said here and now that none of the authors contributing to the present work considers himself ideologically anywhere in the vicinity of National Socialism.¹⁵² This aside, however, such an accusation is no argument suited to invalidating our own. It seems reasonable to suspect that these establishment historians resort to this verbal garrote merely to distract attention from those factual questions which they obviously do not feel competent to field. In any case, it is clear that anyone who evades factual arguments by means of political accusations cannot have any scientific motivation for doing so, since a scientifically motivated researcher is interested first and foremost in factual arguments. Political motivation is the only thing that could possibly prompt these historians to voice political accusations; this, however, places the charge of political choreography of our understanding of history squarely back on their own heads.

Every reader ought to examine the intentions with which he approaches this volume, for, as Bradley Smith put it:¹⁵³

“If you must worry about motive, however, it is incumbent on you to examine as well the motives of those who consistently argue against intellectual freedom on this one issue. If you don't want to examine the motives of those on both sides of the issue, perhaps (forgive me) you should examine your own.”

We will also not accept the change of subject to certain marginal issues within the debate on the Holocaust which certain revisionists may have started – for example, the discussion about the definitely eccentric theory that the National Socialists had resorted to the murder

¹⁵² I am well aware that, when it comes right down to it, certain ladies and gentlemen do not care where we revisionists consider ourselves to fit into the ideological spectrum, since after all they always know better than we do what and how we think – right?

¹⁵³ B. R. Smith, *Campus Update No. 2*, Committee for Open Debate on the Holocaust, Spring 1994.

of the Jews in self-defense following the publication of T. N. Kaufman's book *Germany Must Perish!*,¹⁵⁴ or the theory (untenable under international law) that, following the declaration of war which had in fact been made against the Third Reich by international Jewish private (!) organizations,¹⁵⁵ the National Socialists had the right to intern all the Jews in their sphere of influence as members of an enemy nation. What is more, this erroneous thesis is usually advanced by people who simultaneously condemn the Soviet deportation of the Volga Germans at the start of Germany's Russian Campaign in the summer of 1941, or the USA's internment of Germans, Italians and Japanese when the U.S. entered the war.¹⁵⁶

This kind of peripheral subject is not our issue. It is not our goal in this volume to justify or rationalize in any way a proven injustice. Our issue is solely and exclusively the question whether the evidence offered for the Holocaust – defined as the intentional, planned mass murder of the Jews in the sphere of control of the Third Reich – suffices to give it continued credibility in its present form, especially with respect to the mass gassings, or whether new evidence may perhaps require the revision of historiography.

The thesis that the Holocaust as defined above may not have taken place is naturally an explosive topic for the study of contemporary history, as for all aspects of social life directly or indirectly associated with it. We are fully aware of this. But it is important to keep in mind that since 1955 at the latest, when the official German *Institut für Zeitgeschichte* determined that it was the Soviets who had perpetrated the 1940 massacre of more than 20,000 members of the Polish elite at Katyn and elsewhere,¹⁵⁷ the (West) German media could have been disseminating the truth about Katyn, despite Soviet propaganda to the contrary, which continued to lay its own guilt for this crime at Germany's door as late as 1990. Yet right until the late 1980s, the leftist media in particular mindlessly parroted this Communist propaganda.¹⁵⁸ The reason for this is probably to be found in the politically, *i.e.*, anti-scientifically motivated desire to keep the Third Reich from being exonerated from historical guilt even where this has become inevitable, the greater purpose being to prevent, by thwarting even the partial revision of historiography, any farther-reaching revisions which might ultimately cast doubt upon the politically desirable concept of the unique and unparalleled evil of the National-Socialist regime.

But this is not the only contentious issue in which the media deny the truth for ideological reasons. There are subsections of contemporary history where neither the media nor many historians are particularly concerned about honesty. For four decades after the end of the war, for example, almost all of German contemporary historiography has championed the claim that the German campaign against Russia had been a merciless attack intended solely to gain territory in the East, at the expense of the Slavs living there. This claim persisted

¹⁵⁴ Cf. the correction by W. Benz, *op. cit.* (note 150).

¹⁵⁵ "Judea Declares War on Germany – Jews of all the World Unite – Boycott of German Goods," in *Daily Express*, March 24, 1933, one day after the Enabling Act was passed. The German reaction to this declaration of war is well known: on Saturday, April 1, 1933, the government of the Reich called for a half-day boycott of Jewish stores. A similar declaration of war was given by Samuel Untermyer, President of the World Jewish Economic Federation, on August 7, 1933, in the *New York Times*. After war had broken out in Poland, another Jewish declaration of war was issued by Chaim Weizmann, President of the Jewish Agency, *Jewish Chronicle*, September 8, 1939. In 1985, Professor Ernst Nolte mentioned this declaration in a British publication, as well as the thesis based on it, namely that the internment of the Jews by Germany was therefore allegedly not in violation of international law. No doubt this was one of the main triggers of the Historians' Dispute; cf. E. Nolte, *Das Vergehen der Vergangenheit*, Ullstein, Frankfurt am Main / Berlin 1987, pp. 20f., 170f.; declarations of war and other threats by Jewish individuals and organizations against Germany were very common at that time, cf. Hartmut Stern, *Jüdische Kriegserklärungen an Deutschland*, FZ-Verlag, Munich 2000.

until V. Suvorov¹⁵⁹ and E. Topitsch¹⁶⁰ both presented compelling proof that the Russian Campaign was in fact a pre-emptive war against the Soviet Union which had been poised to strike – which, of course, does not preclude a policy of *Lebensraum* (living space) on the part of the Third Reich. Following the collapse of the Soviet Union and the opening of Soviet archives, it has suddenly grown quiet among the ranks of those historians who formerly argued against the thesis of the pre-emptive war; especially the German media, however, continue to propagate the lie of the attack on peace-loving Russia¹⁶¹ – in contrast to the Russian media of the 1990s.¹⁶² Neither Topitsch, the philosopher, nor Suvorov, the Russian officer in exile, is a German historian, yet their researches have resulted in a radical re-thinking process. Admittedly, many historians as yet shy away from the theses of Suvorov and Topitsch, since it is a matter of principle with them to feel ill at ease with a thesis which exonerates the Third Reich from one of its evil deeds.

Another sensitive subject also had to be broached by a foreigner first before German historians began to consider the topic. In 1989 James Bacque, a Canadian, published a work in which he proved that in the years between 1945 and 1947 the Americans, Canadians, and French together deliberately starved some one million Germans labeled “disarmed enemy forces” to death, which constitutes genocide.¹⁶³ Since according to Bacque the Soviet archives reveal that some 450,000 abducted German prisoners died in Russia after the war, and since it has been a known fact for years that approximately 1.4 million Germans never returned from Allied imprisonment, Bacque feels that he can state the number of losses in the camps of Germany’s current friends, the western Allies, quite precisely at one million.¹⁶⁴ Considering all deaths caused by the Allied policy of destroying Germany, he totaled the German post-war losses as high as at least 5.7 million persons.¹⁶⁵ Some historians reacted to this Canadian (self-)accusation that the USA, Canada and France had committed genocide against the German people by denying the correctness of Bacque’s analysis and jumping to the defense of the Allies.¹⁶⁶

The extensive field of research related to the many concentration camps established after the war in eastern and southeastern Europe for purposes of the indiscriminate internment of mostly German victims, many of whom were to die an agonizing death there, was also introduced to a broader international public by a non-German, namely John Sack. In his book, he describes how mostly Jewish concentration-camp guards in Polish camps took gruesome revenge on innocent Germans who had been rounded up more or less at random.¹⁶⁷ The

attempt to publish this book in Germany shows just what a state that country is in. Although the Munich publishing firm Piper Verlag had already printed the German edition, it decided just prior to the release date to pulp, in other words to destroy, the entire print run, since they did not want to contribute to a 'relative' perspective of the German crimes against the Jews and also did not wish to expose the Jews as perpetrators.¹⁶⁸ Eventually, Sack did succeed in finding a different German publisher.

The situation regarding the blame for the bombing of the German civilian population has been no less paradoxical for decades. Whereas the British openly acknowledge their guilt (and are even proud of it),¹⁶⁹ a great many of the German historians insist that Hitler was to blame for absolutely everything, including the bombing campaign against German civilians.

If one adds to these more than half a million German victims of the Allied bombing¹⁷⁰ (which violated international law) the 1.4 million victims of Allied starvation camps, at least 2.1 million victims from the expulsion from the German eastern territories,¹⁷¹ and uncounted hundreds of thousands of victims of starvation and diseases resulting from the initial implementation of the genocidal Morgenthau plan, one arrives at a total of around six million Germans killed by the Allies and their accessories, deliberately or at least through gross negligence, and in contravention of international law. This total approaches another, heavily symbolic number.

In the face of those punishments that have befallen German researchers in contemporary history in recent years, it is understandable that the majority of German historians *feel* that at least the Holocaust must remain intact if they are not to lose even their last shred of credibility. In 1977, in view of the fact that no document has ever yet been found in which Hitler ordered the murder of the Jews or even reveals his awareness or approval of the mass murder, D. Irving (another non-German national) postulated that Hitler may not even have known of the murders.¹⁷² M. Broszat commented rightly:¹⁷³

"Rather, Irving's theory touches the nerve of the credibility of historiography regarding the National-Socialist period."

But what is left of this credibility if the Holocaust did not take place as generally believed? This revisionist thesis, advanced in the last decades primarily by, once again, citizens of the western Allied nations, not only touches the nerve of the credibility of historiography, it shatters it outright – and together with it the credibility of the entire German elite in the media, in politics, and the judiciary.

In the end, the inevitable happened: four months after the first edition of the present study had been published, the German police moved out in order to confiscate even the last copy of this book by means of hundreds of house searches throughout Germany, and the public prosecutor saw to it that all confiscated copies got burned under police supervision in waste incinerators. When it comes to the credibility of the entire German elite, there is neither freedom of expression nor freedom of science and research...¹⁷⁴

But can the issue at stake really be the credibility of Germany's elites, or is the ascertainment of historical truth the more-important issue? And is it not also particularly the question whether freedom of scholarly research and freedom of expression still exist in Europe, in

the German minority under J.B. Tito in the former Yugoslavia.

¹⁷⁴ I have described in detail the entire drama of the destruction of copies of my various research books, the present one included, in my two autobiographical studies *Hunting* (cf. note 41) and *Resistance* (cf. note 33).

other words, whether human rights, the moral foundation of western civilization, really still deliver what they promise?

The semi-conservative German daily newspaper *Die Welt* demanded in a fit of outrage at the above-mentioned verdict of the German Federal Supreme Court (Supreme Court v. Deckert, cf. Note 49) that revisionists should not only be convicted for their attack on Jewish dignity without permitting any evidence, but claimed as further justification that

“[a]nyone who denies Auschwitz [...] also shakes the very foundations of this society’s self-perception.”¹⁷⁵

As I said, there’s the rub!

The leftist German weekly paper *Die Zeit* also explained why disputers of the orthodox Holocaust narrative must be silenced by the justice system and Protection Agency of the Constitution:¹⁷⁶

“The moral foundation of our Republic is at stake.”

No, my dear ladies and gentlemen of the press, quite the reverse is true! Anyone who threatens academic freedom and freedom of the expression of opinion shakes the very foundations of German society’s self-perception and endangers the moral foundation of Germany!

Unless, yes, unless the Federal Republic of Germany defines itself not in terms of the human rights set out in her constitution, but in terms of the belief in the prevailing narrative of the Holocaust. But before anyone expects us to accept this theocratic approach, it would have to be set down in black and white in the Constitution – after prior approval by the German electorate.

The fact that the above newspaper reports were not simply a passing craze was proven a short time later by *Die Welt*, which wrote:¹⁷⁷

“Anyone who denies the truth about the National-Socialist extermination camps betrays the principles on which the Federal Republic of Germany was built. This state is supposed to be a valiant democracy that defends itself when anti-democrats try to subvert it.”

Well, there we have it: anyone who holds a contrary opinion on certain topics is anti-democratic. That makes about as much sense as the statement that nights are colder than outdoors.

Regarding *Die Welt*’s indirect accusation that the authors of this volume are anti-democratic, I just want to point out that in my opinion an increase in democratic rights in the form of popular plebiscitary participation in the state’s decision-making process would be a major boon to Germany. In view of the conditions described in this introduction, to which we researchers and scientists are subjected in Germany and other western nations, it is evident that these nations suffer from considerable deficits of democratic and human rights – not only in terms of freedom of opinion, research, and science, but also in terms of access to the media.

Please allow me to define the term democracy succinctly here: Democracy is when three foxes and a chicken decide what to have for dinner. Pure democracy is quite compatible with lynch justice. Where the mob becomes the majority, democracy becomes an enemy of humanity. Democracy needs the straitjacket of the rule of law, which protects and enforces the inalienable civil, human and international rights even against the will of a democratic majority. However, if the majority determines what is law and order at will, then the rule of law simply ceases to exist. This condition existed in Germany not only between 1933 and 1945, but it exists also today.

Further examples I listed elsewhere¹⁷⁸ show that the above-quoted media statements are not just the opinions of some few journalists, but rather that it is the implacable posture of most members of the German elites, in whose service said journalists write. This attitude was succinctly summarized by German journalist Patrick Bahners when he wrote, in refer-

¹⁷⁵ P. Philipps, “Quo vadis, BGH?,” *Die Welt*, March 16, 1994, p. 6.

¹⁷⁷ R. Wassermann, “Die Justiz hat Klarheit,” in *Die Welt*, April 28, 1994, p. 4.

¹⁷⁸ In my *Lectures*, op. cit. (note 117), pp. 418f.

ence to the verdict against the leader of the right-wing National Democratic Party of Germany,¹⁷⁹ Günter Deckert, for having voiced sacrilegious views on the Holocaust:¹⁸⁰

“If Deckert’s [revisionist] ‘view of the Holocaust’ were correct, it would mean that the Federal Republic of Germany was based on a lie. Every presidential address, every minute of silence, every history textbook would be a lie. In denying the murder of the Jews, he denies the Federal Republic’s legitimacy.”

Finally, we ought to ask: what should we think of a state that tries to define by penal law certain views of history as the ultimate truth, and which disparages dissidents as enemies of democracy. Friedrich Karl Fromme, co-editor of the German daily newspaper *Frankfurter Allgemeine Zeitung* and certainly above suspicion of anti-democratic leanings, wrote in 1994:¹⁸¹

“Historical truth cannot be established by criminal law; such endeavors do not become a state committed to liberality, no matter how painful or embarrassing it may be in individual cases.”

One might hope that the truth will hold its own in a factual, scientific encounter even without the protection of criminal law. On the other hand, it is almost impossible for truth to prevail under the constant threat of criminal prosecution.

So, what is such a state to do when it turns out that the revisionists really are right? Is it supposed to dissolve itself? Or is it supposed to ban the study of history and to jail all historians? It is easy to see how far from the straight-and-narrow such erroneous views lead: someone who pretends to wish to protect this Republic through the ruthless defense of the orthodox Holocaust narrative will, in the crunch, find himself forced to undermine the notional pillars of this state, which are freedom of expression, freedom of research, teaching and science, and an independent justice system under the rule of law. He thus becomes, not the protector of a free and democratic fundamental order, but its greatest threat.

That this threat is more than theoretical was shown by the reactions to the infamous Mannheim verdict against Günter Deckert. In this instance, one of the foremost principles and prerequisites of a state under the rule of law, namely the independence of the trial judges, was annulled in that two of the three judges were punished for their verdict by means of their (forcibly extracted) ‘notifications of illness’ and subsequent forced retirements, while all the time threatened to be prosecuted for an Orwellian, *Brave New World*-type “perversion of justice.” They were accused not only of having sentenced Deckert too leniently, but also of having portrayed his views and intentions as honorable.¹⁸²

Ever since, German judges have been forced under threat of prosecution by the democratic mob to portray any dissident of the orthodox Holocaust narrative as profoundly evil from the get-go. This turns trials against Holocaust revisionists into nothing more than show trials whose results and verdicts are already set in advance. Already in 1993 I posited that the real issue to be decided by the judges during trials against revisionists is ultimately whose head is to roll: that of the defendant, or that of the judge.¹⁸³ The Deckert case proved me right.¹⁸⁴ Furthermore, also the parallel drawn by me (in the contribution “The Value of Testimony and Confessions on the Holocaust”) between the medieval witch trials of suspected demonic agents and today’s trials against suspected ‘Holocaust Deniers’ has proven to be true, unfortunately.¹⁸⁵

¹⁷⁹ See footnote 49 for this. On the case against Deckert, see Günther Anntohn [Deckert], Henri Roques, *Der Fall Günter Deckert*, DAGD/Germania Verlag, Weinheim 1995. The book was confiscated and destroyed by the Mannheim District Court, however (Landgericht Mannheim, ref. (13) 5 Ns 67/96).

¹⁸⁴ The revocation of the judges’ independence was also acknowledged by the jurist Dr. Martin Kriele, “Ein Eingriff mit Präcedenzwirkung,” *Frankfurter Allgemeine Zeitung*, Sept. 15, 1994, p. 14.

¹⁸⁵ In the present volume summarized in the contribution “The Value of Testimony and Confessions Concerning the Holocaust”; originally and more thoroughly as W. Kretschmer, “Der mittelalterliche Hexenprozeß und seine Parallelen in unserer Zeit” (The medieval witch trials and its parallels in our time), *DGG* 41(2) (1993), pp. 25-28.

Repressive governments need “enemies” to frighten the average citizen into accepting the government’s encroachments on civil rights, and to enlist them as footsoldiers in their battle against any and all dissent. Very few Holocaust revisionists start their journey of doubts as enemies of “the system”. The system persecutes them to the point where these dissidents have little choice but to consider the destroyer of their civil existence as their enemy. Thusly created, this revisionist enemy then serves as the government’s prime justification for stepping up its persecution. And so, a vicious circle of persecution and dissent is created which keeps escalating. It is a tragic development ultimately leading to the destruction of liberty for all.

Scholarship is a process of constant revision. As this edition appears, portions of it may be superseded by new findings. That is so in every field of knowledge. Hence, this book does not pretend to give definitive answers to the many whats and hows of the history of the Holocaust, as everything must forever be subject to revision due to new findings. Nor does it try to describe, in detail or in brief, how certain events happened, as do most history books. This book rather goes to the very roots of historiography: document criticism and detailed, interdisciplinary expert analysis of certain (alleged) historical events. It simply attempts to build, or to reveal, a solid and exact scholarly foundation about a few sections of contemporary history, on which a source-discriminating historiography can rely in its future research.¹⁸⁶

Furthermore, the purpose of this book is the evidentiary, scientific *debate* about the question of where the truth is to be found regarding the Holocaust. This volume is to serve as a *beginning*, not as conclusion to this debate. Everything else may follow. We hereby introduce our theses regarding subnarratives of the Holocaust and look forward to objective replies and possible refutations. Anyone, however, who can think of no better reply to our work than cheap political polemics and *ad hominem* attacks is disqualified from the outset.

12. About Academic Freedom

“The protection that the Law provides for academic freedom depends neither on the correctness of the methods and the results, nor on the soundness of the arguments and the line of reasoning, nor on the completeness of the points of view and evidence forming the basis of a scientific treatise. Good or bad research, truth or untruth of findings can only be assessed scientifically [...]. Thus, academic freedom also protects minority opinions as well as approaches to, and findings yielded by, research that proves incorrect or flawed. Similarly, unorthodox or intuitive approaches are protected by the Law. The only prerequisite is that what is in question is scientific or academic; this includes anything which, by virtue of form and content, is to be regarded as a serious attempt to ascertain truth [...]

No work may be denied scientific or academic character for the sole reason that it is one-sided or incomplete or neglects to adequately consider contrary opinions. [...] A work fails to qualify for scientific or academic character only if it fails to meet the requirements of scientific or academic approach not only in individual respects or as defined by specific schools of thought, but systematically. In particular, this is the case when the work is not intended to ascertain truth but merely to give an appearance of scientific origin or provability to preconceived opinions or findings. One indication of this may be the systematic disregard of facts, sources, opinions and conclusions which cast the author’s views into doubt. On the other hand, it does not suffice for a work to be deemed unscientific in the course of intra-disciplinary controversy between diverging material or methodological approaches.”

Verdict of the German Federal Constitutional Court,
January 11, 1994, Ref. 1 BvR 434/87, pp. 16f.

A comparison of orthodox historical writing on the so-called Holocaust with more-recent revisionist publications reveals a fundamental difference between the two scholarly communities. In the following I would like to consider this difference, and how it illuminates the concerns addressed in this book.

¹⁸⁶ That is, by the way, the origin of the German title of this book: *Foundations of Contemporary History*.

As already mentioned, orthodox historiography on the National-Socialist persecution of the Jews *assumes* that certain events of recent history took place in a certain, widely accepted manner. When writing about the claimed events of physical extermination of the Jews, witness statements are almost the exclusive form of evidence on which the orthodoxy relies. These statements are rarely examined critically, nor can any comprehensive document criticism be found; the interpretation of a document in the framework of the thousands of other documents that provide its context is particularly rare.¹⁸⁷

Often it is considered sufficient to cite portions of documents out of their proper context, or arbitrarily select a few documents from many others of relevance. The well-known book by Daniel J. Goldhagen represents in effect the apogee of this approach,¹⁴⁰ and it has been massively criticized for this even from the establishment side. However, Goldhagen's work is merely the logical, radical conclusion of the general tendency in this field of research to selectively interpret source materials. Consequently, the criticism directed at Goldhagen generally reflects poorly on his establishment critics themselves.¹⁴¹ Two prominent examples for such poor historiography are the well-known authors Jean-Claude Pressac¹⁸⁸ and Danuta Czech.¹⁸⁹ Both profess to reconstruct the history of Auschwitz (or Auschwitz-Birkenau) on the basis of documents and, in the case of Danuta Czech, also of eyewitness testimony.

Aside from the fact that, where gas-chamber and mass-extermination claims are concerned, both authors clearly give eyewitness testimony priority over all other forms of evidence and thus proceed in a grossly unscientific manner, their books also exhibit two other grave errors. First, neither of the two authors has attempted to draw on the hundreds of thousands of documents stored in the Moscow, Auschwitz and Prague archives to write a history of the camp as reflected in the original documents. Both authors content themselves with choosing, from amongst the masses of all that is available, only such documents as they find appealing, and by misinterpreting them, they then combine them into a distorted overall picture that reflects their bias.¹⁹⁰

Furthermore, in virtually every one of its treatises, the method of historiography as practiced by mainstream historians ignores, on principle, any opposing scientific or academic view that revisionists have submitted regarding the Holocaust. A prime example of this is Jean-Claude Pressac's second book, which was announced in Europe in the early 1990s as the 'last word' of Holocaustology.¹²⁷ Despite claiming to refute the revisionists' arguments, Pressac systematically disregards any and all facts, sources, opinions and conclusions that cast his own view into doubt. No revisionist work is cited, not one single revisionist argument is discussed. One could live with that if at least he did justice to what he promises in his book's title, namely to present a treatise sound in technical, *i.e.*, technological respects. In fact, however, his work contains not a single source from a technical publication. It does not contain even one conclusion drawn from his own technical studies or those of others. Further, he mingles his own frequently unfounded opinions indistinguishably with the contents of documents he quotes – an extremely unsound procedure.¹²⁸ One would be fully jus-

¹⁸⁷ With this, I include all the speeches, addresses, articles, diaries and calendars of the witnesses Hitler, Himmler, Goebbels, Frank, and all the others. Whatever these documents reveal, at best, they reflect what these persons thought they knew, what they felt or intended, what they wanted their audience to hear and their readers to read. In most cases, these documents do not, by themselves, prove what happened, when, where, by and to whom. All they can do is to raise our suspicions that something might have happened. What actually occurred may be made clearer with the support of material and documental evidence directly related to the alleged events.

¹⁸⁸ *Auschwitz: Technique and Operation of the Gas Chambers*, The Beate Klarsfeld Foundation, New York 1989; Pressac, *op. cit.* (note 127); by the way: Pressac was a pharmacist, neither an engineer, nor an architect, nor a toxicologist, nor a chemist, nor an historian.

¹⁸⁹ D. Czech, *Auschwitz Chronicle, 1939-1945*, Henry Holt, New York 1990.

¹⁹⁰ For a profound critique of Czech's "standard work" on Auschwitz, see C. Mattogno *Mis-Chronicling Auschwitz: Danuta Czech's Flawed Methods, Lies and Deceptions in Her "Auschwitz Chronicle,"* Castle Hill Publishers, Dallastown, Penn., 2022. For critiques of Pressac's work, see G. Rudolf (ed.), *Auschwitz: Plain Facts: A Response to Jean-Claude Pressac*, 2nd ed., Castle Hill Publishers, Uckfield 2016; C. Mattogno, *The Real Case for Auschwitz*, *op. cit.* (note 128); G. Rudolf, *Auschwitz: Technique and Operation of the Gas Chambers. An Introduction and Update to Jean-Claude Pressac's Magnum Opus*, Castle Hill Publishers, Uckfield 2018.

tified in saying that Pressac systematically disregards not only arguments running counter to his own views, but also the scientific method as a whole.

Exactly the same is true for Prof. Robert Jan van Pelt's works.¹⁹¹ Pelt does not quote a single source of the expert literature about toxicology, chemistry, engineering, or architecture. He does not perform a single calculation, and he ignores the vast body of research done by others, such as Germar Rudolf, Carlo Mattogno, Franco Deana, Werner Rademacher aka Willy Wallwey, Friedrich Paul Berg.¹⁹²

Not surprisingly, such a *modus operandi* results in the grotesque situation where documents of 'innocent' or at worst ambiguous content are taken out of their proper context, declared to be "criminal traces" (J.-C. Pressac), and promoted to the status of central evidence for the Holocaust, even though these documents have nothing at all unusual about them when considered in context.¹⁹³ A truly objective study of the Auschwitz concentration camp, however, would have to consider all other pertinent documents as well and would have to assign each document its evidential value and significance in the context of the many others. It is telling that not one mainstream scholar has tackled this gargantuan task to date. Evidently none of the many Holocaust 'scholars' springing up like mushrooms, especially in the United States, is interested in a solid history of this camp, based on documental evidence. Or are they simply too lazy?

One reason for their missing motivation may lie in the fact that, in the meantime, the Holocaust has assumed quasi-religious features. Symptomatic for this is for instance that two of the most-prominent Holocaust scholars worldwide are theologians: Deborah E. Lipstadt, Professor for Modern Jewish and Holocaust Studies, holds a chair in the Department of Religion at Emory University. Michael Berenbaum, for many years active in leading positions of the US Holocaust Memorial Museum in Washington D.C., is a rabbi. According to opinion polls, the Holocaust has replaced the Jewish religion as the most important topic defining Jewish identity,¹⁹⁴ and it is widely accepted that the Holocaust is a "founding myth of Israel"¹⁹⁵ and a sort of a new secular religion of modern Jewry¹⁹⁶ that is used by Jewish organizations to garner support for Israel, promote Jewish identification, and advance the cause of multi-culturalism.¹⁹⁷ And it is well known that religions and political ideologies are more interested in defending dogma than in searching for truth.

Among the revisionists, on the other hand, aside from historians, there are engineers and exact scientists (physicists, chemists, geologists).¹⁹⁸ Since scholars in the exact sciences have a completely different approach to their fields – "You must never trust an eyewitness

Walendy; lawyer: Karl Siegert; geologist: John C. Ball; chemist: Germar Rudolf; Robert Faurisson was professor for text, document and witness account criticism.

account.”¹⁹⁹ –, it is no surprise that their results are completely different from those of scholars swayed by theology.

First of all, the discussion of the opinions on the Holocaust as they are recorded in the works of orthodox historians is the heart of the matter of this volume. Nothing is disregarded. The intensive examination of (alleged) facts, sources, opinions and conclusions of the opposing side is the foremost reason for the publication of this book.

Secondly, the critique of documents and witness testimony has always been the core of revisionist analysis and fundamental criticism. The present volume contains several chapters on this subject, so I will dispense with a detailed discussion here.

Finally, in insisting on hard, *i.e.*, documental and material facts, the revisionist side has begun the task of writing a reliable history of the Holocaust relying almost exclusively on the *total* documental *and* material record available, and supported by pertinent and exact scientific expertises.

This is what science is all about. And it is a heinous crime to punish revisionist scientists for their findings, as many European countries do today.

However, due to constraints of time and resources, the revisionists’ focus has been on resolving one detail after the other, fitting the mosaic together piece by piece. But since the revisionists are being increasingly persecuted for their labors by state prosecution, especially in Europe (during the late 1990s, the Federal German government even exerted diplomatic pressure on eastern European countries to make it more difficult for us to access the archives there),²⁰⁰ their work will probably take many more years. This volume contains only a few examples; of these, Carlo Mattogno’s articles in particular are based on intensive archival research, which he has been conducting for several decades. Since the publication of the first edition of the present study, further findings of these ongoing research efforts have been published step by step as part of the series *Holocaust Handbooks* (www.HolocaustHandbooks.com).

13. The Scientist’s Ethical Responsibility

Let us assume for the moment that our theses are correct. Should this be kept from the world, or should it be made known? Or, to put it more clearly: can the dissemination of our theses have negative consequences for the co-existence of different peoples? It is a negative possibility; but it is also possible that it may have positive consequences, just as it is conceivable that the dissemination of the view commonly held of the Holocaust today may also have had, and may continue to have, negative effects on the co-existence of different peoples, especially as far as the Germans and the Palestinians are concerned. The crucial factor in determining the political ramifications of a scientific theory or discovery is its treatment in politics and today especially in the media. A theory or insight cannot be eliminated by attempts to suppress or even to ban it, by whatever means. Even self-denial on the part of the scientist can result at most in a delay, but never in a termination of the process of learning and discovery. Friedrich Dürrenmatt described this accurately in his drama *The Physicists*. No power on earth can forever stop the processes of learning and discovery. That is why a wise politician must strive to reconcile the concepts of these processes into a framework in accordance with his own concepts and goals. This implies that politics must determine its objectives at least roughly in accordance with the state of scientific knowledge.

Historical revisionism is the first great intellectual adventure of the 21st Century. Judging from the way things look today, this adventure will in the future be more than just an intellectual one, though.

¹⁹⁹ This was the response of my Ph.D. supervisor Prof. Dr. Dr. hc. Hans Georg von Schnering when one of his assistants, Dr. Harald Hillebrecht, quoted a statement of a colleague as proof for an allegation (January 20, 1993, 9:48, Room 4D2, Max Planck Institute for Solid-State Research, Stuttgart.). Needless to say, Prof. von Schnering rejects his own maxim where the ‘Holocaust’ is concerned.

²⁰⁰ Cf. epd/AFP, “Herzog: Sudetendeutsche sollen Nachbarschaft gestalten,” *Frankfurter Allgemeine Zeitung*, Oct. 17, 1997; cf. W. Rademacher, G. Rudolf, “Appell an unsere Unterstützer,” *VffG* 2(1) (1998), pp. 83-86; G. Rudolf, “Wer zu spät kommt, den bestraft das Leben,” *VffG* 2(3) (1998), p. 165.

Whoever controls the histories of nations controls those nations and their peoples. The Second World War ended in the total victory of the enemies of the Third Reich and its allies. Their victory gave the conquerors a hitherto-unknown power to write the world's history to their liking. But the power that brings total victory intoxicates, and poisons. Like their predecessors, the victors, in their hubris, would write a history that was arbitrary, self-serving, and at odds with what actually happened. No-less-inevitable than this intoxication of victory, however, is the gradual decay of their one-sided view of history, and thus an erosion of the power based upon it. Viewed in this way, historical revisionism is an instrument against abusive political power. Nor does it function as such a weapon only at present: it has in the past, and will do so in the future.

The possible political impact of the findings of Holocaust revisionism become apparent if one considers what in our world is being dominated by the Holocaust Taboo. I have shown elsewhere that the social sciences of western societies suffer under severe restrictions wherever topics are involved which somehow can be brought into context with the Third Reich, often by the most devious of pseudo-arguments.²⁰¹ Consequently, western societies are increasingly unable to solve their social problems. Given that Holocaust propaganda and war mongering very often go hand in hand, the indirect financial and human costs of this war-justifying propaganda is hard to overestimate.

Robert Hepp has summarized what would be at stake for Germany, should it emerge that our opinion about the Second World War in general and the Holocaust in particular is seriously wrong: basically the entire postwar world order.²⁰² Under these circumstances, simply everything might be jeopardized on which the reigning power elites depend.

Considering all the things that could be at stake, the role of the scientist in this process ought to be to repeatedly remind politicians of the aforementioned insight: banning something does not eliminate it, it only makes it all the more interesting to those factions that enjoy working in the shadows of the semi-legal or illegal. But most of all, the legislators and powers-that-be who impose bans on research and science invariably place themselves in the wrong in the eyes of the public, and thus lose all their credibility, for anyone who forbids discussion is quickly suspected of having something to hide, or of lacking sound arguments of his own.

Anyone who wishes to keep certain insights or theses from being misused by extremist groups can only succeed by addressing the issues in question himself. In other words, if Racists, National Socialists and anti-Semites are to be prevented from using Holocaust revisionism for their own political purposes, their opponents must embrace revisionism themselves. Responsibility and leadership have to be taken from *inside* Holocaust revisionism in order to manage how irresistible revisions of our views of history affect the self-understanding of our polities. One has to take an offensive rather than a defensive approach to revisionism.

It ought therefore to be the foremost concern of moderate politicians to see to it that the discussion about the Holocaust spreads to social circles beyond the radical or extremist ones, so that any potential consequences of a revision of historiography can be represented and implemented credibly and competently by respectable and respected politicians. And the foremost concern of the scientist must be to alert the politicians to this fact and to support them as they thread their ways among the cliffs of scientific insights.

It is to be hoped that revisionist historians will be able to resist the Faustian temptation to intoxicate themselves on their power that may arise in the future.

Thus, this book is offered as intellectual ammunition, but is *not* meant to serve any political ideology. Scholarship serves primarily one cause, the cause of Truth.

As a proper guideline, I have added a few paragraphs written by Bruno Leoni. May the reader be inspired by this.

Bruno Leoni, *Freedom and the Law*, Indianapolis, Liberty Fund, 1991, pp. 148-150.²⁰⁴

“No truly scientific result has ever been reached through group decisions and majority rule. The whole history of modern science in the West evidences the fact that no majorities, no tyrants, no constraint can prevail in the long run against individuals whenever the latter are able to prove in some definite way that their own scientific theories work better than others and that their own view of things solves problems and difficulties better than others, regardless of the number, the authority, or the power of the latter. Indeed, the history of modern science, if considered from this point of view, constitutes the most convincing evidence of the failure of decision groups and group decisions based on some coercive procedure and more generally of the failure of constraint exercised over individuals as a pretended means of promoting scientific progress and of achieving scientific results. The trial of Galileo, at the dawn of our scientific era, is in this sense a symbol of its whole history, for many trials have since actually taken place in various countries up to the present day in which attempts have been made to constrain individual scientists to abandon some thesis. But no scientific thesis has ever been established or disproved in the end as a result of any constraint whatever exercised upon individual scientists by bigoted tyrants and ignorant majorities.

On the contrary, scientific research is the most obvious example of a spontaneous process involving the free collaboration of innumerable individuals, each of whom has a share in it according to his willingness and abilities. The total result of this collaboration has never been anticipated or planned by particular individuals or groups. Nobody could even make a statement about what the outcome of such a collaboration would be without ascertaining it carefully every year, nay every month and every day throughout the whole history of science.

*What would have happened in the countries of the West if scientific progress had been confined to group decisions and majority rule based on such principles as that of the ‘representation’ of the scientists conceived of as members of an electorate, not to speak of a ‘representation’ of the people at large? Plato outlined such a situation in his dialogue *Politikos* when he contrasted the so-called science of government and the sciences in general with the written rules enacted by the majority in the ancient Greek democracies. One of the characters in the dialogue proposes that the rules of medicine, of navigation, of mathematics, of agriculture, and of all the sciences and techniques known at his time be fixed by written rules (syngrammata) enacted by legislatures. It is clear, so the rest of the characters in the dialogue conclude, that in such a case all sciences and techniques will disappear without any hope of reviving again, being banished by a law that would hinder all research, and life, they add sadly, which is so hard already, would become impossible altogether.”*

dolf chose in 1992/1993 for his first book *Vorlesungen über Zeitgeschichte* (Grabert, Tübingen 1993) to protect himself from German government persecution which indeed started shortly afterwards. In 1994, the publisher of the original German version of the present book, Grabert Verlag, urged Rudolf to continue using this pen name since it had gained reputation, and for safety reasons for both the publisher and the editor.

²⁰⁴ Thanks to Michael Humphrey who discovered and sent me this excellent excerpt.

The Case of Walter Lüftl

Contemporary History and the Justice System

WALTER LÜFTL

1. Introduction

In the early spring of February 1992, many Austrian and German daily newspapers¹ reported the resignation of the president of the Austrian Federal Chamber of Engineers, Walter Lüftl, who stepped down from his prestigious position after voicing doubts about the Holocaust. Things calmed down fairly quickly in Germany, while in Austria a fair-sized scandal ensued. The president of the Federal Chamber of Engineers, it was alleged, had expressed ‘Nazi’ sentiments, and cries for the public prosecutor were to be heard.

More sensible and aware persons, however, pricked up their ears, since, after all, an engineer and many-thousand-time forensic expert witness from Austria’s prestigious professional group must surely have had his reasons if he questioned the technical feasibility of some aspects of the Holocaust.

Insiders had realized as early as winter 1991 that something was in the wind, since Lüftl had already published preliminary hints in the engineering journal *Konstruktiv* that not all was right with some historical eyewitness testimony. He did not at that time make reference to the Holocaust, leaving it up to the reader instead to make the connection based on the facts and questions raised.²

The basic legal principles of a state under the rule of law demand that publicly appointed and sworn experts must accord greater significance to material evidence than to any eyewitness accounts. Lüftl, being such an expert and acting in accordance with this logical stipulation, was more than a little surprised to realize that the generally accepted qualitative hierarchy of evidence appears to be reversed where the Holocaust is concerned: Holocaust historiography is dominated by eyewitness testimony which, he found, frequently does not stand up to expert criticism, but which is nevertheless accepted unquestioningly and is given precedence over the material findings of experts.

He was also surprised to find that the courts take “judicial notice” of the events of the Holocaust as described by eyewitnesses – *i.e.*, they consider these accounts to be self-evident and proven facts – not only in order to obviate the need for their formal proof and thus to spare themselves the bother of bringing evidence for these events, but that they also make use of this “judicial notice” in order to deny the opposing side the right to bring evidence to the contrary. Lüftl considers this practice to be a violation of human rights, since judicial notice should be taken only of such matters as are undisputed by both prosecution *and* defense – such as water is wet, fire is hot, and ice is cold. As soon as there is any justified and reasonable dispute of any point, however, such a point must be open to discussion.

Does someone hiding behind rulings of judicial notice not in fact reveal that he does not care to know the truth if it differs from the traditional version (that which is ‘desirable from the perspective of public education’), and that he wishes to keep this truth, by whatever means, from those who would prefer to see actual knowledge replace blind faith? Surely, someone who is truly convinced that the *official* truth corresponds to *his* truth has nothing to fear from any material evidence proffered, which after all he ought to be easily able to refute. But the legal reality with respect to the Holocaust is that any and all dissenting evidence proffered is dismissed from the start as being “pseudo-scientific.” Truth is the sole province of the status quo. ‘Everything has been proved a thousand times over. Arguments

¹ E.g., “Rücktritt nach Zweifel am Holocaust,” *Süddeutsche Zeitung*, March 14, 1992.

² W. Lüftl, “Sachverständigenbeweis versus Zeugenbeweis,” *Konstruktiv* 166 (Dec. 1991), pp. 31f.; both articles are reproduced in G. Rudolf, *Vorlesungen über den Holocaust*, 4th ed., Castle Hill Publishers, Uckfield 2017, pp. 566f.

to the contrary have been refuted *ad nauseam*,’ goes the hollow standard objection, which is simply not true. This arbitrarily assigned self-evidentness is the muzzle that is put on truth.

2. Austria’s Special Laws

Austria is an oddity which can only be understood if one knows Austria’s history. Since the early Middle Ages, Austria had been part of the German-dominated Holy Roman Empire, to whose name the phrase “of German Nation” was later added. Since the end of the Middle Ages at the latest, Austria and its royal house of the Habsburgs was the dominant power in Germany. This did not change until the Silesian Wars, when the Prussian Hohenzollerns under Friedrich the Great, with much martial luck, wrested Silesia from the Habsburgs. Since then, Prussia had claimed equal standing with Austria within Germany, which ever since the late Middle Ages had consisted of hundreds of small kingdoms and principalities. It was not until 1806, when the Holy Roman Empire of the German Nation collapsed under Napoleon’s onslaught, that Austria gave up its leading role in Germany, a role which was assumed by Prussia 60 years later when Prussia again defeated Austria in the Austro-Prussian War.³ As early as 1848, when the German people urged the princes on to a political unification of the German states, it was clear that the Habsburgs Monarchy, due to their involvement in the Balkans, could not participate in the first German unification, which eventually materialized in 1871 – although the inhabitants of Austria wanted this unification no less than all the other Germans, regardless whether they lived in Bohemia, Moravia, Prussia, Bavaria, Swabia, Saxony, or wherever. The unification of 1871 encompassed only the northern German states, which became the so-called German Reich. However, the relations with Austria-Hungary were very close, and neither side ever gave up hoping or striving for an eventual reunification of both empires into one “whole Germany.” This did not become possible until the Austro-Hungarian Empire collapsed after World War One, but at that time the Allies forcibly prevented the unification of Austria with the rest of the German empire, even though the unification had already been formally agreed upon. Both sides continued to hope that sooner or later the Allies would comply with the Austrian Germans’ right to self-determination, and so, unofficial negotiations continued after 1918 to prepare for Austria’s unification with the rest of Germany, by coordinating laws and decrees. As we know, actual unification did not come about until 1938, when it finally became fact as a result of Adolf Hitler’s no-nonsense approach; and it is important to note that even though the circumstances were less than ideal, this unification did take place with the overwhelming agreement of the Austrian Germans. Even after World War Two, the Austrian Germans did not want to give up their affiliation with “whole Germany,” yet again the victorious Allies denied them this option.

This time, however, the Allies went all the way. They established the so-called *Prohibition Order* as prerequisite for ending their military occupation of Austria. This Order provides for severe penalties for any activities serving National-Socialist purposes, including severe punishment for anyone attempting to undermine Austria’s independence, for example by preparing for or carrying out its reunification with Germany. At the same time, a totalitarian re-education program similar to that imposed on Germany was also instituted in Austria; one of its aims was to strip the Austrians of their German identity and to define them as a separate people. By now this endeavor has largely succeeded.

The so-called *Prohibition Order* – a separate, independent criminal law existing parallel to the Austrian Criminal Code – is a relic from occupation times which still has the power to impose harsh penalties for certain poorly defined ‘thought crimes’ labeled as being ‘Nazi’ in nature. Its hazy definition, as well as the randomness with which it criminalizes certain beliefs and convictions, puts this law outside the norms of human rights. Beyond that, it also violates fundamental principles of international law, such as the right of self-determination. What is more, the *Prohibition Order* even violates the Austrian Constitution, which is in compliance with internationally accepted human rights and international law. But due to the special lie that Austria lives – namely, to consider itself “Hitler’s first victim,” but now a “liberated nation” – it is impossible for Austria to dispense with this law if it does not wish

³ Formally speaking, the dispute was about who would hold supremacy in Schleswig-Holstein.

to jeopardize its own statehood. And since the international community has no wish to see the cooperation between Austria and Germany grow closer, these shortcomings are generously ignored.

3. Lüftl's Violation of a Special Law

In the late 1980s, the Holocaust revisionists became more active in Austria as well. At that time the Austrian Criminal Code did not contain any explicit means for punishing such dissidents. Falling back on the so-called *Prohibition Order*, which provides for severe punishment for any revival of National-Socialist activity, turned out to be problematic, however, for the government. Admittedly, judges did not hesitate to impute National-Socialist convictions to the defendants, and to assume that, with their revisionist theories, they aimed at making National-Socialist ideology socially acceptable again, in order to restore it to influence and power at some future date. However, the *Prohibition Order* in force at the time provided for a minimum sentence of five and a maximum sentence of twenty years in prison for offenses of this kind, and most judges were hesitant to pass such harsh sentences for mere 'thought crimes,' so that – in the opinion of the media and of the politicians – the ultimate outcome of too many cases was an acquittal. A rectification of the matter was demanded by several pressure groups.

The reader will no doubt wonder how any conflict with this law could be possible for a person 'like you and me,' a person who has lived a decent, industrious life, has no prior convictions – not even a traffic violation –, who has devoted considerable efforts to working on a volunteer basis for the public good. It would take an entire page just to list all the functions and offices W. Lüftl has held and who was ultimately elected to serve in a politically unaffiliated and independent capacity as president of the representative body of his profession – the Austrian Federal Chamber of Engineers. How can it be possible for such a man to come into conflict with the law previously set out and be branded as a dangerous criminal subject to twenty years imprisonment?

What follows in this article will detail the case of this academically accredited engineer, *Walter Lüftl*.⁴

For Lüftl, it all began with two press releases in the Viennese daily paper *Die Presse* on March 23 and 29, 1991. Both articles reported about the debates by the SPÖ [Austrian Social Democratic Party] and the ÖVP [Austrian People's Party] regarding the introduction of a new special definition of a crime, namely "incitement," as §283a of the Austrian Criminal Code. This suggested paragraph provides for a term up to one year in prison for anyone "who denies the fact that millions of human beings, Jews in particular, were killed in concentration camps of the National-Socialist regime as part of a program of planned genocide."⁵

This prompted Lüftl to write two letters, one to the newspaper *Die Presse* and one to Dr. Michael Graff, the Chairman of the Justice Committee of the Austrian National Council. Their contents in brief: all that the new law will do is promote denunciation. Following a visit to the concentration camp Dachau in 1990, Lüftl had found that the tourist attraction exhibited there as a 'gas chamber' not only "had not been used," as the tour guide briefly summed up the truth, but was in fact a fake that had been set up by a group of laypersons. Lüftl asked whether this fact, which could be easily proved, would in future brand anyone mentioning it as suggesting perhaps a 'Dachau Lie'?

Dr. Graff did not respond; the Editor-in-Chief of *Die Presse*, Dr. Thomas Chorchherr, informed Lüftl on April 5, 1991, that unfortunately his letter could not be published, as it might be misunderstood by the public. On April 10, 1991, Lüftl replied to this with the following letter:

⁴ Originally, Walter Lüftl used the pen name Werner Rademacher for this contribution, which is the reason why it is written in the third person.

⁵ This suggested paragraph was later abandoned in favor of a new paragraph 3h of the *Verbotsgesetz*.

“Vienna, April 10, 1991
Your Ref.: Dr. Ch/P
Your letter of April 5, 1991

Dear Dr. Chorherr, Editor-in-Chief:

Thank you for your response; it is rather unusual for an editor-in-chief to reply to the writer of a letter to the editor. It shows that my letter was received with a thoughtful and open mind on your part. I agree that my letter might be misunderstood, particularly when someone wants to misunderstand it; there is also the potential danger of approval from the wrong parties.

For this reason, I am sending you a memo authored by me and documented with publicly available sources. This memo is not intended in defense of anyone, it is merely intended to raise doubts in the sense of: I cannot tell whether it was this way because I wasn't there, but if it wasn't necessarily this way then one ought to be allowed to talk about it.

Even a judge and jury may not convict a defendant if they still have doubts.

I ask you to please treat this memo as confidential. It is only for your personal information. If it should raise doubts in your mind as well, then Die Presse must nevertheless take a stand AGAINST §283a; not, however, due to the cause per se (again, I agree with you regarding the potential for misunderstandings), but rather due to the hazard posed to our state under the rule of law. A handful of neo-Nazis are not worth jeopardizing the maxims of a state under the rule of law.

Very sincerely yours,

[signed] *Walter Lüftl*”

The memo mentioned in this letter was a study, *Die neue Inquisition (The New Inquisition)*, which Lüftl had by then written on the basis of information from his own library and of otherwise easily accessible sources.⁶

Lüftl had decided to inform some deputies to the National Assembly as well as some other ‘opinion leaders’ of the doubts he, as an impartial expert, was entertaining. Naively enough, he hoped that if such doubts were expressed by an expert, not by a ‘neo-Nazi,’ they would prompt second thoughts in the persons addressed. Chorherr’s negative attitude had baffled him somewhat, since he recalled that Chorherr had voiced rather vehement objections in *Die Presse* when the movie *Holocaust* had been broadcast on Austrian television. What had happened since then to turn this Saint Paul back into a Saul?

Drawing on his limited knowledge of the subject at that time, Lüftl severely criticized a number of core topics of orthodox Holocaust historiography in his paper, denounced the Austrian legislators’ attempt to prevent the search for truth *ex lege* (by legal means) as being state-proscribed terrorism of conviction, and asked whether the minister of justice and the Parliament intended that in the future historians as well as technical and scientific expert witnesses, or even perfectly average persons who merely expressed their doubts, would be dragged into court and convicted without any chance to defend themselves. As the case of Lüftl shows, both the minister of justice as well as the Austrian Parliament did intend to do exactly this!

4. Lüftl’s Work behind the Scenes

Since Dr. Graff had not responded to Lüftl’s letter of March 23, 1991, Lüftl wrote him again on May 9, 1991, after he had received a visit from the former party whip of the ÖVP, to whom he had entrusted some documents with the request to pass them on to Dr. Graff. Lüftl drew Graff’s attention to the results of his researches to date: irreconcilable inconsistencies and well-founded doubts. ‘Contemporary history’ and technology simply could not be made to agree. This time Dr. Graff responded, with a letter dated May 13, 1991:

⁶ A revised version of this paper titled “Holocaust: Glaube und Fakten” was published in English translation: “The Lüftl Report: Holocaust: Belief and Facts,” *JHR*, 12(4) (Winter 1992), pp. 391-420.

“Thank you for your letter regarding the planned §283a. The ‘Leuchter Report’ which you sent me is already known to me. I must say, however, that the personal recollections of so many witnesses who described the atrocities of Auschwitz impress me more than the expositions of the ‘Leuchter Report.’ I do, however, fully agree with you on the point that only science, not a trial judge, can determine what is truth and what is falsehood.” (Emphasis added)

On May 19, 1991, Lüftl responded to this letter and pointed out, with examples, that the eyewitness testimony and confessions of alleged perpetrators which he had examined were factually incorrect, and informed Dr. Graff of the contents of a letter he (Lüftl) had sent on May 10, 1991 to Austrian mainstream historian Professor Jagschitz.

The District Criminal Court of Vienna had summoned Dr. Gerhard Jagschitz, professor for contemporary history in Vienna, as expert witness in the trial of the Austrian Holocaust revisionist Gerd Honsik (26b Vr 14.186/86); in a January 10, 1991, letter to the District Court, Jagschitz had mentioned **fundamental doubts about matters of judicial notice** regarding the existence of homicidal gas chambers at Auschwitz.

Lüftl informed Professor Jagschitz of his own well-founded doubts and urged him to consult the expertise of engineers in order to resolve the questions at issue: had there really been mass executions by means of poison gas, and were there really gas chambers in Auschwitz? Lüftl further wrote to Professor Jagschitz on August 12, October 5, October 21, 1991, and February 20, 1992, pointing out many facts (forgeries and false testimony), providing references to relevant literature, and finally asking him the decisive question:

“How do you as contemporary historian expect to judge whether a witness is in a position to know something, if you do not consider the material evidence offered by technical experts (Wittgenstein, On Certainty, Clause 441)? All you can do is to quote other sources, without being able to really check the facts! One example: how do you deal with the testimony of a ‘witness of atrocities’ who claims that ‘...flames several meters high shot out of the chimneys...’? I know the witness is lying, and I can prove it by means of my expert knowledge, and by calculations and experimentation if need be. But how can you, on the other hand, ‘...prove that the witness was in a position to know...’?”

Lüftl therefore urged Professor Jagschitz to recommend to the Court that engineering experts should be consulted. Professor Jagschitz responded for the sake of politeness, but evaded the issue. German chemist Germar Rudolf also generously offered Professor Jagschitz his services. The following critique of the *Jagschitz Report* shows the consequences of the professor’s refusal to consider these recommendations.

5. Lüftl’s Commission as Expert on the Holocaust

By this time, Lüftl had written the outline for parts of his report titled *Holocaust (Belief and Facts)* and was working on corrections and supplements; since his work had meanwhile become known, the German lawyer Hajo Herrmann of Düsseldorf commissioned him on May 24, 1991 to draw up a report “about the alleged gassing of human beings during the war in the concentration camps of Auschwitz 1 and 2, based on on-site investigation.” An active exchange of letters developed between Lüftl and the lawyer, who wrote the former on June 7, 1991 that the documents he had received pointed him to a “chemical and forensic approach,” and that he had therefore written to Germar Rudolf for more information. This was the starting point for the report of accredited chemist Germar Rudolf; the reader will find a summary of this report further on in the present volume. For reasons of time, it was not possible for Lüftl to go to Auschwitz for an on-site investigation, and so his correspondence with attorney Herrmann ended with a letter of July 16, 1991, without Lüftl having written a report. He merely handed in the results he had worked out by then as well as the relevant documents, and answered a number of questions. He amended and supplemented his work *Holocaust* on the basis of the information he had been given by the experts consulted, and concluded his work in August 1991.

Prior to this time, Lüftl had sent copies of his work – always the currently up-to-date version – to a number of Austrian politicians, including the minister of justice, a party whip, several deputies to the National Assembly, a head of a provincial government, etc., and in

February 1992 to a number of senate presidents of the Austrian Supreme Court. One of these gentlemen, whose name is here withheld for his protection, sent him the following remarkable reply:

“Dr. NN
Senate President of the Supreme Court

March 3, 1992

To Walter Lüftl, Accredited Engineer
President of the Federal Chamber of Engineers

Dear Mr. President,

I read your work with great interest. According to press reports, the National Assembly has decided to pass the enclosed amendment into law.

As far as I am concerned, a law that criminalizes the scientific debate about issues of contemporary history is unconstitutional and irreconcilable with the basic principles of a state under the rule of law.

For this reason, I personally consider as indefensible an interpretation of this new criminal law §3h, which operates largely with vague legal concepts, in a sense that (public) scientific works are in violation of that law which endeavor to question or even refute the accounts given by academics or institutions of certain historical events.

The scientific endeavor to refute, by technical arguments, the opinion generally held of certain killing methods or the numbers of victims does not in my opinion fall within the province of this law at all, unless the National-Socialist genocide or other National-Socialist crimes are thereby denied or grossly trivialized. The other potential ways of violating the law do not enter into the picture at all in the case at hand.

Of course, I cannot give an authoritative interpretation or a prediction of the law's interpretation by the Supreme Court.

Sincerely, [...]”

The study *Holocaust (Belief and Facts)* was published in English in Volume 12, Issue 4 (winter 1992/1993, pp. 391-420) of *The Journal of Historical Review*. It should be briefly mentioned that in it Lüftl stated the motives that had prompted his work, and further, that he believed that a crime begins with the very first person wrongly killed and that it was not the issue to try to argue for a reduction of the number of victims, but rather that the numerous contradictions and the factually incorrect, even deliberately false claims he had pointed out needed to be critically appraised and analyzed by technical experts. In any case, the doubts entertained by revisionists were not unfounded, he said, and much more readily reconcilable with technological realities than the claims made by orthodox Holocaust writers to date. If, contrary to the revisionists' expectations, scientific investigations of the Holocaust – notably by means of material evidence – were to establish the Holocaust as a fact, then the revisionists, too, would have to accept this. To Lüftl, the questionable aspect of the Holocaust was particularly the alleged mass gassings; the other forms of killing are not mentioned at all by Lüftl due to his lack of familiarity with these topics.

6. The Scandal

On February 26, 1992, the Austrian National Assembly passed the amendment of the *Prohibition Order* into law.⁷ The revised Paragraph 3g and the new Paragraph 3h of this Austrian special law, which is analogous to the contents of the planned but later abandoned §283a Criminal Code, now read as follows:

“g) *Anyone engaging in activities reflecting National-Socialist sentiments in any way other than set out in §§3a to 3f – and providing that there is no other law providing for a more-severe sentence – shall be punished by a term of imprisonment ranging from one to ten years, and in cases of particular menace posed by the perpetrator or by his actions, by up to 20 years' imprisonment.*

⁷ Bundesgesetzblatt 127/92.

h) §3g also applies to anyone who, whether through publication, broadcasting, any other media, or other manner suited to public dissemination, denies, grossly trivializes, applauds or seeks to justify the National-Socialist genocide or other National-Socialist crimes against humanity.”

Thus, Lüftl considered his work on this problem to be finished. He had no wish to tilt at windmills.

Only a few days later, an article appeared in Issue 11/92 of the Austrian weekly newspaper *Wochenpresse / Wirtschaftswoche* titled “The Nazi Babblings of Walter Lüftl” [*“Die Nazisprüche des Walter Lüftl”*], written by a journalist named Reichmann in the typically manipulative style so characteristic of today’s ‘investigative journalism.’ Reichmann took factually undeniably true statements such as “bodies are not fuel; their incineration requires a great input of energy, and a long time,” out of their proper context and denounced them as “Nazi babblings.” He ignored entirely the motives that had prompted Lüftl’s work.

The outrage was not long in coming. “Architecture chief denies Auschwitz” was the style of one of the gentler headlines. No researches were initiated, to the contrary. At best there were two or three telephone inquiries whose subsequent print editions usually claimed exactly the opposite of what Lüftl had explained.

The scandal was complete.

The Professional Engineering Associations as well were abuzz with outrage both genuine (based on ignorance) and induced. Especially the Association of Social Democratic Academics [*Bund Sozialdemokratischer Akademiker*, BSA]. Masonic institutions outdid themselves in screaming for Lüftl’s resignation as president of the Austrian Chamber of Engineers. As president, Lüftl really could neither be dismissed nor voted out of office, but he saw no point in trying to continue working with artificially outraged representatives of the civil engineering profession. He had assumed that engineers, of all people, would investigate first and judge later. The president of the Vienna Chamber of Engineers, a Socialist, tried to make stepping down a tempting option for Lüftl by pointing out that the BSA would not pursue legal proceedings against him. What the word of this Social Democrat is worth was demonstrated by the fact that even with all the induced outrage and boat-rocking there were only two reports to the police: that of Dr. Neugebauer, the professional denouncer of the Documentation Center of the Austrian Resistance [*Dokumentationszentrum des österreichischen Widerstandes*], and that of the BSA.

Since the office of president of the Austrian Chamber of Engineers was no sinecure, but required great sacrifice of time and money from anyone who was truly committed to this function, and to spare his family further grief, Lüftl resigned on March 12, 1992.

It was not long before he received a summons from the District Criminal Court. A preliminary inquiry had been instituted against him on the basis of the two aforementioned denunciations. But the examining magistrate did not care to ascertain the truth; his sole concern was to determine how excerpts of Lüftl’s work had found their way into ‘radical right-wing publications.’ No notice was taken of Lüftl’s comment that surely the important point was the correctness of his work and not its place of publication, which might have been the *Atlanta Church News* for all he cared. No, the issue was ‘National-Socialist views’ that supposedly always appear whenever anyone writes down undesirable truths (meaning those undermining matters of judicial notice). There is obviously a sort of ‘relative truth’ that depends on the medium in which it appears. It is surprising that no one went so far as to speculate that Lüftl himself just might have incited Herr Reichmann of the *Wochenpresse* to carefully select tendentious quotations from his work *Holocaust* and to publish these in his article “Nazi Babblings,” expressly as clandestine “glorification of the National-Socialist regime”...

Neither the prosecuting attorney nor the examining magistrate could come up with even so much as one sentence, or part of a sentence, that would show Lüftl to have grossly trivialized, approved or justified National-Socialist crimes, much less genocide.

On January 15, 1993, Lüftl was informed that at the request of the Public Prosecutor’s Office the preliminary inquiry, which evidently had not yielded any incriminating findings, had been ‘upgraded’ to preliminary investigation, a more-serious proceeding.

A motion by Lüftl's defense attorney to drop the charges was dismissed on June 28, 1993, on the remarkable grounds

"[...] that it is clear from the formulation of the work that it is generally suited, when used in a palliative or exculpatory manner, to violate §3g Prohibition Order [...]."

In plain English this means that to state the fact that hydrogen cyanide boils at 78.3°F represents National-Socialist revivalism if a 'radical right-winger' uses this fact to raise the question as to how it could then have been possible to 'gas' people with Zyklon B within only a few minutes in unheated basements. What is more, even to suggest that someone should find an answer to this question by looking up a chemistry textbook approved by the Ministry of Education (because a radical right-winger can't come up with that idea himself!) would evidently be a case of "National-Socialist revivalism." But since Lüftl was no longer accused of 'denial,' his defense counsel drew the crystal-clear conclusion in his subsequent objection

"[...] that the findings [of his work] are obviously correct. In this respect we agree with the Court [...]."

What we have here is a law clearly in violation of human rights. Lüftl wrote to a good number of deputies to the National Assembly and asked them whether, at the time they voted this bill into law, they had desired the sort of thing that was happening to him. A single deputy wrote back:

"Your letter disturbs me. I wanted no such thing."

7. Further Research

Lüftl now saw himself forced to continue working on his study *Holocaust*, even if only for the sake of backing up his defense, as well as to fulfill the requirements of the shorthand protocols of the Austrian National Assembly, which permit the "strictly serious scientific research into specific topics." Through the intensive study of source literature and through exchange of information with qualified experts, his knowledge grew exponentially, since he could now devote to these pursuits the time he had previously spent on volunteer service to the Chamber of Engineers. On those points where he had had only 'educated guesses' or 'personal convictions' to draw upon while writing *Holocaust*, he could now consolidate his knowledge to the point of virtual certainty. Today, Lüftl feels confident that he can prove each and every claim advanced in *Holocaust* with technical certitude, replete with all technical evidence and verifiable results. A case in point is his critique of the *Jagschitz Report* that had been submitted in the *Honsik Trial*, discussed in the following (Section 8).

8. The Honsik Trial

It is natural that Lüftl took the greatest interest in the trial of Gerd Honsik, which was held before the District Criminal Court of Vienna from late April to early May 1992. He was particularly interested in a report which, contrary to all judicial custom, had not been presented in writing prior to the main hearing. In other words, it had only been introduced in the course of the main hearing. This was the Jagschitz Report, by the expert witness Dr. Gerhard Jagschitz who, as 'contemporary historian,' fought a losing battle from the start where the issue of 'mass extermination with poison gas' was concerned.

Even a child could glean from news-media coverage that this was no expert report, but rather an accounting to the Court of what the expert had read and what he said he personally believed. According to his own claims made under oath – so we must believe him, until and unless he is proven false – the expert witness had read 5,000 to 7,000 statements of witnesses and found some two-thirds to be false. However, the expert failed to state his criteria for this examination, which cannot have taken more than ten minutes per witness statement on average. Further, *only* the court should be in a position to evaluate testimony, and only such testimony as was made before the court, since after all the defendant and his defense counsel must be able to question each witness and possibly to refute their testimony.

But only one single eyewitness statement was introduced in detail into the trial proceedings. This was the documented testimony of “Dr.” Horst Fischer who, however, according to the *Dienstaltersliste der Waffen-SS*, the Waffen SS's seniority list, was not a physician at all at the time in question, and hence cannot have performed the functions he testified he performed in Auschwitz.⁸ His statement is rife with absurdities, which the expert Dr. Jagschitz failed to recognize as such – and in fact he could not possibly have recognized them, due to his own lack of qualifications on the subject. Did he deem Dr. Fischer's statement to be a “key statement”? Or did he simply fail to find a more-incriminating one, one he deemed ‘more credible’? More on that later.

It is self-evident, as well as confirmed by discerning observers of the trial, that it was only the massive intervention of the presiding judge that saved the expert witness from greater embarrassment during cross-examination by the defense attorney. The fact that in complicated issues it is necessary to provide clarifying commentary before asking one's question in order to ensure that matters are clear to everyone concerned and that there is no more or less deliberate obfuscation empowers the presiding judge to cut short any preliminary statements that might prove uncomfortable for the expert witness, merely by saying, “Ask your question, please!” But anyone who truly wishes to ascertain the truth will not hesitate to permit even long-winded introductions in such important matters, since these serve the purpose of determining what is the truth. Within the framework of current criminal procedure, however, it is clearly not good form in such cases to let the defense ‘have its say’ and listen patiently. We wonder why?

Just consider how the defense attorney might have driven the expert witness into a corner if the report had been made available *before* the main hearing and if subject experts could have critically examined the statements of the report, which were downright amateurish on some of the technical points in question. But this was not possible until afterwards, when the transcript of the hearing was available.

Prof. Jagschitz did repeatedly stress that he was no engineer – which, since it had already been established as fact by the court, really needed no further avowal. Still, he constantly presumed to interpret such technical documents as he considered to be genuine. However, a document, even if genuine, need not be correct. A ‘contemporary historian’ is not in a position to judge. Further, an opportunity to examine the expense account of the expert witness revealed that not only had the court ‘commissioned a reading,’ but that Jagschitz as well, due to inadequate facility in the Polish language, had commissioned third parties to ‘read for him’ and had then presented their findings as his own conclusions. In Austria, expert witnesses must swear an oath *that what they present to the court are their observations in a true and complete manner*. It is quite incomprehensible how Jagschitz could arrive at any ‘true and complete’ findings at all without relying on translations by Austrian court translators. These translations, however, should have been available to the defendant and his defense counsel at an appropriate time, as well as the complete overall findings, so as to permit thorough preparations on the part of the defense. But that was not done. On the contrary, when the defendant made the thoroughly sensible suggestion (which would no doubt have been acted on in any other trial) that one should at least call in experts from the Viennese crematorium to refute the false and incorrect document regarding the incineration capacity of the crematoria of Auschwitz, the judge cut him off. Was that fair?

Nevertheless, Jagschitz did do away with certain ‘stereotypes’ such as ‘soap from Jewish bodies’ and ‘four million gassed in Auschwitz.’ Despite a great many shortcomings, his report is a step in the direction of the manifestation of ‘true’ truth. Nothing is more foolish than to dispute actual facts. But if these facts, which are terrible enough in themselves, are

⁸ B. Meyer (ed.), *Dienstaltersliste der Waffen-SS, Stand 1.7.1944*, Biblio Verlag, Osnabrück 1987. Horst Fischer was “SS-Führer of the Medical Corps” with no medical degree, and SS *Hauptsturmführer*. His written statement, that he participated in gassings in 1942 in the capacity of SS physician, is thus false; in a later publication, the professional denouncers of the Documentation Center of the Austrian Resistance repeat Jagschitz's allegation about the “Dr.,” but refuse to give any evidence: B. Bailer-Galanda, in B. Bailer-Galanda, W. Benz, W. Neugebauer (eds.), *Wahrheit und Auschwitzlüge*, Deuticke, Vienna 1995, p. 97; cf. G. Rudolf, “Lüge und Auschwitz-Wahrheit,” in: *idem, Auschwitz-Lügen, op. cit.* 3rd ed., Castle Hill Publishers, Uckfield 2016, pp. 187-227, here p. 204.

exaggerated, there is a danger that this exaggeration will result in *nothing* being believed any more in the future.

Lüftl examined Professor Jagschitz's report only through 'spot checks.' The following sets out his findings. These few examples hint at how the defense might have reacted to the benefit of the defendant, had it had refutations by engineers at its disposal.

9. Why Should Engineering Reports Be Obtained before Reports Are Issued on Contemporary History?

Even though Professor Jagschitz was alerted by Lüftl to the fact that, in light of the complexity of the issue 'mass exterminations with poison gas,' it would be useful and advisable to obtain prior engineering and scientific reports on this subject, he – in his capacity as expert on contemporary history summoned by the court for the Honsik Trial – neglected to have the technical questions settled at the outset by engineering experts.

In drawing up his report, he relied on witness testimony given in other trials, on claims made by other persons, and on documents which he apparently deemed genuine and correct. The following expositions are intended to show in a comprehensible manner that *neglecting to consult engineering experts* resulted in false conclusions that could have been avoided.

9.1. Mortuary as Gas Chamber

On April 30, 1992 (page 471 of the court transcript), Expert Jagschitz explained that in a letter dated March 6, 1943, the head of the Central Construction Office of the Waffen SS Auschwitz, a man by the name of Bischoff, had ordered preheating facilities for Mortuary 1, with ventilation and aeration from Crematoria II and III in the concentration camp of Auschwitz-Birkenau. The expert witness took this order as proof that Mortuary 1 was in fact a gas chamber,

- since the heating facility was needed "because Zyklon B works properly only at temperatures between 75 and 79°F" (what vast ignorance in engineering, physical and chemical respects is revealed by even these few words!), and
- no heating facility would have been needed for a mortuary, since such a room would need to be cool.

Disregarding the question of whether the document is even genuine⁹ (the process of planning and construction described leaves room for considerable doubt), it must be stated first of all that the court expert merely stated precisely the same thing here as Jean-Claude Pressac.¹⁰ He came to the same false conclusion. However, what Pressac points out but Jagschitz seems not to know is the fact that the project for a preheating installation for Crematorium II was canceled even before the building became operational due to a flawed design of the forced-draft device, and that the same installation was cancelled for Crematorium III from the start.¹¹ Did Jagschitz skip over that part in his reading? Or is he not that familiar with Pressac's work after all? Consequently, how can he draw up a report about 'mass extermination with poison gas at Auschwitz' without being familiar with Pressac's voluminous findings?

Furthermore, there may very well have been a technical need to install heating devices in a mortuary, for two reasons:

- For reasons of hygiene, it was no doubt necessary to have water pipes connected to the mortuary for cleaning purposes.¹² If one wants to avoid having to routinely drain all facilities manually in winter when there is danger of freezing, then one must surely keep the room temperature above 32°F, and

⁹ Letter of Bischoff, head of the Central Construction Office, Waffen SS, dated March 6, 1943, published, e.g., in J.-C. Pressac, *Auschwitz: Technique and Operation of the Gas Chambers*, Beate Klarsfeld Foundation, New York 1989, p. 221.

¹⁰ *Ibid.*, p. 223, bottom right.

¹¹ *Ibid.*, p. 230.

¹² The blueprints of the mortuaries in question do in fact show water taps; *ibid.*, pp. 311f. These are said to have been removed later: *ibid.*, p. 286.

- Neufert’s standard work on civil engineering¹³ clearly states that a mortuary should be kept at a temperature between 35.5 and 53.5°F, since freezing bodies burst open and may freeze to whatever they are lying on (as well as to each other, if they are stacked). On May 24, 1945, eyewitness Henryk Tauber stated with respect to Crematorium I:¹⁴

“All the bodies were frozen and we had to separate them from each other with axes.”

Therefore, planning for “mortuary heating facilities” is by no means proof that said mortuary was used as a homicidal ‘gas chamber.’ At any rate, no engineering expert would have dreamed of incompletely quoting Jean-Claude Pressac, without stating his source, and without critical, comprehensible technical arguments, and then to present these incomplete quotations as the result of his own comprehensible thought process, as his own ‘expert report.’ And what is more, the cancellation of the project in question renders this ‘proof’ for the existence of ‘gas chambers’ *per se* moot.

9.2. Capacity of the Crematoria

Due to the characteristic nature of Expert Witness Jagschitz’s presentation (without adequate technical verification, but proportionately all the more adamant!), the document pertaining to the capacity of the crematoria¹⁵ will be briefly discussed.

The document¹⁶ of June 23, 1943 states that the five crematoria of Auschwitz Main Camp (*Stammlager*) and Birkenau were able to process 4,756 corpses in 24 hours.

The figure regarding total capacity was purely hypothetical.

The first point here is that the SS Central Construction Office includes in its statement Crematorium I of Auschwitz Main Camp, even though it was retired a few weeks later. Crematorium II frequently had to be taken out of service because of damage to its flues and chimney and was fully serviceable only from May to July 1944(!). Crematorium III was never used to full capacity, and Crematorium IV suffered from constant damage to its furnaces and chimney (taken out of service in May 1943, repairs attempted in vain in April 1944) and was shut down for good after the inmates’ revolt of October 7, 1944. In Crematorium V as well, furnaces and chimneys frequently burned out.

The document in question is well-known and has already been declared to be absurd several times (Stäglich, Butz, Walendy and others).¹⁷ The figures it cites are sheer fantasy, as the following will show. Aside from the claim that the capacity of the individual muffles in Crematoria II through V allegedly was 96 persons per day,¹⁸ the capacity of Crematorium I would have been only half as great – even though the supplier (Topf & Söhne) clearly manufactured the furnaces based on the same patent.

But if one compares this document with the memo of March 12, 1943,¹⁹ regarding the consumption of coke fuel recorded there, then one finds something truly remarkable. In a non-stop 24-hour operation the 4,416 bodies (4,756 – 340 for Crematorium I = Crematorium II through V) could allegedly be cremated with 34,574 lbs. of coke fuel, *i.e.*, 7.8 lbs. per body. This is utterly incredible, since normally it takes 88 to 110 lbs. per body. Anyone who does not believe this is free to go to the crematorium of any larger city and ask the older staff members there, who remember the ‘coal-fired age.’²⁰

The maximum delivery of coke fuel in March 1943 amounted to 144.5 metric tons,²¹ this alleged peak capacity was thus possible for only nine days in March 1943 – but at that time

¹³ E. Neufert, *Bauentwurfslehre*, Ullstein Fachverlag, Frankfurt am Main 1962, p. 423.

¹⁴ J.-C. Pressac, *op. cit.* (note 9), p. 482.

¹⁵ Court transcript, page 475.

¹⁶ J.-C. Pressac, *op. cit.* (note 9), p. 247.

¹⁷ For the latest critique see Carlo Mattogno, “‘Schlüsseldokument’ – eine alternative Interpretation,” *VffG* 4(1) (2000), pp. 50-56; English: “The Auschwitz Central Construction Headquarters Letter Dated 28 June 1943: An Alternative Interpretation,” <http://vho.org/GB/c/CM/lalett.html>.

¹⁸ 15 minutes per body! In 1940, the technology available required 1.5 to 2 hours per body!

¹⁹ J.-C. Pressac, *ibid.*, p. 223, column 3.

²⁰ Anyone who wishes to study the problems of cremation and power consumption by various means and methods is referred to the standard work on this topic: F. Schumacher, *Die Feuerbestattung*, Gebhardt’s Verlag, Leipzig 1939. Cf. also the chapter by C. Mattogno and F. Deana chapter, this volume.

²¹ J.-C. Pressac, *op. cit.* (note 9), p. 224.

Crematoria II through V were not yet ready for full operation! At other times, average consumption was about 71 metric tons per month; in other words, the crematoria could have been used at peak capacity for only 4.5 days per month on that amount of fuel. Even if the fabulous throughput of 4,416 persons per day were attained, no more than a maximum of 20,000 bodies could have been cremated per ‘average month’ in 1943. If one takes into consideration a realistic fuel-consumption rate, which may be conservatively estimated at 55 to 66 pounds (greater than the alleged rate by a factor of 7 to 8!), then the cremation capacity of the crematoria cannot have exceeded an average of 2,500 to 3,000 bodies per month. This means that the method by which the victims of the mass gassings were disposed of is yet to be determined. In any case, the crematoria were not up to such a task. Possibilities that have been suggested include burning the bodies in pits and on pyres, for instance with methanol (boiling point 148°F!), or with wood: quantities of 330 to 440 lbs. per body would be required; and the question whether such an operation would even be possible at all becomes clear from the testimony of crematoria expert Lagacé, see Section 9.4.

For the double/triple/octuple muffles, respectively, the consumption of coke fuel (based on a calculation of the energy balance) per body, in continuous operation (*i.e.*, in the theoretical ideal case), for ‘normal bodies,’ would amount to 50.1/33.7/24.9 lbs., and for extremely emaciated bodies, to 67.7/45.0/33.7 lbs., which means an approximate average of 44.1 lbs.²² One must add to this approximately 20% for periods of firing-up and downtime, or some 53 lbs. (=24 kg). In other words, between April and October 1943 (consumption approx. 497 metric tons¹⁹), $497,000 \div 24 = 20,000$ to 21,000 bodies could be cremated. This means an average of barely 3,000 cremations per month, or roughly 100 per day. Therefore, if one considers the actual consumption of fuel, the crematoria were incapable of cremating thousands of bodies per day. Furthermore, after a maximum of 3,000 cremations the retort is ‘burned out,’ that is, the refractory lining must be completely replaced, which, as can also be proved, was never done for any of the muffles.²²

9.3. No Smoke from the Crematoria Chimneys

Regarding the absence of smoke from the crematoria chimneys in Auschwitz-Birkenau on the USAAF aerial reconnaissance photos,²³ Expert Witness Jagschitz suggested that the Americans

*“probably used a filter [...] its purpose was to screen out thin clouds [...]”*²⁴

However, even if such a filter had successfully “screened out” smoke plumes, Expert Jagschitz should know that their shadows would still have been visible on the ground, and thus on the photos, as clearly and precisely as the shadows of the chimneys are visible. Aside from this fact, the filters, for whose use Jagschitz cannot cite any source or evidence, clearly were *not* used, since the bombs dropped by the Allies caused fires on the ground, and thus smoke plumes; and these smoke plumes are clearly visible on other photos.²⁵

9.4. The “Fabulous” Crematorium Expert

Questioned by defense attorney Dr. Herbert Schaller, Expert Witness Jagschitz stated that he did not understand how some (later “some fabulous”) crematorium expert could say that there had been only hundreds (of cremations), ... that was over his head... that exceeded his comprehension...²⁶ By studying the sworn testimony of the “fabulous” crematorium expert (a Canadian citizen before a Canadian court on April 5 and 6, 1988, in the second ‘Zündel Trial’!), expert witness Jagschitz could easily have discovered technical reality.

²² Cf. the chapter by C. Mattogno and F. Deana, this volume.

²⁶ Report of expert witness Professor Jagschitz for the District Criminal Court of Vienna in the trial of Gerd Honsik, Ref. 26b Vr 14.186/86, pp. 20 and 42 of the court transcript.

The “fabulous crematorium expert” is Ivan Lagacé, manager of the Bow Valley Crematorium in Calgary, Alberta, Canada. The Bow Valley Crematorium is the hottest and therefore the fastest crematory in operation in North America. By virtue of its natural-gas burner, a cremation can be completed in only 90 minutes.

Lagacé had completed the two-and-a-half-year Funeral Services program at Humber College in Ontario, and in 1979 he graduated and received his Ontario license. In 1983 he obtained his Alberta license. He has cremated more than 1,000 bodies. In clear testimony Lagacé meticulously explained the problems of cremation and the hazards involved. He showed, in replicable and verifiable manner, that the (coke-fired!) crematoria of Birkenau were less efficient than crematoria using natural-gas burners (where the energy supply can be simply shut off). He was also familiar with the plans for the crematoria at Birkenau and compared them with the equivalent facilities in Bow Valley.

Lagacé also discussed in detail the practice of open-air burning and the issue of how to deal with typhus-infected corpses. Regarding open-air burning, he testified that even with the use of gasoline, in 90% of all cases it would be only the skin that charred, perhaps the limbs would also be burned, but the torso was very difficult to cremate.

That was the “fabulous” crematorium expert, whose testimony is doubtless of much greater value than a patently *false* document. A technically impossible scenario does not become possible even if this is alleged in a ‘genuine’ document, or one considered to be ‘genuine’ by Expert Witness Jagschitz.

Even Raul Hilberg knows that Crematorium I was operational only until spring 1943.²⁷ So why the SS would still detail its capacity on June 23, 1943, in this case exceed this author’s comprehension.

9.5. The Powerful Ventilators

On May 4, 1992, Expert Witness Jagschitz discussed the “considerably large ventilators” (“I found that clearly in Moscow,” page 19 of court transcript; “these enormous ventilators that vent air out of the mortuaries,” “rather there were considerably large ventilators at least in Crematoria II and III,” page 34 of the court transcript).

These ventilators had motors of 3.5 hp. Given a necessary pressure capacity of 6 inches water-column and considering the area of the conduit cross-sections, conduit course (numerous right-angle diversions), interior surfaces of the conduit (undressed brick, wood) and the nature of the vent openings (coarsely punched metal), this suffices for a maximum of ten exchanges of air in the ‘gas chamber’ per hour.

Considering the ventilation time of 30 minutes, this means that the concentration of hydrogen cyanide may then have dropped to a minimum of approximately $\frac{1}{100}$ of the initial concentration. But since the method of alleged introduction of the Zyklon B from above means that the evaporation of hydrogen cyanide cannot be simply ‘shut off,’ as it were (that works only in the American gas chambers using hydrogen-cyanide generators), the evaporation would continue and at a greater rate than before, since the less-than-atmospheric pressure created in ventilation (lowering of the boiling point) promotes evaporation. This means that, until almost right before the end of the evaporation process – which can take from a few to many hours, depending on the ambient temperature and humidity – the ventilators with their capacity of only 3.5 hp would have had to perform a Sisyphean task without succeeding in lowering the gas concentration below the lethal level.

The question how the ventilators really worked, given a chamber crowded to bursting with dead bodies and given the air-intake and -exhaust configuration, is a matter that still needs to be settled by ventilation experts, for the used air was extracted near the floor, even though heating and increased moisture content caused by the presence of the victims would have made it lighter than the incoming fresh air. Another problem is the fact that the air intake and exhaust openings are located too close to each other – 6.5 feet apart on the same wall, versus a distance of 24.5 feet from the opposite wall of the room blocked by the dead bodies. This means that there would be a ‘short-circuit’ of air in the chamber.

²⁷ R. Hilberg, *The Destruction of the European Jews*, Holmes & Meier, New York 1985, Table 75.

Given an initial hydrogen-cyanide concentration of 5 g/m³, complete ‘shut-off’ of gas production, five air exchanges per half hour and ideal ventilation conditions, the concentration of hydrogen cyanide remaining will be only 50 mg/m³ after half an hour and it will be safe to enter the gas chamber without a gas mask. But since Zyklon B continues to evaporate for hours, entering the gas chamber after 30 minutes and without protective clothing as claimed would be fatal. Even gas masks equipped with a special Filter J, guaranteeing safety for 30 minutes, would be inadequate under such conditions.

Furthermore, the location of the air intake and exhaust vents on the roof ridge, approximately 15 feet apart,²⁸ begs the question as to what would happen whenever there was a breeze from the exhaust vent towards the intake opening. Again, it would be a matter of a ‘short-circuit of air.’ No self-respecting German engineer worth his epaulets would design a ‘gas chamber’ this poorly.

The ventilator for the dissecting room and the rooms for washing up and for laying out the corpses – all of them situated above-ground and with windows – had a capacity of 1 hp, while that for the much larger Morgue 1 (‘gas chamber’) had 3.5 hp. As Carlo Mattogno has shown, the performance of all air-extraction systems of the different rooms in Crematoria II and III in Birkenau (furnace room, Mortuary 1, Mortuary 2, dissecting and washing room) was considered to be nearly the same: 9.9 to 11.1 air exchanges per hour.²⁹ And Mattogno provided evidence that this was the standard capacity required for morgues according to contemporary German expert literature,³⁰ whereas air-extraction systems for hydrogen-cyanide gas chambers (delousing chambers) required at least 72 air exchanges per hour.³¹ Thus, the ventilation system of Mortuary 1 was certainly not suited to exchange the given volume of air, enriched with 5 g hydrogen cyanide per m³ (according to Pressac,³² it was even 12 g/m³!) and within the space of time (30 minutes) claimed in Holocaust literature (eyewitness reports), nor was it suited to exchange the given volume of air a sufficient number of times to allow the ‘gas chamber’ to be entered after this ventilation process without powerful gas masks and protective clothing. The bottom line of all this is that the ventilation systems of Crematoria II and III were designed strictly for purposes of normal morgue ventilation, and not for the removal of highly toxic quantities of gas in a short period of time (20 to 30 minutes).³³

9.6. An SS-Colonel as Traveling Repairman

‘Expert Witness’ Jagschitz also neglects to go directly to the source of things in non-technical matters, as he had initially stated he would (court transcript page 261).

As proof of the existence of gas chambers he cites the ‘fact’ determined by him (transcripts page 390) that specialists for ‘gas chambers’ were evidently called in from Berlin when repairs were needed:

“When gas facilities [sic] were broken, there was a man who was called in from Berlin to repair them. This was a certain Herr Eirenschmalz [...]”

A quick glance into a standard work of ‘Holocaust literature’ reveals that the “certain Herr Eirenschmalz” was chief of Office C-4 (Finances!) in Group C (Construction) of the WVHA (*Wirtschafts- und Verwaltungshauptamt*, Main Economic and Administrative Office of the SS).³⁴ He held the rank of *Standartenführer*, approximately equivalent to that of colonel in the US Army.

²⁸ J.-C. Pressac, *op. cit.* (note 9), p. 291.

²⁹ C. Mattogno, “Auschwitz: The End of a Legend,” in G. Rudolf (ed.), *Auschwitz: Plain Facts*, 2nd ed., Castle Hill Publishers, Uckfield 2016, pp. 173-176.

³⁰ *Ibid.*, p. 175; cf. W. Heepke, *Die Leichenverbrennungsanstalten (die Krematorien)*, Verlag von Carl Marhold, Halle/Saale 1905, p. 104.

³¹ C. Mattogno, *op. cit.* (note 29), p. 175; cf. G. Peters, E. Wüstinger, “Sach-Entlausung in Blausäure-Kammern,” *Zeitschrift für hygienische Zoologie und Schädlingsbekämpfung* 32(10/11) (1940), pp. 191-196, here p. 195; F. Puntigam, H. Breymesser, E. Bernfus, *Blausäuregaskammern zur Fleckfieberabwehr*, Sonderveröffentlichung des Reichsarbeitsblattes, Berlin 1943, p. 50.

³² J.-C. Pressac, *op. cit.* (note 9), pp. 16 and 18.

³³ This is also the opinion of J.-C. Pressac, *ibid.*, pp. 224 and 289.

³⁴ R. Hilberg, *op. cit.* (note 27), Table 72, p. 559.

Does anyone with half a brain really believe that an SS *Standartenführer*, who normally commands a regiment in the Army and who was evidently the chief paymaster of the Construction Office, would come running from Berlin clutching his toolbox whenever a hinge stuck on some input chute for Zyklon B?! Particularly when there were enough workshops and trained personnel available in Auschwitz itself?

9.7. The Unusual Consequences of Hydrogen-Cyanide Poisoning

‘Expert Witness’ Jagschitz also claims (court transcript page 441f.) that, in an interview in Warsaw with an “inmate who had a relationship of personal trust with SS man Breitwieser,” he had learned that Breitwieser had been present at “this particular gassing” (of Soviet prisoners-of-war on September 4, 1941, in Block 11 of the Auschwitz Main Camp, which now, according to Pressac, apparently did not take place until December³⁵). Breitwieser had removed his gas mask too soon and had suffered facial hemiplegia, paralysis of one half of his face, as a result.

The expert is here quoting a false statement, presumably by the inmate Michał Kula. Asking a toxicologist or forensic doctor about this would reveal that paralysis of one half of the face cannot be the result of hydrogen-cyanide poisoning, and that a hydrogen-cyanide poisoning not producing death has no permanent effects.³⁶

9.8. Further Details, Conclusions and Questions

9.8.1. Uncritical Acceptance of Witness Testimonies

Incidentally, Jagschitz concludes (transcript pages 499-501) that there is room for correction in individual subsections of this complex subject, and that considerable academic efforts are still required to look into the numerous questions of detail.

But this is exactly what was neglected during the trial!

Not one single question of detail was examined by engineers, chemists, doctors, etc. summoned for the purpose. On the contrary: experts whose interest in contemporary history prompts them to raise critical questions for discussion (*i.e.*, who do exactly what Expert Witness Jagschitz urges) are being embroiled in criminal trials under §3h of the revised Austrian Criminal Code, or §§130f., 185 of the Criminal Code in Germany dealing with jeopardizing the public peace, incitement to hatred, and slander.³⁷

On January 10, 1991, in a preliminary report prior to submission of his expert report, Jagschitz commented that

“fundamental doubts about some basic issues have been reinforced,” and *“that there is only a relatively small body of scientific literature, as opposed to a considerably greater number of personal accounts or non-scientific summaries.”*

His presentations during the main hearing and the transcript thereof were thus studied with keen interest. Nothing important however, emerged from this presentation that had not already been well-known. Jagschitz bases his summary value judgment, that

the mass murder with poison gas is a proven fact,

primarily on documental evidence and on his observation that, in examining the accounts of witnesses and perpetrators, he had found approximately two thirds of these accounts to be false and roughly one third to be correct.

An interesting forensic aspect is the ‘expert’s’ assessment of the evidential value of the testimony of persons who were not even questioned by this court! But Expert Witness Jagschitz withholds the testimonies themselves, as well as his criteria for evaluating them. The only one he quotes, presumably as a typical example for all of them, is the statement of a ‘perpetrator,’ the “SS physician,” Dr. Fischer. Since it is incriminating, it must be true?

³⁵ J.-C. Pressac, *Les crématoires d’Auschwitz: La machinerie du meurtre de masse*, CNRS, Paris 1993.

³⁶ W. Forth, D. Henschler, W. Rummel, *Allgemeine und spezielle Pharmakologie und Toxikologie*, 5th ed., Wissenschaftsverlag, Mannheim 1987, pp. 751f.

³⁷ Eg., the trial against G. Rudolf, academically accredited chemist, for his expert report; cf. G. Rudolf, *Hunting Gernar Rudolf*, Castle Hill Publishers, Uckfield 2016.

An objective and unbiased observer ponders with some surprise as to how it was possible, as late as the 1960s, to persuade a ‘perpetrator’ to personally record such physically impossible nonsense as:

1. the victims die within two minutes of the introduction of Zyklon B;
2. an elevator for the corpses leads directly to the doors of the crematoria furnaces.

His ‘eyewitness’ can never have seen a crematorium from the inside, much less supervised an execution with hydrogen-cyanide gas derived from Zyklon B.

Let us critically examine only two details from the statement of “Dr.” Fischer. These pertain to gassings in the ‘Sauna’ (trial transcript p. 443, supplement), a renovated farmhouse which, interestingly enough, is not shown or recognizable in so much as one single aerial photograph ever taken!

“[...] only 2-kg [4.4 lb.] cans were used [...]”

As Pressac states, only cans with a net weight of 0.5, 1 and 1.5 kg of hydrogen cyanide were available (1.1, 2.2, 3.3. lbs.).³⁸

“[...] the gas chamber was opened after about 20 minutes [...] the doors were left open for approximately 10-15 minutes so that the poison gas could escape the gas chamber. There was no ventilation device in the ‘sauna.’ Now the inmates [from the Corpse Commando...] pulled the dead bodies out [...] with 6-foot poles that had a bent iron hook at the end [...]”

Since Zyklon B continues to release hydrogen cyanide for hours, and ventilation by means of natural draft would have taken days rather than hours, these inmates must have been immune to the highly toxic hydrogen cyanide! How does that agree with the Special Order issued by Camp Commandant Hoess on August 12, 1942,³⁹ which stated that, after gassed (more correctly: fumigated!) facilities are opened, members of the SS not wearing gas masks must keep at a distance of 45 feet for at least 5 hours and must also be mindful of wind direction, since there had already been some accidents?

Insofar as the documents quoted by Jagschitz are even genuine and correct – which is frequently very doubtful for technical reasons – they certainly also support other technical interpretations than those which the expert witness ascribes to them. One document, for example, discusses a gas-proof door in Crematorium II having dimensions of 39.4" × 75.6" (100 cm × 192 cm). According to the building plans, however, the Mortuaries 1 of Crematoria II and III had double doors measuring 70.9" × 78.7" (180 cm × 200 cm). But how does one gas-proof a double-door opening of 70.9" × 78.7" with a single door measuring 39.4" × 75.6"?

Two other examples from ‘Holocaust literature’ and the Jagschitz Report are examined subsequently.

9.8.2. “10 Gas Detectors”

In spring 1943, the Central Construction Office of Auschwitz ordered “10 gas detectors” from the furnace manufacturing firm of Topf and Sons.⁴⁰ If these gas detectors had had anything to do with hydrogen cyanide they would have been ordered by the camp’s health authorities from the company DEGESCH or its distribution partner Tesch & Stabenow, not by the Central Construction Office from the furnace manufacturer Topf and Sons.

As even contemporaneous subject literature shows, “gas detectors” were in fact devices used for analyzing combustion gas for the presence of CO or CO₂, which are produced by the ‘gasification’ of coke fuel in the generator of the crematorium furnace.⁴¹ The number of gas detectors ordered (ten) also indicates strongly that this is what they were intended for, since the two Crematoria II and III, constructed as mirror images of each other, had a total of ten smoke flues, where the detectors were probably placed.

³⁸ J.-C. Pressac, *op. cit.* (note 9), pp. 16f.

³⁹ *Ibid.*, p. 201; also p. 445 of court transcript.

⁴⁰ J.-C. Pressac, *ibid.*, p. 371; also p. 471 of court transcript.

⁴¹ Akademischer Verein Hütte (ed.), *Hütte*, 27th ed., Ernst und Sohn, Berlin 1942, p. 1087.

This matter took a strange turn when Pressac recently found a document in the KGB archives in Moscow in which the company Topf and Sons confirms the aforementioned order of the gas detectors.⁴² This document makes reference to the telegram with the words “Re.: Crematorium, gas detectors,” but in the main text it is mentioned that it had not yet been possible to locate a supplier of “indicator devices of hydrogen-cyanide residue.” So, this document might lead us to infer that gas detectors were in fact devices for detecting hydrogen cyanide. But several factors ought to make an engineer suspicious:

1. According to the subject literature of the time, devices for the detection of hydrogen-cyanide residue were called *Blausäurerestnachweisgeräte*.⁴³ The term used in the letter, however, is *Anzeigegerät für Blausäure-Reste*. (No German would write *Blausäure-Reste* as two words, hyphenated!) But since, according to their letter, Topf and Sons by that time had received responses from three suppliers regarding such devices, the correct name of said devices ought to have penetrated even to Topf and Sons. Besides: "*kommen wir Ihnen sofort näher*" ["we shall come closer to you immediately"] is nonsense. It should read "*kommen wir sofort auf Sie zu*" ["we shall get in contact with you immediately"].

2. The regulations of that time stipulated that after every delousing procedure utilizing hydrogen cyanide, a hydrogen-cyanide-residue detector had to be used to test the fumigated facilities to determine whether ventilation had been successful. Only then could the deloused rooms be entered without a protective gas mask. Since delousing had been carried on in Auschwitz on a large scale ever since 1941, it is utterly implau-

*Document in facsimile in: J.-C. Pressac, Die
Krematorien von Auschwitz, Piper, Munich 1994. Doc.
Plate No. 28. Translation:*

"We confirm the reception of your telegram, saying: 'Send off immediately 10 gas detectors as discussed. Hand in cost estimate later.'"

In this regard, we inform you that already two weeks ago we asked 5 different firms about the indicators devices of hydrogen-cyanide residue requested by you. We received negative answers from 3 firms, and from two others an answer is still outstanding. In case we receive notification in this matter, we shall come close to you immediately so that you can get in contact with the firm producing these devices.

⁴² J.-C. Pressac, *op. cit.* (note 35), plate 28. Compared to his first book this is the only new document introduced here. The rest of the book in essence only repeats and condenses the expositions of the book from note 9.

⁴³ Cf. the guidelines for the use of hydrogen cyanide (Zyklon) for pest control (disinfestation), issued by the Gesundheitsanstalt des Protektorats Böhmen und Mähren, Prague, n.d.; IMT Document NI-9912(1).

sible that no one should have cared about finding ways to obtain these devices until spring 1943.

3. The health authorities of the Auschwitz Camp had been responsible for the ordering, distribution and use of Zyklon B and all the materials necessary for its use (delousing facilities, gas masks, hydrogen-cyanide-residue detectors etc., and allegedly for the mass gassings as well) ever since the camp had been set up in 1940. In other words, they had three years of experience in this field. So why should the Central Construction Office, which had no purview to deal with such things, suddenly step in in spring 1943 and order the purchase of hydrogen-cyanide residue detectors?
4. Why was the order given to the furnace-manufacturing firm Topf and Sons, who were so out of their depth in this field that they clearly did not even know who the suppliers of these devices might be, when the health authorities of Auschwitz Camp had already been continually supplied with these devices for three years, and thus knew the suppliers (which actually were the selfsame which supplied Zyklon B)? Very probably the health authorities even had some spare devices in stock.
5. From the text of the order placed by the Central Construction Office (“Send off immediately 10 gas detectors as discussed. Hand in cost estimate later.”) it also becomes clear that, after a discussion with the firm of Topf and Sons, the Central Construction Office was in a position to expect that the devices would be shipped without delay and that the Topf was able to quote a price. Both, however, could only have been the case for products that were part of Topf’s standard stock, and thus not possibly for hydrogen-cyanide residue detectors. In irreconcilable contradiction to this is Topf’s reply letter, which suddenly indicates the necessity for laborious research to locate the manufacturers of these detectors.
6. It has never been customary in German business practice to confirm receipt of telegrams with a postal letter, in which the entire telegram itself is quoted (!), as was allegedly done in this case. And what is more: after the surrender of the 6th Army in Stalingrad in the winter of 1942-43, the Reich suffered from a severe labor shortage, so that especially in administrative respects every step that could possibly be dispensed with was eliminated to save work. Thus, one can be quite certain that telegrams were not confirmed in this period.
7. It is somewhat puzzling that this document, which was celebrated in the press as the irrefutable proof of the existence of gas chambers,⁴⁴ was not discovered until 1993, and then in the hardly trustworthy archives of the KGB!
8. What should be in the archives but is conspicuously missing is Topf’s subsequent cost estimate as requested by the Central Construction Office. Was this cost estimate taken by third parties, its original text replaced by a text that makes no sense at all, and then stuck back into the archive?

Therefore, this alleged new document is probably a forgery. This needs to be conclusively determined by an expert analysis of the supposed original document. But even if it were genuine, it still makes no sense, and it does not prove the existence of *homicidal* gas chambers.⁴⁵

⁴⁴ Cf. *Frankfurter Allgemeine Zeitung*, Oct. 14, 1993; *Die Welt*, Sept. 27, 1993; *Welt am Sonntag*, Oct. 3, 1993; *Der Spiegel*, 49/1993; *L’Express*, Sept. 23, 1993; *Libération*, Sept. 24, 1993; *Le Monde*, Sept. 26, 1993; *Le Nouvel Observateur*, Sept. 30, 1993.

⁴⁵ A different approach to this document was given by S. Crowell, “Technique and Operation of German Anti-Gas Shelters in WWII: A Refutation of J. C. Pressac’s ‘Criminal Traces’,” April 30, 1997, <https://codoh.com/library/document/883/> (German as “Technik und Arbeitsweise deutscher Gasschutzbunker im Zweiten Weltkrieg”, *Vierteljahreshefte für freie Geschichtsforschung* 1(4) (1997), pp. 226-244); for a more-recent summary of the discussion regarding this document see Carlo Mattogno, “The ‘Gas Testers’ of Auschwitz: Testing for Zyklon B Gas Residues. Documents – Missed and Misunderstood,” *The Revisionist*, Vol. 2, No. 2 (2004), pp. 140-155.

9.8.3. “210 anchors for fixing the gas-tight doors”

Who would need 210(!) door anchors⁴⁶ for the claimed lethal gas chambers of Crematorium IV if the “gas-tight doors” had indeed been doors to a ‘gas chamber’? The technical work *Hydrogen-Cyanide Gas Chambers as Defense Against Typhus (Blausäuregaskammern zur Fleckfieberabwehr)* explains how hydrogen-cyanide-gas-proof doors must be anchored:⁴⁷ 8 wall anchors per door (supplier, Otte & Co., Vienna) are already welded onto the doorframe so that the door cannot warp. 210 anchors for mounting gas-tight doors are no proof for gassings of human beings. However, they might be a proof for the fact that gas tight doors, windows and shutters were installed everywhere in Auschwitz as protection devices against poison gas attacks by allied bombers, as Samuel Crowell pointed out.⁴⁵

These examples clearly show how many details would require attention before a comprehensive value judgment based on a solid foundation of factual questions answered to scientific satisfaction can be rendered in this historical issue that sincerely concerns many who seek the truth.

9.9. Summary

In his report, Expert Witness Jagschitz corrected the “symbolic number of 4 million Jewish victims” insofar as he stated that “several hundreds of thousands, up to as many as 1.5 million were killed by gassing” in Auschwitz.

In light of the aforementioned technical facts, one can agree with Jagschitz’s lower limit regarding the magnitude of the number of victims – perhaps with some reservations with respect to the actual cremation capacities. However, this does not comprehensibly settle the number of killed, on the one hand, and the number of deceased on the other. All the more so since Kazimierz Smoleń, an author certainly above suspicion of revisionist leanings, stated:⁴⁸

“[...] Several hundred died in the camp daily. Mortality was particularly high during the typhus epidemics, and when diarrhea occurred on a large scale [...]”

So, if “several hundred” actually died on a daily basis,⁴⁹ then in light of the limited capacity of the crematoria there was no excess capacity left over for the cremation of the victims of alleged ‘mass gassings.’ Smoleń made this statement while still believing in the ‘4 million.’ He still allowed for ‘mass gassings.’ But if one combines the findings of Jagschitz (several hundreds of thousands, up to a maximum total of 1.5 million) with Smoleń’s (several hundred dead per day) and with the capacity of the crematoria, then the final picture is quite different.

But the statistics Jagschitz arrived at place this expert witness in sharp conflict with Galinski, the former chairman of the Central Council of Jews in Germany, who as late as mid-1990 vehemently clung to the traditional figure of 4 million mostly Jewish victims of Auschwitz.⁵⁰

“I consider it a historically proven fact that four million persons died in the worst extermination factory in the world.”

This statement is reminiscent of Germany’s Supreme Court’s ruling of “judicial notice” based on information given in the *Brockhaus* encyclopedia. However, *Brockhaus* also states that cremation takes from 90 to 100 minutes!

One wonders whether this part of Jagschitz’s report will yet come back to haunt him? On the other hand, perhaps Simon Wiesenthal’s statement will exculpate Lüftl. Wiesenthal was

⁴⁶ J.-C. Pressac, *op. cit.* (note 9), p. 451.

⁴⁷ F. Puntigam, H. Breymesser, E. Bernfus, *Blausäuregaskammern zur Fleckfieberabwehr*, Sonderveröffentlichung des Reichsarbeitsblattes, Berlin 1943, p. 44.

⁴⁸ Prior to the collapse of the Communist regime in the Eastern Bloc, Kazimierz Smoleń had been Director of the Auschwitz Museum. Quoted from Smoleń, *Auschwitz 1940-1945*, Ullstein, Frankfurt/Main 1961, p. 63.

⁴⁹ “Died,” not “were killed”; of course no one, not even revisionists, will seriously contest that killings also occurred!

⁵⁰ *Rheinische Post*, July 18, 1990.

quoted as having said that 1.5 million is now supposed to be the final, definitive number of victims. Only those who claim a lesser figure run the risk of incurring Wiesenthal's wrath.⁵¹

Furthermore, from press releases it has been evident since early March, 1993, that according to the Polish press agency PAP the updated number of victims is between 1.2 to 1.5 million:

"[...] *the 4-million-figure was part of Soviet propaganda* [...]"

So what do the courts consider to be "judicially noticed" since March, 1993? Will those persons who got in trouble in the past for claiming figures between 1.5 and 6 million now be pardoned or rehabilitated, or even paid compensations?

In his new book, Pressac writes that only 630,000 persons perished in the gas chambers of Auschwitz and that no more than 800,000 persons died in Auschwitz altogether.⁵² In the first German edition of the present book, this author already asked which figure will be granted judicial notice in 1994, and which in 1995.⁵³ Now we know that, according to the 1994 German edition of Pressac's second book, there were some 470,000 to 550,000 Jews gassed at Auschwitz, and some 710,000 victims altogether.⁵⁴ In 2002, Fritjof Meyer, an editor of Germany's largest weekly magazine *Der Spiegel*, published an article in which he stated that the death toll of Auschwitz did not exceed 510,000, of which not more than 356,000 were allegedly gassed.⁵⁵ What number will be "judicially noticed" in 2003? What number in the year 2004? Which in 2010?

Drawing exclusively upon the Jagschitz Report, on 'non-revisionist' sources such as Pressac, Hilberg, documents from the archives of the Auschwitz Museum, and on other sources such as standard subject-reference works which are certainly above suspicion, Walter Lüftl has shown that the material presented by Expert Witness Jagschitz can be interpreted in other, equally plausible ways, to arrive at the opposite conclusion:

The mass murder with poison gas cannot be proven.

Even though only seven points (and some details) from the court expert's report were discussed here, an examination of the whole of the court transcript reveals a plenitude of points, a scrutiny of whose technical components (and, as the example of "Eirenschmalz" shows, even merely the organizational components) allows precisely the opposite conclusion than that drawn by Expert Witness Jagschitz.

10. Do All Expert Witnesses Have Equal Rights?

For an outside observer, the following question arises: if, after careful examination of sources and consultation with subject experts, Expert Witness Jagschitz had arrived at the opposite of his actual conclusion, this time actually in a replicable and verifiable manner – *would he too have been in violation of §3h of the Criminal Code?*

In any western nation under the rule of law one must naturally answer this in the negative. And therefore such a violation also cannot be alleged against a private researcher such as Walter Lüftl, who has looked into this issue and concluded as the result of an examination of the facts and of his own replicable and verifiable reasoning that the 'truth desirable from the perspective of public education' is as yet open to doubt, because it stands in contradiction to natural laws and what is technically possible. Such an allegation would be all the more inappropriate since the examination of individual aspects of the overall subject has been expressly declared to be outside the province of the law cited (cf. Stenographic Transcripts of the Austrian National Assembly).

It is purposely left up to the reader to determine for himself that the above expositions as a whole are at least equal to the scientific and academic standard of Jagschitz's presentation.

In any case, every assessment has been thoroughly founded on facts, and adequately supplemented with documentation permitting the replication and verification of findings.

11. Author's Statement

At no point does the above article contain any statement or claim, whether of direct or indirect nature, which was intended or meant to be taken as

- denial,
- approval, or
- gross trivialization of the National-Socialist mass murder.

This author sincerely condemns National-Socialist crimes with all appropriate force and affirms that a crime begins with the very first victim wrongfully killed.

However, he claims for himself the *fundamental principle of academic freedom* as expressed in the February 5, 1992, report of the Justice Committee of the Austrian National Assembly.⁵⁶

The above study, being a serious academic and scientific endeavor, concerns itself with *individual aspects of a historical complex of events* and should be regarded first and foremost as a critical post-verdict statement pertaining to the *individual aspects of a report* drawn up by an 'expert' summoned by the court and *discussing the historical complex of events in question*.

In particular, the author wishes to stress a statement of the Chairman of the Justice Committee of the Austrian National Assembly:

"I do, however, fully agree with you on the point that only science, not a trial judge, can determine what is truth and what is falsehood." (Dr. Michael Graff)

What is more, where and by whom this work is published is quite irrelevant,
for the truth is indivisible.

12. The End of the Matter

On June 15, 1994, Lüftl received a notice from the District Criminal Court of Vienna, dated June 8, 1994,⁵⁷ stating that the preliminary investigation initiated against him had been dropped since there were no further grounds for prosecution.

The Holocaust lobby who had learned even before Lüftl that the case had been dropped (whatever happened to 'privacy'?) considered this a severe blow.⁵⁸ In an open letter to Justice Minister Michalek, professional denouncer Wolfgang Neugebauer from the Documentation Center of the Austrian Resistance lamented the outcome of these events and charged the Minister of Justice, who had only acted correctly, with "full responsibility":

"A severe setback in the battle against denial of the Holocaust, and carte blanche for all future Holocaust deniers."

Meanwhile, the Holocaust lobby had realized that in denouncing Lüftl they had shot themselves in the foot. Prior to the revision of the Criminal Code, what Lüftl had written in his study *Holocaust* had not been an indictable offense; the only point at issue had been whether or not he had written it in the spirit of "National-Socialist revivalism," for which the legal persecution and preliminary investigation, to which he had been subjected for more than two years, had failed to turn up even the slightest shadow of evidence. But the loud and vociferous manner in which the press reported on the "scandal," grossly distorting the truth in the process, ensuring that the matter drew attention around the globe, prompted a great many people to independent thought. And in the eyes (and for the purposes) of the Holocaust lobby, the results of such reflection were certainly counterproductive.⁵⁹

⁵⁶ Cf. No. 387, Supplements to the Transcripts of Proceedings of the National Assembly, XVIII of the transcript, Point 4, p. 5.

⁵⁷ Ref. 26b Vr 4274/92.

⁵⁸ Cf. reports in the Austrian daily press of June 15, 1994, as well as *Profil*, June 20, 1994.

⁵⁹ In the meanwhile, Lüftl succeeded in being reelected for the Austrian Chamber of Engineers, cf. "Lüftl wieder in Kammer. 'Schwieriges Problem,'" *Standard*, September 19, 1994.

Thus, Lüftl, vindicated by the District Criminal Court of Vienna, could state with impunity:

1. In light of physical laws and technical possibilities, the mass gassings with Zyklon B, as they are described by ‘contemporaneous witnesses’ and in ‘perpetrator confessions,’ cannot have taken place.
2. The Kurt Gerstein Statement is (verbatim) “a whopping lie.”⁶⁰
3. By virtue of the composition of the exhaust gases, mass gassings with Diesel-exhaust fumes cannot have taken place. Had there really been execution chambers or ‘gas vans’ operating with exhaust gas, the Germans would have used the more efficient internal combustion engines, or the even more efficient wood-gas generators.
4. Crematoria chimneys do not spew flames during the cremation process. All ‘eyewitness’ testimonies asserting such a phenomenon are false.
5. The number of cremated victims is considerably exaggerated since the capacity of the crematoria would have been insufficient to handle mass gassings. The quantity of fuel actually used delimits the true number of bodies cremated.
6. No homicidal mass gassings took place in the concentration camp Mauthausen. The method of gassing described by witnesses is nonsense and would have been fatal for the executioners.⁶¹
7. Homicidal mass gassing using bottled carbon monoxide is technical nonsense.
8. Auerbach’s attempt at discrediting the Leuchter Report can easily be refuted by experiment.⁶²
9. Zyklon B and Diesel-exhaust fumes have lost all credibility as alleged ‘murder weapons’ used in the “planned extermination of millions of human beings, especially Jews, as part of a program of planned genocide.”
10. Natural laws hold true for ‘Nazis’ no less than for anti-Fascists.
11. Material evidence will refute the testimony of perjured ‘eyewitnesses’ and the confessions of ‘perpetrators.’
12. Should the objective and scientific investigation of the Holocaust nevertheless prove the “planned genocide by means of gas chambers,” then the revisionists too will have to accept this.
13. *Who* is it that wants to stifle any and all discussion of this topic by means of criminal laws, and for what reasons?
14. Are we entering an era of 1984 totalitarianism after all, albeit through the back door?

However, considering the new revised paragraph 3h of Austria’s *Prohibition Order*, it seems to be necessary to advise others not to make similar public claims today, since the above statements were made before the new law came into effect. A national-liberal Austrian publisher who published these statements in 1995 as part of a documentation of Lüftl’s case,⁶³ was charged with “Holocaust denial” according to the new §3h⁶⁴ and consequently sentenced to 10-month imprisonment on probation and a fine of ÖS 240,000 (\$24,000).⁶⁵

⁶⁰ For a brief discussion of Gerstein’s statement see F.P. Berg’s article in this volume.

⁶¹ See the interesting admissions that no traces of killing devices of the Mauthausen Concentration Camp were ever found and that the gas chamber shown to visitors is a post war fabrication with no relation to reality: Florian Freund, Bertrand Perz, Karl Stuhlpfarrer, “Historische Überreste von Tötungseinrichtungen im KZ Mauthausen,” *Zeitgeschichte* (Vienna), 22 (1995), pp. 297-317; review: I. Schirmer-Vowinkel, “Nicht vorhanden,” *VffG*, 2(1) (1998), pp. 68f.

The Value of Testimony and Confessions on the Holocaust

GERMAR RUDOLF

“To deny that Jews had been maliciously killed en masse by Germany in a tribunal whose very existence was based upon the intent to establish without doubt that Jews had been killed was as fatal to the defendant in 1946 as it would have been to an accused medieval heretic who before his inquisitors guaranteed his condemnation on whatever charge by throwing in for the hell of it a denial of the existence of the Trinity and the Divinity of Jesus.”¹

1. Introduction

In the debate about the Holocaust, one of the main arguments of popular opinion is that there are a great many statements of eyewitnesses to document the National-Socialist mass extermination, and that especially the many confessions of perpetrators among the SS are irrefutable proof of the existence of a program of deliberate extermination of the Jews in the Third Reich.² For this reason, it is claimed, the lack of documental and material evidence is irrelevant.³

First of all, it is incorrect to say that there is no material evidence. The present work is a compendium of such material evidence, which, however, all goes to refute certain aspects of the Holocaust as these are related by witnesses and maintained accordingly by the courts and by academia. The justice system as well as academics of the establishment ignore this material evidence; nevertheless, the question arises as to how eyewitness testimony is to be evaluated.

It is important to note that neither objective historians nor jurists may uncritically accept everything that someone recounts as being the plain truth, but is dutybound to establish the value of such reports. The first step in this process is to fit eyewitness testimony properly into the hierarchy of the various types of evidence. Then one must consider how the individual testimony came to be – for example, whether there were manipulative factors that may have impinged on the witness and influenced his testimony.

Since most of the eyewitness statements concerning the Holocaust were made in the course of criminal investigations and of trials, we shall first clarify the value accorded to eyewitness testimony in court.

2. The Value of Eyewitness Evidence in General

In academia as well as in the justice system of a state under the rule of law, there is a hierarchy of evidence reflecting the evidential value. In this hierarchy, material and documental evidence is always superior to eyewitness testimony.⁴ Thus, academia as well as the justice system regard eyewitness testimony as the least-reliable form of evidence, since human

¹ W. B. Lindsey, “Zyklon B, Auschwitz, and the Trial of Dr. Bruno Tesch,” *The Journal of Historical Review (JHR)* 4(3) (1983), pp. 261-303, here p. 265.

² The most prominent advocate of this thesis is Professor Nolte, in his book *Streitpunkte*, Propyläen, Berlin 1993, pp. 290, 293, 297.

³ For example, the verdict of the *Schwurgericht* [jury court] of Frankfurt am Main stated that there is no evidence as to the crime, its victims, the murder weapon, nor even the perpetrators themselves; Ref. 50/4 Ks 2/63; cf. I. Sagel-Grande, H. H. Fuchs, C. F. Rüter (eds.), *Justiz und NS-Verbrechen*, Vol. XXI, University Press, Amsterdam 1979, p. 434.

⁴ Cf. E. Schneider, *Beweis und Beweiswürdigung*, 4th ed., F. Vahlen, Munich 1987, pp. 188 and 304; additional forms of evidence are “*Augenscheinnahme*” [visual assessment of evidence by the Court], and “*Parteieinvernahme*” [the questioning of disputing parties, i.e., prosecution and defense], a particularly unreliable form of testimony.

memory is imperfect and easily manipulated.⁵ According to Rolf Bender, a German expert on the evaluation of evidence, its unreliable nature renders eyewitness testimony merely circumstantial evidence, in other words, not even direct evidence.⁶

What standards must be met for eyewitness testimony to be usable in court?⁷

1. The Witness Must Be Credible

While making no claims to completeness, the following lists a few criteria for determining credibility:

- a. Emotional involvement. If witnesses are emotionally too involved in the cases under investigation, this may distort the testimony in one direction or the other, without this necessarily being a circumstance of which the witness is conscious.
- b. Veracity. If it turns out that a witness is not much concerned with truthfulness, this casts doubts upon his further credibility.
- c. Testimony under coercion. The frankness of testimony may be limited if a witness is subjected to direct or indirect pressure that makes him deem it advisable to configure his testimony accordingly.
- d. Third-party influence. A person's memory is easy to manipulate. Events reported by acquaintances or in the media can easily become assimilated as 'personal experience.' Thus, if a witness has been exposed intensively to one-sided accounts of the trial substance prior to testifying, this can very well affect his testimony to reflect these impressions.
- e. Temporal distance from the events to be attested to. It is generally known that the reliability of eyewitness testimony diminishes greatly after only a few days, and after several months has been so severely influenced and altered by the replacement of forgotten details with subsequent impressions that it retains hardly any value as evidence.⁸

2. Testimony Must Be Plausible

- a. Internal consistency. Testimony must be free of contradictions and in accordance with the rules of logic.
- b. Correctness of historical context. Testimony must fit into the historical context established conclusively by higher forms of evidence (documents, material evidence).
- c. Technical and scientific reality. Testimony must report such matters as can be reconciled with the laws of nature and with what was technically possible at the time in question.

While the issues listed under 2. are easily verified, the circumstances listed under 1. are often difficult or impossible to determine and thus involve the greatest effort for the least return. One must keep in mind that every witness experienced a certain event differently, from a purely subjective and personal point of view. He or she internalized it differently, depending on his/her physical and psychological state. He/she will ultimately recount the experience in a strictly subjective manner depending on his/her abilities and on the occasion at hand. So even if two witnesses are completely impartial and credible and their statements are plausible, they nevertheless may not report the same thing.⁹

The testimony of parties in dispute before the court – *i.e.*, the statements of the prosecution and the defense – must naturally be considered in an especially critical light since each party has a vested interest in incriminating its opponent and exonerating itself.¹⁰ But even impartial witnesses are often very far removed from the objective truth, and the fact that (although

⁵ *E.g.*, cf. §373, German Code of Civil Procedure.

⁷ Cf. also the detailed accounts of E. Schneider, *op. cit.* (note 4), pp. 200-229, and R. Bender, S. Röder, A. Nack, *op. cit.* (note 6), Vol. 1, Part 1.

⁸ Cf. esp. R. Bender, S. Röder, A. Nack, *ibid.*, pp. 45-47.

⁹ In this case in particular, cf. J. Baumann, in R. Henkys, *Die NS-Gewaltverbrechen*, Kreuz, Stuttgart 1964, pp. 280f.; also R. Bender, S. Röder, A. Nack, *op. cit.* (note 6), *passim*.

¹⁰ E. Schneider, *op. cit.* (note 4), pp. 310ff.

this has been well known for centuries) eyewitness testimony is still accorded disproportionately great significance in court even today, has repeatedly drawn sharp criticism from qualified sources¹¹ and has frequently resulted in gross miscarriages of justice.

From a judicial point of view, confessions – made both inside and outside of the court – are considered to be circumstantial evidence, since past experience has shown that a large part of all confessions are false. False confessions may be made in order to:

- cover for a third party;
- bask in the limelight of a crime;
- put a stop to grueling interrogation;
- gain a mitigated sentence by exhibiting remorse and repentance;
- as a result of psychological disorders; etc....

In the Federal Republic of Germany as well, miscarriages of justice unfortunately occur time and again as a result of false confessions.¹² The same goes accordingly for self-incriminating testimony which need not always be true. It is all the more surprising, therefore, that the otherwise knowledgeable R. Bender would categorize a self-incriminating witness as being generally truthful.¹³

3. Forms of Evidence in Holocaust Studies

3.1. Material and Documental Evidence

Until the late 1990s, material evidence has been practically nonexistent in orthodox Holocaust studies:

- There has been no initiative to systematically locate, excavate and forensically examine the contents of mass graves relative to this subject complex.¹⁴
- Not one of the allegedly numerous and giant burning sites has been looked for, located, dug up or examined.
- In no case were the alleged murder weapons sought and found, *i.e.*, examined forensically by international committees or by courts under the rule of law.

It is thus not surprising that Rückerl dispenses with any mention of material evidence and instead declares documental evidence as the best and most important form of evidence even without any material evidence with respect to the authenticity and correctness of the documents themselves.¹⁵

Otherwise, mainly revisionists have presented material evidence, as other authors do in this volume.

It is always telling to see how aggressively historians of the establishment respond to any objection that a document, which allegedly proves the Holocaust, might be forged or falsified, irrelevant, or might have been misinterpreted. On this point, orthodox scholars of recent history exhibit the same aversion to detailed document criticism¹⁶ as they also exhibit where material evidence is concerned. After all, document criticism is nothing more nor less than the expert assessment of a document. In other words, it is the furnishing of material evidence regarding the authenticity and factual correctness of a document.

¹¹ For ex., cf. S. Klippel, *Monatsschrift für deutsches Recht*, 34 (1980), pp. 112ff.; E. Schneider, *op. cit.* (note 4), p. 188.

¹² *E.g.*, the case of two defendants falsely convicted of murder; reported on *Spiegel-TV*, RTL-Plus, July 15, 1990, 9:45 pm.

¹³ R. Bender, S. Röder, A. Nack, *op. cit.* (note 6), p. 76.

¹⁴ The situation has changed to some degree since then, as attempts have been made to locate mass graves in the former alleged extermination camps at Belzec, Treblinka and Sobibor as well as in some areas of formerly German-occupied Soviet Union of yore, but systematic excavations and forensic examinations of presumed mass graves found has still not been conducted. For this, see Mattogno's books *The "Operation Reinhardt" Camps Treblinka, Sobibór, Belżec* (Castle Hill Publishers, 2021), and *The Einsatzgruppen* (*ibid.*, 2022).

¹⁵ A. Rückerl, in J. Weber, P. Steinbach (eds.), *Vergangenheitsbewältigung durch Strafverfahren?*, Olzog, Munich 1984, p. 77.

¹⁶ Cf. the chapter by J. P. Ney in the original German issue of this book: "Das Wannsee-Protokoll – Anatomie einer Fälschung," in E. Gauss (ed.), *Grundlagen zur Zeitgeschichte*, Grabert, Tübingen 1994, pp. 169–191. Ney refused to see his contribution included in this volume.

3.2. Eyewitness Evidence in the Orthodox View of the Holocaust

3.2.1. Media Witnesses as Evidence for Historiography?

Part of the testimony or statements regarding the Holocaust came in the form of written declarations or, more recently, as radio and television programs. In both cases it is easy to assess these statements in terms of the points listed under 2, but there is usually no opportunity to speak with the witness personally in order to learn more details and to establish his credibility and the plausibility of his testimony, for example by means of cross-examination. Critiques of the statements published in the various media are both numerous and extensive,¹⁷ and a critical overview of testimonies on Auschwitz was presented in 2019.¹⁸ However, these witnesses usually evade the requests of critical contemporaries to make themselves available to cross-examination.¹⁹ And while radio and television regularly present new witnesses, they never ask them any critical questions, and deny interested researchers and lawyers access to these witnesses by keeping their address or even their entire identity secret. But these paper- and celluloid-witnesses can only be accorded evidential value once their statements have stood up to critical examination. In the following contribution, Robert Faurisson reports about the first two of such a critical examination of this kind of witness to date. In this contribution, therefore, I will focus primarily on statements made in court, particularly since the supposed justness of the German justice system prompts the public to accord these a greater significance.

3.2.2. Court Testimony as Evidence for Historiography?

The very critical view, at least theoretically, taken by courts of witness and party testimony is based on the understanding of human nature gained in the course of centuries by many jurists. It should be accepted as a valid guideline by historians as well, even if the methods used to determine truth in scientific pursuits are necessarily different from those employed in court. For example, while a court must reach an absolute decision regarding what is proven and what is not proven, and must do so within a limited period of time, science cannot, indeed may not reach a conclusive and final verdict if it wants to remain true to its maxim of openness in every respect. Whereas in a court case the close relation of the proceedings to a human fate causes emotion to exert a strong and distorting influence on the process by which the verdict is reached, such an influence usually is, or should be, minor in scientific pursuits.

When discussing in the following the witness testimony and confessions that represent almost the entirety of the foundation on which the structure of the Holocaust narrative rests, we must bear in mind that for the most part these statements were made in the course of trials or at least for the purpose of incriminating or exonerating someone before a court or the public. Eyewitness accounts that were made outside a courtroom situation and are free of emotion are rare.²⁰ The subject matter itself and the emotions with which it is charged see to that. The factuality of testimony and confessions must therefore be carefully examined before the court by qualified experts – something that regularly does *not* happen in the so-called “NSG trials.”²¹ And all the more, we must ask to what extent such testimony can serve a scholarly quest that depends on unemotional reports in order to get close to the truth. Therefore, the tendency to write history based on court testimony and on court verdicts de-

¹⁷ Most of the volumes of the series *Holocaust Handbooks*, which was started with this very book you are holding in your hands, contain more or less details critiques of testimonies concerning the various topics addressed. Cf. www.HolocaustHandbooks.com.

¹⁸ J. Graf, *Auschwitz: Eyewitness Reports and Perpetrator Confessions of the Holocaust. 30 Gas-Chamber Witnesses Scrutinized*, Castle Hill Publishers, Uckfield 2019; see also C. Mattogno's trilogy *Sonderkommando Auschwitz I through Sonderkommando Auschwitz III* (Castle Hill Publishers, 2021f.), and *idem*, *The Making of the Auschwitz Myth*, 2nd ed., *ibid.*, 2021, pp. 105-401.

¹⁹ For two interesting exception cf. G. Rudolf, “Auschwitz Doctor Hans Münch Interviewed,” *Inconvenient History*, 15(2) (2023); G. Baum, “Auschwitz: Die Paradoxie der Erlebnisse,” *ibid.*, pp. 195-199.

²⁰ I would include here Paul Rassiniér's *The Holocaust Story and the Lies of Ulysses* and Josef G. Burg's *Schuld und Schicksal* as some of the rare exceptions (but not necessarily their later works).

²¹ NSG = *Nationalsozialistische Gewaltverbrechen*, i.e., violent National Socialist crimes; NSG trials = trials prosecuting violent crimes allegedly committed by the National Socialist regime.

rived from it, which is very common in orthodox Holocaust research, is in and of itself a very questionable approach, even if these respective trials were conducted strictly under the rule of law. The procedure becomes even more suspect when historians draw on eyewitness testimony as evidence even when this testimony was rejected by the ruling court as lacking credibility.²²

The science of historiography is thus faced with the dilemma that it has only these statements to rely on, which are at least partially questionable, and must therefore make do with them. But then it is all the more important for historians to consider the circumstances under which these statements were made, for their value depends not least of all on how fairly the prosecution, the defense and the court, but also the media and the general public were disposed towards the witnesses, the defendant and their respective testimonies.

3.2.3. An Expert Opinion about the Value of Testimony Regarding the Holocaust

There is currently no topic of human history that is treated more emotionally and one-sidedly in public than the Holocaust. It represents the central taboo of western civilization, and to question it is the epitome of heresy, punishable by imprisonment in many western democracies.

Given this state of affairs, Professor Dr. Elisabeth Loftus, expert on the evaluation of eyewitness testimony, pointed out in 1991 that testimonies pertaining to actual (or merely alleged) National-Socialist atrocities, which for many different reasons are based on experiences made during times of particularly emotional distress, consequently are less reliable than almost any other kind of testimony. Elaborating, she observes:

- a. The time elapsed since the end of World War II has contributed to an inevitable fading of recollections.
- b. In trials of alleged National-Socialist criminals, pre-trial publicity has meant that witnesses had generally known the identity of the defendants and the crimes they were charged with already before the trial.
- c. Prosecutors have asked witnesses leading questions, such as whether they could recognize the defendant as the perpetrator. Witnesses have rarely been called on to identify the defendant from a number of unknown people.
- d. It is fairly certain that witnesses have discussed identifications among themselves, which facilitated subsequent 'identifications' by other witnesses.
- e. Photos of defendants have been shown repeatedly also during exhibitions, each additional showing of the pictures making witnesses more familiar with the face of the defendant, and thus increasingly 'certain.'
- f. The extremely emotional nature of these cases further increases the risk of a distortion of memory, since the defendants to be identified by the witnesses were more than alleged tools of the National Socialists – they were devils incarnate: said to have tortured, maimed and mass-murdered prisoners. They were allegedly responsible for the murder of the witnesses' mothers, fathers, brothers, sisters, wives and children.²³

Professor Loftus, herself Jewish, uses her own experience to describe how a false sense of loyalty to her heritage and her people and "race," as she puts it, prevented her from taking a stand against the obviously false testimony of her fellow Jews. It is safe to assume that this is a widespread, common reflex among Jews.²⁴

However, she omits three further factors that can contribute additionally to the massive distortion of memory where the Holocaust is concerned:

²² E.g., E. Kogon, H. Langbein, A. Rückerl *et al.* (eds.), *Nationalsozialistische Massentötungen durch Giftgas* (Fischer, Frankfurt/Main 1983), base their studies on documents and testimony from the archives of various Public Prosecutors' Offices; it cannot be verified, however, whether these were ever accepted as evidence by the Courts in question.

²³ E. Loftus, K. Ketcham, *Witness for the Defense*, St. Martin's Press, New York 1991, p. 224; cf. review by J. Cobden, "An Expert on 'Eyewitness' Testimony Faces a Dilemma in the Demjanuk Case," *Journal of Historical Review (JHR)*, 11(2) (1991), pp. 238-249. The author thanks R. Faurisson for the latter reference.

²⁴ *Ibid.*, pp. 228f.

- g. Accounts of witnesses' personal experiences have always – and not only during criminal trials – been widely disseminated by word of mouth, print and broadcast media, and particularly among the witnesses themselves through personal correspondence and all sorts of relief organizations.
- h. Since at least the late 1970s the topic of the Holocaust has been ever-present in the mass media, and in an extremely one-sided manner, so that memories inevitably become standardized.
- i. Where the Holocaust is concerned, it is not only unforgivable but at times even a criminal offense not to know, not to concede, or perhaps only to doubt, certain things. There is thus a very strong social (or even legal) pressure on witnesses in particular to recall certain 'facts' and to repress others.

If one considers all these factors and combines them with studies on the manipulability of human memory, such as the one recently published by Prof. Loftus in a leading scientific journal,²⁵ then one *cannot help* but conclude that there is in fact no other kind of witness testimony less reliable than that on the Holocaust. If in normal scientific and legal proceedings one accepts as a rule that eyewitness testimony is the least-reliable kind of evidence, then insofar as the Holocaust is concerned it is necessary to observe that here the eyewitness testimony should only serve to flesh out the framework of historical events as established by documental and physical evidence, and perhaps to give clues to events whose occurrence has yet to be proven by documents or material evidence. But anyone who relies chiefly on eyewitness testimony and assigns it a greater value as evidence than documental or even material evidence cannot seriously claim to adhere to the scientific method in his work. Thus, the present volume pays particular attention to the critical analysis of many claims made by witnesses.

3.3. Methods of Obtaining Testimony

3.3.1. Allied Post-War Trials

In order to assess the value of eyewitness testimony and confessions relating to the Holocaust, one must first examine the conditions prevailing in the Allied post-war trials in Nuremberg and elsewhere. For it is the verdicts handed down in these trials which recorded, in sketchy outlines, the accounts of the Holocaust given by eyewitness testimony and putative confessions. These Allied trials may be roughly divided into two types, namely those carried out by the respective occupying powers as these saw fit, and those carried out with at least initial co-operation among the victorious powers within the framework of the International Military Tribunal (IMT) in Nuremberg.²⁶

3.3.1.1. U.S. Trials

Immediately after the end of the war the Americans placed all Germans who held leading positions in the Party, the state or the economy under "automatic arrest" without trial.²⁷ In this way hundreds of thousands ended up in prison camps consisting mainly only of fenced-in meadows. Shortly after the end of the war, all German prisoners of war were moreover stripped of their status as prisoners of war.²⁸ The Allies considered civilian internees to have

no rights whatsoever; particularly in the American and French Zones, these prisoners lived mostly in burrows in the ground, received insufficient food, were denied all medical attention, and neither the International Red Cross nor other organizations nor even private individuals were allowed to help. In this way the prisoners in the American-run camps died like flies by the hundreds of thousands.²⁹

Military Government Ordinance No. 1 required every German, on pain of lifetime imprisonment, to give the Allies any and all information they required.³⁰ Thus German witnesses could be forced to give evidence by imprisoning them for years, subjecting them to hours of interrogation, or threatening to hand them over to the Russians.³¹ A separate department, "Special Project," was responsible for obtaining incriminating evidence against recalcitrant witnesses. The material obtained in this way was used to bend the witnesses to the Allies' will, since this information was used to threaten them with prosecution if they refused to give incriminating evidence against others.³²

This fact alone shows that after the war every German was practically outlawed and became fair game for persecution, and found himself unexpectedly in a situation where he would give the Allies any information they sought – even if such information was false – rather than suffer the blows of arbitrary despotism looming over him at every turn.

In the American Occupation Zone, trials against various defendants were conducted under the United States' or U.S. Army's sovereignty in Dachau, Ludwigsburg, Darmstadt and Salzburg.³³ These trials fell roughly into three categories:

- crimes in concentration camps (including the cases of euthanasia);
- murders of bailed-out Allied plane crews;
- the alleged war crime of Malmedy in the Ardennes Offensive.

Preparation for these trials included the interrogation of suspects and witnesses in various camps and prisons known today as torture centers, such as Ebensee, Freising, Oberursel, Zuffenhausen and Schwäbisch Hall.³⁴ Rückerl comments succinctly:³⁵

"Even the Americans themselves soon objected to the way in which some American military tribunals conducted their trials, particularly to the fact that what was repeatedly used as evidence in these trials were confessions of the defendants which had been obtained in preliminary hearings, sometimes under the worst possible physical and psychological pressure."

In fact, until 1949 there were several U.S. Congressional investigating committees which looked into a part of those accusations that had been brought by German and also by American defense attorneys, particularly by R. Aschenauer, G. Froeschmann and W. M. Everett.^{33,36f.} However, these committees – whose reports were published only in part, and not until public pressure had been brought to bear³⁸ – were accused by Americans of being merely symbolic fig-leaves for the Army and for politics alike, since they had served merely

about Nuremberg, (D. Irving, *Nuremberg. The Last Battle*, Focal Point, London 1996) the reader should refer to this, even though it could not be included in detail in this study which was written prior to its publication.

to cover up the true extent of the scandal.³⁹ For example, the National Council for Prevention of War commented on the conclusions of the Baldwin Commission, which exonerated the Army of grave wrongdoings, as follows:⁴⁰

“The Commission concluded its report with recommendations for reform of future proceedings of this sort – but these recommendations give the lie to all the excuses and exonerations making up the greatest part of the report. In effect, the bottom line stated, ‘Even if you didn’t do it, we don’t want you to do it again’ [...].”

Senator J. McCarthy, who had been sent by the U.S. Senate to act as an observer, turned out to be especially committed. Protesting against the collaboration between the members of the investigating committee and the U.S. Army in their efforts to cover up the scandal, he resigned his function as observer after only two weeks and gave a moving address to the U.S. Senate.⁴¹ The manner in which the Americans extorted confessions from accused persons, or statements from reluctant witnesses subjected to automatic arrest both in the prisons for those awaiting trial as well as during the main hearing in Dachau, left clearly visible marks; the methods used were:

- skin burns
- destruction of the nail beds (of fingers) with burning matches
- torn-out fingernails
- knocked-in teeth
- broken jaws
- crushed testicles
- wounds of all kinds due to beatings with clubs
- brass knuckles and kicks
- being locked up naked in cold, damp and dark rooms for several days
- imprisonment in hot rooms with nothing to drink
- mock trials
- mock convictions
- mock executions
- bogus clergymen, and many more.^{42,43}

According to Joachim Peiper, principal defendant in the Malmedy Trial, what was even worse than these so-called third-degree interrogation methods was the feeling of being completely at the mercy of others while being totally cut off from the outside world and one’s fellow prisoners, as well as the often-successful attempt by the Americans to play the prisoners off against each other with threats and promises in order to obtain false incriminating statements. This would help to break the prisoners’ resistance, which had its roots in the solidarity among them (second-degree interrogations).⁴⁴

The transcripts of these interrogations, which lasted for hours and even days, were cut-and-pasted into so-called affidavits by the prosecution; for this, exonerating passages were deleted, and contents were frequently distorted by re-wording.⁴⁵ Aside from these dubious affidavits, anything and everything was admissible as evidence, including, for example, uncertified copies of documents as well as third-hand statements (hearsay).⁴⁶ In one case even

⁴⁶ R. Aschenauer, *Macht gegen Recht*, (note 33), pp. 32f.; cf. Article 7, Ordinance No. 7 of the Military Government of the American Zone, in A. von Knieriem, *op. cit.* (note 30), p. 558.

the unfinished, unsigned affidavit of one defendant whom all the abuse had driven to suicide was used as evidence!⁴⁷ And Order SOP No. 4 promised that any defendant who offered to testify in order to incriminate others would be set free.⁴⁸ The effects of this regulation were demonstrated by Lautern with two examples showing how two prisoners bought their freedom with false statements incriminating third parties.⁴⁹

Up to the start of the trials, the defendants had no legal representation whatsoever, and even during the trials, the defense attorneys rarely provided effective support, since these defense counsels (appointed by the court) in many cases were themselves citizens of the victorious powers, usually with a poor command of the German language, if any. They showed little interest in defending their clients and sometimes even acted blatantly as prosecutors, going so far as to threaten the defendants and to persuade them to make false confessions of guilt.⁵⁰ But even if, like American attorney W. M. Everett for example, they were willing to carry out their duties as defense counsels, the prosecution and the court made this almost impossible for them: the defense was reluctantly given only partial access to pertinent documents, and conversations with the defendants were not possible until just before and sometimes not even until after the trials had begun, and always only under Allied supervision. Frequently it was not until just before the trial that the defense was informed of the charges, which tended to be sweeping and general in nature.⁵¹ Motions to hear witnesses for the defense, or to contest evidence such as extorted statements, were usually refused.⁵² And this was fully in accordance with the regulations of the American Occupation Power; after all, Article 7 of Ordinance Number 7 of the Military Government for the American Zone states, with respect to the charter of certain military tribunals:⁵³

“The Tribunals shall not be bound by technical rules of evidence [...]. The tribunal shall afford the opposing party such opportunity to question the [...] probative value of such evidence as in the opinion of the tribunal the ends of justice require.”

It was left to the court to decide what justice required. In other words, the procedure was purely arbitrary.

It is interesting to determine how the incriminating statements, especially those made by former inmates of the concentration camps, are to be evaluated. The prosecution used a special technique to obtain these statements – so-called “stage shows” or “revues.”⁵⁴ For this purpose the prosecution gathered up former concentration-camp inmates and put them into an auditorium. The defendants were placed on a well-lit stage while the former inmates sat in the darkened room and could bring any and all conceivable accusations against the defendants, accompanied at times by furious yelling and the vilest curses. In those cases where, contrary to expectation, no charges were made against a defendant, or when those accusations that were made seemed insufficient, the prosecution helped matters along by persuading and sometimes even threatening the witnesses.⁵⁵ If this shameful tactic still did not suffice to obtain incriminating statements, the prosecution nevertheless did not shy away from a trial; exonerating statements were simply destroyed by the prosecution.⁵⁶ These stage-shows continued until an American officer donned an SS uniform and appeared on the stage before the howling witnesses, who promptly incriminated him as a concentration-camp thug.⁵⁷

Defense witnesses from the concentration camps were withheld, threatened, sometimes even arrested and mistreated by the prosecution.⁵⁸ Many former concentration-camp inmates

threatened their one-time fellow sufferers with reprisals against their families or even with incriminating statements and indictments against them if they failed to give sufficiently incriminating testimony or statements against third parties. Even threats of murder are documented to have been made against fellow prisoners.⁵⁹ The VVN (*Vereinigung der Verfolgten des Naziregimes* = Organization of Persons Persecuted by the Nazi Regime),⁶⁰ the organization that decided which former inmates living in the starving Germany of those days would receive food rations, housing authorization etc., used its power to pressure many former fellow prisoners into not taking the stand as defense witnesses. It even expressly forbade the former fellow prisoners to give exonerating testimony.⁶¹

Those witnesses who were willing to give incriminating evidence were conspicuous by virtue of their frequent appearance, sometimes in groups, at various trials where they could expect to receive considerable compensation, both financial and in goods. In many cases these “professional witnesses,” who openly coordinated their testimony amongst themselves, were criminal ex-convicts who had been promised exemption from punishment in return for their cooperation.⁶² Judges G. Simpson and E. L. van Roden, whom the U. S. Army had appointed as investigating commission, are said to have used the term “scum of humanity” in this context.⁶³ Even when such or other witnesses were found to have perjured themselves, they were never prosecuted.⁶⁴ On the contrary: only if a witness told the court of the methods with which his testimony had been obtained, and thus rescinded his statements – only then did the prosecution take steps – against him!⁶⁵

In principle, the trials in Dachau were all the same, regardless of whether they dealt with crimes in the concentration camps, with murders of airmen, or with the Malmedy Case. F. Oscar correctly points out⁶⁶ that torture was worse in the Malmedy Case due to the dearth of ‘witnesses,’ while the superfluity of ‘witnesses’ in the concentration camp cases resulted in “stage shows” instead. In “The Medical Case,”⁶⁷ the method of choice was the confiscation of exonerating documents and the suppression of exculpatory statements.⁶⁸ Freda Utley stated that the concentration-camp cases were even worse than the Malmedy Case, which was already unparalleled.⁶⁹

What must one think of historians who, such as Thomas A. Schwartz, claimed as late as 1990, and in Germany’s foremost periodical on contemporary history to boot, that the American trials had been conducted in accordance with the stipulations of the Geneva Convention; that the main problem with these trials had merely been the lack of opportunity for appeal and the uncertain future treatment of the convicted; that the cases of Ilse Koch⁷⁰ and Malmedy were the only ones of particular significance; and that the committee appointed by the U.S. Senate had exonerated the American occupation authorities from the more-serious charges?⁷¹

3.3.1.2. British Trials

In the first post-war years the British, on the whole, acted no differently than the Americans. According to Aschenauer, the main features of the American post-war trials also characterized those British trials taking place in Werl,⁷² where leading officers of the *Wehrmacht* as well as concentration-camp guards from Auschwitz, Bergen-Belsen and Natzweiler were tried.⁷³ One fundamental difference, however, was that no investigating commissions were introduced during or after these trials, so that the internal proceedings of, for example, the British interrogation camps and prisons – most notably Minden,⁷⁴ Bad Nenndorf⁷⁵ and Hameln – remained sub-surface.

From two examples, however, it becomes clear that interrogation methods of second and third degree were the rule there as well. The first example is the torture of the former commandant of Auschwitz, Rudolf Höß, in the prison of Minden. This torture was not only mentioned by Höß himself in his autobiography,⁷⁶ but has also been confirmed by one of his torturers⁷⁷ who, rather as an aside, also mentioned the torture of Hans Frank in Minden.⁷⁸ And further, in his testimony before the IMT, Oswald Pohl reported that similar methods were used in Bad Nenndorf and that this was how his own affidavit had been obtained.⁷⁹ The example of Höß is especially important since his statement was used at the IMT as the confession of a perpetrator, to prove the mass murder of the Jews (see 3.3.1.5).

In 2001, Patricia Meehan revealed some ugly features of the network of secret “Direct Interrogation Centres” the British had set up in their occupational zone of Germany. Those centers are indeed best characterized as torture centers meant to extract ‘evidence’ for the upcoming trials.⁸⁰ The topic was researched in more depth by British journalist Ian Cobain in 2005 who wrote in some detail about these British torture centers both in London (the so-called “London Cage”) and in the British occupational zone in Germany.⁸¹

⁷² R. Aschenauer, *Macht gegen Recht*, (note 33), pp. 72ff.

⁷³ A. Rückerl, *op. cit.* (note 35); for a comprehensive discussion of the British trial of the suppliers of Zyklon B to Auschwitz, cf. W. B. Lindsey, *op. cit.* (note 1).

⁷⁴ According to R. Faurisson, “How the British Obtained the Confessions of Rudolf Höss,” *JHR* 7(4) (1986), pp. 389-403, here p. 399, Minden/Weser was the interrogation headquarters of the British military police.

⁷⁵ R. Aschenauer, *Macht gegen Recht*, (note 33), p. 72, tells of the infamous Special Camp Bad Nenndorf, where preliminary hearings culminated in severe physical abuse. Cf. Johannes Heyne, “British Torture at Bad Nenndorf,” *Inconvenient History*, 10(3) (2018).

3.3.1.3. French Trials

We know comparatively little about the French trials of the camp staff of the concentration camps Neue Bremme and Natzweiler.⁸² However, judging from the French conduct towards German civilians under “automatic arrest”⁸³ as well as towards the population of the occupied territories⁸⁴ – which was just as bad as, if not worse than, the conduct of the Americans – one may conclude that the French were equal to the Americans in every way.

3.3.1.4. Soviet-Russian Trials

The trials in the Soviet Occupation Zone can be considered as part of the continuation of the war-crimes tribunals that had been held in the Soviet Union ever since the outbreak of hostilities in 1941. In 1950, an official report confirmed that these war-crimes trials were a violation of international law.⁸⁵ Maurach reports that the preliminary hearings were characterized by continuous, *i.e.*, non-stop interrogations, physical abuse of all kinds, distorted protocols, playing prisoners off against each other, forced denunciation of others, etc.; and the main hearings by summary mass trials before special courts governed by arbitrary rules of procedure.⁸⁶ There is a general consensus of opinion regarding these procedures, and even the German Federal Ministry of Justice has commented to this effect.⁸⁷ In a 1996 publication by a Russian historian and based on original Russian archives, these early German expert reports were confirmed.⁸⁸ The same goes for comparable trials held by the Soviet satellite states in the first few years following the war. Buszko reports, for example, that in Poland a special court comparable to the IMT was set up whose verdicts were incontestable.⁸⁹ Further, the German Federal Ministry of Justice has described the early trials in the communist east-German “German Democratic Republic” as arbitrary trials,⁹⁰ whose darkest chapter, the so-called Waldheim Trials, was recently described in detail by Eisert.⁹¹

3.3.1.5. The International Military Tribunal and Its Successor Tribunals

The actual International Military Tribunal consisted of prosecutors and judges from the four Allied Powers – hardly an objective tribunal. It brought 22 of the most-important figures from the Third Reich to trial. This Tribunal was followed by twelve further trials of various offices and government departments – for example the Reich Government, the *Wehrmacht*

⁸² A. Rückerl, *op. cit.* (note 35), p. 99.

⁸³ Aside from J. Bacque, *op. cit.* (note 29), see also the accounts of brutal torture of internees in Landesverband der ehemaligen Besatzungsinternierten Baden-Württemberg (ed.), *Die Internierung im deutschen Südwesten*, pub. by ed., Karlsruhe 1960, esp. pp. 73ff.; cf. also Arthur L. Smith, “Die deutschen Kriegsgefangenen und Frankreich 1945-1949,” *VfZ* 32(1) (1984), pp. 103-121, who bases his study exclusively on official accounts of Allied sources. Would it be equally appropriate to report about the conditions in German concentration camps exclusively on the basis of official contemporaneous accounts of German governmental and administrative sources?

⁸⁹ J. Buszko, *Auschwitz: Geschichte und Wirklichkeit des Vernichtungslagers*, Rowohlt, Reinbek 1980, pp. 193ff.; R. Henkys, *op. cit.* (note 9), p. 191, believes that in 1947 the Polish took care to ensure that trials were conducted in accordance with the principles of rule-of-law. But since hardly any of these trials at that time in the sphere of influence of Stalin were conducted as such, one wonders on which information Henkys relies.

⁹⁰ A. Rückerl, *op. cit.* (note 35), p. 211.

⁹¹ W. Eisert, *Die Waldheimer Prozesse*, Bechtle, Munich 1993; for an account of a more recent trial regarding Oradour and Lidice, cf. H. Lichtenstein, *Im Namen des Volkes?*, Bund, Cologne 1984, pp. 132ff. According to Lichtenstein, the defense acted as secondary prosecution in this trial.

Supreme Command, and the SS Economic-Administrative Main Office – and of professional groups, such as lawyers and executives of the chemical and steel industry. These trials, however, were conducted exclusively by the Americans, since by then the other victorious powers had lost interest.⁹²

The London Agreement, which defined the legal framework of the IMT,⁹³ decreed in its Article 3 that the Tribunal cannot be challenged, and in Article 26 it categorically ruled out any contestability of its verdicts. In accordance with Article 13, the court also determined its own rules of procedure. These points alone already suffice to strip this tribunal of any justicial legitimacy. Three articles pertaining to the rights of the court are particularly significant. Article 18, for example, determined that the court should

“confine the Trial strictly to an expeditious hearing of the issues raised by the charges [sic]”

and that it could refuse any and all questions and explanations it deemed unnecessary or irrelevant. Article 19 states verbatim:

“The Tribunal shall not be bound by technical rules of evidence. It shall adopt and apply to the greatest possible extent expeditious and nontechnical procedure, and shall admit any evidence which it deems to have probative value.”

And Article 21 confers to this very day the cloak of legal respectability upon atrocity propaganda produced mainly but not exclusively by Stalin’s various war-crimes commissions:

“The Tribunal shall not require proof of facts of common knowledge but shall take judicial notice thereof. It shall also take judicial notice of official governmental documents and reports of the United Nations, including the acts and documents of the committees set up in the various Allied countries for the investigation of war crimes, and the records and findings of military or other Tribunals of any of the United Nations.”

Thus, all ‘evidence’ produced in the dubious trials discussed in Subsections 3.3.1.1 to 3.3.1.4 was deemed to be a matter of fact needing no further substantiation, and which could not be contested. The IMT categorized the SS and the Waffen SS, for example, as criminal organizations primarily on the basis of the ‘evidence’ produced in the Dachau Trials.⁹⁴

In the time leading up to the trial, the Soviets bluntly stated that they wished to execute the defendants without a trial or at most after a summary show trial, since their guilt was self-evident anyhow.⁹⁵ While some voices were raised in agreement on the side of the western Allies,⁹⁶ the understanding that only a ‘real’ trial could be effective did predominate.⁹⁷ The fact that chief prosecutor R. Jackson stated in one of his addresses that this military tribunal was only a continuation of the war against Germany by other means, and that said tribunal was not bound by any limiting conditions imposed by legal systems coming down

to modern times through tradition, should instill in any researcher a healthy dose of skepticism regarding the conditions providing the framework of this trial.⁹⁸

Irving described the early investigations of the IMT prosecution as a private event put on by the American Secret Service OSS [Office of Strategic Services], until R. Jackson reduced this influence.⁹⁹ Von Knieriem gives a very detailed account of the consequences ensuing from the fact that the prosecution had unlimited access to the entire executive apparatus of all occupation authorities – permitting, for example, their arrest of any witness they chose, the confiscation of all documents and files of the Third Reich, as well as access to the files of the victors – while the defense was completely without means and influence.¹⁰⁰ Since the IMT was conducted in the style of Anglo-Saxon trials, in which – unlike in German trials – the prosecution is not obliged to ascertain and submit any evidence that would serve to exonerate the defendant but rather strives to prove the guilt of the defendant in a one-sided manner, this unequal ‘arsenal’ of prosecution and defense could not but result in grave miscarriages of justice.¹⁰¹ Even the presiding judges – provided they had been willing to balance the situation – could not have helped the defense to improve its situation very much, for these judges were merely *de facto* guests of the prosecution, which latter decided all material and personnel matters in court.¹⁰² With regard to the obtainment or hearing of evidence, the judges had no authority to issue directives, neither to the occupation powers nor to the prosecution.¹⁰³

In many and pervasive respects, the conduct of the IMT was shockingly similar to that of the trials described previously in Section 3.3.1.1. Von Knieriem and many others recount threats of all kinds, of psychological torture,¹⁰⁴ of non-stop interrogation¹⁰⁵ and of confiscation of the property¹⁰⁶ of defendants as well as of coerced witnesses. Intimidation, imprisonment, legal prosecution and other means of coercion were applied to witnesses for the defense;¹⁰⁷ distorted affidavits,¹⁰⁸ documents¹⁰⁹ and synchronized translations;¹¹⁰ arbitrary refusal to hear evidence,¹¹¹ confiscation of documents¹¹² and the refusal to grant the defense access to documents;¹¹³ as well as the systematic obstruction of the defense by the prosecu-

tion¹¹⁴ such as, for example, making it impossible for the defense to travel abroad in order to locate defense witnesses,¹¹⁵ or censoring their mail.¹¹⁶ We know of professional witnesses who had been interned in concentration camps for serious (non-political) crimes.¹¹⁷ Last but not least, we know of verdicts flying crassly in the face of what the evidence demanded¹¹⁸ which were justified with “arguments unrivalled in their crudity.”¹¹⁹

When the American attorney E. J. Carroll was prevented from acting as defense counsel in the Krupp case, he sent a letter of protest to General Clay criticizing the IMT trials for, among other things, lengthy and inhumane detention awaiting trial; the withholding of documents by the prosecution and the court, hearsay evidence, the random nature of documental evidence, the suppression of witnesses for the defense, and the mandatory presence of members of the prosecution at any discussions held with witnesses; the disappearance of exonerating evidence; confiscation of property; testimony under duress; and intimidation of witnesses.¹²⁰

Irving calls the manner in which the IMT prosecution conducted interrogations “Gestapo methods.”¹²¹ The prisoners, cut off as they were from the rest of the world and suffering from hunger and cold, were not granted any medical care for injuries they had sustained through abuse by their captors,¹²² and even their defense counsels ran the risk of being arrested if they insisted on the rights they might have expected in legal trials – as happened, for example, to the defense counsel of von Neurath,¹²³ or to all the defense attorneys in the Krupp Trial.¹²⁴ As far as the incriminating testimony provided by former inmates is concerned, Aschenauer detects significant parallels between the concentration-camp trials conducted by the U.S. in Dachau on the one hand, and the trial of the SS Economic-Administrative Main Office in Nuremberg on the other, since in both cases the testimony was provided by the same criminal “professional witnesses.”¹²⁵ And of course the VVN’s threats and intimidation of former fellow inmates to prevent exonerating testimony were also not lacking in the IMT trials.¹²⁶

Opinions regarding abuse and torture during the IMT trials are divided. Whereas Irving acknowledges them in the form of constant harassment and minor maltreatment,¹²⁷ von Knieriem assumes that “apparently” there were none.¹²⁸ We do know, however, of the severe abuse of Julius Streicher, which he described during his interrogation before the IMT.¹²⁹ His account about having been tortured was stricken from the protocol at the request of the prosecution.¹³⁰ Lautern reports the torture of SS *Gruppenführer* Petri,¹³¹ and in his last records,

¹¹⁴ A. von Knieriem, *op. cit.* (note 30), pp. 149f., 189, 199f.; M. Lautern, *op. cit.* (note 27), pp. 23, 27f.; Lautern is fair and also describes the advantages that the defense counsels enjoyed: free travel within the American Zone, army mail service privileges, the support of Occupation authorities in proceedings instituted against them by the Law Societies, some of which had an active dislike of attorneys who defended ‘Nazis’; cf. pp. 22f.

¹³¹ M. Lautern, *op. cit.* (note 27), p. 45.

Oswald Pohl told of the maltreatment of SS *Standartenführer* Gerhard Maurer.¹³² Mark Weber details a number of additional cases of abuse.¹³³ This suggests that the main defendants who received much public attention suffered only a lesser degree of physical abuse, while incarcerated witnesses who received less publicity also risked abuse in Nuremberg if they were not quick enough to cooperate.

The investigating committees mentioned in Section 3.3.1.1. resulted in the revision of some of the verdicts handed down by the IMT and its successor tribunals. In these cases, the German Federal government, whose cooperation due to the Korea crisis had become indispensable, demanded leniency.¹³⁴

3.3.1.6. The Consequences of Allied Post-War Trials

The American trials in Dachau and the similar trials conducted by the other Allies allegedly “proved” the atrocities committed in the concentration camps and in eastern Europe. The SS and Waffen SS have been deemed criminal organizations ever since, even if for example the German courts do not treat their members automatically as criminals, but this may be only due to the necessity to avoid illegal retroactive application of new laws. The IMT itself reinforced this assessment through the repeated presentation of ‘evidence’ largely obtained in the aforementioned trials.

The best summary of the consequences of the evidence presented to the IMT may be found in the memoirs of H. Fritzsche. All the main defendants of Nuremberg insisted that prior to the IMT proceedings they had not known of any mass murder of the Jews.¹³⁵ After the screening of a dubious film about the Dachau Concentration Camp and other camps had achieved the desired psychological effect,¹³⁶ but had failed to convince completely, the testimonies of R. Höß and O. Ohlendorf finally persuaded most of the defendants to accept the mass murder as fact.¹³⁷ The murder of the Jews, which was ultimately accepted as proven by most of the defendants, affected the defense and the defendants and even the fate of the entire nation like a paralyzing curse, since now no one dared still object.¹³⁸ Nevertheless the defendants were left with the impression that the investigative requirements had not been met.¹³⁹

“The incomprehensible was proven in a makeshift sort of way, but it was by no means investigated.”

The fact that the German mainstream journal of contemporary history, *Vierteljahrshefte für Zeitgeschichte*, regards the IMT as a fair trial sincerely striving for justice, whose only fault was to be found in its legal foundation, will not surprise anyone familiar with the leftist, biased *Institut für Zeitgeschichte*, the body publishing that periodical.¹⁴⁰

3.3.2. Trials ‘Under the Rule of Law’

The 1952 Transition Treaty on the partial sovereignty of the Federal Republic of Germany, in effect since 1955, decreed that the verdicts of the IMT were final and binding for all

¹³² U. Walendy, *op. cit.* (note 79), p. 37.

¹³⁷ H. Springer, *op. cit.* (note 65), p. 87. It is unknown whether Ohlendorf was treated like Höß or Pohl, but in his case even an almost undetectable, ‘gentler’ psychological treatment may have sufficed.

¹³⁸ *Ibid.*, pp. 101, 112f.

¹³⁹ *Ibid.*, p. 119.

¹⁴⁰ Lothar Gruchmann, “Das Urteil von Nürnberg nach 22 Jahren,” *VfZ* 16(4) (1968), pp. 385-389, here p. 386.

official and judicial authorities of the Federal Republic.¹⁴¹ The establishment considers this a handicap, since due to the demands of the Korea Crisis the United States released most of those they had convicted in their post-war trials in fairly short order, with the German justice system missing out on the pleasure of re-charging them even in light of new evidence.¹⁴² But one might also consider the decree to be a handicap in the sense that, through Article 7 of the Treaty, the Allies effectively placed the view of history resulting from their post-war judicial conclusions and verdicts beyond revision even for German courts.

Regarding the significance of witness testimony to the verdicts in trials particularly in the Federal Republic of Germany and Israel, it must first be pointed out that the view of history as the IMT established it with regard to the Holocaust is generally considered to be self-evident and true today. The question of how great a role the Transition Treaty played in this remains open. Thus, motions to admit evidence challenging this ‘truth,’ or to question its self-evidentness, are rejected without any further ado by the courts, especially in Germany. Such motions are dismissed as mere tactics intended to delay the trial.¹⁴³ Anyone who nevertheless insists publicly on his dissenting claims, *i.e.*, beliefs in, or points out technical and scientific counter-arguments, soon finds himself the object of prosecution for slander of the Jews, disparagement of the remembrance of persons deceased, inciting the masses, or incitement to racial hatred.¹⁴⁴ Since 1985 this is even considered an offense so grave that proceedings are brought directly by the Public Prosecutors’ Departments even without a prior report or complaint by someone considering himself slandered.¹⁴⁵ The only thing anyone will achieve by speaking out in court against the self-evident ‘truth’ will be to receive an even more severe sentence for stubborn lying and lack of repentance, and his arguments will be ignored. This insurmountable and blindly dogmatic persecution of dissenting viewpoints hobbles any and all research deviating in content from the officially sanctioned view.¹⁴⁶ But let us take a look at some examples afforded by Israel and the Federal Republic of Germany, to see in what sort of setting the trials of alleged violent National-Socialist criminals took and continue to take place in so-called countries under the rule of law.

3.3.2.1. The Investigations

The dubious starting point of many investigations – whether shortly after the war, or sometimes even today – are statements made in the course of Allied post-war trials, be they in judicial opinions, in witness statements, confessions of perpetrators, or other documents at the disposal of the investigating bodies.^{147ff.} It is also cause for concern to consider how the rules of procedure were circumvented in order to facilitate the prosecution exclusively of Germans who were merely *suspected* of having committed crimes. Until 1951, the German justice system was permitted by the laws of the Allied Control Council to deal only with crimes committed by Germans against other Germans or stateless persons.¹⁵⁰ But even after

¹⁴¹ “Vertrag zur Regelung aus Krieg und Besatzung entstandener Fragen, 26. 5. 1952,” *Bundesgesetzblatt (BGBl)* II (1955), pp. 405f.

¹⁴² *E.g.*, A. Rückerl, *op. cit.* (note 35), pp. 130ff., 138f.

¹⁴³ The *Bundesgerichtshof* [German Federal Supreme Court] has confirmed the legality of such measures: Ref. 1 StR 193/93.

¹⁴⁴ §§130, 131, 185, 189 German Criminal Code, old version; §131 has since been changed and now outlaws certain depictions of violence.

¹⁴⁵ For the amendment of §194 Sect. 2 German Criminal Code, cf. *BGBl* I (1985), p. 965.

¹⁴⁶ Thus the opinion of some German historians, such as A. Plack, *Hitlers langer Schatten*, Langen Müller, Munich 1993, pp. 308ff.; H. Diwald, *Deutschland einig Vaterland*, Ullstein, Frankfurt/Main 1990, p. 70; E. Nolte, *Streitpunkte*, Propyläen, Berlin 1993, p. 308; J. Hoffmann, *Stalin’s War of Extermination 1941 – 1945*, Theses & Dissertations Press, Capshaw, Ala., 2001, p. 24: “In contrast to the spirit and letter of freedom of research as proclaimed under the German Basic Law, it is, unfortunately, advisable today to have many passages of a historiographical text revised for ‘criminal content’ prior to publication—an almost degrading situation.”

¹⁴⁷ Cf. A. Rückerl, *NS-Prozesse*, *op. cit.* (note 134), pp. 83f., 88.

¹⁴⁸ A. Rückerl, *Nationalsozialistische Vernichtungslager im Spiegel deutscher Strafprozesse*, dtv, Munich 1978, pp. 39f., 43ff., regarding Treblinka Trial cf. pp. 43ff., regarding Chelmno cf. p. 243.

¹⁴⁹ Regarding the Auschwitz Trial: B. Naumann, *Auschwitz*, Athenäum, Frankfurt/Main 1968, pp. 67f., 132 (English edition: *Auschwitz*, Praeger, New York 1966).

¹⁵⁰ A. Rückerl, *op. cit.* (note 35), pp. 107f., 124. For the scope of these trials and the problems involved, cf.

partial sovereignty had been attained in 1955, certain circles were not satisfied with the scope of the German justice system's investigative activities and results. Rückerl explains this dissatisfying condition with the fact that under existing laws, Public Prosecutors' Offices can take action only when a supposed criminal is resident in their region or when the crime was committed in their sphere of responsibility. Since the presumed National-Socialist crimes are predominantly said to have been committed outside Germany, and frequently by unknown individuals, there was no investigation at all in many cases.¹⁵¹

In order to improve that situation, the Ministers of Justice of the Federal German states established the *Zentrale Stelle der Landesjustizverwaltungen zur Aufklärung nationalsozialistischer Verbrechen* [Central Office of the State Administrations of Justice for the Investigation of National-Socialist Crimes] in Ludwigsburg in 1958 in order to circumvent the above regulations and conduct worldwide researches in the form of preliminary investigations to determine where which crimes might have been committed in the name of Germany, and by whom – an act that is unique in the history of law and justice.¹⁵² To this day this Central Office continues to draw on all possible sources (archives, witness statements, court documents, books, accounts of personal experience, movies, mass media) to obtain information on crimes supposedly committed abroad by Germans under the National-Socialist regime. When the Central Office thinks that sufficient evidence has been found against certain suspects, it passes its findings on to the appropriate Public Prosecutors' Offices which then proceed to initiate the standard investigations.

After refusing for years to examine and make use of the archives of the Eastern Bloc,¹⁵³ the Federal German government finally abandoned its reluctance in the wake of the 1964 Auschwitz Trial, and appealed to all nations of the world to make as much documentation about National-Socialist crimes available to Germany as possible. Some parties even demanded that a European Legal Commission should be set up expressly and exclusively to prosecute supposed National-Socialist criminals.¹⁵⁴ This appeal by West Germany caused East Germany, for example, to declare that it had sufficient incriminating material in its archives to prosecute hundreds of thousands.¹⁵⁵ Aside from these eastern European sources, the western archives (including especially those in Israel) as well as the standard Holocaust literature and inmates' organizations are the chief sources of the material collected by the Central Office.¹⁵⁶ Simon Wiesenthal¹⁵⁷ and Hermann Langbein, a former communist and Auschwitz inmate, have been particularly assiduous in providing material. The Frankfurt Jury Court even certified to the latter that he had played an especially important part in the preparations for the Auschwitz Trial and its execution,¹⁵⁸ and on the occasion of Langbein's presence at the examination of a witness, the public prosecutor went so far as to thank him openly for his assistance.¹⁵⁹

But what is of key importance is the fact that, as has been proven now in five separate cases, the Central Office or the Public Prosecutors' Offices compiled so-called criminals'

dossiers which they made available to all potential witnesses, as well as to domestic and foreign investigative bodies, for the purpose of further dissemination to potential witnesses. In these dossiers, every suspected perpetrator is listed along with their curriculum vitae, their photographs both of recent and from National-Socialist times, and a description of the crimes they are suspected to have committed – as well as such crimes as *may* have been committed but for which witnesses and clues to the identity of the perpetrators are still lacking. The witnesses are then asked to treat the issue as a matter of confidence but to assign the criminals to the crimes and to add other crimes which may be missing from the dossier.¹⁶⁰ It is clear that under such circumstances the memory of these witnesses was ‘refreshed,’ *i.e.*, distorted. Thus, subsequent testimonies and especially the identifications of the alleged perpetrators in court are a farce.¹⁶¹ And finally, Rückerl¹⁶² and Henkys¹⁶³ report that due to new findings that had come to the attention of the investigating authorities, or due to discrepancies between witness testimony and the beliefs of the investigating authorities, the witnesses were questioned over and over again. It would not be surprising if this fact by itself already resulted in a sort of ‘streamlining’ of testimony toward a certain goal. In this context, Rückerl points to cases of witness manipulation by investigating officers as well as by private records centers – while of course considering these cases to be exceptions to the rule.¹⁶⁴

The frequently very difficult investigations resulted in the defendants being detained awaiting trial for three to five years and sometimes even longer, which can contribute to the emotional attrition of a defendant, and which the European Court is not alone in condemning as a violation of human rights.¹⁶⁵

It must also be noted that both Rückerl¹⁶⁶ and Henkys¹⁶⁷ considered it a necessity that politically particularly reliable personnel were employed for the first few decades of these special investigations, since many employees and officials might have been biased due to their own activities during National-Socialist times. It is safe to assume that only such persons were employed as had never even dreamed of doubting the reality of the alleged crimes to be investigated. Given such eager, ideologically committed and trained personnel, it is quite within the realm of the possible that witnesses who were reluctant to testify were threatened in the course of preliminary investigations in order to obtain the desired testimony. Lichtenstein describes the results of a second-degree interrogation, which he expressly states is necessary in order to force reluctant witnesses to talk.¹⁶⁸

¹⁶⁰ Case 1 is the Sachsenhausen Trial. The entire witness dossier is available in copy form: letter of the Chief of the North Rhine-Westphalian Central Office for Investigation of National Socialist Mass Crimes in Concentration Camps, held by the Chief Public Prosecutor in Cologne, Dr. H. Gierlich, Ref. 24 AR 1/62 (Z) (online: www.inconvenienthistory.com/media/files/SachsenhausenGierlich.pdf); Case 2 is described without mention of the trial, by J. Rieger: Deutscher Rechtsschutzzkreis (ed.), *Zur Problematik der Prozesse um “Nationalsozialistische Gewaltverbrechen,”* Schriftenreihe zur Geschichte und Entwicklung des Rechts im politischen Bereich 3, Bochum 1982, p. 16; Case 3, regarding the Sobibor Trial, is described by F. J. Scheidl, *op. cit.* (note 79), Vol. 4, pp. 213f., based on *National Zeitung*, Sept. 30, 1960, pp. 3ff.; Case 4, regarding the Majdanek Trial, is set out in *Unabhängige Nachrichten*, 7 (1977), pp. 9f.; cf. W. Stäglich, *Die westdeutsche Justiz und die sogenannten NS-Gewaltverbrechen*, Deutscher Arbeitskreis Witten, Witten 1978, p. 14; W. Stäglich, “West German Justice and So-Called National Socialist Violent Crimes,” *JHR* 2(3) (1981), pp. 247-281; for Case 5, in the trial of G. Weise, see R. Gerhard (ed.), *Der Fall Gottfried Weise*, Tübingen, Berg 1991, p. 63; see the summary: G. Rudolf, “How Postwar German Authorities Orchestrated Witness Statements in Nazi Crime Cases,” *Inconvenient History*, 7(2) (2015).

¹⁶¹ Cf. the ‘identification’ farces enacted by witnesses, in B. Naumann, *op. cit.* (note 149), pp. 151, 168, 176, 471; F. J. Scheidl, *op. cit.* (note 79), Vol. 4, pp. 164, 213; H. Lichtenstein, *Majdanek. Reportage eines Prozesses*, Europäische Verlagsanstalt, Frankfurt/Main 1979, pp. 68, 82.

¹⁶⁴ A. Rückerl, *op. cit.* (note 35), p. 256.

¹⁶⁵ For example, see the jail time spent awaiting trial in the Auschwitz Trial, Frankfurt, in B. Naumann, *op. cit.* (note 149), pp. 15f.; regarding the decision of the European Court: J. G. Burg, *NS-Prozesse des schlechten Gewissens*, G. Fischer, Munich 1968, p. 187; cf. also R. Henkys, *op. cit.* (note 9), p. 265.

¹⁶⁶ A. Rückerl, *op. cit.* (note 35), pp. 163f.

¹⁶⁷ R. Henkys, *op. cit.* (note 9), p. 210.

¹⁶⁸ H. Lichtenstein, *op. cit.* (note 161), p. 52, cf. also p. 55.

“The witness [Barth¹⁶⁹] hesitates, [...] suffers or fakes a nervous breakdown. [...] Before leaving the witness stand, he takes back his claim that the police officer who had interrogated him had ‘blackmailed’ him into telling what had happened at that time. He now states rather lamely that the officer had ‘been rather tough with him,’ which is certainly necessary with witnesses of this sort. [sic!]”

All in all, the Central Office seems to regard itself more as an institute for historical research operating with unconventional methods than as an office for criminal prosecution: Rückerl, in any case, considers its findings historical facts.¹⁷⁰ Steinbach even suggested that in the future, after the end of the NSG trials, the Central Office ought to be turned into an institute for historical research,¹⁷¹ which apparently is the plan of German politicians, too.¹⁷²

An interview with a former SS-man, however, revealed that probably not even this task of historical research is performed properly. According to this interview it seems that the members of the Central Office *never* try to find out what really happened, but are only interested in testimony about claimed crimes and alleged criminals.¹⁷³ This procedure must inflate the number and dimension of the crimes, and can only hide the truth.

3.3.2.2. Judges and Prosecuting Attorneys

For the major crime categories of the Third Reich (*Einsatzgruppen*, concentration camps and other camps), the trials of individual persons were supplemented by a mammoth trial conducted at a central location, to which dozens of defendants and sometimes hundreds of witnesses were summoned.¹⁷⁴ Although this might have been a financial and technical necessity, it was nevertheless inevitable that the question of the individual guilt of each defendant would perforce be drowned out. In the face of the inevitable deluge of evidence and information coming down on them, neither the defense nor the prosecution, neither judges nor jury could keep track of everything for years on end.¹⁷⁵

Even though there has been much emphasis on the point that it cannot be the task of a court of law to dabble in historiography, Rückerl stresses that particularly the trials concerned with the alleged National-Socialist extermination camps are of historical relevance, and that the elucidation of historical events frequently took center stage in those trials.¹⁷⁶ It is frankly admitted that the ‘historical’ findings of these investigations make up the chief pillars on which contemporary historiography has based its research.¹⁷⁷ Steinbach even states that it is unique in the history of historiography that this area of inquiry had been left to non-historians, *i.e.*, prosecuting attorneys and judges, and that this chapter is therefore the best-researched in German history.¹⁷⁸

And indeed, courts of law are superior to historians in one respect, namely in obtaining testimony. Rückerl notes correctly that, unlike historians, investigators and judges in criminal trials are able, thanks to the state apparatus, to obtain a great many statements from witnesses and to probe them for their veracity by means of questioning, *i.e.*, interrogation.¹⁷⁹ But whether these statements, on which such fateful decisions hinge, are true, may be at

¹⁶⁹ H. Barth was convicted in an East German show trial in 1983 for his participation in the events in Lidice and Oradour-sur-Glane; cf. H. Lichtenstein, *op. cit.* (note 91).

times difficult to determine. Bader and Henkys suggest that it would be possible to determine the veracity of a statement only if the court were allowed to exert physical force, which, however, is prohibited in a state under the rule of law.¹⁸⁰ It is rather amazing to find that in our times there actually are adults who believe that force can ascertain the truth. Tüchel limits the historical usability of legal findings to those that are based on good and complete legal research.¹⁸¹ But *who* assesses quality and completeness, and by which criteria?

The most prominent example of the NSG trials is the Auschwitz Trial in Frankfurt. Contrary to the claims of the then presiding judge, this trial is generally regarded as the epitome of historical trials.¹⁸² Thus it is not surprising that the only expert reports which the court commissioned to elucidate the issues at hand were historical reports about the National-Socialist regime in general and about the persecution of the Jews in particular,¹⁸³ but no forensic reports about the evidence for the supposed and alleged deeds of the defendants.¹⁸⁴ How cynical, therefore, of the German Federal Supreme court, which reverted the acquittal resulting from one particular NSG trial by arguing that the fact-finding court allegedly had done nothing to determine whether the crime had taken place in the first place!¹⁸⁵ But this is precisely what the courts entrusted with the NSG trials *never* do in the only reliable way available, namely by way of commissioning non-historical, *i.e.*, technical, scientific and forensic expert reports. Yet the German Federal Supreme Court clearly is never bothered by this when the result is a conviction rather than an acquittal.

Another element for concern is the fact that in these large-scale, well-publicized NSG trials, both the prosecution and the witnesses produced in a show-trial manner a graphic, overall impression of the alleged horrors of the Holocaust,¹⁸⁶ even though this contributed nothing to the establishment of truth regarding the charges brought against the defendants; instead, it added to the court's bias against them. Rückerl explains, for instance, that graphic presentation of the gruesome context within which the alleged crime was committed serves to increase the severity of the sentence.¹⁸⁷ Bader comments:¹⁸⁸

“Trials which are conducted in order to furnish evidence for historians are evil trials and represent a sinister approach to show trials.”

The court's assessment of the evidence is also significant. Rückerl reports that it is practically impossible to find a suspect guilty on the sole basis of documental evidence, so that especially with the increasing time span separating the event from the trial, it is almost always necessary to fall back on witness testimony, even though its unreliable nature is clear, and particularly so in these NSG trials.¹⁸⁹ He states further that the conviction of a defendant

¹⁸⁰ K. S. Bader, in: K. Forster, Albert Mösl (ed.), *Möglichkeiten und Grenzen für die Bewältigung historischer und politischer Schuld in Strafprozessen*, Studien und Berichte der katholischen Akademie in Bayern, No. 19, Echter-Verlag, Würzburg 1962, p. 126; quoted in R. Henkys, *op. cit.* (note 9), p. 220.

¹⁸¹ J. Tüchel, in J. Weber, P. Steinbach (eds.), *op. cit.* (note 15), p. 143.

¹⁸² A. Rückerl, *op. cit.* (note 148), p. 18; B. Naumann, *op. cit.* (note 149), p. 7.

¹⁸³ Regarding the Auschwitz Trial, cf. H. Laternser, *op. cit.* (note 174), pp. 82f. For these historical expert reports, see H. Buchheim, M. Broszat, H.-A. Jacobsen, H. Krausnick, *Anatomie des SS-Staates*, 2 vols., Walter Verlag, Freiburg 1964; regarding Sobibor: A. Rückerl, *op. cit.* (note 148), pp. 87, 90ff.; regarding Treblinka: *ibid.*, p. 82; regarding Majdanek: H. Lichtenstein, *op. cit.* (note 161), p. 30.

¹⁸⁴ The Frankfurt *Schwurgericht* [jury court] admits this frankly in its Reasons for Sentence, cf. Rüter, *op. cit.* (note 3); A. Rückerl, *op. cit.* (note 35), pp. 214f., claims that aside from visits to the sites of the crimes only documental and material evidence is used.

¹⁸⁵ H. Lichtenstein, *op. cit.* (note 91), pp. 117f., on a verdict of the District Court of Bielefeld, Ref. Ks 45 Js 32/64, regarding the evacuation of the Wladimir-Wolynsk Ghetto. The German Federal Supreme Court commented that the Court can find the defendant guilty even if their exonerating statements have not been refuted!

¹⁸⁶ H. Laternser, *op. cit.* (note 174), pp. 34f.; Rückerl considers this absolutely necessary: *NS-Prozesse*, *op. cit.* (note 134), p. 32; P. Steinbach, in J. Weber, P. Steinbach (eds.), *op. cit.* (note 15), p. 26; in the Eichmann Trial in Jerusalem, the corresponding witnesses were officially known as “witnesses of Jewish suffering”: H. Arendt, *Eichmann in Jerusalem*, Reclam, Leipzig 1990, p. 335, cf. pp. 355ff. (English: *Eichmann in Jerusalem*, Penguin Books, New York 2006); cf. also F. J. Scheidl, *op. cit.* (note 79), Vol. 4, pp. 235ff.

¹⁸⁷ A. Rückerl, *op. cit.* (note 148), p. 328.

¹⁸⁸ K. S. Bader, *op. cit.* (note 180); quoted according to R. Henkys, *op. cit.* (note 9), p. 219.

¹⁸⁹ A. Rückerl, *op. cit.* (note 35), p. 249; *idem*, *op. cit.* (note 148), p. 34; *idem*, *NS-Prozesse*, *op. cit.* (note 134), pp. 27, 29, 31.

based on the testimony of only one witness is questionable due to the possibility of error on the part of the witness, but that several witnesses, all giving the same, incriminating testimony, would convince the court.¹⁹⁰ This is reminiscent of the trial technique sometimes used in ancient times, where it was the number of witnesses rather than the quality of the evidence they gave that decided someone's guilt or innocence.¹⁹¹ It is a particular point for concern that the courts, due to their lack of proper evidence, are increasingly accepting hearsay testimony,¹⁹² even though it is generally acknowledged that this type of evidence is worthless, and that it is extremely dangerous to rely on it, since doing so practically *ensures* a miscarriage of justice.¹⁹³

The external conditions surrounding such trials also violated the judicial standards of a state under the rule of law. For example, Laternser criticizes that filming and photographing in the courtroom were unlawfully permitted during the Auschwitz Trial, which resulted in the defendants being besieged much like lions in a zoo.¹⁹⁴ During their statements, the defense or the defendants were subjected to insults and even threats from courtroom spectators without any intervention from the court;¹⁹⁵ that the defendants were subjected to insults from the prosecutors and witnesses and even to disparagement by the judges;¹⁹⁶ that the prosecution participated in an exhibition held in the *Paulskirche* [Church of St. Paul, an important national memorial of Germany] during the trial, at which the defendants were portrayed as perpetrators, not suspects, complete with their photos, life histories and details of their alleged crimes.¹⁹⁷

Prosecutor Helge Grabitz reports that, in the face of the horrible events described by the witnesses, it was next to impossible for judges and prosecutors alike to remain objective, and that they sometimes even declared themselves to be biased since they felt rage, shame or despair.¹⁹⁸ This bias – or “interest,” as it is called – became particularly evident when the judges, the jury members and members of both prosecution and defense of the Auschwitz Trial visited the site of the alleged crime. Grabitz comments:¹⁹⁹

“When the trial moves out of the courtroom and to the site of the crime, a profound sense of consternation predominates.”

This is vividly reminiscent of those Auschwitz pilgrims who shuffle through the camp with heads bowed, who pray before a *hot-air delousing* chamber, in which the prisoners' clothes were fumigated, in memory of the victims they, albeit mistakenly, believe to have been murdered therein instead of trying to learn to which use these buildings and facilities were really put. Instead of explaining the true purpose for *all* buildings and camp centers by the experts, the courts used these opportunities only in order to increase their dismay.

If Laternser is correct, then it is also a point for concern that the prosecution in the Auschwitz Trial failed to comply with its duty (§160 of the German Code of Criminal Procedure) to also search for evidence that would exonerate the defendant.²⁰⁰ Chief prosecutor Grabitz's comment regarding the responsibility of the prosecution in cases where a defendant plays down or denies the crimes he is charged with is rather revealing in this instance:²⁰¹

¹⁹⁰ A. Rückerl, *op. cit.* (note 35), p. 257; H. Lichtenstein, *op. cit.* (note 161), p. 49.

¹⁹¹ Cf. Salzburg District Court judge Dr. F. Schmidbauer's letter-to-the-editor in *Profil*, 17/91; the author thanks W. Lüftl for this reference.

¹⁹⁹ H. Grabitz, *NS-Prozesse ...*, *op. cit.* (note 198), p. 18, cf. pp. 149ff.

²⁰⁰ H. Laternser, *op. cit.* (note 174), p. 32; A. Rückerl, *op. cit.* (note 35), p. 249, disagrees.

²⁰¹ H. Grabitz, in J. Weber, P. Steinbach (eds.), *op. cit.* (note 15), p. 86.

“It is the task of the prosecution to refute these claims of the defendant by bringing convincing evidence, especially eyewitness testimony.”

Despite claims to the contrary, most of the prosecutors were indeed concerned solely with incriminating the defendants. Thus, these trials came to be more and more like Anglo-Saxon trials, in which the prosecution concerns itself only with proving guilt, and not with attempting to establish truth, be it guilt *or* innocence.

The means available to investigative authorities (described in Section 3.3.2.1.) to conduct investigative proceedings against future defendants for many years and with the support of several hundreds of experts, all the governments in question, and any and all archives of the world they may need,²⁰² result in an inequality of resources between prosecution and defense that is similar in scope to that characterizing the Allied post-war trials. Arendt ascertained this inequality of resources, analogous to the IMT, for the Eichmann Trial in Jerusalem.²⁰³

Once someone accused of NSG crimes has been convicted, he has next to no chance to prove his innocence through an appeal or a retrial. Whereas retrials were not uncommon shortly after the war, they have been denied almost always in later years.²⁰⁴ Oppitz suggests that the reason for this is that courts today regard eyewitness testimony in a much more critical light than they did right after the war, which means that miscarriages of justice have become far less likely.²⁰⁵ We shall see to what extent this is in fact so.

3.3.2.3. Defense Counsels

Trial reports written by defense counsels in NSG trials are few and far between, since those few counsels who are willing to assume the defense in such trials tend to be more than fed up with the trouble they incur through their involvement with the trial *per se*. As a rule, they therefore avoid the further trouble that would be theirs in the event of a publication. Also, for a self-employed lawyer, it is very difficult to come up with the time and money (forgone earnings) necessary to write a book, not to mention that it is next to impossible to find a publisher for such a book. H. Laternser, who was himself convinced that the Holocaust story is fundamentally correct,²⁰⁶ is the only attorney to date to publish a detailed account of this kind. Since the trial in question drew a great deal of public interest, it was even possible to find an establishment publisher for the book. Laternser's expositions also hold true more or less for all other NSG trials, whose general conditions have been discussed in less-mainstream publications.²⁰⁷ Laternser, who had already served as defense counsel during the IMT trials, describes the atmosphere pervading the Auschwitz Trial in Frankfurt as follows:²⁰⁸

“In the major international criminal trials in which I participated, there was never as much tension as in the Auschwitz Trial – not even at the International Military Tribunal in Nuremberg.”

One point of criticism of this trial which he cites from the perspective of the defense is that hardly any prosecutors and members of the press were present during the summation of the defense. In other words, there was no interest in a balanced view of the matter.²⁰⁹ He further criticizes that the defense was severely restricted in its questioning of witnesses and that their motions to hear evidence were suppressed, not decided, or denied without reason.²¹⁰ The defense was also not granted access to the audio-taped records of witness testimony.²¹¹ Reviewing and scrutinizing the many eyewitness statements was thus hardly possible for the defense. The view that even this judicial straitjacket was not tight enough for some was

²⁰² A. Rückerl, *op. cit.* (note 35), pp. 242f., 262f.

²⁰³ H. Arendt, *op. cit.* (note 186), pp. 352f.

²⁰⁶ H. Laternser, *op. cit.* (note 174), pp. 12f.

²⁰⁷ Cf. next to Laternser, *ibid.*, also, e.g., E. Kern, *Meineid gegen Deutschland*, 2nd ed., Schütz, Preussisch Oldendorf 1971; F. J. Scheidl, *op. cit.* (note 79), esp. Vol. 4, pp. 198ff.

²⁰⁸ H. Laternser, *op. cit.* (note 174), p. 28, cf. also p. 32.

²⁰⁹ *Ibid.*, p. 57.

²¹⁰ *Ibid.*, pp. 37, 40f., 46ff., 61, 112, 117 etc.

²¹¹ *Ibid.*, pp. 46ff., 146f.

advanced by Rückerl, who complains that the trials took too long, allegedly because of the ever-increasing deluge of evidence introduced by the defense,²¹² and Lichtenstein claims, in the same vein, that the defense did not have sufficient restrictions put on it.²¹³

The reaction of the court and the public was very telling in the case where an attorney dared approach the witnesses whom the prosecution authorities had located, and questioned these witnesses prior to the trial without identifying himself as defense counsel. In court, it later turned out that the statements of these witnesses, which had been inconsistent and contradictory before the trial, were now brought into mutual accord and had been purged of their most unbelievable elements.²¹⁴ The public condemned the attorney in question for his investigations, and the chief witness nations, Poland and Israel, banned him from entering their respective countries in the future.²¹⁵

It is further food for thought that defense attorneys in NSG trials are exposed to public attacks which at times go as far as physical assault and professional disciplinary hearings or even criminal prosecution, *should they ask for or try to present evidence that challenges the self-evidentness of the Holocaust*.²¹⁶

Thus it is not surprising that many defense counsels, appointed to the case by the court, take themselves to their task with great reluctance originating with ideological reservations or with fear of harm to their reputation, and prefer to cooperate with the judge or even with the prosecution rather than represent their clients effectively, and even consider resigning their appointment under the pressure of media campaigns.²¹⁷ This resulted in the failure of any joint strategy on the part of the various defense attorneys, who instead even turned on each other at times.²¹⁸ In one case, it has been shown that this went so far as to prompt one such appointed defense attorney to advise his client to try to obtain leniency from the court by making false confessions of guilt, which the defendant did in fact proceed to do.²¹⁹ Similar strategies are recommended to the defense by third parties, as the defendants' insistence on their innocence, which no one is willing to believe, seems pathetic and cowardly to the public.²²⁰

In reading Laternser's trial documentation, one notices that he never comments critically on the fact that no material evidence was ever brought with regard to victims, murder weapons or the site of the crime, and that eyewitness testimony was also not subjected to any critical expert analysis. In this respect Laternser follows in the traditional footsteps of other defense counsels of the IMT and the Federal German trials, none of whom harbored any doubts as to the factuality of the various Holocaust stories until just recently. It thus never so much as occurred to them to demand proof of the crime prior to negotiations about the guilt of the defendant, as is the standard course of procedure in any court case relating to normal murders and even to trivialities such as traffic accidents. Laternser also fails to critically address the practice of keeping the defendants awaiting trial in jail for many years, sometimes for more than five years, thus subjecting them to psychological attrition that per-

²²⁰ E.g., E. Bonhoeffer, *Zeugen im Auschwitz-Prozeß*, 2nd ed., Kiefel, Wuppertal 1965, pp. 52f.

suades almost any accused person to cooperate with the court and the prosecution to some extent, if only doing so will serve to make his own fate more bearable.

And finally, as an aside it should be noted that Adolf Eichmann's defense counsel was not permitted to speak with his client privately, and that he was not granted access to the transcripts of Eichmann's interrogations²²¹ – once again, methods reminiscent of the International Military Tribunal, and of the “trials” of witches and heretics throughout the ages.

3.3.2.4. Witnesses

3.3.2.4.1. Witnesses for the Prosecution

Rückerl, Henkys and Langbein²²² are well aware that eyewitness testimony is unreliable not only due to the natural fading of one's memory and to emotional bias, but also because things heard or seen in the reports of third parties or in the media frequently become internalized and regarded as personal experiences. It is almost impossible for courts to differentiate between personal and second-hand experiences in eyewitness testimony.

On the one hand, Rückerl and Henkys²²² write that the misery of camp life dulled the inmates' ability to absorb the events around them, which explains faulty testimony and makes it not only excusable, but in fact even more credible than it would otherwise have been.²²³ On the other hand, they suggest that particularly horrible and thus indelibly impressive events may be retained unchanged in an inmate's memory like a photograph for 30 years and more, thus making highly detailed eyewitness testimony credible.²²⁴ Even if this theory should be correct, the question remains: how is a court to differentiate between photographically precise memories and testimony that has been unconsciously warped by time and external influences?

The Jewish-American expert on witness testimony Elisabeth Loftus takes the opposite position, *particularly* in the context of Holocaust witnesses: of all the categories of witnesses, she says, these are the most unbelievable, due to the world-wide media exploitation and the emotionally highly charged atmosphere characterizing this topic.²²⁵ Admittedly, she has held this view only since attending the Demjanjuk Trial in Jerusalem, where the scales fell from her eyes. In the end, this trial ended with an acquittal, since the unreliable nature of *all* the witnesses for the prosecution had become too apparent²²⁶ –including those witnesses who had given similar testimony two decades earlier during two Treblinka trials in Germany, where they had been deemed credible and had helped to decide the outcomes of these trials.²²⁷

In many German trials, experts at the credibility of witnesses had concluded that, on the whole, said credibility was intact even after 30 years, at least where the essence of the testimony was concerned. Oppitz believes, therefore, that in the future, motions to examine witness credibility should be denied on grounds of self-evidentness.²²⁸ Since Rückerl opines that vagueness and inconsistency are the hallmarks of quality in eyewitness testimony,²²⁹ it is not surprising that there is a general tendency to demand that the scrutiny of incriminating eyewitness testimony pertaining to the Holocaust be condemned as reprehensible practice.²³⁰

²²¹ F. J. Scheidl, *op. cit.* (note 79), Vol. 4, pp. 239f.

²²² A. Rückerl, *NS-Prozesse*, *op. cit.* (note 134), pp. 26f.; *idem*, *op. cit.* (note 148), pp. 88f.; *idem*, *op. cit.* (note 35), pp. 251ff.; R. Henkys, *op. cit.* (note 9), pp. 209f.; H. Langbein, *Menschen in Auschwitz*, *op. cit.* (note 159), pp. 334ff., 544f.

²²³ R. Bender, S. Röder, A. Nack, *op. cit.* (note 6), Vol. 1, pp. 146ff., comment rightly that an overly detailed account is perforce unbelievable, since no witness can remember everything in precise detail, least of all after such a long time.

²²⁴ On the one hand, H. Lichtenstein is practically in rhapsodies about the marvelous memory of the witnesses for the prosecution: *op. cit.* (note 161), pp. 64f., 78, but on the other hand he considers contradictions in eyewitness testimony to be quite understandable, p. 75.

²²⁵ E. Loftus, *op. cit.* (note 23); H. Grabitz, *NS-Prozesse...*, *op. cit.* (note 198), pp. 64, 67, also recognizes the problem that results from the Jewish witnesses' role as victims.

²²⁶ Cf. A. Neumaier's chapter, this volume.

²²⁷ Cf. H. Lichtenstein, *op. cit.* (note 91), pp. 196ff.

²²⁸ U.-D. Oppitz, *op. cit.* (note 204), p. 352.

²²⁹ A. Rückerl, *op. cit.* (note 35), p. 253; also the Court in the trial of G. Weise: R. Gerhard (ed.), *op. cit.* (note 160), pp. 56, 59, 65, 75.

²³⁰ A. Rückerl, *op. cit.* (note 35), pp. 253f., 257f., is very understanding of this bias; H. Arendt, *op. cit.*

It has also been noted that, in the face of the paralyzing horror which witnesses for the prosecution bring to vivid life in the courtroom, the courts themselves appear to lose all their critical faculties where this testimony is concerned, and are prepared to regard the witnesses strictly as innocent, guileless and defenseless victims, even in the courtroom;²³¹ there are even those who deem such stunned horror on the part of the court and the public to be a necessity without which the suffering of the victims cannot be properly appreciated.²³² Grabitz explains that where “victim witnesses” are concerned, one must be especially empathic, understanding, and restrained in one’s questions,²³³ a sentiment which culminates in his comment:²³⁴

“As a human being one simply wants to take this witness into one’s arms and to weep with him.”

But it did not take the Demjanjuk show trial to show that some of these witnesses are up to no good. Oppitz²³⁵ demonstrated with a number of examples that even in the German courts there are both professional and vengeful witnesses who, however, are only rarely condemned for perjury, or who – as one may well suppose, in light of the German courts’ uncritical and credulous attitude towards Holocaust witnesses for the prosecution – were not even recognized as perjurers. Particularly dramatic cases include those where the defendants were accused by witnesses of having murdered certain persons who later turned out to be still alive, to never have existed in the first place, or to have died long before the time of the NS regime.²³⁶

With reference to the Auschwitz Trial, Latenser reports something that goes for all NSG trials on the whole: foreign witnesses departed again immediately after testifying, making it impossible to call them to account later when it turned out that they had committed perjury. Neither the judges nor the prosecutors took any steps to examine the statements of prosecution witnesses for their veracity. Any and all attempts by the defense to do so were “nipped in the bud,”²³⁷ since it would be wrong to persecute the victims of yesterday all over again today.²³⁸ Lichtenstein gives an outraged account of one exceptional case where the prosecution as well as the court condemned the eyewitness statements all and sundry as fairy tales.²³⁹

Grabitz distinguishes among three categories of Jewish witnesses:²⁴⁰

- a. *Objective, matter-of-fact witnesses.* According to Grabitz, these stand out for their detailed and differentiating testimony regarding the character and conduct of those involved in the crime(s). Further, they often cite the sacrifices of their family or their people as their reason for feeling obliged to testify. What Grabitz fails to see here is that even an apparently unemotional, discriminating statement need not be true, and that the remembrance of the sacrifices of their family and people may well be driven by a desire for vengeance.
- b. *Jewish witnesses striving for objectivity and matter-of-factness.* Grabitz includes in this category those witnesses whose dreadful experiences make it difficult for them to maintain their composure; characteristics include crying fits and meltdowns, but also bursts of invective expressed during or after testimony. In other words, Grabitz excuses

(note 186), pp. 338f., considers it an inhumane practice to question the veracity of the Holocaust survivors’ testimony, but deems it necessary and just to consider the accused guilty from the start – a thoroughly ‘normal’ attitude among our contemporaries; cf. H. Lichtenstein, *op. cit.* (note 161), pp. 75, 99, 104; H. Lichtenstein, *op. cit.* (note 91), p. 120; I. Müller-Münch, *Die Frauen von Majdanek*, Rowohlt, Reinbek 1982, p. 156; E. Bonhoeffer, *op. cit.* (note 220), pp. 22f.

²³¹ The Majdanek Trial is a typical example of this; cf. I. Müller-Münch, *op. cit.* (note 230), p. 142; also B. Naumann, *op. cit.* (note 149), p. 281.

²³² H. Lichtenstein, *op. cit.* (note 161), p. 127.

²³³ H. Grabitz, *NS-Prozesse...*, *op. cit.* (note 198), pp. 12ff., 78, 87.

²³⁴ *Ibid.*, p. 12.

²³⁵ U.-D. Oppitz, *op. cit.* (note 204), pp. 113, 239ff., 258, 350f.

²³⁶ Cf. F. J. Scheidl’s accounts of this: *op. cit.* (note 79), Vol. 4, pp. 198ff.; also Deutscher Rechtsschutzzkreis, *op. cit.* (note 160).

²³⁷ H. Latenser, *op. cit.* (note 174), pp. 37f., 57f., 85, 157.

²³⁸ Claimed in another trial, cf. Deutscher Rechtsschutzzkreis (ed.), *op. cit.* (note 160), p. 19.

²³⁹ H. Lichtenstein, *op. cit.* (note 91), pp. 113ff., 120.

²⁴⁰ H. Grabitz, *NS-Prozesse...*, *op. cit.* (note 198), pp. 64-90.

the at times unobjective accounts of those witnesses on the grounds of the awful nature of their experiences. But what if the awful experiences attested to are not true? How is one to examine such testimony if the sympathy that the testimony inspires for these witnesses prohibits any questioning of their statements?

- c. *Witnesses characterized by hatred.* According to Grabitz, these witnesses project crimes they experienced onto innocent persons because they can no longer incriminate the actual guilty party, or magnify the guilt of someone involved in the crime or injustice. It does not occur to Grabitz that these “hate witnesses” are well capable of the total fabrication of the crimes they allege, as has been demonstrated in a number of cases.

Public prosecutor Grabitz is probably in accord with most prosecutors, and with judges as well, when he states that his witnesses of Category a) are credible, and thus not to be cross-examined, the witnesses of his Category b) are unreliable in parts, but are also not to be cross-examined due to the witnesses’ horrible experiences (which of course cannot but be true), and that the witnesses of his Category c) are factually correct, but have a distorted memory with respect to the perpetrators. In other words, he sees no reason whatsoever to doubt the credibility of any Jewish witness –

“[...of] *this witness who wants to testify in order to bring the truth to light – why else would he have voluntarily come from abroad [...].*”²⁴¹

The height of naïveté, surely, by this prosecutor allegedly *seeking* truth!

The free rein that as a rule was granted the witnesses for the prosecution, frequently not even restricted by the defense counsels,²⁴² no doubt did not contribute to the veracity of these witnesses. What makes matters worse is that in German criminal proceedings the taking of verbatim transcripts is not required, meaning that the court does not record eyewitness testimony exactly as it was given, neither in written form nor taped.²⁴³ Until the end of the 1970s, the German courts merely took a protocol of results, in which only the essential results of the trial were summarized. Accounts of witnesses as well as statements of defendants, lawyers and judges therefore could not be reconstructed precisely if later evidence produced contradictions. At the end of the 1970s, even the duty to prepare a protocol of results was lifted for all higher courts (district and provincial high courts). Ever since, they have only prepared pro-forma protocols. Regarding the statements of defendants and witnesses one can read therein only something like: “The witness made statements about the matter,” or: “The defendant made a declaration.” Nothing appears in those protocols about the contents of the statements and declarations. Since trials against alleged NSG criminals are being held in higher instances right from their start because of the gravity of the alleged crime (which denies the defendants a second instance with a hearing of evidences), this leads to a situation where the courts have an absolutely free hand regarding the ‘interpretation’ of the statements of witnesses and defendants. The court can even put words into someone’s mouth that were in fact never spoken. This situation throws the gates wide open for untruths on the part of witnesses, but also for interpretations by the courts of statements contrary to their actual wording by the courts.²⁴⁴ The media as well only publicize select portions of testimony, whose value as evidence is suspect from the start.²⁴⁵

²⁴¹ *Ibid.*, p. 13.

²⁴² In the Eichmann Trial, for example, defense counsel R. Servatius declined to cross-examine the “witnesses-of-Jewish-suffering,” see R. Servatius, *Verteidigung Adolf Eichmann*, Harrach, Bad Kreuznach 1961, pp. 62f. (cf. also note 186).

²⁴³ The Frankfurt Auschwitz trial was an exception, as these proceedings were taped, but exclusively for the judges. Neither the defense nor the prosecution ever got access to these tapes.

²⁴⁴ Cf. the report on the trial against G. Weise: R. Gerhard (ed.), *op. cit.* (note 160), which shows how the Court judges the wording of a witness account against its actual content; in trials against revisionists, German Courts proceed rather similar, cf. G. Rudolf, “Webfehler im Rechtsstaat,” *Staatsbriefe* 7(1) (1996), pp. 4-8; English as “Failings of a State under the Rule of Law,” in: G. Rudolf, *Hunting German Rudolf*, Castle Hill Publishers, Uckfield 2016, pp. 147-161.

²⁴⁵ Unfortunately, H. Langbein’s book *Der Auschwitz-Prozess*, *op. cit.* (note 158), based on his own notes, also contains only those witness statements that he deems credible, Vol. 1, p. 15 – but even they seem unbelievable in places.

In several instances Oppitz and Rückerl have noted the influencing or prejudicing of witnesses by inmate organizations such as the covertly Communist VVN, the “Organization of Persons Persecuted by the Nazi Regime.”²⁴⁶ In addition to the manipulation by the German investigative authorities mentioned earlier, and considerably more serious than this, is the way in which the witnesses coming to the Federal Republic of Germany from the Eastern Bloc nations were vetted out for their reliability and even put under massive pressure, both by eastern secret-service organizations as well as by these communist countries’ ministries of justice and of the interior, and even during the trials by these countries’ embassies and consulates. They were even escorted into the courtroom by public servants. Reliable communists willing to incriminate the defendants were usually the only ones to be granted permission to leave the eastern states.²⁴⁷ B. Naumann called this *modus operandi* of the Eastern Bloc nations an “inquisition,”²⁴⁸ and Langbein rejoiced that in spite of this discovery the German courts still did not question the credibility of these witnesses.²⁴⁹ Further, Laternser reports that the witnesses for the Auschwitz Trial were able, even before the trial began, to tell their stories in the media or even in Witness Information Pamphlets published especially for this occasion, so that impartial and objective testimony became quite an impossibility. The witnesses were moreover mentored by many different organizations and persons, which also may have influenced them.²⁵⁰ Only in passing should it be pointed out that many witnesses travelled from one trial to the next, pocketing outrageously high witness fees as they went.²⁵¹

The influence of the constant barrage of Holocaust stories on European, American and Israeli witnesses is demonstrated by Rückerl on the basis of Australian witnesses. Whereas western witnesses can almost always make definite statements on certain topics of the matter at issue, investigators in Australia usually came away empty-handed. Nobody could quite remember anything anymore there.²⁵²

Of course, there is another component to some ‘eye-witness accounts,’ and that is political propaganda. It is well known that many communists and socialists were incarcerated in German concentration camps. It is more than likely that these persons co-operated with external underground movements as well as with the Soviets in what is today generally acknowledged as atrocity propaganda. For example, the famous Auschwitz inmates Ota Kraus and Erich Schön-Kulka,²⁵³ Rudolf Vrba and Alfred Wetzler,²⁵⁴ Filip Müller²⁵⁵ and Stanislaw Jankowski²⁵⁶ all were members of the so-called Camp Partisans of Auschwitz who were involved in what they themselves called “making propaganda.”²⁵⁷ The communist Bruno Baum even declared:

²⁴⁶ A. Rückerl, *op. cit.* (note 35), p. 256; U.-D. Oppitz, *op. cit.* (note 204), pp. 113f., 239; cf. H. Laternser, *op. cit.* (note 174). VVN = Verein der Verfolgten des Naziregimes.

²⁴⁷ H. Laternser, *ibid.*, pp. 37, 99ff., 158ff., 171ff.; H. Lichtenstein, *op. cit.* (note 91), p. 29, describes how the KGB manipulated Soviet witnesses.

²⁴⁸ B. Naumann, *op. cit.* (note 149), pp. 438f.

²⁴⁹ H. Langbein, *op. cit.* (note 158), Vol. 2, p. 864; the fact that witnesses were pressured was confirmed by the German Federal Supreme Court, but was rejected as grounds for revision; Criminal Division of the Federal Supreme Court, Ref. StR 280/67.

²⁵⁷ See Bruno Baum, *Widerstand in Auschwitz*, Kongress-Verlag, Berlin (East) 1957, chapter “Success of Propaganda,” p. 97.

*"The whole propaganda which started about Auschwitz abroad was initiated by us with the help of our Polish comrades."*²⁵⁸

*"I believe it is no exaggeration when I say that the majority of all Auschwitz propaganda which was spread at that time all over the world was written by ourselves in the camp."*²⁵⁹

*"We carried out this propaganda in [for] the world public until our very last day of presence in Auschwitz."*²⁶⁰

The most striking admission of being a pathological liar is perhaps that by famous Jewish Auschwitz survivor Rudolf Vrba to his fellow-Jew and fellow-survivor Georg Klein. Asked by Klein whether everything is true that Vrba had said about Auschwitz during an interview made for Claude Lanzmann's movie *Shoa*, Vrba answered with a sardonic smile on his face.²⁶¹

"I do not know. I was just an actor and I recited my text."

These admissions of blatant lies are rare.²⁶² If one does not wish to accuse all witnesses of lying, but would rather give them the benefit of the doubt, then one must perforce seek other explanations. Many approaches to explanations have already been made, some of which are discussed here briefly.

Gringauz was the first who described the Jewish perception and description of their persecution as biased:²⁶³

"The hyper-historical complex may be described as judeocentric, lococentric and egocentric. It concentrates historical relevance on Jewish problems of local events under the aspect of personal experience. This is the reason why most of the memoirs and reports are full of preposterous verbosity, graphomantic exaggerations, dramatic effects, overestimated self-inflation, dilettante philosophizing, would-be lyricism, unchecked rumorism, bias, partisan attacks and apologies."

Furthermore, it is evidently possible that events which someone has not personally experienced, or not experienced in the degree claimed, may be 'remembered' *ex post facto* so intensively that it affects a person's psyche – in other words, that people experience the horror retroactively after actually having heard about it only through the media or through third parties. This issue became especially relevant after the Demjanjuk Trial in Jerusalem when it turned out that not only the witnesses themselves were not credible, but that the deluge of forged documents and false testimony were also shaking the very core and foundation of their testimony as a whole.²⁶⁴ As already mentioned, Elisabeth Loftus, the Jewish-American specialist on eyewitness testimony, published a study in which she describes the mechanisms by which most human brains produce 'memories' of events they actually never experienced, especially in situations of heavy emotional stress.²⁶⁴

Otto Humm described how typhus, an epidemic which raged in many German concentration camps and claimed tens of thousands of lives, leads to a psychotic behavior of the pa-

²⁶² In the eastern block, they fell victim to censorship, as K. Bäcker has shown: "Ein Kommentar ist an dieser Stelle überflüssig," *VffG* 2(2) (1998), pp. 120-129, here FN 29. In later editions, the sentences quoted here were 'defused' by deleting words like "propaganda" and replacing them with "information" and "publication," see Bruno Baum, *Widerstand in Auschwitz*, East Berlin 1957 and 1961, p. 89, and 88, resp.

²⁶³ S. Gringauz, "Some Methodological Problems in the Study of the Ghetto," in Salo W. Baron, Koppel S. Pinson (ed.), *Jewish Social Studies*, Vol. XII, New York 1950, pp. 65-72.

²⁶⁴ E. Loftus, K. Ketcham, *op. cit.* (note 23), and E. Loftus, *op. cit.* (note 25).

tient who has extremely terrible hallucinations. If the patient is not treated appropriately, these hallucinations may be believed by the recovered patient as real events.²⁶⁵

Hans Pedersen offered a more psychological explanation based on a case in Denmark at the beginning of 19th Century, where a young Jewish girl exhibited bizarre behaviors: she injured herself and pretended to be handicapped in order to attract public attention and a higher social status. She tricked all of her guardians and curiosity seekers, including most renowned physicians who were brought in to explain her baffling physical conditions. Stunning in this case was *not* so much the behavior of the young lady, since self-harming behaviors are quite well-documented among adolescents with behavioral disorders, but the incapability of the 'experts' to recognize the obvious signs of deceit as such because of their predisposition to believe in the innocence of the girl and in the reality of the physiological miracles she apparently performed.²⁶⁶

Howard F. Stein pointed out another possible explanation when he recognized that the Holocaust has become a central focus of modern Jewish identity, and that the majority of the Jewish people lose themselves in identity-creating group fantasies of martyrdom.²⁶⁷ And what is more: the Jewish side even demands the constant and ever-increasing "traumatization" of particularly the younger Jewish generation by means of the deeply affective re-experiencing of all real and supposed Holocaust atrocities, intended to achieve their "almost-physical identification" and solidarity with their people.²⁶⁸ Thus, the Holocaust is considered today to be the core of the "civil religion" of at least the Israelis, if not of all of Jewry.²⁶⁹

Of course these almost-pathological fixations of many Jews on the Holocaust led to massive criticism even from the Jewish side.²⁷⁰ Even one of the most-popular Holocaust authors, the late Nobel-Peace-prize winner Elie Wiesel, admonished not to let the Holocaust be a central point of reference for the Jewish identity. Under the title "Do not get obsessed with the Holocaust", he is quoted as follows:²⁷¹

"The Holocaust has become too much of a central point in Jewish history. We need to move on. There is a Jewish tendency to dwell on tragedy. But Jewish history does not finish there."

A conference of Ukrainian and Polish physicians in American exile, held in January 1993 towards the end of the Demjanjuk Trial, concluded that many Jews have forgotten their true and sometimes just as horrible experiences in the concentration camps, and are increasingly replacing them with group fantasies of martyrdom and with horror fairy tales as spread by the media, since the latter accounts are circulated with particular vigor in the Jewish communities due to their identity-building effect. Such phenomena have already been described in relevant medical literature and are known as *Holocaust Survivor Syndrome*.²⁷²

Jerome Rosenberg, "Holocaust Survivors and Post-Traumatic Stress Disorders," *The Journal of Sociology & Social Welfare*, 11(4) (1984), pp. 930-938.

Finally, greed and political power may be seen as another driving force behind the tendency to invent, exaggerate, and distort events when it comes to the Holocaust, as Jewish-American scholar Norman G. Finkelstein pointed out in 2000.²⁷³

3.3.2.4.2. Witnesses for the Defense

How different in comparison is the courts' treatment of witnesses for the defense! The most devastating example is that of G. Weise, for whose trial a great number of witnesses for the defense appeared, or were motioned to appear in court. However, they were either not summoned by the court, or their testimony was construed as incriminating (contrary to its actual content) or simply declared irrelevant on the grounds that only incriminating testimony could clear up the facts of the crime. Anyone who knew nothing of the alleged crime had simply been in the wrong place at the wrong time.²⁷⁴ In the end, Weise was convicted on the basis of only *one* witness for the prosecution, while the more than ten defense witnesses were utterly disregarded. Rieger reports that another court scornfully dismissed two defense witnesses with the comment that it was a mystery why these witnesses would be untruthful.²⁷⁵ Burg reports that, as a defense witness, he was regularly threatened and even physically assaulted.²⁷⁶

German defense witnesses doing service at the outside of the concentration camps and ghettos at the time in question are on principle treated with distrust by the courts. If they cannot remember the atrocities alleged by witnesses for the prosecution, or if they should even dispute them, which is generally the case,²⁷⁷ they are declared unreliable and are therefore not sworn in.²⁷⁸ Prosecutor Grabitz expresses revulsion and loathing for such witnesses, as for the defendants who testify in a similar vein and whom she would like nothing better than to slap resoundingly in the face.²⁷⁹ Rückerl even insinuates perjury,²⁸⁰ and in fact some witnesses have been prosecuted to this effect.²⁸¹ Lichtenstein reports a case where such "ignorant" witnesses were charged *en masse* with lying and perjury, and where threats of arrest, and actual arrests, were repeatedly made.²⁸² He quotes the judge's response to one witness who avowed that he was telling the plain and simple truth.²⁸³

"You will be punished for this truth, I promise you."

In the Auschwitz Trial, witness Bernhard Walter, whose testimony was not to the prosecution's liking, was temporarily placed under arrest until he had revised his statements.²⁸⁴ It is clear that such actions by the court cannot but have intimidated witnesses. But Lichtenstein merely fumes that despite all this some witnesses were still so insolent as to continue to deny everything.²⁸⁵ German defense witnesses for the side of the perpetrators – meaning any German officials of the time – who were willing to testify for Adolf Eichmann in the Jerusalem trial were always threatened with arrest by the prosecution, so that they stayed away from the proceedings.²⁸⁶

The dilemma of the German witnesses who had been 'outside the camps or ghetto fences' was demonstrated by Heinz Galinski, who demanded that all members of the concentration-

camp guard staffs be punished for having been members of a terrorist organization.²⁸⁷ Rückerl explained that the only reason why this demand cannot be met is that at the time of the Third Reich the legal concept of a terrorist organization did not yet exist, and today's laws cannot be applied retroactively.²⁸⁸ Nevertheless he and many others concluded that *anyone* from the Third Reich who had any contact whatsoever with the alleged events always has one foot in prison,²⁸⁹ since the witnesses who are frequently motivated by hatred often regard any such person as a criminal merely because of the position he held at the time.²⁹⁰ Langbein devotes an entire chapter to the opinion, expressed by many inmates, that all SS-men were devils incarnate,²⁹¹ and he even admits that each and every Holocaust survivor is a perpetual accuser of all Germans.²⁹² It is thus easy to understand that only a very few defense witnesses from the ranks of the SS, SD, *Wehrmacht* or Police had the courage to give unreserved, candid testimony, since any witness for the prosecution could fashion a noose out of it for them with their considerable talent for coming up with all sorts of incriminations. The show-trial character of these anti-German and anti-Germany trials is plainly obvious to thoughtful onlookers.

And if defense witnesses should get carried away and presume to claim that they know nothing of gas chambers, and perhaps even dare to dispute their existence, then the least that will happen to them is that they are declared unreliable. Even the judge himself may become abusive.²⁹³ But how the judges change their tune in those exceptional cases where a former SS-man 'confesses'.²⁹⁴

"A valuable witness, one of the few who confirm at least some of what everyone knows anyhow."

Indeed, the author has hit the nail on the head! Since everything is "judicially noticed" and considered self-evident anyhow, it would be much easier to dispense with all the laborious proceedings and simply hand down the verdict as soon as the witnesses for the prosecution have had their say as in traditional show trials.

The courts frequently conclude from these circumstances that witnesses for the defense cannot contribute anything of value to an investigation anyhow, and thus disregard their testimony or even dispense with summoning them in the first place.²⁹⁵

Finally, it should be mentioned that many former inmates who, during interrogations by the police or state attorneys prior to the actual trials, made exonerating statements about purported historical events in general or certain defendants in particular, were simply never summoned by the courts as witnesses. The transcripts of these pre-trial interrogations are not accessible to the public. Only recently, I managed to receive a complete set of photocopies of these investigation files leading to the infamous Frankfurt Auschwitz trial by means not to be described here (and Jürgen Graf managed to receive a copy of the investigation files of the Majdanek trial). These documents are currently analyzed, results of which

²⁹⁴ H. Lichtenstein, *op. cit.* (note 161), p. 56; *op. cit.* (note 91), pp. 72f.: "[...] the Chief of the District Court said, well, we get this sort of witness too sometimes. 'Thank God!,' one might add."

²⁹⁵ Cf. H. Lichtenstein, *ibid.*, p. 106.

will be published step by step. A preliminary study has already revealed that the German authorities have been – and probably still are – engaged in the suppression of exonerating evidence on a massive scale.

In the course of the increasingly hysterical hunting for German geriatrics who served in the alleged Nazi extermination camps, the German Federal Supreme Court decided in 2016 that each of these men, without exception, can be prosecuted for aiding and abetting mass murder, even if he merely shuffled files from the left to the right or merely cleaned boots.²⁹⁶ Since it must have been plainly obvious to everyone back then that a mass murder was taking place, anyone who somehow contributed to this system – even if only with the most menial activities – is automatically guilty of aiding and abetting mass murder.

3.3.2.5. The Defendants

While the situation of witnesses from the SS and similar backgrounds is critical, that of the defendants can only be described as hopeless. They are the target of the unbridled hatred and malice of the witnesses for the prosecution as well as of the media.²⁹⁷ It borders on the miraculous that in light of the conditions pointed out here, by far the majority of the defendants *did* in fact dispute any participation in the alleged crimes. On the other hand, they did not as a rule dispute the crimes *per se*; in view of the “self-evidentness” of these matters, any such attempt would only have served to diminish their credibility in the eyes of the court anyway. The defendants frequently even expressed dismay and disgust at the crimes alleged. Jäger²⁹⁸ comments that these exclamations might have been prompted by tactical considerations, and by a change of heart brought about by later influences from outside, and can thus hardly be regarded as evidence for an awareness of guilt at the time in question – and we would like to add here that for the same reasons they can also not be taken as evidence for the crime itself, particularly since the often-ambiguous statements of the alleged perpetrators, as recorded in contemporaneous diaries, letters, speeches etc.,²⁹⁹ almost never suggest any awareness of guilt.

Frequently, however, the defendants made no statements about the allegations made against them or claimed to not remember anything. They merely attempted to dispute any participation of their own in the crime, and to shift the blame onto third parties – mostly unknown, dead or missing former comrades.³⁰⁰ Statements made by the defendants in their own defense were interpreted by the court and the prosecution as lies intended to serve as cover,³⁰¹ which is often the case since many defendants tried any and all possible and impossible tricks in order to distance themselves from the place and time of the alleged crime, which of course they did not always succeed in doing. But these tactics, often doomed to failure, are easy to understand, since the defendants are given next to no chance to disprove the crime itself. Thrust into an undefendable position in this way, the defendants fell silent

²⁹⁶ German Federal Supreme Court, decision of September 20, 2016; ref. 3 StR 49/16. This case was about the 2011 sentencing of John Demjanjuk by a German court merely because it had allegedly been proven that he had served in the Sobibor Camp. The Supreme Court okayed this decision and thus open the floodgates of hell.

²⁹⁷ Regarding the prior conviction by the media, cf. H. Laternser, *op. cit.* (note 174), pp. 12f., “Beast in human bodies,” pp. 33, 86, 147f.

at many of the charges brought against them. A statement of the presiding judge at the Auschwitz Trial in Frankfurt is significant.³⁰²

"We would have come a good bit closer to the truth if you had not persisted in hiding behind such a wall of silence."

But which truth did the judge want to hear? Only after dramatic scenes of heart attacks, nervous breakdowns and hysterical fits were some of the defendants prepared to admit at least a certain measure of guilt.³⁰³ Outrage at the boundless lies of the witnesses was a constant with all the defendants.³⁰⁴

Even after they have been convicted and sentenced to many years or even a lifetime in prison, most of them continued to "obstinately" deny their guilt, which is otherwise absolutely unusual for criminals of this kind. Remorse, repentance and an awareness of guilt seem to have been alien to them.³⁰⁵ Even in those few cases where guilt was admitted, a strange dichotomy of perception occurred where the alleged criminals were not truly penitent and ready to atone from the heart, but continued to seek to place part of the blame elsewhere, to make up justifications for the acts in question, and to complain of injustices done to them. Sereny³⁰⁶ and Draber³⁰⁷ speak of the existence of two different levels of conscience and consciousness and even of self-alienation and disturbances of consciousness.

A particularly devastating example is that of Oswald Kaduk, one of the defendants in the Auschwitz Trial, a very simple soul. He was badgered so dreadfully that he suffered a nervous breakdown,³⁰⁸ attempted during his trial to refute even testimony in his favor,³⁰⁹ and ultimately said with resignation,³¹⁰

"Well, I'm a murderer, no one will believe me anyway."

Anyone who would like to comprehend Kaduk's complete mental confusion is referred to Demant's interviews with him and two other convicts of the Auschwitz Trial.³⁰⁴ Reading them will make this scandalous travesty of justice palpable for the attentive reader.

Considering these circumstances, it is utter mockery for Langbein to claim:³¹¹

"There is nothing to keep them [the defendants] from dismissing or disproving exaggerated allegations."

The last straw is provided by Oppitz, who complains that after their release from prison some of those who had been convicted of NS crimes are monitored with an eye to their political activity – an unlawful and no doubt unparalleled act of police-state surveillance.³¹² Clearly the German government desires to ensure that these people do not become active as revisionists. The same is true for prisoners who were released on parole: They do not dare to get in contact with independent researchers and do not want to talk about the events so many decades ago since they are threatened to be imprisoned immediately if they show any kind of revisionist behavior. Thus for example Kurt Franz, former camp commandant of the Treblinka Camp, who was released on parole in 1994, refused to speak about the past since he feared to get imprisoned again.³¹³ There should be no reason for that fear if everything German courts have stated in their verdicts about Treblinka were correct.³¹⁴

In view of the glaring discrepancy between the gruesomeness of the alleged crimes and the good and decent harmlessness of the defendants, Helge Grabitz³¹⁵ seconds Hannah Arendt¹⁸⁶ in her observations on the banality of evil. It even occurs to him that the reason for the stubborn denials of the defendants, and for the contrast between the crimes and the alleged criminals, just might be that the crimes in fact never actually took place – but he immediately rejects this “seductive” idea as cynically flying in the face of the evidence.³¹⁶

3.3.2.6. Public Reaction

As pointed out in Section 3.3.2.2., the circumstances and conditions of the NSG trials with regard to the compilation of historical overviews of the alleged National-Socialist atrocities raised the suspicion that these proceedings tend to have a show-trial nature. Admissions are numerous to the effect that the NSG trials are important first and foremost to the cause of public education. For example, the chief public prosecutor Fritz Bauer admitted this truth during the Auschwitz Trial,³¹⁷ as did B. Naumann, correspondent for the *Frankfurter Allgemeine Zeitung* at this trial. The latter wrote that the Auschwitz Trial was of “ethical, socially educational significance.”³¹⁸ And H. Langbein, the *éminence grise* behind the trial scene, commented:³¹⁹

“*The special element in these criminal trials is their political impact.*”

A. Rückerl wrote that the ‘clearing-up’ of National-Socialist crimes was

“*of an overall public and historical relevance that went far beyond the criminal prosecution per se,*”

and:

“*The combined results of historical research and criminal investigation lend themselves to impressing upon the man on the street such matters as he ought to bear well in mind, in his own interest – regardless of how unpleasant this may be for him.*”³²⁰

With thematic consistency, Scheffler suggests that the NSG trials ought to be a permanent focus of German public life, since they deal with an issue of German society’s very existence,³²¹ and according to Steinbach the NSG trials provide an important contribution to the shaping of German identity.³²²

The logical consequence of all this is that, for educational reasons, entire school classes and armed-forces units were regularly taken to observe such trials,³²³ which were at times also attended by high dignitaries from Jewish organizations and Israel.³²⁴ The unabashed Jewish admission that the trials against Eichmann and Demjanjuk in Israel, where both cases were the only really interesting matter for all of Israel’s media for many weeks, had been of the nature of show trials, seems more honest than these German proceedings.³²⁵

³¹⁵ H. Grabitz, *NS-Prozesse...*, *op. cit.* (note 198), p. 115.

³¹⁶ H. Grabitz, *ibid.*, p. 147, refers to E. Aretz, *Hexen-Einmal-Eins einer Lüge*, Hohe Warte, Pähl 1973, a book that is certainly not representative of revisionism, and outdated as well. It would have been more appropriate to quote A. R. Butz, *The Hoax of the Twentieth Century*, Institute for Historical Review, Newport Beach, Cal. 1976, or W. Stäglich, *Der Auschwitz-Mythos*, Grabert, Tübingen 1979.

³²⁵ Regarding the Eichmann Trial and the trial of J. Demjanjuk in Jerusalem: A. Melzer, “Iwan der Schreckliche oder John Demjanjuk, Justizirrtum? Justizskandal!,” *SemitTimes*, special issue March

Kröger points out the discrepancy between the will of the majority of the German people in the mid-1960s, which was to have an end to the NSG trials,³²⁶ and the major print media's almost unanimous support of their perpetuation,³²⁷ which ensured that the reading public was steered in this "pedagogically desired" direction.³²⁸ He also points out that the criticism directed at the courts by these print media is proportionally more severe, the more lenient the verdicts turn out – in other words, greater severity is demanded.³²⁹ Bonhoeffer thus notes correctly that the German press reported in great detail particularly about the spectacular mass trials, even though there was next to no public demand for such information until the 1970s.³³⁰ Lichtenstein³³¹ and Steinbach³³² note that a growing trend towards the rejection of the NSG trials in the late 1970s and early 1980s was suddenly followed by a drastic change in public opinion, induced – according to Steinbach – not only by the pedagogically trained younger generation but primarily by the television miniseries *Holocaust*.³³³ The mission entrusted to the media – public education and opinion-steering – has been stressed by various sources.³³⁴ The newspaper *Neues Österreich* shed new light on the quality of this type of media reporting when it commented on witness testimony in an NSG trial in the following way, which unfortunately is typical for our media:³³⁵

"Whatever the defendant cannot disprove did obviously take place, as incredible as it may sound."

In other words, the public consents to the practice that in NSG trials it is not the guilt of the defendant that must be proven, but rather that the defendant must prove his innocence of any and all conceivable accusations, in the tradition of the Inquisition of medieval times.

Abroad, the most-remarkable reaction to the NSG trials was no doubt the international appeal of 1978, not to allow the National-Socialist crimes to lapse under the statute of limitations;³³⁶ this appeal, which came after the Federal German statute of limitations for murder had already been extended twice,³³⁷ was made for the sole purpose that the prosecution of alleged National-Socialist crimes might continue until the end of time. In this context, Lichtenstein notes that during the 1979 debate about this statute, Simon Wiesenthal had had postcards of protest printed in many different languages and distributed with the request to mail these to the Federal German government.³³⁸ Steinbach is quite right when he describes the debates of the German parliament (*Bundestag*) on this statute³³⁹ as some of the most remarkable moments of German parliamentarianism.³⁴⁰

Thus, even in 2019, more than 74 years after the end of the war, NSG trials continue to be decided solely on the basis of witness testimony. Especially after the German reunification

³⁴⁰ P. Steinbach, in J. Weber, P. Steinbach (eds.), *op. cit.* (note 15), p. 27.

in 1990, people residing in the new post-reunification German states are being prosecuted who have practically already been convicted but who until 1990 were not within the reach of the West-German authorities. Langbein predicted this development as early as 1965:³⁴¹

“It is therefore to be expected that, once extensive researches are conducted, many SS-men will yet be found in the German Democratic Republic who, while already proven guilty [sic!], could not be arrested in the Federal Republic of Germany or in Austria.”

This perpetual witch hunt is made possible by revisions of laws which operate retroactively to exacerbate the trial situation of any defendant – in other words, according to Henkys, the process is based on an *ex post facto* (retroactive) law that violates human rights.³⁴²

It is also significant that the supposed National-Socialist criminals are not allowed to rest in peace even after their deaths. Ever since the war the press has routinely spread rumors claiming that Hitler is still alive, or that his body has finally been found and autopsied; these rumors supplement the many reports and accounts surrounding the fates and final resting places of supposed National-Socialist murderers.³⁴³

3.3.2.7. Summary

Even though experts agree that witness testimony is almost worthless after only a few years, persons continue to be convicted even decades after the supposed fact on the basis of witness testimony that is clearly unreliable in every respect. Exonerating evidence is suppressed on occasion,³⁴⁴ and the media, whose proper role ought to be that of guardians of civil rights, not only join in this game, but even demand that it be stepped up.

In other words, in trials dealing with certain types of crimes the crime itself is regarded as unshakeable fact, and this usually goes for the perpetrators as well, since every German employed in a concentration camp may be considered a criminal or an accomplice. Some witnesses even said this quite frankly, and demanded that punishment should be meted out for the mere fact that someone had worked in a concentration camp. In the meantime, the German Federal Supreme Court has declared this view as legally binding. Anyone involved in a trial under these conditions – regardless of whether as a witness or a defendant – could not possibly dispute the crime itself, since doing so would have meant a more severe sentence for a defendant or, for a witness, criminal charges for incitement, slander or the like, or at the very least enormous social reprisals ensuring professional ruin or worse.

Under such circumstances, the most that any defendant could do was to try to minimize his role in the ‘crime’ and to deflect at least some of the attack by incriminating others. The incrimination of third parties is a sure way to make friends of the prosecution and the court, the latter of which is always willing to make concessions in return for confessions and co-operation in the discovery of further putative criminals (meaning denunciation) – a court technique that will induce false confessions if the crime *per se* is not open to debate.

In many countries in Europe even neutral researchers are not in a position today to approach Holocaust studies with the hypothesis that certain events did not take place. They too are condemned without any examination of their arguments, on the grounds of self-evidentness of the opposite of their theses, and with that they are deprived of their social existence. Although in 1992 the Provincial High Court and Court of Appeals in Düsseldorf, seconding a decision of the German Federal Constitutional Court, decided that self-evidentness may be reversed if completely new evidence, or such that is superior to past evidence, is presented, requiring a retrial of the matter at hand.³⁴⁵ But even new, comprehensive scientific

³⁴² R. Henkys, *op. cit.* (note 9), p. 276; cf. the chapter by C. Jordan, this volume.

³⁴³ E.g., the frequent reports about the alleged destiny of Hitler’s corpse, e.g. in the German tabloid *Bild*, Jan. 26, 2000, pp. 1, 2, 6; the downright repulsive exploitation of the death of Mengele; cf. G. L. Posner, J. Ware, *Mengele. Die Jagd auf den Todesengel*, Aufbau, Berlin 1993; cf. *Frankfurter Allgemeine Zeitung*, April 13, 1993, p. 3: “Nichts als Gerüchte um Bormanns Grab”; *Die Zeit*, Nov. 8, 1991, p. 87: “In ewiger Ruhe das Ungeheuerliche,” regarding Christian Wirth.

³⁴⁴ For a classic example of this, cf. the chapter by C. Jordan, this volume.

³⁴⁵ Düsseldorf Provincial High Court and Court of Appeal, Ref. 2 Ss 155/91 – 52/91 III; Federal Constitutional Court, Ref. 2 BrR 367/92; cf. H. Kater, “Die Rechtslage bei der Überprüfung der deutschen Zeitgeschichte,” *DGG* 40(4) (1992), pp. 7-11. The *Bundestag* seconded this, cf. the decision of the petition-

material evidence, advanced in order to reverse the decree of self-evidentness, has been rejected by the German courts. In this context the German Federal Supreme Court decided in 1993 that the denial of motions to examine self-evidentness, as criticized by a defense counsel in an appeal document,³⁴⁶ is proper legal procedure due to the self-evidentness of the Holocaust.¹⁴³ The Holocaust, therefore, is a judicially protected version of history which this decision renders completely untouchable. This represents an inquisition in its purest and highest degree, and a gross violation of the human rights to academic freedom and the freedom of expression and opinion.

Unfortunately, until the early 1990s, there were no attorneys in Germany who recognized this vicious circle that is so catastrophic for a state under the rule of law, and who insisted that the crime, the murder weapon and the victims, or traces of them, as well as eyewitness testimony and documents, be examined with modern forensic methods before the question can be raised as to who the perpetrator(s) might have been. Such attorneys have stepped onto the scene only recently, but aside from slander and abuse, threats of prosecution and actual prosecutions as well as further exacerbations of the judicial situation, they too have been unable to achieve any changes.³⁴⁷

In 1966, Robert M. W. Kempner, back then an assistant U.S. chief counsel at the IMT, claimed that with respect to legal procedure the Nuremberg Trial did not differ from the trials held before a German jury court or another kind of court.³⁴⁸ In many respects we can agree with him.

4. Parallels

There once was a type of crime that was considered to be worse than any other; it was known as *crimen atrox* (atrocious crime). According to witness testimony, this included the most horrific abuses and ways of murdering people and animals that the human mind can conceive of, and even included harm to and destruction of the environment. Not only was such a crime prosecuted directly by the public prosecutor as soon as it became known, but the courts were even instructed not to observe the normal rules of procedure, since these were satanic crimes that could not be dealt with in the ordinary way. Even death could not keep the victims from being persecuted: their bodies were simply exhumed without much ado.

Whereas in the early days of the prosecution of such crimes the defendants and sometimes even reluctant witnesses were subjected to brutish torture, such methods fell quite out of favor later on. Psychologically cunning methods of interrogation and protracted, trying imprisonment while awaiting trial replaced physical torture. And finally, the stories about these crimes, spread by all available media and already recorded in detail in official books and registers, ensured that everyone knew what the proceedings were all about. As a result, witness statements regarding individual crimes often resembled each other so closely that outside observers could not but believe that the testimony of so many different persons who had nothing else in common simply *had* to be true somehow.

Many witnesses testified anonymously. Witnesses for the prosecution, who had to swear a holy oath to the court regarding the veracity of their testimony, were usually highly rewarded for their services. As a rule, their statements were never scrutinized, and the witnesses themselves were never cross-examined by the defense. Even if they were shown to have committed perjury, generally nothing happened to them. Even patently absurd and inconsistent, physically impossible claims were deemed credible.

Witnesses or defendants, however, who denied the crime itself or their involvement in it were persecuted and punished all the more severely for their stubborn lies, since obviously they were not willing to admit their satanic deeds, to repent and to renounce their satanic practices. In time, every defendant realized that admitting guilt was his only hope for leniency from the court, so that false confessions were made even in cases where torture was no

ing committee, Ref. Pet4-12-07-45-14934, letter to H. W. Woltersdorf, dated July 30, 1992.

³⁴⁶ Appeal document, Hajo Herrmann, regarding the verdict of the Schweinfurt District Court, Ref. 1 KLS 8 Js 10453/92, submitted on Dec. 29, 1993, Ref. H-nw-02/93.

³⁴⁷ See on this my documentary *Germany, Country under the Rule of Law: Role Model or Illusion?, A Critical Inspection*, Aug. 27, 2017; <https://codoh.com/library/document/4872/>.

³⁴⁸ R. M. W. Kempner in P. Schneider, H. J. Meyer, *op. cit.* (note 298), p. 8.

longer practiced. The incrimination of third parties was a device commonly used in attempts to cooperate with the court in order to obtain a more lenient sentence or even freedom.

Very rarely did the courts accept material evidence relating to the alleged crimes, and even in cases where it could be proven that the persons said to have been murdered were still alive, or had died of natural causes many years earlier, the courts were frequently unmoved. Later, even a clause providing for the self-evidentness of the crime was introduced, which served to stonewall any counter-evidence from the start.

The defense attorney was not permitted to question the crimes themselves and had to accept the views of his time as his own if he did not wish to fall out of favor with the court and the public. This could even result in his being accused of sympathizing with his client's deeds and belonging to the latter's criminal clique, which earned him a trial of his own. Furthermore, the defense lawyers were rarely granted access to the case files and could not speak with their clients in private.

This is an account of the conditions prevailing in the witch trials of medieval times, as researched and set out by Wilhelm G. Soldan and Heinrich Heppe in their classic work *Geschichte der Hexenprozesse* (*History of the Witch Trials*).³⁴⁹

Are the similarities to the modern cases described herein surely coincidental? The greatest heresy of our times is no doubt any incredulity regarding the Holocaust ("Haeresis est maxima, holocausto non credere.").

5. Conclusions

Under the conditions of the NSG trials set out above, the eyewitness testimony and confessions made in these trials can be accorded hardly any evidential value. From a scientific point of view, and in this case in particular, eyewitness testimony can never suffice to document historical events, much less to prove them in a court of law.

Confessions and statements have been extorted or gained by trickery from supposed perpetrators and participants by means of torture, threats of criminal charges, more-severe punishment and prison terms, detriments to personal welfare and professional advancement, as well as by the complete hopelessness and helplessness imposed by the show trials as described. Similar means were also employed to manipulate witnesses for the prosecution, who in turn engaged in manipulations of their own. In these cases, it was a matter of threats of violence as well as deliberate manipulation by the media, governmental, judicial and private institutions. What is more, the absolute free rein that was granted these witnesses, and the tendency to portray them after-the-fact as heroes of anti-Fascist resistance and to reinforce their thirst for vengeance, have resulted in this type of testimony being taken *ad absurdum* in its inconsistency and exaggeration. Some of the most glaring examples of such statements are listed at the end of this article.

The decisive prerequisite for these conditions is the worldwide climate of persecution and defamation to which anyone and everyone is subjected who may possibly have been in any way connected with alleged National-Socialist crimes or who is merely suspected of doubting the veracity of these. The allegedly unprecedented nature of these crimes induces an unparalleled moral blindness in 'Nazi-hunters' and in the guardians of the fundamental anti-Fascist consensus that prevails in politics, in the media and even among the broad masses, which suspends the rules of common sense and justice guided by the rule of law, so that the corresponding court cases call the medieval witch trials vividly to mind.

One proof of this attitude held by the majority of our fellow men and women is already the fact that to date books such as the present volume have not been favored with rational arguments, but rather are countered with hysterical cries for the public prosecutor, even if those shrieking the loudest have never read the book in anything approaching its entirety or have not bothered to confirm the correctness of its contents by checking the source material.

³⁴⁹ M. Bauer (ed.), W.G. Soldan, H. Heppe, *Geschichte der Hexenprozesse*, esp. Vol. 1, Müller, Munich 1912, pp. 311ff.; on judicial notice during the witch trials see W. Behringer, *Hexen und Hexenprozesse in Deutschland*, dtv, Munich 1988, p. 182; for a more-through comparison see W. Kretschmer, "Der mittelalterliche Hexenprozeß und seine Parallelen in unserer Zeit," *DGG* 41(2)(1993), pp. 25-28.

There simply are things nowadays that *cannot* be true because they are not *allowed* to be true.

In view of all the facts one is probably correct in the assumption that, where the Holocaust is concerned, our society is in a state of permanent mass suggestion fostered by the Holocaust Survivor Syndrome,²⁷² by the downright hysterical mania of all sorts of social groups right up to the upper echelons of the justice systems of an entire list of predominantly but not exclusively European countries³⁵⁰ to persecute anyone holding a dissenting opinion, and of course by the never-ending traumatizing coping and mourning rituals conducted in schools, politics and the media. Bender comments:³⁵¹

“Mass suggestion, frequently bordering on the hysterical, has an even stronger formative influence than the good example of so-called opinion leaders. Enhancing factors include: solemn rituals,^[352] the incessant repetition of the same catch phrases,^[353] emotionally stimulating signals (music, flags etc.).^[354] [...] What is more, mass suggestion lends itself more than almost any other phenomenon to the induction of downright extreme distortions of perception.”

Taking into consideration all the circumstances involved in how testimony regarding the Holocaust comes about, suspicions may arise that the accusations made are not only not provable, but that in fact the opposite of the claims advanced by the established Holocaust narrative may be true. This is the only thing that could explain why the establishment saw and continues to see itself forced to resort to such unjust, even unlawful measures.

Meanwhile even contemporary historiography has concluded, painfully enough, that eyewitness testimony is unreliable.³⁵⁵ But contemporary historians have fashioned themselves a crutch: Nolte, for example, explains that, while statements on the Holocaust might be exaggerated, it would be impossible to invent the like outright.³⁵⁶ He is thus in agreement with many expert psychiatrists and psychologists who, according to Oppitz,²²⁸ have affirmed repeatedly that there really can be no doubt about the core of all the Holocaust testimonies, whose general claims are always the same or at least similar.

But who decides, and on the basis of what rules, where the rotten shell of eyewitness testimony ends and where its sound core begins?

³⁵⁰ In the late 1990s, efforts especially in the USA, Canada and Australia grow to expell or prosecute former members of former German military units, cf. *World Jewish Congress*, press release December 12, 1996; *AP*, January 1, 1997; *Dateline ABC*, January 31, 1997; *New York Times*, February 3, 1997; *Calgary Herald*, March 24, 1997; *Globe & Mail*, February 21, 1997; *Toronto Sun*, May 13, 1997; *New York Times*, June 21, 1997; *AP*, August 20, 1997; *AP*, September 2, 1997; *AFP*, August 30, 1997; *Reuter*, July 1, 1997; *ibid.*, July 15, 1997; *ibid.*, July 22 1997; *ibid.*, August 12, 1997; *ibid.*, August 31, 1997. cf. Efraim Zuroff, *Occupation: Nazi Hunter. The Continuing Search for the Perpetrators of the Holocaust*, KTAV, Hoboken, N.J., 1994.

³⁵¹ R. Bender, S. Röder, A. Nack, *op. cit.* (note 6), Vol. 1, pp. 44f.

³⁵² In this case: the screening of Holocaust movies, commemorative speeches on special days ('Reichskristallnacht,' Wannsee Conference, liberation of concentration camps) and at special places (memorial site Plötzensee, Auschwitz Concentration Camp, Babi Yar), pilgrimages of school and youth groups to concentration camps.

³⁵³ In this case: the never-ending litany, in thousands of variations, of the unparalleled and unforgettable nature of German crimes, as well as their graphically detailed description.

³⁵⁴ In this case: horror photos and movies, regardless of whether they be genuine, falsified or "creatively re-enacted," as well as the incessant, uncritical presentation of atrocity reports and testimony, combine to eliminate the public's critical faculties and result in indiscriminating, deeply emotional consternation and in hatred of everything and everyone who would differ. For example, H. Lichtenstein, "NS-Prozesse – viel zu spät und ohne System", *Aus Politik und Zeitgeschichte* 31(9-10) (1981), pp. 3-13, reports that prior to the Majdanek Trial young people wanted to have an end to the NS trials of now-elderly men, but changed their minds after hearing of the incredible atrocities alleged by witnesses for the prosecution and supported instead the perpetuation of criminal prosecution to eternity: p. 12; cf. also C. Schatzker's demand for traumatization, *op. cit.* (note 268).

³⁵⁵ E.g., J.-C. Pressac, *Les crématoires d'Auschwitz: La machinerie du meurtre de masse*, CNRS, Paris 1993, p. 2; cf. also A. J. Mayer, *Why Did the Heavens Not Darken?*, Pantheon Books, New York 1988, pp. 362-365; J. Baynac, *Le Nouveau Quotidien* (Geneva), September 2/3, 1996, pp. 16/14; cf. R. Faurisson, "Keine Beweise für Nazi-Gaskammern!", *VffG*, 1(1) (1997), pp. 19-21.

³⁵⁶ E. Nolte, *op. cit.* (note 2), p. 310; similarly, J.-C. Pressac, *op. cit.* (note 17), pp. 126ff.

How do these experts explain away the fact that all the horror stories circulated by the Allies in the First World War were pure invention: nuns' breasts cut off, civilians nailed to barn doors, children's hands chopped off, fallen soldiers processed into soap,³⁵⁷ mass gassing of Serbs in gas chambers, etc.?³⁵⁸ Why shouldn't it have been possible to invent out of whole cloth similar stories during World War Two?

How do they explain away that the following horror scenarios of the Second World War were nothing more than atrocity lies invented by the Allies and their confederates: conveyor-belt executions, conveyor-belt electrocutions, cremations in blast furnaces, murders by means of exposure to vacuum and steam,³⁵⁹ puddles of pooling fat at open-air cremations, the smoke-filled black air resulting therefrom, mass graves squirting geysers of blood, soap from human fat, lampshades from human skin, shrunken heads from the bodies of inmates, etc.?³⁶⁰

Furthermore, it is a known fact today that the horror scenarios of mass gassings – allegedly carried out with Zyklon B or Diesel-exhaust gas – in the concentration camps of the German Reich proper (e.g., Dachau, Sachsenhausen, Buchenwald, Bergen-Belsen) were nothing other than utter lies, invented or at least supported by Germany's democratic western friends and the perjurious witnesses at their service. What reasons can our historians come up with that would justify declaring as 'uninventable' sterling truth the identical or similar tales of mass gassings with Zyklon B or Diesel exhaust in the former Communist, dictatorial Eastern Bloc, which was certainly not very kindly disposed towards Germany?

And how, finally, do these experts explain away the inconsistencies which the present volume points out between the material evidence and eyewitness testimony in fundamental core aspects of the Holocaust?

It may be true that most witness statements contain a core of truth, but this core cannot be defined by assigning it in democratic fashion to the weighted mean of overall testimony. The impossible remains impossible even if the vast majority of witnesses alleges the contrary.

6. Examples of Absurd Claims Regarding the Alleged National-Socialist Genocide³⁶¹

- child survived six gassings in a gas chamber that never existed;³⁶²
- woman survived three gassings because Nazis kept running out of gas;³⁶³
- to stay alive, gassing victim breathed through a keyhole in a gas chamber door at Flossenbürg – where no homicidal gas chamber ever existed – cursed the SS when they opened the door, then ran away;³⁶⁴
- fairy tale of a bear and an eagle in a cage, eating one Jew per day;³⁶⁵

Witnesses to the Gas Chambers of Auschwitz

ROBERT FAURISSON

1. Summary

Eyewitness testimony must always be verified. There are two essential means of verifying such testimony in criminal cases: confronting the account with the material elements (in particular, with expertise as to the crime weapon), and the detailed cross-examination of the witness on what he/she purports to have seen. Thus, in the proceedings where it had been a question of the homicidal gas chambers of Auschwitz, no judge nor any attorney was able to claim any kind of expertise regarding the weapon of the crime; moreover, no lawyer ever cross-examined the witnesses by asking them to describe with precision even one of these chemical slaughter-houses. That is, up until 1985. When that year witnesses were finally cross-examined on these subjects during the first Zündel Trial in Toronto, their rout was total. Because of this resounding set-back and by reason of other calamities previous to or following 1985, the defenders of the thesis of Jewish extermination have begun to abandon a history of Auschwitz primarily founded on testimonies and are obliging themselves, at the present time, to replace it with a scientific basis, or, at least, one which appears scientific, founded on factual research and proofs. The 'testimonial history' of Auschwitz in the manner of Elie Wiesel and Claude Lanzmann is discredited. Its time has passed. It remains for the exterminationists to attempt to work, like the revisionists, on the basis of facts and evidence.

In the present study, 'gas chambers' are intended to mean homicidal gas chambers, or 'Nazi gas chambers.' By 'Auschwitz,' it is necessary to understand this as Auschwitz I or Auschwitz Main Camp, as well as Auschwitz II or Birkenau. Finally, by 'gas-chamber witnesses,' I am indiscriminately designating those who claim to have participated in a homicidal gassing operation at these locations and those who are content to say they either saw or perceived a homicidal gas chamber there. In sum, by 'witnesses,' I mean those whom one usually designates as such, whether it is a matter of judicial witnesses or media witnesses; the first have expressed themselves potentially under oath in the docket of a legal proceeding, while the second have given accounts in books, magazine articles, films, on television or the radio. It so happens that certain witnesses have alternately been of both the judicial and media types.

This study is devoid of any psychological or sociological consideration for the Auschwitz gas-chamber testimonies, as well as any consideration of the physical, chemical, topographical, architectural, documental, and historical reasons why these testimonies are unacceptable. It aims above all to make evident a point which the revisionists have so far not mentioned but which is nonetheless of prime importance: up until 1985, no judicial witness of these gas chambers had been cross-examined on the material nature of the facts reported. When, in Toronto, at the first Zündel Trial in 1985, I was able to cause such witnesses to be cross-examined, they collapsed; since this date, there are no longer any gas-chamber witnesses presented in court except perhaps at the trial of Demjanjuk in Israel where, there again, the witnesses revealed themselves as false.¹

To begin, I will digress upon the grievous causes by which, since 1983, Simone Veil² was led to recognize that there existed no witnesses of the gas chambers.

2. The Thesis of Simone Veil

After the end of the war, the illusion that there were innumerable witnesses to the Auschwitz gas chambers was gradually accepted. By the end of the 1970s, with the arrival of historical revisionism into the media arena, particularly in France, it began to occur to certain individ-

¹ Cf. E. Loftus, K. Ketcham, *Witness for the Defense*, St. Martin's Press, New York 1991, as well as the contribution of A. Neumaier in this volume (editor's note).

² S. Veil, maiden name Jacob, former president of the European Parliament, was interned in the Auschwitz Concentration Camp during WWII, especially in subcamp Bobzek.

uals that these witnesses were perhaps not as numerous as one had believed. It is thus that, during the preparations for a major trial in which Jewish organizations had intended against me during the early 1980s, their lawyers and in particular, Robert Badinter, the future minister of justice, experienced severe difficulties securing evidence and witnesses. With staff in hand in the manner of the pilgrim, they were obliged to go to Poland and to Israel so as to bring back, if possible, that which they could not find in France. All for naught!

My first trial took place in 1981, followed by the appeal in 1983. Not one single witness took the risk of appearing in court. On April 26, 1983, the Paris Court of Appeal rendered its verdict. Naturally, I was found guilty, as one might have expected, for “harm to others” which is in fact to say for harm caused to Jews by the exposition of my theses in the mainstream press. Yet the court coupled this verdict with remarks sufficient to cause my adversaries a fair degree of consternation. My work was judged to be serious and yet dangerous. It was dangerous because, in the opinion of the judges, it appeared I allowed other persons the possibility of exploiting my discoveries for reprehensible ends! All the while, this same work was serious in the sense that, in the opinion of the court, one could uncover neither negligence, frivolousness, willful ignorance, nor lies – and this contrary to what had been affirmed by the adversarial party, which had accused me of “causing harm to others by falsification of history.” (sic)

On the subject of testimonies, the court went so far as to pronounce:

*“The researches of Mr. Faurisson have dealt with the existence of the gas chambers which, to believe multiple **testimonies**, would have been used during the Second World War to systematically put to death a portion of those persons deported by the German authorities.”* (my emphasis)

The court perfectly summarized what it called my “logical thread” and my “reasoning” by specifying that, for me,

*“[...] the existence of the gas chambers, such as usually described since 1945, conflict with an absolute impossibility, which suffices by itself to invalidate all the existing **testimonies** or, at the least, to stamp them with suspicion.”* (my emphasis)

Finally, the court, drawing a practical conclusion from these considerations, decreed the right of every Frenchman not to believe in the evidence and witnesses of the gas chambers. It stated:

“The value of the conclusions defended by Mr. Faurisson [as to the problem of the gas chambers] rests therefore upon the sole appreciation of the experts, the historians and the public.”

Two weeks later, Simone Veil publicly reacted to this judicial decision – upsetting for her and her co-religionists – with a declaration of extreme importance. She admitted the absence of proofs, of traces and even witnesses of the gas chambers, but added this absence was easily explained because:

“Everyone knows [she asserts] that the Nazis destroyed these gas chambers and systematically eradicated all the witnesses.”

To begin with, “everyone knows” is not an argument worthy of a jurist. Furthermore, Simone Veil, believing perhaps to be getting out from behind the eight-ball, made her case only worse; in effect, in order to uphold what she was claiming, it would have been necessary for her to prove not only that the gas chambers had existed but that the ‘Nazis’ had destroyed them and that they liquidated all the witnesses: a vast criminal undertaking about which one wonders on what order, when, with whom and by what means the Germans would have carried it out in greatest secrecy.

But what does it matter? We shall take note of this concession by S. Veil: *there is neither proof, nor traces, nor witnesses to the gas chambers*. It so happens that, in trying to reassure her circle, S. Veil clothed this surprising concession with conventional parlance. Here is, therefore, in her own words, what she confided in an interview for *France-Soir Magazine* (May 7, 1983, p. 47), the title of which was: “Simone Veil’s warning in regard to Hitler’s diaries: ‘We risk banalizing genocide’”:

“What strikes me nowadays is the paradox of the situation: someone publishes a diary attributed to Hitler by sheer dint of publicity and a great deal of money without, it seems,

taking very great precautions to assure himself of its authenticity, yet, at the same time, in the course of a trial brought against Faurisson for having denied the existence of the gas chambers, those lodging the complaint are obliged to supply a formal proof of the reality of the gas chambers. Yet everyone knows that the Nazis destroyed these gas chambers and systematically eradicated all the witnesses.”

A choice so full of consequences as that of S. Veil is not to be explained solely by the disaster of April 26, 1983, but by an entire series of events which, for her, made 1982 a dark year in terms of the history of the gas chambers and the credibility of witnesses. I will recall here but three of these events:

1. On April 21, 1982, historians, politicians and former deportees founded an association in Paris having as its objective the research of evidence for the existence and operation of the gas chambers (ASSAG: Association pour l'étude des assassinats par gaz sous le régime national-socialist; Association for the study of killings by gas under the national-socialist regime). One year later, this association had still not discovered any proof. [This is still the case today [1993], since, envisioned according to its own statutes for a “duration limited to the realization of its objective,” this association has not disbanded.]
2. In May, 1982, the Minister for Veterans' Affairs launched a noteworthy “Deportation Exposition, 1933-1945” in Paris; this exposition was supposed to continue by touring throughout France; I immediately sent out a text in which I demonstrated the fallacious character of this exposition: no evidence – except fraudulent evidence – nor any precise testimony for the existence of ‘Nazi gas chambers’ could be shown to visitors. Additionally, Ms. Jacobs, the person responsible for this initiative by the Ministry, took it upon herself to immediately cancel this would-be vagabond exposition.
3. From June 29 to July 2, 1982, an international symposium was held at the Sorbonne on “Nazi Germany and the Extermination of the Jews.” This colloquium had been announced as a decisive reply to the revisionist offensive in France. While it was supposed to have concluded with a resounding press conference, in reality, it was totally different. The first day of the proceedings, we distributed in the Sorbonne's entrance hall recent copies of my *Response to Pierre Vidal-Naquet* (not without risk to ourselves).³ The colloquium was carried out behind closed doors and in a turbulent atmosphere. Finally, during the press conference, the two colloquium organizers, historians François Furet and Raymond Aron, weren't even mentioning the words ‘gas chamber(s).’

I often say it's on this date of July 2, 1982, that the myth of the ‘Nazi gas chambers’ and their associated witnesses died or entered their final death throes, at least on the level of historical research. In the very heart of the Sorbonne, one had thus disconcertingly discovered the absence of any solid proof and any witness worthy of trust. Notwithstanding, one had previously trumpeted that this colloquium would put an end to “the ineptitude of Faurisson” by bringing forth a mass of evidence and testimonies. Such a silence after all that fanfare was truly eloquent.

3. The Written Testimony of Fajnzylberg-Jankowski

I said earlier that at my trial not a single witness took the risk of appearing before the court. At the last minute, my accusers had nonetheless provided the written testimony of a Jew who was living in Paris but whom they did not dare present in the witness stand. This Jew was the famous Alter Szmul Fajnzylberg, born in Stockek, Poland, October 23, 1911. This former Polish waiter, an atheistic Jew and Communist political delegate for the international brigades serving in Spain, had been imprisoned for a period of three years at Auschwitz-Birkenau.

In his brief deposition, he essentially stated that, working in the Auschwitz crematory (the old crematorium, or Crematorium I), he had spent a good deal of his time locked up with his comrades in the coke-room, for, on each occasion that the SS gassed Jews in the adjoining room, the

³ R. Faurisson, *Réponse à Pierre Vidal-Naquet*, La Vieille Taupe, Paris 1982; English: “Response to a Paper Historian,” *The Journal of Historical Review*, 7(1) (1986), pp. 21-72.

SS took the precaution of sequestering the *Sonderkommando* in the coke-room so that no Jew might visually confirm the gassing operation! Once the gassing operation was completed, the Germans freed the *Sonderkommando* members and made them collect and incinerate the victims. Thus, on the one hand, the Germans allegedly tried to conceal the crime while on the other hand they revealed to them its results!

This blinded witness is equally known by the names Alter Feinsilber, Stanislaw Jankowski or Stanislaw Kaskowiak. One can read his testimony in another form in the *Hefte von Auschwitz*.⁴

4. The Unraveling of the Witnesses at the First Zündel Trial (1985)

The important victory won by revisionism in France on April 26, 1983 would go on to be confirmed in 1985 with the first Zündel Trial in Toronto. I would like to dwell a moment on this trial in order to underscore the general impact, and especially as far as the testimonies on the Auschwitz gas chambers are concerned: *for the first time since the war, Jewish witnesses were subjected to a regular cross-examination*. Moreover, without wanting to minimize the importance of the second Zündel Trial (that of 1988), I should like it to be understood that the 1985 trial already contained the seeds for all that was attained in the 1988 trial, including the report by Leuchter and all the scientific reports which, in the aftermath, would proliferate in the wake of the *Leuchter Report*.

In 1985, as also afterwards in 1988, I served as advisor to Ernst Zündel and his lawyer, Douglas Christie. I accepted this heavy responsibility only under condition that all the Jewish witnesses would, for the first time, be *cross-examined on the factuality of the reported facts, and uncompromisingly so, and without sensibilities*. I had noted, in effect, that from 1945 to 1985, Jewish witnesses had been granted virtual immunity. Never had any defense lawyer thought or dared to ask them for explanations about the material features of the gas chambers (exact location, physical appearance, dimensions, internal and external structure), or about the homicidal gassing (the operational procedure from beginning to end, the tools employed, the precautions taken by the executioners before, during and after execution).

On rare occasions, as at the trial of Tesch, Drosihn and Weinbacher,⁵ lawyers formulated some unusual questions of a material nature which, although troublesome for the witness, always remained at the fringes of the more-fundamental questions which should have been asked. No lawyer ever demanded clarifications on a weapon which, indeed, he had never seen and that no one had ever shown him. At the major Nuremberg Trial of 1945-46, the German lawyers had manifested total discretion on this point. At the proceedings against Adolf Eichmann in Jerusalem in 1961, the lawyer Dr. Robert Servatius had not wanted to raise the question; in a letter on this subject dated June 21, 1974, he wrote me:

“Eichmann hat selbst keine Gaskammer gesehen; die Frage wurde nicht diskutiert; er hat sich aber auch nicht gegen deren Existenz gewandt.”

*“Eichmann himself had not seen any gas chamber; the question was not discussed; but neither did he oppose the claim of their existence.”*⁶

⁴ Jadwiga Bezwińska, Danuta Czech (eds.), “Handschriften von Mitgliedern des Sonderkommandos”, *Hefte von Auschwitz*, Special Issue (I), Verlag Staatliches Auschwitz-Museum 1972, pp. 32-71; English in: Jadwiga Bezwińska, Danuta Czech (eds.), *Amidst a Nightmare of Crime: Manuscripts of Prisoners in Crematorium Squads Found at Auschwitz*, Howard Fertig, New York 1992, pp. 31-68; for critiques see C. Mattogno, *Auschwitz: Crematorium I and the Alleged Homicidal Gassings*, Castle Hill Publishers, 2nd ed., Uckfield 2016, pp. 27-35; J. Graf, *Auschwitz: Eyewitness Reports and Perpetrator Confessions of the Holocaust: 30 Gas-Chamber Witnesses Scrutinized*, Castle Hill Publishers, Uckfield 2019, pp. 140-151; C. Mattogno, *Sonderkommando Auschwitz I: Nine Eyewitness Testimonies Analyzed*, Castle Hill Publishers, Uckfield, 2021, pp. 160-179.

⁵ On the cross-examination of the witness Dr. Charles Sigismund Bendel by attorney Dr. Zippel, see “Excerpt from transcript of proceedings of a Military Court for the Trial of War Criminals held at the War Crimes Court, Curiohaus, Hamburg, on Saturday 2nd March, 1946, upon the trial of Bruno Tesch, Joachim Drosihn and Karl Weinbacher,” transcript, pp. 30f. (Doc. NI-11953). Regarding this abominable trial, it is indispensable to read: Dr. William Lindsey, “Zyklon B, Auschwitz, and the Trial of Bruno Tesch,” *The Journal of Historical Review*, 4(3) (1983), pp. 261-303. This study has been reproduced in part by Udo Walendy in *Historische Tatsachen*, No. 25 (1985), pp. 10-23.

⁶ In the so-called Eichmann protocols, however, we read that Eichmann, according to his own statements, had seen a “fast-deployable gassing hut” in the countryside, a statement which speaks for itself: R.

While waiting for his trial in Jerusalem, Eichmann, in his cell, was fed like a Christmas goose. He ended up no longer knowing what he had heard, what he had seen, what he had read. Here, for example, is a very important passage from his interrogation by the Israeli government commissioner regarding the ‘gas chambers’ directly from Transcripts, J1-MJ at 02-RM:

“The Commissioner: *Did you talk with Höß about the number of Jews who were exterminated at Auschwitz?*

Eichmann: *No, never. He told me that he had built new buildings and that he could put to death ten thousand Jews each day. I do remember something like that. I do not know whether I am only imagining that today, but I do not believe I am imagining it. I cannot recall exactly when and how he told me that and the location where he told me. Perhaps I read it and perhaps I am now imagining what I had read I heard from him. That is also possible.*”

At the Frankfurt Trial of 1963-65, the lawyers showed themselves to be particularly timid. I should mention that the atmosphere was rather inhospitable for the defense and the defendants. This show trial will remain as a blot on the honor of German justice as on the person of Presiding Judge Hans Hofmeyer, initially *Landgerichtsdirektor*, then *Senatspräsident*. During more than 180 sessions, the judges and juries, the public prosecutors and the private parties, the defendants and their attorneys, as well as the journalists who had come from around the world, accepted as a complete physical representation of the ‘crime weapon’ a mere map of the camp of Auschwitz and a map of the camp of Birkenau, whereupon five minuscule geometric figures were inscribed for the location of each of the alleged homicidal gas chambers, with the words, for Auschwitz: “*Altes Krematorium*,” and for Birkenau: “*Krematorium II*,” “*Krematorium III*,” “*Krematorium IV*,” and “*Krematorium V*”! These maps were displayed in the courtroom.⁷

The revisionists have often compared the Frankfurt Trial with the 1450-1650 trials against witchcraft. Nevertheless, at least during those trials, someone sometimes bothered to describe or depict the witches’ sabbath. At the Frankfurt Trial, even among the defense lawyers who made difficulties for a witness like Filip Müller, not one asked of a Jewish witness or a repentant German defendant to describe for him in greater detail what he was purported to have seen. Despite two judicial visits to the scene of the crime at Auschwitz, accompanied by some German defense lawyers, it seems not one of the latter insisted on any technical explanations or criminological expertise regarding the murder weapon. To the contrary, one of them, Anton Reiners, a Frankfurt lawyer, pushed complacency to the point of having himself photographed by the press while raising the chute cover through which the SS supposedly sprinkled Zyklon B granules into the alleged Auschwitz gas chamber.

And so at Toronto in 1985, I had fully decided to put an end to this bad state of affairs, to break the taboo and, for starters, pose, or rather have Douglas Christie pose, questions to the experts and Jewish witnesses as one normally poses in every trial where one is supposed to establish whether a crime has been committed and, if so, by whom, how and when.

Fortunately for me, Ernst Zündel accepted my conditions, and Douglas Christie consented to adopt this course of action and to pose to the experts and witnesses the questions that I would prepare for him. I was convinced that, in this manner, all might change, and the veil woven by so many false testimonies would be torn away. While I was not counting on Ernst Zündel’s acquittal and we were all resigned to paying the price for our audacity, I nevertheless had hope that, with the aid of this far-sighted man of character, and thanks to his intrepid defense lawyer, history, if not justice, would finally make an end to this legend.

From the moment of the first cross-examination, a tremor of panic began to creep its way into the ranks of the prosecution. Every evening and throughout most of the night, I would prepare the questions to ask. In the morning, I would turn over these questions, accompanied by the necessary documents, to lawyer Doug Christie who, for his part and with the aid of his assistant,

Aschenauer (ed.), *Ich, Adolf Eichmann*, Druffel, Leoni 1980, pp. 179f. (remark by G. Rudolf).

⁷ For a representation of these two maps, see Hermann Langbein, *Der Auschwitz-Prozess, Eine Dokumentation*, 2 Vols., Europäische Verlagsanstalt, Frankfurt 1965, 1027 pp., here on pp. 930-933. For a thorough study of the trial see Dr. Wilhelm Stäglich, *Auschwitz: A Judge Looks at the Evidence*, 3rd ed., Castle Hill Publishers, Uckfield 2015.

conducted the essentially legal aspects of the effort. During the cross-examinations, I maintained a position close to the lawyer's podium and unremittingly furnished, on yellow notepads, supplementary and improvisational questions according to the experts' and witnesses' responses.

The expert summoned by the prosecution was Dr. Raul Hilberg, author of *The Destruction of European Jews*. Day after day, he was subjected to such humiliation that, when solicited in 1988 by a new prosecutor for a new trial against Ernst Zündel, Prof. Hilberg refused to return to the witness stand; he explained the motive for his refusal in a confidential letter wherein he acknowledged his fear of having to confront once again the questions of Douglas Christie. From the cross-examination of Dr. Raul Hilberg, it was definitively brought out that no one possessed any proof for the existence either of an order, a plan, an instruction, or a budget for the presumed physical extermination of the Jews. Furthermore, no one possessed either an expertise of the murder weapon (whether gas chamber or gas van), or an autopsy report establishing the murder of even one single detainee by poison gas. However, in the absence of evidence regarding the weapon and victim, did there exist at least witnesses of the claimed crime?

A testimony must always be verified. The usual first means of proceeding to this verification is to confront the assertions of the witness with the results of investigations or expert opinion regarding the facts of the crime. In the case at hand, there were neither investigations, nor expert reports relative to the alleged Auschwitz gas chambers. Here is what made any cross-examination difficult. Yet, this difficulty should not serve as an excuse, and one might even say that a cross-examination becomes even more indispensable because, without it, there no longer remains any way of knowing whether the witness is telling the truth or not.

5. Jewish Witnesses Finally Cross-Examined: Arnold Friedman and Dr. Rudolf Vrba

For those persons interested in the technical and documental means by which we were nevertheless in a position to severely cross-examine the two principal Jewish witnesses, Arnold Friedman and Dr. Rudolf Vrba, I can do no better than to recommend a reading of the trial transcript.⁸ Pages 304-471 cover the questioning and cross-examination of Arnold Friedman; the latter breaks down on pages 445-446 when he ends by acknowledging that he in fact saw nothing, that he had testified from hearsay because, according to him, he had met persons who were convincing; perhaps, he added, he would have adopted the position of Mr. Christie rather than that of these other persons if only Mr. Christie had been able to tell him back then what he was telling him now!

Dr. Vrba was a witness of exceptional importance. One might even say about this trial in Toronto that the prosecution had found the means of recruiting 'Holocaust' expert Number One in the person of Dr. Raul Hilberg, and witness Number One in the person of Dr. Rudolf Vrba. The testimony of this latter gentleman is one of the principal sources of the famous *War Refugee Board Report on the German Extermination Camps – Auschwitz and Birkenau*, published in November 1944 by the Executive Office of President Roosevelt. Dr. R. Vrba was also the author of *I Cannot Forgive*,⁹ written in collaboration with Alan Bestic, who, in his preface, declares with regard to him:

"Indeed I would like to pay tribute to him for the immense trouble he took over every detail; for the meticulous, almost fanatical respect he revealed for accuracy." (p. 2)

Never, perhaps, had a court of justice seen a witness express himself with more assurance on the Auschwitz gas chambers. Yet, by the end of the cross-examination, the situation had reversed itself to the point where Dr. R. Vrba was left with only one explanation for his errors and his lies: in his book he had, he confessed, resorted to "poetic license" or, as he was wont to say in Latin, to "*licentia poetarum*"!

In the end, a bit of drama unfolded: Mr. Griffiths, the prosecutor who had himself solicited the presence of this Witness Number One, was evidently exasperated by Dr. Vrba's lies and fired off the following question:

⁸ *Queen versus Zündel*, Toronto, Ontario, Canada, beginning January 7, 1985. Published: G. Rudolf (ed.), *The First Zündel Trial*, Castle Hill Publishers, Uckfield (in preparation).

⁹ Bantam Books, New York 1964. For a critique of Vrba's various statements see J. Graf, *op. cit.* (note 4), pp. 102-118.

“You told Mr. Christie several times in discussing your book I Cannot Forgive that you used poetic license in writing that book. Have you used poetic license in your testimony?” (p. 1636)

The false witness tried to parry the blow, but prosecutor Griffiths hit him with a second question equally treacherous, this time concerning the number of gassing victims which Vrba had given; the witness responded with garrulous nonsense; Griffiths was getting ready to ask him a third and final question when suddenly, the matter was cut short, and one heard the prosecutor say to the judge:

“I have no further questions for Dr. Vrba.” (p. 1643)

Crestfallen, the witness left the dock. Dr. Vrba’s initial questioning, cross-examination and final questioning filled 400 pages of transcripts (pp. 1244-1643). These pages could readily be used in an encyclopedia of law under a chapter on the detection of false witnesses.

6. The Prosecution Gives up on Calling Witnesses

Three years later, in 1988, during the second trial of Ernst Zündel, the public prosecutor deemed it prudent to abandon any recourse to witnesses. Canadian justice had apparently learned the lesson of the first trial: there were no credible witnesses to the existence and operation of the ‘Nazi gas chambers.’

Little by little, every other country in the world has learned this same lesson. At the trial of Klaus Barbie in France, in 1987, there was talk about the gas chambers of Auschwitz, but no one produced any witnesses who could properly attest to them.¹⁰ The attorney Jacques Vergès, courageous yet not audacious, chose to avoid the subject. This was a stroke of luck for the Jewish lawyers who feared nothing so much as to see me appearing at the side of Mr. Vergès. If this gentleman had accepted my offer to counsel him, we in France might have been able to strike a tremendous blow against the myth of the gas chambers.

All the while in France, during several revisionist trials, Jewish witnesses sometimes came to evoke the gas chambers, but none of them testified before the court as to having seen one or having participated in a homicidal gassing by hauling bodies out of the ‘gas chambers.’

Today, gas-chamber witnesses are making themselves extremely scarce, and the Demjanjuk trial in Israel, which once again has revealed how much false testimony is involved in the matter, has contributed to this development. Several years ago, it happened that I was aggressively questioned at the rear of a law court by elderly Jews who presented themselves as “living witnesses to the gas chambers of Auschwitz,” showing me their tattoos. It was necessary for me only to ask them to look me in the eyes and to describe for me a gas chamber that inevitably they re-torted:

“How could I do this? If I had seen a gas chamber with my own eyes I would not be here today to speak with you; I myself would have been gassed also.”

This brings us back, as one can see, to Simone Veil and her declaration of May 7, 1983, about which we already know what to think.

7. The Media Witnesses

Aside from the judicial witnesses, there are media witnesses to the gas chambers, or homicidal gassings, at Auschwitz or Birkenau. Here one thinks of the names of Olga Lengyel, Gisela Perl, Fania Fénelon, Ota Kraus, Erich Kulka, Hermann Langbein, André Lettich, Samuel Pissar, Maurice Benroubi, André Rogerie, Robert Clary, ... My library is full of these accounts which duplicate themselves over and over. Paul Rassinier was the first to show us in what manner the falsehood of these testimonies might be demonstrated; he did this notably for Auschwitz in *Le Véritable Procès Eichmann ou les Vainqueurs incorrigibles*¹¹ (*The True Eichmann Trial or, the Incurable Victors*), where Appendix V is devoted to *Médecin à Auschwitz*¹² (*Doctor at Auschwitz*) regarding Miklós Nyiszli.

¹⁰ During the trial against Gottfried Weise in 1988 in Wuppertal (Germany), gas chambers were not mentioned; cf. the contribution of C. Jordan in this book (editor’s note).

¹¹ Les Sept Couleurs, Paris 1962.

¹² English: *Auschwitz: A Doctor’s Eye-witness Account*, Panther Book, London 1962.

From the 1950s to the 1980s, the revisionists found merit in undertaking studies critical of testimonies. Nowadays, it seems to me this exercise has become superfluous. Let us abstain from chasing after ambulances and instead leave the care of criticizing this sub-literature to the exterminationists themselves, and in particular to Jean-Claude Pressac, because – so far as one can determine at present – the most virulent anti-revisionists end by putting themselves into the school of the revisionists. The result is sometimes rife with pungency. In October 1991, the periodical *Le Déporté pour la liberté* (*Deportee for Liberty*), an organ of l'Union nationale des associations de déportés, internés et familles de disparus (UNADIF; National Union of Associations of Deportees, Prisoners and Families of the Missing), announced on its cover-page:

“In the inner pages of this issue, part one of the testimony of Henry Bily, one of the rare escapees from a Sonderkommando.”

In his follow-up of November 1991, Mr. Bily continued the account of his Auschwitz experience under the title of “Mon histoire extraordinaire” (“My amazing story”).

However, in the following installment of *Déporté pour la liberté*, that of December 1991/January 1992, there appeared a “Clarification regarding insertion of the text of Henry Bily in our columns.” The review’s director and editor uncovered the falsehood: in the major portion of his testimony, Mr. Bily had proceeded to

“copy word for word without any citation of references, from passages (notably chapters 7 and 28) of the book by Dr. Miklos Nyiszli: Médecin à Auschwitz, written in 1946 and translated and published in 1961 by René Julliard publishing house. Unfortunately, the original errors committed by Dr. Nyiszli have also been repeated; finally, the most extensive borrowing has to do with the description of the Sonderkommando functions at Auschwitz-Birkenau, in which Henry Bily declares [deceivingly] to have worked. [...] The result of this analysis is that it is in no way possible to consider Henry Bily’s text as an original and personal testimony.”

To an attentive reader of this declaration, the sentence “Unfortunately, the original errors committed by Dr. Nyiszli have also been repeated” might allow one to perceive that, worst of all, Mr. Bily, a petty Jewish tradesman, had recopied a testimony which itself had already been false. As I have recently mentioned, Paul Rassinier had long ago proved that *Médecin à Auschwitz*, a work dear to Jean-Paul Sartre who in 1951 published parts of it in *les Temps modernes*, could only be one of the greatest impostures. Many revisionists, and in particular Carlo Mattogno,¹³ have since confirmed this assessment. As for me, in my review of Jean-Claude Pressac’s book *Auschwitz: Technique and Operation of the Gas Chambers*,¹⁴ I have inserted a section titled: “Pressac’s Involuntary Comedy Apropos M. Nyiszli.” I recommend the reading of this section to people interested in false testimonies on Auschwitz, false testimonies which pharmacist J.-C. Pressac tries to defend at any price by way of convolutions, laborious inventions and flighty speculations, thus unintentionally discrediting them once and for all.¹⁵

8. False Witnesses Elie Wiesel and Primo Levi

A few words are needed in regard to Elie Wiesel and Primo Levi. Regarding the former, I come back to my article “A Prominent False Witness: Elie Wiesel.”¹⁶ In *Night*,¹⁷ a biographical account particularly regarding his internment at Auschwitz and Buchenwald, Mr. Wiesel does not even mention the gas chambers, but it appears, by way of a sort of universal media convention, that he is considered as a witness *par excellence* on the ‘Holocaust’ and the gas chambers. According to him, if the Germans exterminated large numbers of Jews, it was by forcing them either into raging fires or furnaces! The conclusion of his testimony includes an extremely curious episode (pp. 129-133) over which I have been waiting years for Elie Wiesel to furnish us an explanation: in January 1945 he tells us, the Germans gave him and his father the choice between staying behind in the camp to await the arrival of the Soviets, or leaving with the Germans; after agreeing between them, the father and son decided to depart for Germany with their executioners instead of staying in place to await their Soviet liberators...¹⁸

Curiously, for several years now, Primo Levi has been posthumously elevated by the media to the rank of first importance among witnesses of the Auschwitz gas chambers. He is the author of *Se questo è un uomo*.¹⁹ The first part of the book is the longest and the most important; it comprises 180 pages (pp. 7-186) and was edited in 1947; the author says, starting on page 19, that he learned about the gassing of the Jews at Birkenau only after the war; he himself was working at Buna-Monowitz and had never set foot in Birkenau; also, he only spoke in extremely vague terms and merely six times about “the” gas chamber (pp. 19, 48, 51, 96, 135 and 138), and on one occasion about the gas chambers (page 159); he is satisfied to nearly always mention it in the singular and as a rumor about which “everyone is talking” (page 51). Suddenly, in his “Appendix” written in 1976, being some 30 years later, the gas chambers make a forceful entry: in the space of 26 pages (pp. 189-214), which, in view of their more compact typography, can be considered as 30 pages, the author mentions on 11 occasions (page 193, two times; page 198, three times; page 199, once; page 201, two times; pages 202, 209 and 210, once each); on two occasions, he speaks of “gas” and on nine occasions of “gas chambers” (always in the plural); he writes as if he had seen them:

“The gas chambers were in effect camouflaged as shower rooms with plumbing, faucets, dressing rooms, clothes hooks, benches, etc.” (page 198)

He does not even fear to write additionally:

“The gas chambers and the cremation furnaces had been deliberately conceived to destroy lives and human bodies by the millions; the horrible record for this is credited to Auschwitz, with 24,000 deaths in a single day during the month of August 1944.” (pp. 201f.)

Elie Wiesel and Primo Levi are not the only ones to have thus ‘enriched’ their recollections.

¹⁶ “Un grand faux témoin: Elie Wiesel,” *Annales d’histoire révisionniste*, Spring 1988, pp. 163-168; see also “Un grand faux témoin: Elie Wiesel (suite)” (A Prominent False Witness: Elie Wiesel (Continued)), *Nouvelle Vision*, September 1993, pp. 19-24. English: “A Prominent False Witness: Elie Wiesel,” IHR leaflet (www.ihr.org/leaflets/wiesel.shtml; <https://codoh.com/library/document/858/>). See also the comprehensive study by Warren B. Routledge, *Elie Wiesel, Saint of the Holocaust: A Critical Biography*, 3rd ed. Castle Hill Publishers, Uckfield 2020.

¹⁷ *La Nuit*, Preface by François Mauriac, Les Editions de Minuit, Paris 1958.

¹⁸ One point of particular interest is that in the German translation of this book (*Die Nacht zu begraben*, with German translation by Kurt Meyer-Clason, Ullstein, Munich 1962, pp. 17-153), the cremation furnaces of the original French version are done away with to be replaced by gas chambers (which also applies to Buchenwald). I owe this discovery to the Swiss revisionist Jürgen Graf and I am indebted to Agnes Wimmer, a German revisionist living in France, for a list of 15 instances where the German translator thought it good to use the word ‘gas’ where it was not used in the original text (see Annex). In December 1986, I made my way to Oslo to attend the awarding of the Nobel Peace Prize to Elie Wiesel. Assisted by friends, I distributed a tract previously titled “Elie Wiesel, A Prominent False Witness.” Some months later, Pierre Vidal-Naquet, one of my most implacable adversaries, denounced Mr. Wiesel as a man “who talks any rubbish that comes into his head [...] It suffices to read certain of his descriptions in *Night* to know that certain of his accounts are not exact and that he ends by transforming himself into a Shoah peddler. He commits an injustice, an immense injustice to historical truth.” (Interview by Michel Folco, *Zéro*, April 1987, page 57).

¹⁹ French: *Si c’est un homme*, Julliard Press, pocket edition, Paris 1993; original: *Se questo è un uomo*, de Silva, Turin 1947; English: *If this Is a Man*, Penguin, Harmondsworth/New York 1979.

Primo Levi was a chemical engineer. Regarding his crack-up or delirium from a scientific point of view in *If This Is a Man*, one should consult Pierre Marais' *En lisant de près les écrivains chantres de la Shoah – Primo Levi, Georges Wellers, Jean-Claude Pressac* [A Close Reading of the Siren Writers of the Shoah – Primo Levi, Georges Wellers, Jean-Claude Pressac];²⁰ see in particular “*Le chimiste, la batterie de camion et... les chambres à gaz*” [The Chemist, the Truck Battery and... the Gas Chambers], the chapter which involves Primo Levi (pp. 7-21). The latter died on April 11, 1987, (a probable suicide, we are told). It was to his very nature of being a Jew that he owes not having been shot by the Fascist militia on December 13, 1943, at the age of 24.²¹

“The Fascists had captured him in the role of a partisan (he was still carrying a pistol), and he declared himself a Jew in order not to be immediately shot. And it is in the role of a Jew that he was delivered over to the Germans. The Germans sent him to Auschwitz [...]”

9. Conclusion

From 1945 to 1985, the presumed judicial witnesses of the Auschwitz gas chambers have benefited from an extraordinary privilege: they have always been spared the ordeal of cross-examination regarding the material nature of the purported facts they related. In 1985, at the first of two Zündel trials in Toronto, attorney Douglas Christie was fully agreeable, based on my suggestion and offer of assistance, to conduct the cross-examination according to standard procedure for this type of witnesses. The result was the unmasking of witnesses Arnold Friedman and Dr. Rudolf Vrba. This reversal was so serious that today, one can no longer find witnesses willing to take the risk of swearing before the dock of a court of law that they saw a homicidal gassing, whether at Auschwitz or any other concentration camp under the control of the Third Reich.

The would-be media witnesses continue to proliferate, unchecked, in the world of radio, television and books, where they hardly run the risk of being put into difficulty by embarrassing questions. Yet even these witnesses are becoming more and more vague, making themselves liable to denunciation by representatives of the exterminationist thesis. These latter are in effect aligning themselves more and more with the revisionist school because they realize that up until now they have stood by the lies of too many false witnesses, lies that end by costing their own cause too dearly.

As there are notoriously more and more risks now in presenting oneself as a witness of the gas chambers – as again did the Jew Filip Müller in 1979 – the solution which nowadays tends to prevail is the one which, since May 7, 1983, Simone Veil has had to adopt in the aftermath of the April 26 decision by the Paris Court of Appeal, a decision which recognized that my work on the problem of the gas chambers was serious insofar as I demonstrated that the accepted testimonies flew in the face of strong physical-chemical impossibilities. The solution, or more-over, the evasion, advocated by Ms. Veil consisted in saying that, if there were in effect no proofs, no traces, and no witnesses of the crime, it was because the Germans had destroyed all the evidence, all the traces, and all the witnesses. Such a statement, besides being absurd, would in turn necessitate evidence which Ms. Veil has not provided. But this matters little. Let us take note of this statement and, like Ms. Veil and those who in practice seem to rally to her thesis, let us also put to good use the evidence long brought to light by the revisionists: not only are there no proofs and no traces of ‘Nazi gas chambers,’ but there are no witnesses for them either.

Today, at the close of 1993, the testimonies regarding the Auschwitz gas chambers are discredited, even among the exterminationists. The narrative founded upon these testimonies is beginning to give way to a narrative founded either on facts or arguments of a scientific nature. It is this which I had advocated in my article of December 29, 1978, in *Le Monde* and in my letter to *Le Monde* of January 16, 1979. It was necessary to wait more than ten years to see our adversaries venture into the arena where I had invited them to join us in being evaluated: the field of science. Jean-Claude Pressac had been appointed, notably by Mr. and Mrs. Klarsfeld, to

²⁰ La Vieille Taupe, Paris 1991, 127 pages.

denounce ‘testimonial history’ and to replace it with a scientific basis or, at least, one with a scientific appearance.

Claude Lanzmann and the supporters of ‘testimonial history’ are upset,²² to the satisfaction, by the way, of the revisionists. A half-century of unsubstantiated testimonies must now be definitively succeeded by an inquiry for facts and proofs along a judicial, scientific and historical basis.

* Thanks to a discovery by Jürgen Graf and the help of Ms. Agnes Wimmer.

** “Vernichtungslager” means ‘camp with homicidal gas chambers.’

Conclusion: The English translation (1960) of the French original (1958) is correct, whereas the German translation (1962) reads “gas” in 15 instances where, in fact, there was no mention of “gas” in the French original. This replacement was done so systematically that the translator even invented two gas chambers in the Buchenwald Concentration Camp.

²² See notably the article by Robert Redeker which he published in C. Lanzmann’s review *Les Temps Modernes*, under the title: “La Catastrophe du révisionnisme” (The Revisionist Catastrophe), November 1993, pp. 1-6; here, Revisionism is presented as a catastrophic sign of a changing time: ‘Auschwitz’ was – and for the author, still is – a ‘mystique,’ which is to say a belief enveloped by religious reverence; yet, he says in a deploring tone that ‘Auschwitz’ is becoming the subject of historical and technological considerations. This article was in printing when there appeared in *L’Express* a substantial write-up on the new book by Jean-Claude Pressac (September 23, 1993, pp. 76-80, 82-87). Claude Lanzmann virulently protested against this turn of events taken by ‘Holocaust’ history. He wrote: “Even if it is in order to refute them, we thus legitimize the arguments of the revisionists, which become the only criterion by which every text and every author is now judged. The revisionists occupy the entire playing field” (*Le Nouvel Observateur*, September 30, 1993, page 97).

The German Justice System: A Case Study

CLAUS JORDAN

Editor's Introduction

For a short time during the war, Gottfried Weise was a German guard at the Auschwitz Concentration Camp. Was he therefore automatically a subhuman not deserving of justice? Gottfried Weise asserted that he did not do anything evil in these months, and ten former internees who could remember Weise confirmed this. However, two other 'witnesses' accused Weise of murder. Shouldn't both sides be heard and their arguments weighed? That is the way it is meant to be in a state under the rule of law. But, as we shall see, reality is very different. In fact, the case of Gottfried Weise is an example of the hypocrisy of the entire German establishment, not just the legal system.

Totally convinced that they are in the sole possession of the absolute truth regarding the Holocaust, they simply refuse to even consider the possibility that they could be wrong, and that their actions could cause tremendous suffering for innocent people. As soon as the 'Holocaust' is involved in any court case, prosecutors and judges, media and politicians, *en masse*, simply ignore all exonerating evidence!

In a very important book, Rüdiger Gerhard has documented how, during the first trial against Weise in 1991, the judges refused to hear or accept any evidence from the ten witnesses for the defense as presented by Weise's defense lawyers.¹ These former inmates did not witness the alleged crimes claimed by others, and thus could not contribute anything to their elucidation, such was the court's reasoning. Since, in the eyes of German law courts, a crime is almost indisputably proved of having occurred as soon as a "Holocaust survivor" claims that it happened, German courts more or less accept only incriminating evidence. Consequently, any ensuing criminal proceeding merely serves the purpose of establishing the dimension of the claimed crime at issue, naming the culprits and meting out the punishment they presumably deserve.

The following article describes the Sisyphus-like struggle of the defense team in their attempt to exonerate Gottfried Weise and make those blinded by their arrogance and self-righteousness see the light of truth. They failed in the first; Gottfried Weise died without justice being done. His constant friend and defender Claus Jordan also passed away. May this article help to make the second goal come true.

Germar Rudolf

1. Preface

Germany's justice system is based on the principle of a separation of powers. The administration of justice is supposed to be independent of politics. It does, however, have to conform to the law, and laws are passed by political bodies. So far, so good – at least as long as legislative practices in turn are committed to upholding the legal traditions that have evolved over time and have been tried and proven in practice.

But if legislative practice is guided by political opportunism, and if special laws are passed to which jurisprudence must bow, then the administration of justice becomes a tool of politics. The separation of powers, which is such a blessed principle, can then be abused by legislators as an alibi to shirk their responsibility for the consequences of bad laws.

The 1979 rescission of the statute of limitations for murder in Germany is an example of special legislation that has had grave consequences. The decision to revoke this statute was the result of political pressure. Concerns regarding potential miscarriages of justice were rationalized away. The case of Gottfried Weise, set out in this chapter, shows how very

¹ R. Gerhard (ed.), *Der Fall Gottfried Weise*, 2nd ed., Tübingen, Berg 1991, pp. 31ff., 40, 43-47, 51ff., 60, 73. See my contribution on the value of testimonies for a more-general overview.

justified these concerns were and how thoughtlessly all cautions were shrugged off with indifference. But now, the legislators no longer feel responsible: after all, we have the separation of powers.

Can it be that the legislators now, after the child they begot with so many sanctimonious speeches turns out to be wayward, do not want to remember it?

It is my hope that the discussion of this case will prompt the correction of the legislative error of 1979 and that the German justice system will return to its naturally evolved tradition, as was predicted that same year:²

“[...] Perhaps there will in fact be a few new cases that are brought to trial as a sort of justification (eagerly seized upon) for the rescission of the statute of limitations. According to the experts, however, it is not likely. In light of the strict rules of evidence, which cannot be tampered with, it is doubtful that any verdicts can still be handed down. One day, around the year 2000, the stipulation that murder is not subject to a statute of limitations will be discovered amongst the nooks and crannies of our justice system, and people will wonder how this came about. The umpteenth revision to the Criminal Code will then casually correct the problem – unless by that time we will have a state which claims for itself that omnipotence that we [Germans] are still free to call ‘hubris.’”

2. Rescission of the Statute of Limitations: Breach of Legal Tradition

On March 20, 1979 and July 3, 1979, the members of the *Bundestag*, the lower house of the then-West-German Parliament, debated the rescission of the statute of limitations for murder. The corresponding bill was passed into law on July 3, 1979, with a very close margin of 255 to 222 votes.³

2.1. Influence from Abroad

Naturally, there was interest in this question abroad, but this interest was fostered by German circles as well. For example, in an article titled “American Delegation on the Issue of Rescission: Today at Schmidt’s” the newspaper *Frankfurter Allgemeine Zeitung* reported on a tour by the Los Angeles *Simon Wiesenthal Center for Holocaust Studies* that had been supported by the German Foreign Office in Bonn.⁴ Members of the Israeli Parliament also sought to influence the decision-making process at the urging of German authorities. For example, Gideon Hausner, member of the Knesset and the Israeli Holocaust Center Yad Vashem, reports that German Federal Chancellor Helmut Schmidt urged him to impress upon the German legislators that National-Socialist crimes must not be allowed to lapse under a statute of limitations – which Hausner proceeded to do most insistently.⁵

2.2. Judicial Concerns

Reminders that Article 103 of the German Basic Law prohibits retroactive laws were brushed aside with reference to a 1969 decision of the German Federal Constitutional Court. Opponents of the rescission of the statute of limitations raised further judicial concerns. Dr. Alois Mertes (member of the political party Christian-Democratic Union) pointed out the conflict between justice and public peace. In European legal tradition, statutes of limitation mean exclusively the “protection of the state [and certainly of the individual as well] from miscarriages of justice.” And:⁶

“In the countries belonging to the Anglo-American legal community, the state safeguards against the risk of injustice in other ways, namely through the principle of oppor-

² F. K. Fromme, *Frankfurter Allgemeine Zeitung* (*Frankfurter Allgemeine Zeitung*), July 5, 1979: “Was man sagt, und was man meint.”

⁶ Plenary Transcripts 8/166, p. 13235. Emphasis in the transcript.

*tunity and through especially strict rules of evidence. In German and European law, limitation is the necessary corrective to the principle of legality. [...] Incidentally, it is one of the great **hypocrisies** of our time that the punitive purpose of expiatory justice is everywhere relegated to second place in favor of **resocialization**, while in the case of National-Socialist crimes expiation is made the foremost and sole purpose of punishment even after 35 to 47 years of resocialization."*

In his statement of position, Hans-Jochen Vogel, then German federal minister of justice, did not express any concern about miscarriages of justice, but responded merely to the suggestion that alleged National-Socialist criminals could no longer be convicted anyway due to lack of evidence. He commented that modern techniques of criminal investigation were able to

*"secure evidence of crimes and perpetrators in a way that allows the conviction of the criminal even decades after the fact."*⁷

He made no mention of applying the techniques of modern criminology to ensure the prevention of miscarriages of justice. Warnings about one-sided investigation came from opponents of rescission who feared that convictions might result despite insufficient evidence.⁸ Proponents, on the other hand, cited the principle of *in dubio pro reo* – i.e., ‘when in doubt, acquit’ – a practice they clearly considered a matter of course.⁹

This certainly was shown even more clearly by Friedrich Fromme, co-editor of the *Frankfurter Allgemeine Zeitung*, in his aforementioned newspaper article where he wrote of “the strict rules of evidence, which must not be tampered with,” as of something self-evident and to be taken for granted. Apart from (pseudo-)morally suspecting each other, all discussions that flare up time and again about the rescission or prolongation of the statute of limitations in the German parliament altogether focused on the question of how best to punish alleged NS criminals, but never on the question of whether, after such a long period of time, the available evidence can possibly ascertain the actual events of the past, to say nothing of the culpability for them. Since everybody was convinced of the reality of each and every claimed crime, a criminological quest for evidence was deemed necessary only in order to allocate the guilt claimed, and then to mete out the supposedly needed penance.¹⁰

None of these “self-evident” matters of the rule of law mentioned by the members of the *Bundestag* or by Fromme was observed in the case of Gottfried Weise: Weise was convicted with nary a thought given to the acquittal demanded by reasonable doubt. To this defendant’s detriment, the strict rules of evidence were trampled upon most grossly. Furthermore, there was no sign of modern forensic or criminological investigation in his trial, least of all where such endeavors would have resulted in an exoneration of the defendant. But then again, H.-J. Vogel had suggested such techniques strictly for the one-sided purposes of procuring *incriminating* evidence.

2.3. The Fig-Leaf: An Expert Report

Originally, the statute of limitations was to be rescinded only for cases of so-called NS-murders.¹¹ Members of the *Bundestag* Maihofer and Helmrich openly supported this plan. However, constitutional concerns were raised about such very-obvious special legislation, so that in the end the rescission was applied to murder in general.

The question regarding the constitutionality of a general rescission of the limitation for murder remained open. In his capacity as expert, Professor Böckenförde had stated that the rescission of limitation becomes unconstitutional if it means that normative rules of trial procedure can no longer be uniformly applied. He wrote:¹²

¹² *Frankfurter Allgemeine Zeitung*, June 30, 1979, no. 149, p. 6.

“[...] This may happen, for example, if [...] the results obtained are random at best, i.e., due to the unstoppable deterioration of evidence, insurmountable investigative difficulties, lack of opportunity for effectively securing evidence, fundamental uncertainty or insufficient objectifiability of the facts of the crime.

It is beyond the scope of this report to ascertain whether a rescission of the statute of limitations for NS-murders or for murder in general would reverse into such impracticability. This requires a detailed practical understanding and assessment of actual conditions, particularly of the investigative and evidential problems involved [...].”

In other words, this report did not state that the rescission was constitutional. Rather, it stated that at the time (1979) no unconstitutionality was yet apparent, and that, to determine this matter conclusively, it would be necessary to examine the “actual conditions” of several cases.

2.4. Empty Promises

One empty promise was the assurance, given when an expert report was obtained, that the overall constitutionality of the matter would be ascertained in the future. In fact, however, clearly no one in politics or science, no one amongst the guardians of democracy, and no one in the media really wants to know this, or else the supplementation and conclusion of the report would long have been commissioned by now, either from Professor Böckenförde or from others.

In 1979, the embarrassing vulnerability of the core issues of *constitutionality* and *miscarriage of justice* was shielded with Böckenförde’s unfinished expert report as with a fig-leaf, garnished with sanctimonious aphorisms.

The case of Gottfried Weise reveals that these were but hollow phrases and empty promises.

3. The Case of Gottfried Weise: an Example of Reversal into Impracticability

In 1988, pensioner Gottfried Weise was convicted in Wuppertal on five counts of murder. An examination of the Wuppertal trial reveals all the characteristics identified in 1979 by Professor Dr. Böckenförde as being signs of a reversal into impracticability:

- a. Unstoppable Deterioration of Evidence: For example, it has been impossible to obtain the transfer papers which, together with two other documents on hand, would prove that Weise could not have been posted to the alleged site of the crime in Auschwitz until September 1944. (The alleged time of the crime being “June/July 1944.”)
- b. Insurmountable Investigative Difficulties: For example, the court was not even able to develop a realistic conception of the alleged crime scene of the Freimark cases. (cf. Section 3.2.2.)
- c. Lack of Opportunity for Effectively Securing Evidence: For example, both the public prosecutor’s office and the court neglected to obtain a statement from former inmate Dr. Eisenschimmel in due time. His testimony would have gone a long way towards exonerating the defendant. When the defense attempted to secure this testimony, Dr. Eisenschimmel was already so ill that he could no longer testify.
- d. Lack of Objectifiability of the Crime: Wherever concrete facts were concerned, the court was always very vague in its ‘findings.’ In the Freimark cases, for example, the alleged time of the crime was given as “June/July 1944,” and the names and sometimes even the sex of the alleged victims are not stated. This makes it much more difficult to locate concrete counter-evidence such as might have been possible, for example, by cross-referencing the Auschwitz *Death Books* now available.

The Wuppertal Court ‘overcame’ this evidential problems only by considerably violating the strict rules of evidence.

Another point which must be mentioned is one that Böckenförde could not possibly have conceived of because he spoke from the perspective of naturally evolved legal tradition: What happened in the Wuppertal trial was practically a

- e. Reversal of the Burden of Proof: The defendant was in the desperate position of being unable to prove his innocence, e.g., to prove that he could not have been at the alleged site of the crime at the stated time. The court was satisfied with contradictory and vague eyewitness statements, whose doubtful quality it glossed over with the claim that it was exactly these contradictions that showed that the witnesses had not coordinated their testimony beforehand. These testimonies were proof enough for the court. It was up to the defendant to prove his innocence.

It was not until long after the trial that exonerating evidence was found whose timely acquisition had been unlawfully avoided and prevented by the prosecutors.

3.1. Overview of the Background, Course and Consequences of the Wuppertal Trial of Gottfried Weise

3.1.1. Background of the Case of Gottfried Weise

After a severe injury as a soldier, Gottfried Weise lost an eye. He was certified unfit for frontline or guard duty, and after training as bookkeeper, he was detailed to the Auschwitz Concentration Camp, where he was first employed by the Camp's administrative department managing the inmates' funds (*Häftlingsgeldverwaltung*), which was located outside the camp, and later in the *Personal Effects Warehouse II* in Birkenau, where the possessions of camp inmates were stored. There Weise had to supervise a group of Jewish women. After the Auschwitz Camp was dissolved, he conducted this group safely to the Allies, via Ravensbrück. All of 'his' inmates had testified for him: how he had worked to make their lot easier in Auschwitz, that they had been glad to be reassigned to his command during the transport, that once he had even carried a disabled girl out from under Russian artillery fire. After minute scrutiny in the course of three years of imprisonment, Gottfried Weise was released. His conscience was clear, and so he proceeded to do something quite extraordinary: through the Red Cross and the World Jewish Congress, he searched for the former inmates who had been under his supervision at Auschwitz. In the verdict handed down by the Wuppertal District Court,¹³ however, these efforts on the part of the defendant are only mentioned disparagingly as signs of his great cunning.

3.1.2. How Did the Indictment Come About?

In 1962, in the course of investigations against Richard Baer and others (which ultimately led to the great Frankfurt Auschwitz Trial), one witness, Herbert Tischler from Vienna, had told of an SS *Unterscharführer* or *Rottenführer* "Weiser" who, he claimed, had killed an inmate when he tried to shoot a tin can off his head. Thus "William Tell of Auschwitz" was born.

Although an official document identified Tischler as an unreliable witness, and it was a known fact that he was wanted by Interpol for all sorts of criminal acts, as witness for the prosecution in an NS trial, Tischler was nevertheless considered credible. His reference to the alleged "William Tell of Auschwitz" entered the mills of criminal prosecution. The alleged "Tell shooting" was ascribed to former *Unterscharführer* Gottfried Weise. Inquiries were begun in 1980; questionnaires with details of the alleged crime and with photos of Gottfried Weise were sent to Poland, Israel, Hungary, and the United States.

In other words, witnesses were sought – and found. With the example of the witness Freimark, I will show how this search for witnesses and the 'refreshing' of their memories was done.

3.1.3. What Were the Charges?

On June 7, 1985, the Public Prosecutor's Office of Cologne charged the pensioner Gottfried Weise, resident in Solingen, born in Waldenburg on March 11, 1921, with having committed murder in the Auschwitz Camp.

¹³ Verdict of the Wuppertal District Court, Jan. 28, 1988, pp. 104-107.

On January 28, 1988, Weise was found guilty of five counts of murder and sentenced to life imprisonment by the Wuppertal Jury Court headed by Wilfried Klein, now vice-president of the Wuppertal District Court.

According to the witness Józsefne Lazar, the defendant committed two murders (the ‘Lazar cases’) in Personal Effects Warehouse II by means of the so-called “tin can shooting,” where the defendant placed tin cans on the head and shoulders of his victims and then shot at the tins and then at the victims.

According to the witness Jacob Freimark, the defendant also committed three murders (the ‘Freimark cases’) in “June/July 1944” in Personal Effects Warehouse I, namely:

- a. one murder in a hut (the ‘hut murder’), and
- b. approximately four weeks later, two murders in an area between the camp fence and a ramp some 30 ft. away (the ‘ramp murders’).

3.1.4. How Was the Trial Conducted?

The entire trial took place against the backdrop of a foregone conviction of the defendant in a scenario of hatred. The press and the court worked in tandem. For example, the press report quoted below repeated eyewitness testimony which, though proven to be false,¹⁴ was gullibly accepted at face value not only by the credulous public but also by the court, which actually included even this so-easily refutable atrocity tale in its written Reasons for Sentence:¹⁵

“Children Were Thrown Alive into the Burning Pit

[...] When a new transport of inmates arrived at the camp, the children were immediately separated from the rest of the group, and thrown alive into a blazing fire-pit, [...].

Suddenly, the intoxicated ‘Blind One’ arrived (that’s what the inmates called the defendant, Weise), turned the light on and ordered Olga [...] to dance [...]. It was horrible! Outside, the screams of the children. [...]

*The Blind One ordered the girl, who was pregnant, to stand still, and kicked her in the stomach with his boot. The young woman screamed and collapsed. [...]*¹⁶

This sort of atrocity tale served to brand the defendant as the “Beast of Auschwitz” – not only in the eyes of the public, but also in those of the court. While the defendant was not convicted for the alleged live burnings, the assumption that they did take place and that the defendant had displayed a great deal of callous hard-heartedness most certainly did influence the court in reaching its verdict. This is proven clearly by the detailed way in which the court repeats this atrocity tale in its Reasons for Sentence, and then accuses the defendant of “utterly callous hard-heartedness.”

The biased attitude of the judges was also clearly apparent in the courtroom. For example, the VVN – the Organization of Persons Persecuted by the Nazi Regime, a group known at that time to be financed from Communist East Germany and directed by that country’s State Security Service – this VVN had handed out fliers in and outside the courtroom. The presiding judge offered a gentle reprimand for the distribution of the fliers in the courtroom – something like that, he said, should not be disseminated about the defendant until after he had been convicted. But no stop was put to the continued distribution of the leaflets.

The constant taking of shorthand notes by representatives of the VVN and by ‘escorts’ of the witnesses for the prosecution was also not forbidden by the court, which generously overlooked it. (Incidentally, Ruth Kulling of the VVN always had a seat in the area reserved for members of the press.) In contrast, the defense counsel had urged the son of the defendant to refrain from taking notes, as doing so was not permitted during the trial.¹⁷ – Several times it was also observed that those who had made shorthand notes with impunity, proceeded to read their notes to the witnesses for the prosecution before these took the witness stand.

¹⁴ There was no burning pit at the location mentioned, near Personal Effects Depot II; cf. the chapter by J. C. Ball, this volume.

¹⁵ Reasons for the Wuppertal Auschwitz verdict of Jan. 28, 1988, p. 96.

¹⁶ Wuppertal newspaper *General-Anzeiger*, June 10, 1987.

¹⁷ Of course it is permissible to take private notes or even to prepare a private protocol in German courts of law, but they may not be used to manipulate witnesses. Editor’s remark.

In any normal trial, the defense could and should have objected here, but in light of the scenario of hate that had been tolerated and even partly contributed to by the court, the defense in the Wuppertal trial saw no purpose in doing so. In order to avoid providing even further material for all the advance preparation and choreographing of the witnesses for the prosecution (in flagrant violation of all rules of procedure, by the way), the defense counsel had advised the defendant to refrain from making any statements of his own. After the verdict had been handed down, the press twisted this accordingly:¹⁸

“The defendant’s silence, said Klein, showed that Weise had no facts with which to counter the accusations – ‘the past has caught up with him now and will not be hushed up.’”

No one seems to have noticed the monstrous implications of this statement: the defendant had no facts with which to counter the accusations! What this suggests is that the accusations advanced in the indictment and by the witnesses were facts in and of themselves, which the defendant was unable to refute. But accusations, of course, are by no means facts.

But the reversal of the burden of proof, accepted so matter-of-factly by the press, is no mere slip of the judicial tongue. The closer one examines the trial documents, the clearer it becomes how much the court allowed its own bias to guide it. In any normal trial, the defendant is presumed innocent until proven guilty, and any uncertainty dictates the maxim “when in doubt, acquit.” In Wuppertal this was not so.

In the given situation of reversed burden of proof, it was of course an easy matter to turn all the many investigative problems, which are well to be expected in such a very late trial, against the defendant – especially those listed under a) through c) above.

Nevertheless, the defendant would have had a fighting chance to prove his innocence – if that’s the way it had to be – if the court had not inexorably restricted or downright denied him every opportunity to do so. One of the hobbles placed on his defense was that the court relentlessly perpetuated the prosecution’s one-sided selection of witnesses:

The prosecution had a wealth of information regarding potential witnesses at its disposal. It was the duty of the Public Prosecutor’s Office to sift through these for witnesses for the prosecution *as well as for the defense*, but this was not done. Already in the course of preliminary investigations, only those former inmates were urged to testify if they claimed to have incriminating information, such as for example the witness Lazar in her testimony in Budapest on June 2, 1987, and June 16, 1987. The transcripts¹⁹ show, among other things, how compassionately and urgently the Presiding Judge Klein – who had traveled all the way from Wuppertal for this purpose – strove to persuade the witness to consent to testifying in Wuppertal. Potential witnesses for the defense were dealt with rather differently. When the defense suggested the questioning of an ill witness in Israel, Moische Korn, this was rejected:²⁰

“The motion to hear evidence does not indicate any reasons that the witness can be examined in the foreseeable future.”

The defense attempted to counteract this one-sided selection of witnesses by submitting numerous motions to summon former inmates (more than twenty) and by further motions to hear evidence, but all were summarily rejected. These rejections were justified time and again by the comment that the best these witnesses could do would be to testify that they knew nothing of the alleged crimes committed by the defendant. This sort of testimony was said to be irrelevant because, first of all, the inmates could not have known everything and, second, after 43 years they could not possibly remember exactly. In contrast to this, the court always assumed that the witnesses for the prosecution could always remember well enough to testify – and to be believed.

The Wuppertal Court consistently downgraded motions to hear evidence submitted by the defense to the level of motions to obtain evidence, only to reject them.²¹ In the first order for release on bail, however, the Provincial High Court in Düsseldorf had stated that in its view all potential witnesses should be heard, since the difficulty involved in establishing the truth

¹⁸ Article by Ulla Dahmen-Oberbossel in the Wuppertal *General-Anzeiger* of Jan. 20, 1988.

¹⁹ Copies of both transcripts were appended to the Motion for Appeal of Aug. 12, 1988.

²⁰ Rejection of Motions to Take Evidence nos. 1-13, quoted here from p. 17 of the Motion for Appeal.

²¹ Motion for Appeal, p. 6.

after such a long time warranted this.²² This is most remarkable, as it is not the usual procedure in Germany for another court to attend to matters of facts; on principle, this is the sole task of the court responsible for the trial. The Provincial High Court in Düsseldorf reinforced its opinion by granting Weise a renewed release on bail after the Wuppertal verdict.

Another example of suppression of evidence is the testimony of Isaac Liver, given on October 18, 1985, at the headquarters of the National Police in Villejuif, France. The numbers in the following quoted excerpts refer to written questions given to the witness:²³

"No. 2: I worked in 'Camp Canada,' first in Auschwitz in Canada No. 1, then in Canada No. 2, which was in Birkenau, approximately 4.3 miles from Auschwitz. In 1944 I was in Birkenau [...].

No. 4: The name Gottfried Weise and the nicknames 'the Blind Man' or 'Sleepy' are absolutely unfamiliar to me.

No. 5: I did not witness the crimes mentioned in this file and never heard anyone talk about them. I believe that this story is untrue, as there is no doubt that all the prisoners in the camp and probably those in the other camps as well would have known of it."

"Personally, I feel that this story is untenable; everything described in this file [!] is completely new to me, and if these things had really taken place in the camp the way they are described, I could not but have known about them."

Of course, an unprejudiced court would have examined precisely this witness in detail so as to avoid getting a one-sided account of the events, to avoid giving the public a one-sided story, and to ascertain the ability to remember and the credibility of the various witnesses by comparing their testimonies. But the Wuppertal Court 'knew' from the outset which witnesses were credible and which were not. And so, the witness Isaac Liver was not heard. The transcript of his earlier examination, while available to the court, was not read, thus remaining unknown to the public as well as to the lay judges. Other testimony that could have exonerated the defendant and corrected the purely negative way he had been presented to the public was swept under the carpet the same way.

Not only did the court refuse to summon witnesses for the defense, it also thwarted the timely presentation of material evidence. This will be discussed in greater detail in Section 3.1.7.2.

3.1.5. Reasons for Sentence

On January 28, 1988, the First Division of the Wuppertal District Court decided that the defendant, while acquitted of other accusations, was guilty of five counts of murder, the overall sentence being life imprisonment. The first eighteen pages of the Reasons for Sentence are devoted to a representation of the "historical background" based on "generally known and historically established facts" with

"reference to, for example [the books]: Buchheim/Broszat/Jacobsen/Krausnick, Anatomie des SS-Staates, Walter-Verlag, Vols. I and II; Hofer, Der Nationalsozialismus – Dokumente 1933-1945, Fischer-Verlag; Kogon, Der SS-Staat, Wilhelm-Heyne Verlag."

Auschwitz literature giving sound, verifiable and useful factual information is completely missing in this list of works.

It is not surprising, therefore, that the descriptions of the camp, its organization and circumstances, which take up another 40 pages of the Reasons for Sentence, contain numerous patently and verifiably false claims and statements. For example, on pages 57f. of the Reasons for Sentence it actually states:²⁴

"For many of the inmates, their most valuable possession was a bowl that served equally for their calls of nature and for eating."

And then:

"The purpose served by the Auschwitz Concentration Camp as mass extermination camp shall not be discussed in detail here, as the crimes which the defendant committed, or is

²² *Ibid.*, p. 80.

²³ Pages 1909f. of the Court files.

²⁴ Verdict, pp. 65f.

said to have committed, are not connected with the orders given in the context of the 'Final Solution of the Jewish Question.'"

But details mentioned further on in the Reasons for Sentence repeatedly refer to the well-known scenario. One example of this is to be found in the context of the Wuppertal Court's attempts to explain away particularly incredible claims contained in the witness Lazar's thoroughly imaginative testimony. In Budapest, Lazar had stated under oath that she had personally seen many murders taking place, for example:²⁵

"3. I could move around freely in 'Camp Canada,' and so I could observe how SS-men shot prisoners.

4. Executions happened almost every day, almost hourly. I saw it with my own eyes."

However, this was in contradiction to the statements of most former inmates who had testified earlier. But the court managed to come up with an explanation for this 'discrepancy.' It explained away these tendencies to exaggerate by stating that the experiences associated with the mass killings taking place at the nearby crematoria had *fused* with the personal memories of the witness.²⁶

At numerous other points in the Reasons for Sentence as well, the judges made reference to the "commonly known, historically established facts" in which they believe so firmly. For example, the absolutely unbelievable claim that the defendant could take wild potshots in the camp with impunity is simply rationalized with the comment that after all it is "commonly known" that the life of an inmate was of no value.

Even if one were to accept the "commonly known" nature of this idea, at least one should have asked how such mad pistol-popping could have been possible without also endangering the other guards. In a somewhat closer investigation, one could have examined old guard books, which would have revealed that every weapon, each and every bullet had to be accounted for. For example, I had no trouble obtaining a number of sample pages from concentration-camp guard books from archives in Prague – pages which document precisely that the procedure of issuing weapons and ammunition, which every soldier is familiar with, was also observed no less strictly by the concentration-camp guards. With a little less "common knowledge" and a little more objective investigation, the court would not have fallen for that bit of nonsense about the mad beast taking wild potshots in the camp whenever he pleased, and getting away with it without so much as a reprimand.

Under German law, when a crime is considered so severe that a prison term of more than four years is possible, it is tried not by a county court (*Amtsgericht*) but by a court of the next level, a district court (*Landgericht*). This court's findings in matters of fact cannot be challenged with an appeal, which would otherwise permit the re-examination of the 'findings' which the court arrived at in this way of "common knowledge." Only a motion for a so-called revision can be filed to the court of the next higher instance, but this checks only for procedural errors (matters of law), yet does not examine the findings in matters of fact made by the cognizant court, and it also does not assess any new or previously rejected evidence.

3.1.6. Revision

During the trial, the defense had focused on the 'Lazar cases,' and, connected with them, on the branding of the defendant as "the Beast of Auschwitz." The defense considered the witness Freimark, who did not enter the picture until quite late, to be so utterly untrustworthy that it felt that a conviction based on his accusations was impossible. This was a mistake on the part of the defense, which was unfamiliar with the vagaries of these extraordinary kinds of trials. Nothing was impossible in Wuppertal.

The attorney in charge of filing a motion to have the verdict overturned on matters of law (the revision) also focused on the 'Lazar cases.' He believed that evidence for even partial incorrectness would force a new trial. This was another mistake with tragic consequences for the defendant. On March 31, 1989, the Federal Supreme Court quashed the verdict, but

²⁵ Verdict, p. 151.

²⁶ Verdict, p. 116.

only with reference to these two alleged murders – while, surprisingly, upholding it for the remainder of the charges, *i.e.*, for the other three alleged murders, the ‘Freimark cases.’

3.1.7. The Final Verdict: The Freimark Cases

What was the nature of the “very ‘personalized’ evidence” (as the revision lawyer put it) in these Freimark cases that had not been touched by the revision decision? On the basis of Freimark’s testimony, the Wuppertal Court had considered three murders in Personal Effects Warehouse I, the so-called *Old Camp Canada*, as being proved:

- a. Shooting of an unidentified male inmate on an unspecified day in June or July 1944. This crime was said to have been committed in a hut described by the court as “Bedding hut.”
- b. Approximately four weeks later (but still in “June or July 1944”): shooting of two inmates from Grodno (sex unspecified). Another inmate is said to have been murdered by SS-man Graf on this occasion. (This branded Graf as murderer and disqualified him as a witness for the defense. A Viennese court had acquitted him, but the Wuppertal Court fought tooth and nail against having the Viennese records brought in for reference.) These crimes allegedly took place in an area between a fence and a ramp located on a rail line some 30 ft. from the fence. At the time of the crime, hundreds of inmates had been loading up “thirty to forty” wagons at that ramp, while floodlights turned night into day.

3.1.7.1. Unreserved Faith in Freimark’s Statements

For the Wuppertal Court, the testimony of the only alleged eyewitness, Freimark, sufficed to warrant a conviction. The court commented on Freimark:

*“The credibility of this witness is beyond question.”*²⁷

*“His credible testimony is already enough to convince the Court of the factuality of the defendant’s crimes as set out in 1a) and b).”*²⁸

It was very rash to condemn a person to life imprisonment on the sole basis of trust in the veracity and probity of one single witness. Despite all the difficulties ensuing from the advanced deterioration of evidence, it was possible to find new proof which reveals that the witness Freimark had not told the truth.

The court’s unreserved faith in its witness Freimark is incomprehensible. Many contradictions had already become apparent during the trial; the court chose to ignore them. For example, no one had bothered to take note that Freimark had claimed that, having been a Jewish political inmate in Auschwitz, he had had to wear a green identifying patch, which color, rather, designated criminal inmates. Closer scrutiny would have shown that time and again Freimark had given different accounts of this aspect of his internment which, after all, must have been of paramount importance to him during his time in the concentration camp. When asked “what sort of patch?,” he is now known to have answered in the past as follows: red-yellow (1962), green (1966), green (1968), green and red-yellow (1988), green-yellow (1989).²⁹ These and many other inconsistencies were never investigated by the Wuppertal Court. When the defense drew attention to these contradictions, these references were ignored.

The most important discrepancy is to be found in Freimark’s statements regarding the time when he was ill with typhoid fever.³⁰ It is undisputed, for example, that Gottfried Weise

²⁷ Verdict, p. 180.

²⁸ Verdict, p. 190.

²⁹ Matthies/Jordan, Aug. 1993: *Der Fall Weise – Neue Beweise zur Klärung unrichtiger Angaben des Zeugen Freimark und unrichtiger Feststellungen im Urteil des Landgerichtes Wuppertal vom 28. Januar 1988.*

³⁰ Typhoid fever is caused by certain *Salmonella* bacteria and transmitted mainly through polluted drinking water. The term originates in the ancient Greek word *τύφος* (typhos), meaning haze, fog, smoke, steam, but also in a figurative sense dizziness or a befogged state of mind. This refers to neurological symptoms of the disease, especially the stupor as a “befogged consciousness.” This may be one of the backgrounds of Freimark’s bizarre witness statements. Typhoid fever is not to be confused with typhus, which is caused by certain *Rickettsia* bacteria and transmitted by lice. Editor’s remark.

was posted to Auschwitz only in late May 1944, and spent the first eight weeks as a bookkeeper of inmate funds in an office located outside the camp. The defense was able to prove this on the basis of two documents. Further, the witness Freimark had stated earlier that he had contracted a severe case of typhoid fever in late May 1944.

According to the documents at hand, therefore, neither Freimark nor Weise could have been at the alleged site of the crime at the time claimed (“June/July 1944”). But the court managed to iron out this minor ‘wrinkle’: Weise might very well have been assigned to guard duty every now and then (Weise had been certified unfit for guard duty), and Freimark (who was utterly infallible otherwise) may have been mistaken in his earlier statements. Of course, Freimark subsequently confirmed most happily that, oh well, in that case he had simply not fallen ill until later. And the court commented that the discrepancies in Freimark’s claims regarding the time of his bout with typhoid fever did not reflect badly on his credibility as witness because his testimony was supported by circumstantial evidence.³¹ Freimark declared that his earlier ‘mistake’ was due to the fact that, during his questioning in 1968, he had “not paid any particular attention” to the time of his illness.³²

3.1.7.2. Mis-Timed Circumstantial Evidence

The defense had requested that documental evidence be obtained on Freimark’s illness. The court received such papers the day before the verdict was handed down, and believed it had reason to rejoice. The documents that had been located – medical papers from Auschwitz Concentration Camp – proved, it said, that the witness, Freimark, had been examined in the Inmates’ Infirmary in August and September 1944 for suspected typhoid fever. It was felt that, apart from eyewitness testimony desperately lauded to the skies, one now finally had found some material evidence that might serve to support the intent to convict: circumstantial evidence indicating that Freimark’s new claim as to the time of his illness was correct. What was completely overlooked was the fact that in his most recent testimony Freimark had claimed “October 1944” as the new date of the onset of his illness, not “August or September 1944.” The court was only able to maintain these erroneous claims by consistently denying all of the defense’s motions to support this circumstantial evidence with additional documentation.³³

But even this prop, patched together as it was out of fragments of the existing circumstantial evidence, had been mis-timed by the court. It wrote:³⁴

“In the documents of August 14, 1944, for example, it was noted under no. 9 of the list, regarding the examination of former inmate and witness Jakob Freimark: ‘87215... Freimark, Jakob... Clinical diagnosis: suspected typhoid fever [Typhusverd.],’ while for other inmates the result given was ‘typhoid fever still suspected [noch Typhusverd.],’ merely ‘Typhoid fever’ [Typhus], etc.”

What this suggests is that Freimark’s illness was nowhere near a complete recovery (“*noch Typhusverd.*” – typhoid fever still suspected) nor even full-blown “typhoid fever” (Typhus), but that there was merely a preliminary suspicion of typhoid fever, in other words, that at most he had only just contracted the disease. It should be noted, however, that neither among the numerous infirmary documents that were found later, nor among the court documents, is there any infirmary paper that states ‘**noch** Typhusverd.’ [*i.e.*, typhoid fever **still** suspected]. It is also strange that only two of a whole series of relevant documents, available at the Auschwitz Museum, were read by the court, and at the last minute. And what is no less strange is the steadfast claim that there were no further infirmary papers regarding Freimark. The defense had no opportunity to take a closer look at the laboratory papers, which were not read to the court until the day of the verdict. In this way the court was able to sustain the fiction that Freimark’s illness must have broken out some time after August 14, 1944, and that he had been fully recovered again by September 18, 1944. Further evidence has been found now which refutes this tale that was thoroughly unbelievable from the start.

³¹ Verdict, p. 185.

³² Verdict, pp. 75f.

³³ Verdict, pp. 76f.

³⁴ Verdict, p. 58.

3.2. New Evidence, Motion for Retrial, Dismissal, Objection

A motion for retrial was filed in the case of Gottfried Weise in late 1992. On April 22, 1994, the District Court in Mönchengladbach dismissed this motion. This decision was communicated to the prisoner in late May. Weise's attorney objected to this dismissal, because in it, some of the new evidence on which the motion for retrial was based was completely ignored, and the rest was rejected for technical or insufficient reasons.

3.2.1. 'The Wrong Time' – New Evidence for the Incorrect Time Alleged for the Onset of Freimark's Case of Typhoid Fever

3.2.1.1. Infirmary Records Discovered after the Trial

What baffles me is why a judicial scandal had not already erupted years ago when it was shown how recklessly the Wuppertal Court had suppressed the obtaining of further evidence, because allegedly:³⁵

"[...] there is nothing to indicate that the state-operated Auschwitz Museum in Poland has access to any documents beyond the aforementioned infirmary papers, which have been put at the disposal of the Red Cross International Tracing Service in photocopy form."

In fact, tens of thousands of infirmary papers are stocked in the Polish Auschwitz Museum, which alone is circumstantial evidence for the enormous efforts that were made in Auschwitz to help sick inmates recover, even though the established interpretation of history alleges that sick internees were selected for being unfit for labor and consequently gassed. As a matter of fact, seven infirmary papers pertaining to Freimark's illness were found in the archives of the Auschwitz Museum:

1. Aug. 13/14, 1944 (Blood, Gruber-Widal and Weil-Felix,³⁵ results: "0", without note "sterile")
2. Aug. 28, 1944 (Stool, results: still some pathogenic intestinal bacteria)
3. Aug. 28, 1944 (Blood, results: "0" without "sterile")
4. Sept. 5, 1944 (Stool, results: still some pathogenic intestinal bacteria)
5. Sept. 8, 1944 (Blood, results: "sterile" for the first time)
6. Sept. 11, 1944 (Stool, results: only normal coli bacteria, for the first time)
7. Sept. 18, 1944 (Blood, Gruber-Widal, results: second result "sterile")

The court based its opinion – that "in that case" Freimark had simply not fallen ill until August – on the two aforementioned papers that were allegedly the only ones that could be found: on two of seven now-known lab records, specifically the first and last links (Nos. 1 and 7) of the chain of evidence.³⁶

If the defense had been granted an opportunity to examine the documents presented by the court,³⁶ then it could have determined even on the basis of only these two lab reports, Nos. 1 and 7, that something was wrong with the court's interpretation:

- the results of No. 1 did not yet indicate 'sterile,'
- while the results of No. 7 did.

If nothing else, then this "sterile" result on No. 7 – had it been known to the defense – would have sufficed to make the defense suspicious. This was the first instance where the defendant was denied a means to defend himself in this particular matter; his second means of defense – obtaining Documents Nos. 2 through 6 – was also denied him. The motion to obtain an expert medical opinion on all this was also denied.

The documents found after the fact now prove that Freimark's case of typhoid fever did not break out "in August 1944," as the verdict claims. The sequence of documents shows clearly that Freimark was no longer suffering from an acute case of typhoid fever between August 13 and September 18, 1944. However, his lengthy and severe bout with typhoid fever is undisputed, and also established in the verdict. But the documents prove that it did

³⁵ Medical testing methods.

³⁶ In Germany, both the prosecution and the judges (the "court") can introduce evidence; the defense can only motion the judges to introduce evidence for them.

not break out and become cured within the time span of August-September 1944. But when else should the illness have occurred: before or after August-September 1944? The specialists’ statements now available to the defense state unequivocally that the second entry of “sterile” (according to the Gruber-Widal test) at the end of the series of lab tests is typical for the conclusion of a final check-up in accordance with the regulations pertaining to epidemic control at the time in question. This could already be proven by means of the bacteriological findings that have been available since 1990, but evidence regarding the severity and hence the duration of Freimark’s preceding illness was as yet still lacking.

In January 1995, the defense, at long last, also obtained copies of the serological reports. (For an account of how this evidence was obtained in the face of strenuous official opposition, see Section 5.2. False Claims Made by the Wuppertal Court) These serological reports contain the following information pertaining to Freimark’s blood tests:

August 14, 1944: “Titer 1:800”

August 29, 1944: “Titer 1:800”

September 8, 1944: “Titer 1:200”

“Titer” is the term used for the results of serological tests (degrees of dilution in agglutination tests). Titers are first measurable a minimum of two weeks after the onset of illness, and often “not until much later, approximately 30 days” following onset. Values begin at 1:100. As the illness progresses, titers slowly increase to 1:400 or more.³⁷

“The agglutinative potential persists for many months following recovery from the illness.”

A titer of 1:800 on August 14, 1944, (sample of August 13, 1944) means that Freimark must have contracted typhoid fever long before that date. All the medical experts consulted agree on this point. Further, the titer of only 1:200 on September 8 indicates that Freimark’s convalescence was already well advanced at this time. Therefore, Freimark must have been severely ill with typhoid fever prior to August 1944, in other words, in June/July 1944 as he had stated originally. To establish this as evidence relevant to the court, Weise’s attorney has requested the consultation of a court-approved expert – but his requests, submitted repeatedly for several years now, have been in vain.

But even without an expert medical report, it can be proven that Freimark’s illness cannot have begun after September 1944, since as Freimark himself testified, he had participated for at least a few weeks in the preparations leading up to the crematorium Uprising of October 7, 1944. The only remaining possibility, namely that he fell ill before August 1944, is confirmed by many other statements of Freimark. His initial claim that he fell ill “in late May 1944” is supported in many ways by his further statements.

³⁷ According to Helmut Denning, *Lehrbuch der Inneren Medizin*, 6th ed., Thieme, Stuttgart 1964, pp. 86ff.

In its decision to deny a retrial, the District Court of Mönchengladbach again ignored the significance of the “sterile” entries, it again ignored the regulations for epidemic control that were in effect in those days, and it again rejected the consultation of an expert. Weise’s attorney had requested “an expert report, to be drawn up by an epidemiologist specializing in hygiene and bacteriology.” As the Wuppertal judges before them, their colleagues in Mönchengladbach also claimed with their omnipotent universal medical-expert knowledge that the lab reports give no indication of any “final check-up.” But while the Wuppertal judges maintained casually that Freimark’s much-contested bout with typhoid fever took place sometime between August 14 and September 18, 1944, the District Court of Mönchengladbach at least realized that Freimark was not acutely ill with typhoid fever during this time. From the perspective of the motion for retrial, the defense fully agrees with this. But what the District Court of Mönchengladbach also swept under the carpet is the question of when exactly Freimark underwent the acute stage of his severe case of typhoid fever, if not in June/July 1944? Understandably enough, this question is a very uncomfortable one for the supporters of the verdict. In Freimark’s statements, his resistance activities account so fully for the time from September 18, 1944, to the Crematorium Uprising (October 7, 1944) that no sufficient time remains. The time of his long and severe illness, which no one disputes, can thus have been only before August 1944, *i.e.*, in June/July 1944. **And if one concedes this, one must also concede that the only supposed eyewitness could not possibly have been at the alleged site of the crime at the alleged time.**

3.2.1.2. Freimark’s Testimony Regarding the ‘Klehr Case’

Aside from the complete sequence of laboratory reports, other new evidence also supports Freimark’s original statement that his illness began in late May 1944. This evidence comes in the form of statements made by Freimark before he knew where the emphasis would need to be placed in the Weise case. In 1968, for example, he stated that he had been admitted to the infirmary in May 1944 with typhoid fever. He then recounts how he was able to observe Dr. Mengele and the medical orderly (*Sanitätsdienstgrad*) Josef Klehr at their experiments on inmates when he “was already feeling better.”³⁸ By this time his severe illness (102, 104, 106.3°F fever³⁹) had abated and he was up and walking around as convalescent. His severe illness must therefore have abated in July 1944 at the latest, for it was found during the Auschwitz Trial in Frankfurt that the orderly Klehr had been transferred to the Gleiwitz subcamp in July 1944. According to the *Auschwitz Chronicle*,⁴⁰

“[...] from July 1944 [Klehr was] director of the prisoners’ infirmary in the auxiliary camp Gleiwitz I [...].”

In his 1968 testimony, Freimark reported in detail many of Dr. Mengele’s atrocious deeds, all of which he – Freimark – claimed to have seen with his own eyes. And:⁴¹

“Klehr, the orderly, always accompanied Dr. Mengele.”

So Freimark did not see Klehr only once, he saw him a great many times. And, of course, he could not have seen everything he described in just a single day; he needed weeks of observation. This permits only one conclusion: to allow for his observation of Klehr and

³⁸ Freimark’s testimony in Tel Aviv, Nov. 20, 1968; doc/172. Regarding quoting method “doc/nnn” (here doc/172): a voluminous dossier has been compiled about the numerous claims and data by and about Freimark. Interested persons may obtain a copy in return for photoduplication costs. Aside from the transcripts of earlier witness testimony by Freimark, this collection also contains two longer reports or accounts by Freimark:

1. “Einsam in der Schlacht” [Lonely in Battle], Freimark’s autobiographical account in the Suwalki book of 1989 (*Jewish Community Book Suwalki and Vicinity: Baklerove, Filipove, Krasnopole, Psheroshle, Punska, Ratzka, Vizhan, Yelineve*; The Yair – Abraham Stern – Publishing House, Tel Aviv 1989); texts are partly in English, partly in Hebrew; Freimark’s story has been translated from the Hebrew.

2. Freimark’s Yad Vashem Report; recollections from 1959, records from 1962 and 1964. (Originally translated into German from the Yiddish [in Hebrew script].)

³⁹ Yad Vashem Report, pp. 72, 82; doc/156, 162.

⁴⁰ D. Czech, *Auschwitz Chronicle, 1939-1945*, Henry Holt, New York 1990, p. 816.

⁴¹ Freimark’s eyewitness testimony in Tel Aviv, Nov. 20, 1968; doc/173.

Mengele, Freimark's severe case of typhoid fever must have been clearing up in early July 1944 at the latest.

In its rejection for a retrial, the District Court of Mönchengladbach suggests that it might well have been the case that Freimark was in the infirmary on several occasions (and, what a miracle he was never selected as unfit for work and gassed...). After all, the witness had also stated that he had once been beaten by "Dr. Senteler." In suggesting this, the District Court of Mönchengladbach ignores the precisely documented organization of the health-care facilities in the Auschwitz Concentration Camp. The court completely ignores the fact that inmates were admitted to the infirmary only after being examined by the Polish Chief Physician Dr. Zenon Zenkteller (not "Senteler"; cf. also Section 3.2.5); that they could not simply drop in to visit friends whenever they felt like it; and that Freimark himself recounted his experiences with Dr. Zenkteller several times in close relation to his bout with typhoid fever; etc.

3.2.1.3. Freimark's Statements on the Course of His Illness

Freimark's case of typhoid fever must have been very severe indeed. In his Yad Vashem Report, Freimark recounts – as mentioned before – that he had run temperatures of 102 to 106.3°F.⁴¹ Also, probably because he was confined to his sickbed for so long, he had developed a painful abscess on his posterior.⁴² While he was in bed suffering badly from this abscess, the following had allegedly been recorded on his card [hospital chart?]:⁴³

"Grober Vital 1/800."

The question remains open whether this Gruber-Widal test is one of those known to us from the lab reports or whether a test of this kind was already performed during the acute stage of the illness. The latter cannot be ruled out in light of the evident severity and duration of the illness. In his testimony of 1966, Freimark also remarked that he was "laid up" with a case of abdominal typhoid fever.⁴⁴ In his testimony of 1968, already cited repeatedly, he reiterated that he had contracted typhoid fever (in May 1944), then added that he made his observations of Mengele and Klehr "when I was feeling better again." So, he must have been in rather poor shape before that. And he must have been very considerably improved compared to the time when he still suffered so severely from the dressed abscess on his posterior, since he could not have taken the excursions he described while being padded and bandaged as he was. The abscess, in turn, was the result of protracted confinement to bed combined with the uncontrolled voiding of urine and stool typical for typhoid fever. This too shows that the illness must have begun long before the time "when I was feeling better again."

The acute manifestation of his illness, accompanied with collapse and fever up to 106.3°F, which he still stressed vigorously in 1962, rules out that the illness broke out only in August/September 1944. A lengthy series of lab tests intended to identify and confirm the disease would have been utter nonsense, given the intensity of the outbreak and the unmistakable symptoms.

All Freimark's pre-1988 statements regarding his bout with typhoid fever indicate that he was severely ill, and for a correspondingly long period of time. A case of typhoid fever that severe takes weeks from the time of outbreak to the time it abates. But as demonstrated in the foregoing, the illness must have begun to abate by early July 1944 at the latest, else Freimark could not have observed Klehr's misdeeds "frequently." Therefore, Freimark's severe bout with typhoid fever, which lasted several weeks, must have begun in early June 1944 at the latest. This coincides with the time he specified in 1968, namely "late May 1944." Hence, his earlier statements support his testimony of 1968.

Although it was aware of this, the District Court of Mönchengladbach, in its denial of a retrial, turned a blind eye to the fact that Freimark claimed to have made his observations of Mengele and Klehr when he was recovering again – in other words, *after* his severe illness. The court suggested instead that Freimark had no doubt been in the infirmary repeatedly. The court thus ignored not only the fact that Freimark himself had recounted his observa-

⁴² Yad Vashem Report, pp. 79f.; doc/160.

⁴³ Yad Vashem Report, p. 80; doc/161.

⁴⁴ Freimark's statement in Tel Aviv, April 29, 1966; doc/168.

tions of Klehr in express connection with his recovery from typhoid fever. It also ignored the organization of the health-care facilities, which are set out in particular detail in the documentation pertaining to Auschwitz. Without being admitted by the chief of the Out-Patient Department, Freimark could not have gained access to the sick ward, much less to the isolation ward for epidemic patients, which is where he claims to have made his observations. As lab documents prove, Freimark was assigned to Infirmary Compound BIIIf. The admitting physician in the accompanying Out-Patient Department BIIId was the Polish physician Dr. Zenkteller, whom Freimark recollects in a very emotionally charged manner, and again in close connection with his case of typhoid fever (cf. also Section 3.2.5.).

3.2.1.4. Freimark's Testimony Regarding his Collaboration in the Preparations for the Crematorium Uprising

Freimark was not ill in August/September 1944. The complete series of lab reports from August 13 to September 18, 1944, proves this. Could Freimark have been so severely ill with typhoid fever *after* September 18, 1944, (when he was healthy, as proven) and *before* October 24, 1944 (when he was also clearly healthy and on his way to Sachsenhausen)?

An affirmative answer to this question is already practically ruled out, since the five weeks remaining between September 18 and October 24, 1944 would hardly have been enough to allow for the severe illness as such, much less for the mandatory subsequent quarantine that was necessary to establish freedom from the pathogen prior to the transfer to another camp.

But Freimark himself provides us with another piece of evidence for the recovered state of his health after September 18, 1944. According to him, he participated in the preparations for the Crematorium Uprising in close co-operation with Salman Gradowski.⁴⁵ The Uprising took place on October 7, 1944. Freimark's involvement must have happened after his illness. In Wuppertal, too, it was expressly noted that in his new testimony Freimark "placed the subsequent Crematorium Uprising in close temporal proximity to this [*i.e.*, the time of his illness]."⁴⁶ This is correct, except that the entire illness cannot be slotted into August/September. That was only the time of convalescence and the final check-up. The series of lab reports proves this beyond doubt. The actual time of the acute illness as such was in June and July, 1944.

In its denial of a retrial, the District Court of Mönchengladbach completely disregarded the issue of how Freimark's severe illness (which is proven beyond doubt) was to be fitted into the timetable of the events in question.

3.2.1.5. Freimark's Testimony Regarding His Recall to the 'Canada' Commando at the Beginning of the Hungarian Transports

*"When the Hungarian transports began, I was recalled to work in 'Canada.' That was where we realized why they wanted us to purge the camp of Jews. They arrived day and night, these transports from Hungary. We worked on the ramp, and it was very hard. One transport after the other arrived."*⁴⁷

This statement of Freimark in his report of 1959/1962 once more solidly corroborates his very definite testimony of 1968 that he rejoined the 'Canada' Commando in May 1944. According to the *Auschwitz Chronicle*, the Hungarian transports, whose start was the occasion of his recall, began in mid-May 1944.⁴⁸ Freimark's initial statement – that he fell ill shortly after this recall – fits in perfectly with the date he first gave for the start of his illness: late May 1944.

In its denial of a retrial, the District Court of Mönchengladbach ignored this completely.

⁴⁵ Suwalki book and Yad Vashem Report; doc/108, 109, 111, 139, 141, 142, 145, 152ff.

⁴⁶ Verdict, p. 75; doc/177.

⁴⁷ Yad Vashem Report, p. 53; doc/146.

⁴⁸ D. Czech, *op. cit.* (note 40), p. 627.

3.2.1.6. Freimark's Testimony Regarding His Further Convalescence during the Time of the Transports from Lodz

In his Yad Vashem Report,⁴⁹ Freimark gives a detailed account of his stay in the infirmary while continuing to recover from his illness. According to Freimark, this rather lengthy stage of convalescence coincided with the time of the transports from Lodz – in other words, August/September 1944. This, in turn, coincides perfectly with his statement that he had fallen ill in late May 1944.

In its denial of a retrial, the District Court of Mönchengladbach ignored this completely as well.

3.2.1.7. Summary on Freimark's Testimonies

Gottfried Weise's attorney has been pointing out for years that the lab reports do not refute Freimark's illness in May 1944, but rather that they are powerful evidence for the correctness of this initial statement. Strangely enough, none of the authorities whose duty it is to ensure that justice is done has shown the slightest interest. Now, however, this evidence – which is already of great consequence by itself – is solidly supported by further new evidence. These further evidential pillars resulted from statements of Freimark which were just as unknown to the Wuppertal Court as the complete sequence of lab reports, which therefore also constitute new evidence.

The new evidence supporting Freimark's 1968 statement ("onset of illness in late May 1944") include:

1. Lab reports Nos. 1 and 7, which had been misapplied by the Wuppertal Court, as well as the lab reports Nos. 2 through 6, discovered later – *i.e.*, the entire sequence of lab reports, Nos. 1 through 7. This documental support of Freimark's 1968 testimony – very solid support indeed – is reinforced five-fold by the following new evidence contained in other statements by Freimark:
2. Freimark was in the infirmary by June 1944 at the latest. Only in this way could he have observed Klehr at his misdeeds when his illness began to abate, *i.e.*, in July 1944 at the latest.
3. Freimark's illness was very severe, and lasted a proportionally long time. It cannot have begun after the "sterile" test results of September 9 and 18, 1944, because on October 24, 1944, he was already healthy and being transferred.
4. In late September/early October 1944 Freimark, then healthy, collaborated in the preparations for the Crematorium Uprising. Thus, he cannot have been ill at this time.
5. Freimark himself dates his transfer to 'Canada' as mid-May 1944. He recalls the time of the transfer: "When the Hungarian transports began [...]." The Hungarian transports began in mid-May 1944.
6. Freimark was still convalescing at the time the transports from Lodz arrived, *i.e.*, in August/September 1944.

With reference to the court's statement that "the credibility of this witness is beyond question," only one conclusion is possible: Freimark himself proves that he cannot have been at the site of Weise's alleged crimes in June/July 1944. The statements he made which indicate that he fell ill in late May 1944 are considerably more plausible than his suspiciously sudden change of mind in Wuppertal, that "in that case" he had simply not fallen ill until August/September 1944.

In its denial of a retrial, the District Court of Mönchengladbach holds to the Wuppertal version.

3.2.2. 'The Wrong Place' – New Evidence for the Incorrect Account of the Place and Details of the Crime⁵⁰

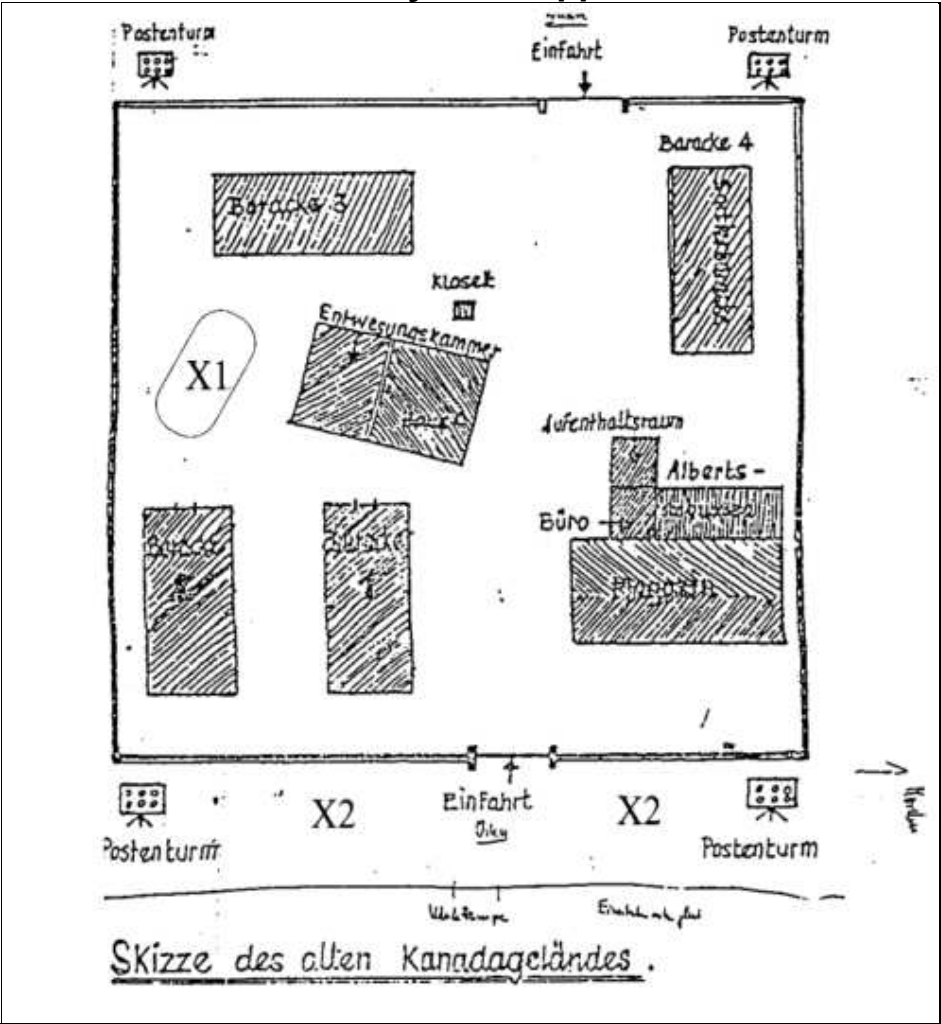

The murders which are imputed to Gottfried Weise by that part of the verdict that has become final were allegedly committed in, *i.e.*, near the old disinfestation facilities (Gas Dis-

⁴⁹ Yad Vashem Report, pp. 83f.; doc/162, 163.

⁵⁰ A more detailed study has been drawn up on this topic: Matthies/Jordan, *Der Fall Weise – Neue Beweise*

The Incorrect Sketch Endorsed by the Wuppertal Court

Labels X1 and X2 added by Jordan.
X1: Alleged 'square' where approx. 100 inmates lined up for roll call. Place where the 'hut Murder' was observed:
X2: Alleged 'square' where 200 to 400 inmates lined up for roll call; site of the alleged 'Ramp Murders.'

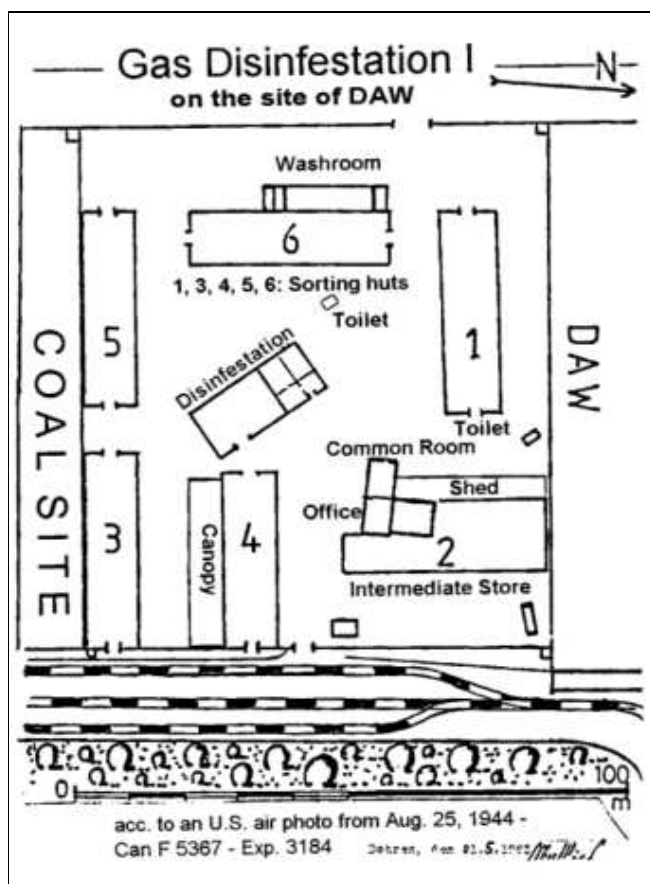

infestation I) which the court imprecisely and incorrectly termed Personal-Effects Warehouse I (*Effektenlager I*).⁵¹ This is where witness Jakob Freimark claims to have observed them:

- a. Weise is said to have committed one murder in the “bedding hut” on the grounds of Personal-Effects Warehouse I. The witness claims to have seen this while standing amongst many other inmates in a camp square from which point one could see two hut entrances.
- b. Weise is said to have committed two further murders “in the square between the loading ramp and the eastern entrance to Personal-Effects Warehouse I.” The track on which the loading ramp was located ran along the fence, at a distance of “approximately 30 ft.” Therefore, in the eyes of the court, there was a “square” of about 1,080 sq. yards [33 ft. (distance between fence and track) × 295 ft. (length of the fence)] between the fence and the loading ramp.

In contrast to the alleged victims and the alleged time of the crime, the supposed sites of the crimes are described relatively precisely by the court. This makes it possible to double-check the description of the site which the court accepted in reaching its verdict. This layout of the site was incorrect.

In its denial of a retrial, the District Court of Mönchengladbach could not dispute the incorrectness of the Wuppertal Court’s account of the site, but it deemed the incorrect findings contained in the verdict to be irrelevant.

zur Klärung unrichtiger Ortsangaben und unrichtiger Tatvorwürfe im Urteil des Landgerichtes Wuppertal vom 28. Januar 1988, March 1993, with supplement from May 1993.

based on US Air Force Aerial Photographs from 1944. The correct layout shows that the open spaces X1 and X2, shown on the sketch endorsed by the Wuppertal Court, did not exist.

U.S. air photo of August 25, 1944

Taken from Germar Rudolf (ed.), *Air-Photo Evidence*, 6th ed., Castle Hill Publishers, Uckfield 2020, p. 47.

3.2.2.1. The Wuppertal Court's Incorrect Layout of the Site of the Crime

Both the witness and the court oriented their accounts of the alleged events on an incorrect layout of the site of the crime – a layout that agrees with an equally incorrect sketch that was incorporated in the verdict (see the illustration on the previous page).

3.2.2.2. The Correct Layout as Shown by Documents

The above sketch, drawn to scale, shows the correct layout. This sketch is the result of careful analysis of several U.S. air photos,⁵² the description of Delousing Chamber I (the alleged site of the crime) as given by documents from the Auschwitz Archives,⁵³ and the 1989 book by Pressac⁵⁴ which is considered to be the definitive scientific work of orthodox Auschwitz literature.

In its denial of a retrial, the District Court of Mönchengladbach did not dispute that the sketch which the Wuppertal Court used to determine the location and nature of the alleged crimes is incorrect. It also had nothing with which to contest the correctness of the sketch drawn from the aerial photographs. Nevertheless, the court stated “that the U.S. air photo of August 25, 1944 by itself cannot reflect the conditions in the camp at the time of the crime, in June/July 1944 [...]” This claim is utterly incomprehensible, since the District Court of Mönchengladbach, according to its own account, had also seen the U.S. air photos of April 4, 1944, May 31, 1944, and December 21, 1944, which – together with other evidence – served to verify the sketch.

3.2.3. 'The Wrong Scenario'

The correction of the crime scene leads to the following conclusion: the scenario attested to would have been physically impossible.

The Wuppertal Court based its conception of the layout of the site in question not only on the incorrect sketch but also on witness testimony, particularly on the testimony of the witness Freimark. The court had affirmed that this witness recollected the site in particularly precise detail. And indeed, he described almost a dozen incorrect details precisely as they appear, incorrectly, on the court's sketch. Witness Freimark obviously was not familiar with the alleged site of the crime from personal memory; he merely went by the faulty sketch.

First of all, two very essential details were wrong:

1. The alleged empty space ("square") where Freimark claims to have stood among "many" inmates while witnessing a crime was in fact taken up by a hut (No. 5 in the previous sketch) of which Freimark obviously had no knowledge. Freimark and his fellow inmates could not have stood here. Also, there was no other place large enough to accommodate a greater number of inmates which would have met the requirements of the scenario described by Freimark (two hut doorways directly visible).

In its denial of a retrial, the District Court of Mönchengladbach suggested that perhaps it was not 100 inmates who were lined up. Freimark and the Wuppertal Court had only mentioned "many." But the work commandos named by the Wuppertal Court, and the information provided by the *Auschwitz Chronicle* regarding their numerical strength, does indicate a number of approximately 100 inmates, calculated as set out in the motion. Fortunately, these calculations are facilitated by the many Auschwitz work-detail lists still available, which show the precise numerical strengths of the work details which, according to the Wuppertal Court, were present at the site of the crime. Once again, any factual resolution of this matter has been rejected following the motto "*in dubio contra reum*" ("when in doubt, convict"). The District Court of Mönchengladbach has also completely ignored the second important matter: according to the Wuppertal/Freimark scenario, Freimark would have had to be able to see directly into the entranceways of two huts resembling each other in every detail. The correct sketch, however, shows that the huts were by no means that similar, and that there is no conceivable place from which both huts' entrances could be directly looked into at the same time. The District Court of Mönchengladbach ignored the fact that this proves Freimark's account of the crime to be incorrect.

Especially where the two allegedly identical huts are concerned, Freimark's account of the crime is typical of the way in which 'truth was ascertained' in this case: originally – *i.e.*, at the time of his first questioning in Israel – Freimark knew of only one hut, where all the characters got together who allegedly played a part in the 'hut murder.' In the Wuppertal trial, Freimark then saw the (incorrect) sketch of the camp, where two identical huts are (falsely) drawn in. The sketch inspired Freimark, and he *revised* his initial testimony (the single-hut version) into a two-huts scenario. He now redistributed the participants in this drama between two huts, for a particularly theatrical account of the alleged events. To make this new version credible, he concedes that he is no longer sure whether the "Bedding hut," the actual scene of the crime, was the right-hand or the left-hand one of the twin huts. The court was so filled with enthusiasm by his nit-picking love of truth and his detailed knowledge of the scene that it completely overlooked the trap: the two-huts version works only on the fictional scene of the crime, on the incorrect camp sketch – not on the real scene. It does not fit the real layout; Freimark's account of the crime, and the 'findings' based thereon in the verdict, are false.

2. The scenario of the alleged crimes b), the 'ramp murders,' is based on the assumption that hundreds of inmates, working day- and night-shifts, were loading up a long freight train of "thirty to forty" freight cars, unloading it again, and re-loading it again. Hundreds of tons of freight must have been passed in bundles along long queues of inmates. With utter disregard for blackout regulations, the large open space between the fence and the ramp is lit "bright as day" by the floodlights on the fence. Three inmates manage to set up a hiding place in one of the many freight cars, bring in a supply of food and water, and hide themselves there. Their absence is not noticed until shift change. After hours of counting and roll-

call, the inmates must begin unloading all the freight cars again. In the presence of hundreds of other inmates, the three hiding inmates were found, beaten, and murdered. The time was approximately midnight.

The facts, however, are as follows: the loading rail-line ran right along the fence. Thus, the ramp did not give access to a “square” 295 ft. long and 33 ft. wide, but rather only to a strip at most 3 ft. wide and at most 98 ft. long (approximately 33 sq. yards). There were also no floodlights on the fence and no night-time illumination “bright as day.” Furthermore, there were no “thirty to forty” freight cars. The entire loading track could have accommodated a maximum of six freight cars, and no more than three would have fit alongside the little ramp directly by the fence. (The former inmate Josef Odi, who – unlike Freimark – was familiar with the old Delousing Gas Chamber, and had described it correctly, had already considered it remarkable, indeed, that on some days as many as “several” freight cars could be loaded!)

In its denial of a retrial, the District Court of Mönchengladbach avoided commenting on the physical impossibility of the “thirty to forty” freight cars in a most remarkable way: while quoting the verdict verbatim at all other times, in this instance the court simply omits the claim of thirty to forty freight cars in its quotation from the verdict. Was this deliberately omitted, or done so through sloppiness? The District Court of Mönchengladbach did not comment on the other errors in Freimark’s account which prove his unfamiliarity with the site. Further, the District Court of Mönchengladbach attempted to gloss over the physical impossibility of setting up the work commandos (as specified by the Wuppertal Court) between the rail line and the fence by arguing rather weakly:

“First, according to the Motion, there was a distance of 8.9 ft. between the rail line and the fence, and second, the work details surely did not number as many inmates as the Motion calculated on the basis of statements of the Wuppertal Court and of data from the Auschwitz Chronicle.”

Regarding the first objection, the District Court of Mönchengladbach failed to take note of the information it had with respect to rail and loading facilities. Otherwise it would have noticed at least that freight cars protrude over the rail line, *i.e.*, that there were by no means all of the 8.9 ft. of open space between the cars and the fence, but rather 5.6 ft. at most. The court would have had to realize that it was not possible to walk or stand immediately next to the fence, that a usable strip approximately 3 ft. wide was all that remained, and that this strip as well was no longer than just barely 98 ft. (including space for guards at the sides). A closer look would have revealed to the District Court of Mönchengladbach that it was impossible for more than twenty persons to line up, much less to work here under guard. And there would have been absolutely no space left for the alleged beatings and murders to take place and – to quote Freimark – to be observed in detail by all the inmates present.

Regarding the second objection, it is rather amazing that the Mönchengladbach District Court suddenly casts grave doubts on the data given in the *Auschwitz Chronicle*, a source which it otherwise deems so extremely reliable (namely, when the data it provides serves to incriminate), and it is all the more surprising that the court does so without even having examined the documents cited therein (the work-detail lists). Well, never mind! Loading, unloading and reloading the thirty or forty freight cars, as was described and “ascertained” by the court, would have required a great many workers, and the Wuppertal Court also stressed this repeatedly. But where should these have found enough room under the actual conditions? The District Court of Mönchengladbach left this vital question completely open.

Investigations pertaining to the alleged site of the crime reveal many other discrepancies, which confirm two things:⁵⁰

- Freimark testified to many local details that exist only on the incorrect court sketch, not in actual fact. He clearly had no personal memories of the site.
- Many of the incorrect details “ascertained” by the court are integral parts of the wrong scenario which is the basis for the account of the crime and the corresponding ‘findings’ of the court.

These two points alone prove that the testimony of the witness Freimark, and the account of the alleged events subsequently set out in the verdict, are false.

3.2.4. ‘The Wrong Gottfried’

During the Wuppertal Trial, witness Freimark repeatedly declared that the defendant was “indelibly impressed” on his memory as “Gottfried.” This was rather surprising even then, for in his earlier testimony – those samples of it which were known at that time – Freimark had never mentioned Gottfried Weise, the man who was allegedly so indelibly impressed on his recollections.

3.2.4.1. New Evidence: The Real Gottfried of Freimark’s Recollections

In the meantime, lengthy reports and witness statements by Freimark have come to light which were not yet known at the time of the Wuppertal Trial. In 1959/1962, for example, Freimark wrote a very long report for Yad Vashem detailing everything he remembered about Auschwitz. Freimark clearly spent years intensively reviewing his Auschwitz memories for this purpose, and these accounts contain something quite astonishing: at that time, Freimark recollected a completely different Gottfried (and *only* this different one):⁵⁵

“When Oskar [an inmate supervising other inmates] was sent home, he was replaced by another German named Gottfried. He was from the Sudetenland. He was a terrible son-of-a-bitch. An assistant overseer served under him, a Belgian named Leon. The two of them were dreadful murderers.”

So in 1962, Freimark clearly associated the name Gottfried with an inmate. Freimark had to endure his tyranny when he was “skilled laborer in the weaving mill.” If he had remembered more than one murderous son-of-a-bitch named Gottfried, is it really credible that at that time (1962) he would have mentioned exclusively the one of whom he only knew in very general terms that he was a “terrible son-of-a-bitch” and a murderer? In contrast to that, we are to believe that in 1962 he had completely forgotten about the very memorable one-eyed Gottfried Weise even though – according to Freimark’s testimony of 1985 – he had observed *this* Gottfried committing several very definite murders, at great peril to his own life?

3.2.4.2. The Wuppertal Theory of “Successive Reproduction”

The Wuppertal Court believes it has found a way to explain the workings of Freimark’s memory. The court explained that despite the great passage of time “his ‘simple’ recollection [...] of the central event [showed] the high degree of accuracy of his recollections.” Further, the court exhibited psychologically motivated empathy for the way in which Freimark first did not, then did remember things.⁵⁶ The witness, the court explained, successively reproduced his memories around emotionally charged focal points, and by so doing had not been affected by external influences.⁵⁷

To Freimark, the name “Gottfried” was no doubt a “focal point” for the reproduction of “emotionally charged fragments of memories.” Does it not seem reasonable to suspect that Freimark “successively reproduced” the wrong Gottfried?

3.2.4.3. How Was the Defendant Identified?

In the trial of Gottfried Weise, the identification of the defendant was carried out in a gross deviation from any serious identification procedure.⁵⁸ As already mentioned in the context of Isaac Liver’s statements, potential witnesses for the prosecution were given a questionnaire providing information regarding the suspect and the charges brought against him.⁵⁹ An accompanying series of photographs included several of the defendant, which, however, is probably of lesser importance in this case, as the one-eyed Gottfried Weise is easily identified anyhow.

⁵⁵ Yad Vashem Report, p. 63; doc/151.

⁵⁶ Verdict, p. 187; doc/180.

⁵⁷ Verdict, p. 188; doc/181.

⁵⁸ Cf. the works of Prof. Dr. Michael Stadler, Institute of Cognition Psychology, University of Bremen; cf. esp. Michael Stadler, Thomas Fabian, Peter Wetzels, *Wiedererkennen des Täters oder Identifizieren des Beschuldigten?*, Bremer Beiträge zur Psychologie, Nr. 100, Univ., Bremen 1992.

⁵⁹ Regarding similar practices in medieval witch trials, see Chapter 4 of Germar Rudolf’s contribution on witness testimonies in this volume.

It is thus no surprise that Freimark, who had several opportunities to study the photos, knew very well which of them showed the defendant. And as though that had not been a bad enough travesty of the identification procedure, the Wuppertal Court even permitted the staging of this farce in the courtroom:⁶⁰

“Much as though a great weight had suddenly lifted from his shoulders, he [Freimark] said that he had immediately recognized ‘Slepak,’ ‘Gottfried,’ when he had entered the courtroom, and then, looking at the defendant, he continued: ‘Yes, that’s him. Let him take off his glasses. He wasn’t wearing glasses back then. I’m inmate 87215. Do you recognize me?’ Flipping back and forth in the photo folder that he had been given, and getting more excited and upset by the second, he identified the defendant after only a few moments: ‘I’m looking, and I think I’m in Auschwitz again. That’s him (Photo 8). No doubt about it, that’s him (Photo 14). I saw him like that (Photo 2). That’s him too. There’s no doubt, these pictures show Slepak. That’s the man sitting here today.’”

3.2.4.4. The Wrong Gottfried: Result of “Successive Reproduction of Emotionally Charged Remnants of Memories”

Freimark’s considerable prowess as an actor in the Wuppertal courtroom shows how thoroughly he was able to embrace a role that accrued to him from successive reproductions of his memory. How could the wrong “Gottfried” have evolved in his mind?

When he was first questioned about Gottfried Weise in 1985, the name “Gottfried” was still “indelibly impressed” on his memory, but any recollections of the actual person had already faded. He is then questioned quite pointedly about a presumed murderer named “Gottfried.” To Freimark this name is a focal point for emotionally charged remnants of memories. One of his emotionally charged remnants is the certain belief that all SS men employed in Auschwitz “participated in the machinery of murder.”⁶¹ Two emotionally charged remnants now combine in his mind to produce a new “focal point for successive reproduction” in a fictional construct that is growing ever more real to him. A photo album is placed before him, showing men wearing the hated uniforms of concentration-camp guards. Unlike the others, one of them is portrayed several times. He stands out for having only one eye: “Sleepy,” or “Slepak,” whom they had specifically asked about! And his name is Gottfried! Goodness gracious! Freimark now feels certain that he has found his man. All that’s still lacking is the appropriate story. Next, Freimark proceeds to successively produce memories of other emotionally charged remnants, drawing on things experienced, read and heard: the story that inmates who had hidden in a freight car were shot. Of course...:

Hadn’t he, Freimark, actually seen that happen himself? – Let’s see, what was that all about again? – Right: an inmate from Grodno⁶² – or was it two?, and Graf is said to have shot him?⁶³ – Were there perhaps even more of them? – But of course: there were three, and two of them were shot by “Gottfried.” – yeah, sure, he’d already been a “dreadful murderer” back in the weaving mill. – And where did he shoot the two of them? – Well, surely there were freight cars to be loaded, standing outside the “Old Canada” area, and the fellow in charge there used to shoot, too.

So was that “Gottfried”? – Of course, who else should it have been, if not that “terrible son-of-a-bitch”? Sure, he was the one! – Incidentally, his surname was Weise. – Oh really? Well, I still think of him by his first name.

What’s that? 1944, not 1943? Well, all right then!!! 1944!

Freimark of 1985 grows ever more certain. And it is not long before he can recount his subjective truth with such “astonishing accuracy and realism” that the witness-hunting public prosecutor is ecstatic and the Wuppertal judges are all the more so.⁶⁴

⁶⁰ Verdict, p. 183; doc/179.

⁶¹ Verdict, p. 182; doc/179. Again, there are parallels to the witch trials: every defendant is guilty!

⁶² For Freimark, the name of the town Grodno seems to be another focal point for emotionally charged remnants of memories. In his imaginative account of how he participated in the murder of a fellow prisoner, his accomplices are again three inmates from Grodno, who were then executed; doc/67.

⁶³ Verdict, pp. 196f.7; doc/182.

⁶⁴ According to the Court (Verdict p. 196; doc/182) two inmates were indeed shot by one *Unterscharführer*.

In its denial of a retrial, the District Court of Mönchengladbach comments on all this:

“The supposition advanced by the appellant that the witness Freimark could have confused the appellant with a functionary inmate named ‘Gottfried’ is not a statement of fact commensurate with the requirements for admissibility. The appellant has not submitted any concrete indications pointing to such a confusion. The witnesses he has proposed to call in order to establish the state of witness Freimark’s knowledge with respect to the appellant and the inmate Gottfried are not suitable as a source of evidence because they cannot contribute anything towards establishing what the witness Freimark knew at the time.”

Note: the testimony of 58 witnesses, all of whom were in the same area as Freimark, had been proposed as evidence to establish that the inmates did not know their guards by their first names.

3.2.5. Other ‘Wrong Gottfrieds’ in Freimark’s Accounts

It is unbelievable how recklessly a German court applies the previously described theory of “successive reproduction.” To emphasize how great the danger of ‘wrong Gottfrieds’ is with story-tellers like Freimark, the following gives just one example of the many other instances where Freimark has mis-identified persons:

In his Yad Vashem Report (1959/1962), Freimark describes how the infamous Dr. Mengele, assisted by Dr. Knott and Dr. Schor, took a quart of his blood.⁶⁵

In his 1966 testimony regarding Sachsenhausen, Freimark then claimed that a Dr. Senteler (correctly: Zenkteller) had taken this quart of blood.⁶⁶

In his Suwalki report of 1989 (“*Einsam in der Schlacht*” [Lonely in Battle]) he again names Dr. Mengele and Dr. Knott as having taken the blood, but this time without mentioning Dr. Schor.⁶⁷

Freimark’s memories focus on a central event, namely the taking of the blood. His tendency to exaggerate turns the quantity into an entire quart. But nevertheless: the taking of the blood – the central event – very likely did indeed take place. The acting persons, on the other hand, are freely exchangeable in Freimark’s imagination. It is easy to see why Freimark named the Polish inmate physician Dr. Zenkteller (1966) as being the one who had taken the blood: Freimark hated this physician, and in 1966 accused him of having carried out “selections,” among other things. The central experience was that this inmate physician had to decide which patients were to be admitted to the infirmary for treatment. Freimark’s penchant for exaggeration turned this into “Selections for the gas chambers” – a charge which, as is well known, bodes ill for anyone accused thereof. Unlike Gottfried Weise, however, Dr. Zenkteller was lucky: he was Polish, was given a fair trial in Poland, and was acquitted.⁶⁸ Had he been German, the matter no doubt would have ended tragically for him too.

In its denial of a retrial, the District Court of Mönchengladbach did not waste time on such considerations. It did not even take note that the name of the physician accused by Freimark was actually Dr. Zenkteller. Similarly, by failing to consider this Polish physician’s duties, which are known in detail, it also neglected to ensure the proper evaluation of Freimark’s statements.

rer Wigleb in 1943 after attempting to hide in a wagon under some things that were to be shipped out. Because of the 1943 incident, former *Unterscharführer* Graf was charged in Vienna as accomplice, but was acquitted. According to Freimark, in 1944 he was again an accomplice in a precisely identical event, this time committed together with Weise. Clearly Freimark had heard about the event of 1943 and proceeded to impute it to Gottfried Weise. Incidentally, Freimark had originally stated 1943 as the date for this event as well, and it took the joint efforts of the prosecuting attorney and the judge to persuade him to revise the date to 1944.

4. The ‘Freimark Case’

In Freimark’s various accounts, there are many other examples of persons, places and incidents being mixed up. These have been discussed in greater detail in a separate analysis of claims and data by and about Freimark.²⁹ On the basis of the statements he made in the course of the ‘Freimark Case’ – statements which, due to the talkativeness of the witness, are amply available – the goal-oriented nature of his testimony can be analyzed easily. The overriding goals which become apparent time and again are:

- a. the desire for revenge for his incarceration, and
- b. the desire for self-aggrandizement.

Freimark adapts these overriding objectives to his individual case-oriented goals. In 1966, for example, his desire for revenge was directed against Dr. Zenkteller. When he realized that, being Polish, Zenkteller – an able Polish army medical officer, by the way – was immune to false allegations, Freimark redirected his accusations at Dr. Mengele. Freimark also manages to adapt his overriding desire for self-portrayal to the conditions presented in each individual case. In his Yad Vashem Report of 1959/1962, for example, he still wrote a great deal about his heroic work for the resistance movement of the camp underground movement, and about his no-less-heroic participation in the preparations for the so-called Crematorium Uprising (October 7, 1944). At that time, he still gave the time of the beginning of these preparations as “August 1944.” That fit in well with the actual beginning of his illness, May 1944. During the Wuppertal Trial, however, it was necessary for him to postpone his illness to August/September 1944 or later, since otherwise he could not have incriminated the defendant. But that collides with his alleged heroic feats in the resistance movement in September/October 1944. Moving his illness after the uprising in turn clashes with his transfer to Sachsenhausen, which can be precisely dated as October 23, 1944.

In writing his heroic epic “*Einsam in der Schlacht*” [Lonely in Battle] for the Suwalki book in 1989, after the Wuppertal Trial, he therefore limited himself to only very vague comments about his participation in the uprising of October 7, 1944, and shifts the starting date of his illness to yet another time – December 1944.

In its denial of a retrial, the District Court of Mönchengladbach stated:

“The credibility of the witness Freimark is in no way compromised by this argument.”

Incidentally, some American friends of a young Israeli were sent translations of the Suwalki book. At first the Israeli was so moved by Freimark’s account that he did not think he could go on reading. But then he did read on. He provided the translation free of charge, annotated with the comment: “This man is a fucking liar!”

5. The ‘Wuppertal Case’

5.1. The Bias of the Wuppertal Court

In Wuppertal they were happy about Freimark’s so precisely tailor-made memory. Freimark was the court’s dream witness.

Up until then, nobody had wanted Freimark as witness. Neither in the Sachsenhausen Trial nor in the Frankfurt Auschwitz Trial had he gotten the role he longed for, and even the clerk who took down Freimark’s Yad Vashem Report seems to have harbored a few doubts, as his skeptical questions indicate. But in Wuppertal, Freimark was finally given center stage. The presiding judge’s “common knowledge” and his desire to create a memorial for the victims of Fascism provided for an effective staging of Freimark’s presentation. The judge himself expounded on the nature of his “common knowledge” in the verdict; his desire for a ‘memorial’ was initially known to the author of this article only through hearsay, and so I made inquiries. The result: in late 1985, the Wuppertal daily newspaper had reported about the many deaths that had occurred in the Kemna Concentration Camp that had existed near Wuppertal from mid- to late-1933. A curious Wuppertal inhabitant asked why the names of the murdered persons were not given on the new Kemna Memorial. It turned out that, fortunately, there had been no casualties in the Kemna Camp at all, and that the allegation of “many dead” was thus wrong. The newspaper named the City Archives as its source. The

City Archives named Judge Klein as theirs. And Judge Klein did not consider the polite inquiry, now addressed to him, to be deserving of a reply.⁶⁹

The appropriate stage-set for the trial was provided courtesy of the Wuppertal ‘Antifa,’ the anti-Fascist scene: the VVN’s metastasis whose fellow-travelers and hired applauders happened to be particularly numerous in Wuppertal and included the local press.

The trial then enacted in Wuppertal has already been reviewed in detail in the book *Der Fall Weise*.⁷⁰ The bias exhibited by the Wuppertal Court, the disparate treatment and valuation of the witnesses for the prosecution and the defense, the refusal of numerous motions to hear evidence, and the suppression of exonerating evidence. I already mentioned a further example of the suppression of evidence practiced in Wuppertal (Section 3.2.1.1, lab reports). A separate report⁷¹ discusses further aspects of the one-sided valuation of evidence in Wuppertal, and I will dispense here with a repetition of the details set out in the book and the report. Copies of the book were sent to all members of the German parliament – the German legislators – and the report went to all those persons directly responsible: the German Federal President, the Federal Chancellor, the Federal Minister of Justice, the Minister President of the state of North-Rhine Westphalia where Wuppertal is located, and the state Minister of Justice. The response: with a few exceptions, there was a general denial of responsibility, references to the separation of powers, and referrals to the Public Prosecutor’s Office, which in turn states succinctly that it perceives “no need for action” without responding to so much as a single one of the arguments submitted.

This situation is not only unfortunate for the individual tragic case in question, but should be a cause of sleepless nights for anyone concerned about how far Germany is actually under the rule of law.

5.2. False Claims Made by the Wuppertal Court

The Wuppertal Court made several false claims. A number of them have been known for some time. For example, it has been proven ever since 1990 that the court’s claim that no further documentation was available regarding Freimark’s illness was false (see Section 2.2, ‘New Evidence’). Another false claim was that the medical records of convalescing patients were always marked “typhoid fever still suspected” (see Section 3.1.7.2, ‘Mis-Timed Circumstantial Evidence’).

In early 1995, particularly weighty evidence came to light regarding further false claims made by the Wuppertal Court. On January 12, 1995, Charles Biedermann, Director of the International Tracing Service in Arolsen, sent the Federal Secretary of the Interior (Bonn) the lab papers, including the serological results, that had been held back for such a long time. In his accompanying letter, he wrote apologetically that it was not the ITS’s fault that these documents had been held back for so long. In 1988, Presiding Judge Klein had merely said that the issue of decisive importance in this trial [of Weise] is the question whether the witness Jakob FREIMARK was still interned in the Auschwitz Concentration Camp on September 18, 1944, as the ITS had confirmed earlier in a memo to the Bavarian Landesentschädigungsamt (State Compensation Office). Yet this date of Freimark’s presence in Auschwitz had never even been disputed by anyone and was not an issue at all. Biedermann continued in his letter:

“Not until now [letter, Federal Department of the Interior, December 19, 1994] have you informed us that in fact every single lab test as well as its nature and results were of vital importance in the trial.”

Contrary to this, Judge Klein gave the impression both during the trial and in the verdict that he had in fact searched for such medical records and that one might be sure that none existed.

⁶⁹ Copy of the unanswered letter, C. Jordan’s files.

⁷⁰ Rüdiger Gerhard, *Der Fall Weise – Dokumentation zu einem Auschwitz-Birkenau-Prozeß: Ein “Lebenslänglicher” fordert Gerechtigkeit*, 2nd ed., Türrner, Berg am See 1991. For example, see pp. 31-33, statements of Dr. Hans Eisenschimmel (not read into evidence) and Henry Isaac Liver (ignored); p. 51, refusal to consider the ‘Vienna File’; p. 60, witness Kierski (disparaged as “having insufficient perspective”); p. 73, witness Burger (exonerating evidence given by a witness for the prosecution is simply glossed over and explained away).

⁷¹ Jordan, March 15, 1992: *Der Fall Weise – Fakten zum Wiederaufnahmebegehren*.

The letter of the ITS reveals, as an aside, that Judge Klein must have had access to Freimark's Compensation File. *The defense is still denied even the slightest glimpse of this file.*

6. General Problems Entailed in Very Late Trials

In its every stage, the Weise Trial entailed problems which most likely did not arise only in this case, but in other, similar trials as well. What happened and continues to happen in the case of Gottfried Weise, therefore, is a general model of the legal problems created by the rescission of the statute of limitations.

Admitted, these are problems within the province of legal experts, a province where I really have no business interfering. But I would not presume to intervene in someone else's province if I could see someone in responsibility doing his duty there.

6.1. The Generation Gap

The Baden-Württemberg Minister of Justice, Eyrich, noted as early as 1979 that a generation gap was to be expected in trials taking place so very long after the alleged crimes. The process of reaching a verdict, Eyrich said, could be compromised by the fact that the younger generation, to which the judges belong, "cannot properly conceive of the conditions and framework of the crime which they themselves, after all, never experienced."⁷²

No doubt Eyrich perceived the generation problem first and foremost with respect to the evaluation of events of the war – the absolute necessity to obey orders, etc. But even in the case of Gottfried Weise, who is charged with completely private murders committed on a whim, as it were, which were in violation of existing orders – even in this case the younger judges were quite unable to "properly conceive of" many things.

A contemporaneous witness who remembers the difficulties encountered in the cremation of the Dresden bombing victims, for example, would surely not have fallen for the atrocity tale of children being burned alive in open-air burning pits. Or another example: Anyone who had ever been on guard duty himself would certainly have wondered where Weise might have gotten the ammunition he wasted in shooting wildly about in the camp, why the Guard Register contained not a single entry about the shootings, etc. etc.

One example shall suffice to show how completely incapable the younger generation of judges in Mönchengladbach also was of understanding and "properly conceiving of" the conditions and situations of those days:

One of Freimark's many 'mistakes' is his claim, made in the Suwalki book of 1989, that he had been interned in a prisoner-of-war camp at Allenstein. "The camp was called Stalag 10a."⁷³ According to Freimark, this was where the Polish Captain Kachacinski told him:⁷⁴

"I invite you to join the underground organization that we will set up. You will be the contact to all the camps. You will be the contact between the camps. You will be given work that will enable you to move freely between the camps. As electrician you will test the electrical fences."

In the Suwalki book, Freimark proceeds to fill several pages describing his underground activities as an electrician.

In his Yad Vashem Report, he tells of similar work done in Auschwitz and refers to the experience he had gained in "Stalag 10a":⁷⁵

"We went to work in the Polish underground. We went around the camp and made sure that the signs were hanging properly and that the small fence in front of the electrical fence was in order. I was the foreman in this work detail because I said I was already experienced as electrician. I had already done this kind of work in Stalag 10a."

In its denial of a retrial, the District Court of Mönchengladbach stated in this regard:

⁷² *Frankfurter Allgemeine Zeitung*, Feb. 9, 1979, p. 5.

⁷³ Suwalki book, p. 314; doc/120.

⁷⁴ Suwalki book, p. 316; doc/124.

⁷⁵ Freimark's Yad Vashem Report, p. 70; doc/155.

“This statement also does not suffice to compromise the credibility of the witness Freimark, because on page 70 the witness only states that he had pretended to be an electrician in order to be assigned to a special unit, which he indeed was; and that he had been made foreman there. Thus, the witness Freimark does not claim that his presence in the penal camp was a matter of fact.”

The District Court of Mönchengladbach did not even pay attention to the abbreviation “Stalag.” As we know, this did not stand for “*Strafgefangenenlager*” [penal camp], as the District Court incorrectly claims, but for “*Stammlager*” [Main Camp], which was the term for regular prisoner-of-war camps – as opposed to “*Oflag*” = “*Offizierslager*” [officers’ camp]. In light of this, how should the judges at Mönchengladbach have thought to ask the questions that would have immediately occurred to any member of the war generation? For example: how did Freimark, who allegedly was 16 years old at that time, ever get into a prisoner-of-war camp in the first place? And why were so many Polish officers interned there, who after all are known to have been quartered in separate officers’ camps? But this did not ‘ring a bell’ for these younger judges who, luckily for them, were born too late to be subject to doubts raised by experience. Instead, they come to the easily refutable false conclusion that it was possible for Freimark to simply “pretend” this in Auschwitz. Even the excerpt which the District Court of Mönchengladbach quotes from Freimark’s Yad Vashem Report shows that he had not said anything about ‘pretending’ there. In the Suwalki book, he even proceeds to build up a whole series of his heroic deeds around his work as an electrician. If the District Court of Mönchengladbach considers this work to be ‘pretense,’ then it must also relegate Freimark’s entire Suwalki report to the realm of fable. In other words, it must acknowledge Freimark to be utterly unreliable, as petitioned by the defense.

6.2. Outlandish Use of Standard Theorems of Forensic Psychology

While the Wuppertal Court did dutifully read the textbooks on the forensic application of psychology, it stretched the theorems it found therein to the breaking point. Something which holds true for normal trials cannot simply be extended ‘as is’ to the new kind of special trial we have here. For example:

The forgetting process over time, which the court did take note of in some detail,⁷⁶ is illustrated by a bell curve in the book by Bender, Röder and Nack⁷⁷. It is downright frivolous for the Wuppertal Court to attempt in pseudo-scientific manner to apply such ‘forgetting’ bell curves in unmodified form in cases where the events to be recalled are 41 years removed, such as in the case of Freimark’s first questioning. It ought to have been noted that the ‘forgetting’ bell-curves of textbook fame are based on forgetting times on the scale of *months*, of a *few* years at the very most – not of several decades.

6.3. Disregarded at Wuppertal: the Tendency of Very Late Testimony to Be Goal-Oriented

Bender, Röder and Nack point out that testimony given in the course of a trial is frequently aimed at a desired goal (in other words, incrimination or exoneration of the defendant). For this reason, remnants of memories are often deformed to make them ‘expedient’; untruths are ‘attached’ to true details. Further they state:⁷⁸

“132. Whereas the comprehensiveness and reliability of recollections deteriorate with time as a matter of course, the subjective certainty of the informants – the conviction that their recollections are complete and reliable – frequently exhibits the opposite trend: they (allegedly) become all the more certain, the farther back the actual event lies in time.

133. This phenomenon is related to the increased probability that remote events have been ‘retrieved’ frequently from the depths of memory because the informants have thought about, have mentally occupied themselves with the events in question. But such repeated

⁷⁶ Verdict, pp. 187f.; doc/180, 181.

⁷⁷ R. Bender, S. Röder, A. Nack, *Tatsachenfeststellungen vor Gericht*, 2 vols., C. H. Beck, Munich 1981, Vol. 1 p. 46.

⁷⁸ R. Bender, S. Röder, A. Nack, *ibid.*, Vol. 1 p. 48.

revisiting of earlier memories not only reinforces memory patterns, it also falsifies and expands them. Given this prerequisite, the farther back an event is, the more our informants have ultimately forgotten how little they had remembered of the event shortly after it happened.”

This classic textbook speaks of even 30 days as “long-term.” Freimark was questioned about the case of Gottfried Weise for the first time after 41 years, *i.e.*, 15,000 days – an intervening period 500 times as long. During this period, additional things he repeatedly heard and read influenced his memories in an emotionally highly charged manner. The ever-changing content of his testimony at different points in time speaks for itself: fading memories are overlaid with things heard, read and imagined.

The problems in ascertaining truth, as already noted for regular trials by renowned authors specialized in this field, occur all the more with exponentially increased severity in political ‘special trials’ conducted decades after the alleged deed. In the Federal Republic of Germany, the problems that arise are made taboo for reasons of foreign affairs or ‘public education.’ Academic research is not subject to such fetters in many other countries.

6.4. Ignored in Wuppertal: The “Survivor Syndrome”

The problem of the “Holocaust-Survivor Syndrome” received international attention at the time of the Wuppertal Trial. Medical sources told me that the Ukrainian-American psychiatrist Dr. O. Wolansky was one of the leading experts on this subject today, and I was referred to a seminar he had given on this subject on January 25, 1993 at a Congress held in the Polish Consulate in New York and attended by 150 Polish, White Russian and Ukrainian physicians. To quote an excerpt:⁷⁹

“Well-known Ukrainian-American psychiatrist Dr. O. Wolansky explained the persistent psychological and psychiatric damage caused to the mentation of the majority of the concentration camp survivors. He indicated that in regard to Holocaust survivors alone, over 1600 medical articles and books [have been] written on this subject in the past 50 years, which resulted in the term Holocaust Survivor Syndrome. He explained that the true horrors and the stress of the concentration camps were forgotten by survivors with the passing of the years, and were supplanted by group fantasies of martyrdom borrowed from heard or read materials or by delusions confabulated anew. He illustrates this phenomenon with the effusive and emotional testimony in Jerusalem of the Jewish Treblinka survivors at the Demjanjuk trial which subsequently turned out to be what in legal terms and before a more neutral tribunal could be called prejudice and/or fabrications.”

It was revealed in the Wuppertal Trial that Freimark had been under psychiatric care. The symptoms of “Survivor Syndrome” which Dr. O. Wolansky listed in his seminar –

- fantasies of martyrdom borrowed from heard or read materials,
- delusions confabulated anew, and
- effusive and emotional testimony –

may be found in Freimark’s accounts in great number, in the form of ‘attached untruths’ as set out by Bender, Röder and Nack.

7. *Cautio Criminalis*

In advocating the rescission of the statute of limitations, Herr Schwarz-Schilling soothingly pointed to the allegedly matter-of-course maxim of *in dubio pro reo* (when in doubt, acquit). As though to reaffirm his confidence in this practice, he released a postage stamp in 1991 (in his erstwhile capacity as German Postmaster General) which commemorated the four-hundredth anniversary of the birth of a man who had made outstanding contributions to the development of the western world’s legal traditions.

At a time when all the world still believed in witches (he himself included), Jesuit Priest Friedrich Spee von Langenfeld advanced his “Judicial Considerations Regarding the Witch

⁷⁹ News release, Jan. 25, 1993, Polish Historical Society, Stamford, Conn., USA; cf. Jerome Rosenberg, “Holocaust Survivors and Post-Traumatic Stress Disorders,” *The Journal of Sociology & Social Welfare*, 11(4) (1984), pp. 930-938.

Trials.” Of course, the heinous crime of witchcraft must be combated, he said, but precisely *because* witchcraft was such an especially grave crime, the defendant must be granted every possible avenue of defense.

One might wish that those in charge of Germany’s justice system today would read Spee’s book and take his advice to heart.⁸⁰ Of course, no one still believes in witches flying off on their brooms at night to meet with the devil. But the belief in

particularly heinous crimes as a matter of “common knowledge” is firmly entrenched. And of course, physical torture is no longer used today, unlike in the witch trials of medieval times. Even during the special trials of the post-war era, it has not been the method of choice since the early 1950s. But defendants accused of crimes commonly known to have been particularly heinous are still denied the full range of avenues for defense demanded by Spee more than 360 years ago. How, for example, was Gottfried Weise to defend himself against being branded “the Beast of Auschwitz” if the flaming burning-pits, the burning of live children, the mass gassings going on all around him, the meters-high flames shooting out of the crematoria chimneys were so “commonly known”? It was only logical for the Wuppertal judges to allow the beast thus branded no ‘excuses.’

As a high-ranking jurist informed me, one of the elements of the certainty of the law is that verdicts which have become final are not open to nitpicking. I beg to differ. Even the judicial demigods in black may err. It is very important in our days to keep them from becoming ideologically blinded and subject to preprogrammed ‘errors.’ The uncertainty of the law resulting from the rescission of the statute of limitations must be remedied. Even those defendants who are charged with ‘special crimes’ must be allowed to defend themselves without restraint, and persons who speak up in their favor must not be defamed out of hand as “Nazi” and potential agitators, as happened in Solingen to Herr Günther Kissel for daring to put in a good word for his neighbor Weise.⁸¹

In 1979, journalist Fromme predicted that our naturally evolved German legal traditions would be silently restored “in about the year 2000.” Yet the opposite has happened: Ever since, the hunt for geriatric SS men has assumed obscene proportions.

Isn’t it high time that Böckenförde’s expert judicial report be finally concluded with the analysis of a concrete legal case?⁸² No one seems to have the courage to grasp the nettle, neither in the matter of principle nor in the individual case of Gottfried Weise. In this case, a retrial had already been requested in late 1992. A few months later, Weise’s attorney attempted to find out from the District Court of Mönchengladbach how the processing of the motion for a retrial was proceeding. The motion could not be adjudicated, he was told initially, because the documents requested had not yet been provided by North Rhine-Westphalia.

Then a game ensued, not unlike what we as children used to call “Schrapf lost his hat.” The Pardons Office had the documents. No, not that office, a different one. No, not that one either. Finally, in late November 1993, the District Court sent a memo with a voluminous enclosure. The Public Prosecutor’s Office of Cologne – the same one that had achieved Weise’s conviction – had had the files since July 1993, and had drawn up a lengthy ‘decree’ in which it attempted, with a great many words and very little content, to substantiate that

⁸⁰ Friedrich Spee von Langenfeld, *Cautio Criminalis oder Rechtliches Bedenken wegen der Hexenprozesse*, dtv, Munich 1982.

⁸¹ Cf. the flier which Herr Kissel saw himself forced to distribute because the media denied him the right to publicly correct the vicious incendiary slander that had been directed at him; cf. reprint of this flier in U. Walendy, *Historische Tatsachen* No. 59, Verlag für Volkstum und Zeitgeschichtsforschung, Vlotho 1993, p. 38.

⁸² Eventually, Prof. Böckenförde became a judge of the German Federal Constitutional Court himself.

the application for retrial should be denied. In a further ‘decree’ of December 1993, the Public Prosecutor’s Office brought forth additional arguments for a denial. In January 1994, Weise’s attorney submitted the refutation of all these arguments to the District Court. In late May 1994, finally, the application for retrial was denied, which the defense appealed.

The Provincial Court of Appeal at Düsseldorf rejected the appeal without a hearing and without comment. The Federal Constitutional Court did not take the case on the grounds that first the Provincial Court of Appeal at Düsseldorf would have to hear the appeal it had rejected earlier. And since early 1995, the Düsseldorf Court of Appeal is waiting for the documents and files to resurface from somewhere within Chief Minister Johannes Rau’s jurisdiction.⁸³

How long is this playing-for-time going to continue? After two previous strokes, Gottfried Weise has just undergone a massive operation for cancer, followed by pneumonia, and has suffered a third stroke. To some, a ‘natural solution’ might seem the easier way out.

For as long as those responsible continue to shirk their duties, all we have left to us is the prayer which I found inscribed on an Upper Bavarian house,⁸⁴ invoking Saint Michael, the “champion of justice, to stand by us in evil times.”

8. Addendum by Willy Wallwey

Since the first German edition of this book has appeared, the situation of the presented case has almost sensationally changed. Due to his meticulous, unremitting efforts, the severely disabled veteran Dr. Claus Jordan has discovered facts that place the verdict of 1988 against Gottfried in an absurd light.

8.1. The Documents

8.1.1. Scene of the Crime

Documents about the railway connection of the *Personal Effects Warehouse I* were found in a Moscow archive. This includes documents about a delousing facility that was operated therein. These documents are being complemented by air photos of the western Allies and of the German *Luftwaffe*. An initial review of these documents indicates that the Auschwitz Main Camp only had a simple rail line passing by rather than a ramp.

8.1.2. Operation of the Delousing Facility of Kanada I

Furthermore, the documents of the Moscow archive show that the delousing facility of the *Personal Effects Warehouse I* directly attached to the Main Camp was out of operation at the alleged time of the crime as it was ascertained by the court. It had been moved earlier to the Auschwitz Main Camp itself. A highly modern microwave delousing facility with a huge capacity was installed at this place. For this we succeeded in finding an hitherto unknown archive demonstrating the capacity of this facility. More detailed results were published recently.⁸⁵

8.1.3. Time of the Crime

The International Tracing Service in Arolsen, Germany, has delivered documents via the German Federal Ministry of the Interior, which prove more facts:

8.1.3.1. Documents Known at the Time of the Verdict

On January 28, 1988, one day before the verdict was announced, the Wuppertal Court received documents about Freimark’s typhoid-fever illness, the only witness for the prosecution, via the International Tracing Service. Instead of involving a medical expert in the as-

⁸³ Date of this writing: May 1995.

⁸⁴ “O’hl.Michael ‘Kämpfer des Rechts’ / steh uns bei / wenn uns droht was schlechts.” AD 1993. Unfortunately the beautiful color photograph of this house inscription cannot be reproduced here; it was confiscated by a certain lady Prosecuting Attorney.

⁸⁵ H.J. Nowak, “Kurzwellen-Entlausungsanlagen in Auschwitz,” *VffG* 2(2) (1998), pp. 87-105; see his contribution in this volume.

essment, the court assessed them itself in its absolute power because of the “urgency of the case.”

Years after the verdict, and thanks to Dr. Jordan’s indefatigable and self-sacrificing efforts, more documents were found among those delivered to the court which give additional information about Freimark. According to a renowned judge, this alone should have sufficed for a retrial of the case.

8.1.3.2. New Documents about Freimark

In a letter of January 12, 1995,⁸⁶ the International Tracing Service of Arolsen reported about a complete series of laboratory reports concerning Freimark via the German Federal Ministry of the Interior. (The International Tracing Service is not allowed to give information to normal citizens.) The Tracing Service received these results of the “*Hyg.-bakt. Untersuchungs-Stelle der Waffen-SS Südost*” (Hygienic-bacteriological Research Department of the Waffen SS South East) regarding Freimark, starting on August 14, 1944, ending on September 18, 1944, and including the highest screening number 79698, directly from the Auschwitz State Museum. According to the book *Inventararchivalische Quellen des NS-Staates*,⁸⁷ these files of the *Hygieneinstitut* include 151 volumes for the years 1943-1945.

According to a first statement of a medical expert, as Dr. Jordan could establish, these laboratory reports prove that the witness Freimark was not ill at the time period in which the court placed his typhoid fever illness. On the contrary, he was probably ill as he has described in his first statement (May/June 1944). Therefore, he cannot have seen anything of the alleged deed during the time as determined by the court.

8.2. Quashed Hearing of Evidence by the Court

The above-quoted letter of the International Tracing Service additionally proves that the Wuppertal Judge Klein did not even try to search for more-detailed documents about Freimark’s illness. Judge Klein told the Tracing Service that the decisive question for this trial was whether the witness Freimark was still interned in Auschwitz on September 18, 1944.⁸⁸

But the supportive Motion to Take Evidence of the defense, dated January 18, 1987, said clearly:

“Visual assessment of the original laboratory reports at the Auschwitz State Museum, Auschwitz/Poland.”

8.3. Afterword

The International Tracing Service wrote in January 12, 1995:

“Not until now have you [German Federal Department of the Interior,] informed us [by letter of December 19, 1994] that in fact every single lab test as well as its nature and results were of vital importance in the trial.”

SEVEN years after the verdict, the International Tracing Service Arolsen sends TWENTY enclosures to the Ministry of the Interior! The Tracing Service had received these documents from the Auschwitz State Museum as microfilm copies already in 1978.

Hence, Gottfried Weise was sitting in prison with a life sentence, because the German Judge Klein did nothing to obtain the evidence.

Dr. Claus Jordan died in June 21, 1995, four days before his 70th birthday. He didn’t have the satisfaction to conclude his efforts and to see Gottfried Weise, whom he always considered to be an innocent man, back in freedom. But at the very least, he was spared from being dragged into court for his contribution to the present book: In March 1995, a criminal inves-

⁸⁸ Thus the International Tracing Service quotes the judge in its letter, note 86.

tigation was launched against him, because the present article allegedly incites the German people to hatred against the Jews.⁸⁹

With this contribution, his work on behalf of Gottfried Weise's freedom and honor, Dr. Claus Jordan courageously fought for the truth, as he always did. His friends continue his work.

Gottfried Weise was released from detention on a mercy plea in April 1997 because he was severely ill (cancer). He died in the spring of 2000.

Holocaust Victims: A Statistical Analysis

W. Benz and W. N. Sanning – A Comparison

GERMAR RUDOLF

1. Introduction

Polemic discussions about the Holocaust frequently come to a dead end when one party resorts to the argument that it is after all an indisputable fact that six million persons of Jewish faith were missing after the Second World War and that therefore it does not matter in the slightest *how* these people were killed. But is the number of victims really undisputed?

In this line of argument it is usually overlooked that for a long time the figure of ‘six million’ was based on nothing more than hearsay evidence given by two German SS bureaucrats at the International Military Tribunal (IMT), specifically the written (never oral) testimony of Wilhelm Höttl¹ and the oral but never cross-examined testimony of Dieter Wisliceny.² These men claimed that they had heard this figure from Eichmann³ who, however, later disputed this.⁴ On the basis of their testimony in Nuremberg, both witnesses were transferred from the defendants’ dock to the witness quarters – usually a life-saving transfer. While Wisliceny and Eichmann were later convicted and hanged, W. Höttl was never prosecuted, even though he was no less deeply involved in the deportation of the Jews. He had clearly been promised exemption from punishment in return for his services as witness and, unlike Wisliceny, was lucky enough to see that promise kept.

Höttl’s recent after-the-fact apologia for his testimony of that time⁵ contradicts what he had stated earlier, and is thus not very credible.⁶ For details of the ways and means with which the statements of such coerced witnesses were obtained during the Nuremberg Trials, see my chapter on the value of testimony earlier in this volume.

British historian David Irving marveled that as early as June 1945, in other words immediately after the end of hostilities in Europe, some Zionist leaders were able to provide the precise number of Jewish victims – six million, of course – even though the chaos reigning in Europe at that time rendered any demographic studies impossible.⁷ Not long ago, German historian Joachim Hoffmann pointed out that the chief Soviet atrocity propagandist, Ilya Ehrenburg, had publicized the six-million figure in the Soviet foreign press as early as January 4, 1945, *i.e.*, fully four months before the war’s end.⁸ W. Höttl has found an article in *Readers’ Digest* which in February 1943 already reported the murder of at least half of the six million Jews threatened by Hitler.⁹

⁹ W. Höttl, *op. cit.* (note 5), pp. 412, 515–519.

In 1936, Chaim Weizmann is reported to have said in front of the Peel Commission on the division of Palestine:¹⁰

“It is no exaggeration to say that six million Jews are sentenced to be imprisoned in this part of the world, where they are unwanted, and for whom the countries are divided into those, where they are unwanted, and those, where they are not admitted.”

But this ‘magic’ number probably dates back even further. A series of *propaganda articles* published shortly after the end of the First (!) World War already mentioned six million Jews who had perished in a Holocaust in eastern Europe,¹¹ and Benjamin Blech tells of an ancient Jewish prophecy that promises the Jews their return to the Promised Land *after a loss of six million* of their number,¹² which is certainly grounds for speculation.

The origin of the six-million figure, which has by now been acknowledged as “symbolic figure” even by historians of the establishment,¹³ is thus more than questionable, and it is not surprising that even world-famous statisticians have long conceded that the issue of the numbers of victims is in no way settled.¹⁴

In introducing the discussion of Holocaust victims, revisionist scholars sometimes cite an article in the Swiss paper *Baseler Nachrichten* of June 12, 1946, which postulated a maximum number of 1.5 million Jewish victims of National Socialism, as well as the fact that the International Red Cross never made any mention in its post-war Activity Reports of a systematic extermination of the Jews in gas chambers.¹⁵ Benz comments rightly that citing various undocumented newspaper sources and the IRC, which out of a lack of any comprehensive overview never compiled any statistics of its own about the numbers of victims, is a very dubious practice.¹⁶ While there have been several attempts since the war’s end to determine the number of victims,¹⁷ any monograph commensurate with the importance of the topic was lacking until the early 1980s. It was not until 1983 that a book was published in the United States and concurrently in Germany, titled *The Dissolution of the Eastern European Jewry*, by Walter N. Sanning,¹⁸ which attempted, by drawing on statistical material from mostly Jewish sources, to ascertain the number of Jewish Holocaust victims in the Third Reich’s sphere of influence. Since Sanning concluded in his book that at the very most several hundreds of thousands of

Sanning, *The Dissolution of the Eastern European Jewry*, Institute for Historical Review, Newport Beach, Cal. 1983; German: *Die Auflösung des osteuropäischen Judentums*, Grabert, Tübingen 1983, as well as the discussions with representatives of the opposing side: W. D. Rubinstein, W. N. Sanning, A. R. Butz, *JHR* 5(2-4) (1984), pp. 367-373; D. Desjardins and J. S. Conway, *JHR* 7(3) (1986), pp. 375-381. Both the German and the English version of Sanning’s book have appeared in new editions (Castle Hill Publishers), but apart from supplements, the contents have basically remained unchanged, although with different pagination. Page numbers mentioned refer to the 1983 English edition.

Jews perished of unknown causes due to measures of the Third Reich,¹⁹ it was to be expected that the establishment would counter with a reply containing a wealth of statistical material intended to reconfirm the “symbolic figure” of six million Jewish victims. And indeed, in 1991 the official German Institute for Contemporary History (*Institut für Zeitgeschichte*) published a 585-page study titled *Dimension des Völkermords (Dimension of Genocide)*, where we read:²⁰

“The bottom line indicates a minimum of 5.29 and a maximum of just over 6 million [Jewish victims of the Holocaust].”

This is how editor Wolfgang Benz summarizes the statistical investigations of his seventeen co-authors, each of whom focused on one nation that had been either occupied by or allied with the Third Reich. Benz follows this up right away with an unasked-for disclaimer, though:²¹

“Of course, the purpose of this project also was not to prove any pre-set figure (‘six million’),”

even if the final result does happen to coincide with the semiofficial number. In the following discussion of individual contributions to this book, we shall refer only to the editor W. Benz rather than to the various co-authors to avoid confusing the reader with a multitude of different names.

In the summary of his 239-page book, Sanning writes:¹⁸

“– At the beginning of World War Two there were fewer than 16 million Jews in the world [...]

– One million Jews died while fighting in the Red Army or in Siberian labor camps; [...]

– Approximately 14 million Jews survived the last war [...]

Further civilian and military losses must be deducted from the missing one million Jews, so that Sanning eventually arrives at only about 300,000 Jews who lost their lives in an unexplained manner in the German sphere of influence during the Second World War.

In view of the fundamental contradiction between these two works, an interested and critical reader naturally wonders which of the two authors is right. Since the answer to this question is of great consequence, and since recent scientific and technical findings have rendered several aspects of the orthodox Holocaust narrative extremely questionable, the following shall compare and contrast the approaches and findings of both works.²²

2. Method

For this purpose, we will organize our analysis on the basis of the nations which, during World War Two, came under German rule either in whole or in part, and we will examine the fluctuations exhibited by the Jewish population statistics there. The sequence of the nations corresponds in general to that used in Benz’s work, where only these countries are dealt with. In comparison, Sanning incorporates more extensive demographic observations, taking into account non-European nations as well, for which reason no strictly defined sequence of nations under German rule can be maintained in his work.

Between 1933 and 1945, the national borders of the countries studied often underwent considerable changes. In the work by Benz, each country is discussed by a different author, and since the various authors clearly did not agree among themselves with respect to common borders, there are many cases of overlap which frequently result in parts of the populations in

¹⁹ W. N. Sanning, *The Dissolution...*, *op. cit.* (note 18), p. 14.

²⁰ W. Benz, *op. cit.* (note 3), p. 17. Since each contribution to this book opens with a summary of the history of the Jews in the country under discussion, and gives a detailed account of all the anti-Jewish laws, measures and events that took place there, one must first wade through masses of extraneous material which has already been set out in many other books before one can isolate the statistically relevant data among all the alphabet soup. The size of Benz’s book is thus no indication of its statistically pertinent content.

²¹ *Ibid.*, p. 20.

²² For other critiques of W. Benz’s work see W. Hackert, “Ein Standardwerk zum Holocaust?,” *DGG* 40(2) (1992), pp. 19-24, and: U. Walendy, *HT* 52, Verlag für Volkstum und Zeitgeschichtsforschung, Vlotho 1992, pp. 27-33.

question being counted twice.²³ We shall point this out as individual examples occur, and total these doublings at the end. Since Sanning, being the sole author of his book, did not have such trouble in allotting boundary areas, we will consequently follow his choice of borders. Since the Benz book goes into great detail where such territories are concerned that were subject to changes in sovereignty, the appropriate corrections are generally quite easy to accommodate here.

For each nation or group of nations, we shall give a brief tabular overview of the Jewish population statistics as given in each work. Only where the data given in the two books are at considerable odds will reference to the soundness of the data and their calculation be made in order to determine which author's arguments are better. The reliability of the sources cited by the authors will be touched on only in isolated cases.

This will be followed by a comparison of the sum total of Jewish losses in German-occupied or -allied Europe, as calculated in each book, as well as by a summary critique. This will also address the matter of where and how the victims Benz believes to have identified, allegedly lost their lives, which will reveal certain contradictions.

An overview of the numbers of Jewish emigrants from the European nations under former German influence follows, as well as a survey of world Jewish population changes before and after the Second World War. Since these aspects are discussed *only* by Sanning, no comparison with the Benz book can be drawn here – but since Benz's book appeared eight years *after* Sanning's, this certainly gives the impression that no factual objections were possible to Sanning's arguments, at least where the matter of emigration was concerned.

And finally, Sanning's work is verified statistically; a similar test was already performed some time ago by a Swedish statistician.

To avoid a vast number of footnotes, sources will be indicated in the text by parenthetical references giving only the page number in question and identifying the book by the initial of its author/editor (S or B), and in tables by appropriate notation in the column "Ref." or in brackets. Only rarely will reference be made to the source quoted by the book itself.

3. The Nations under German Influence

3.1. Germany and Austria

Jewish emigration from the German sphere of influence, which had been strongly encouraged earlier,²⁴ became restricted in October 1941.²⁵ After that, deportations to labor, concentration and so-called extermination camps gradually began. For this reason, where reference is made in the following to Jewish population statistics prior to the beginning of the extermination of the Jews as described by defenders of orthodox Holocaust claims, *it is this approximate date that has been used as the temporal dividing line.*

The lower number of the Jewish population in Germany as given for this time in Benz's book is the same as that in Sanning's, since both are based on a monthly report of the Reich Association of Jews in Germany to the *Reichssicherheitshauptamt* (Reich Security Main Office). Since this association was an extension of the National-Socialist state, the figure given is quite reliable. Benz, however, proceeds on the assumption that this figure represented only "full Jews," and adds approximately 43% for "half-Jews" and "quarter-Jews," even though these Jews were only partly (half-Jews) or not at all (quarter-Jews) subjected to the measures implemented by the German authorities.²⁶

²³ This was also pointed out by E. Jäckel, professor of contemporary history in Stuttgart, in his review of Benz's book in the German weekly newspaper *Die Zeit* of June 28, 1991.

Benz does not give any definite figures for the number of Jews in Austria, but believes that by the beginning of the war two-thirds of the Jews (as defined by the Nuremberg Race Laws) who had been present in Austria at the time of its unification with the Reich had fled (B68). This means that of 206,000 (B70), some 70,000 remained at the start of the war. Until October 1941, emigration – which amounted to approximately 15% in the Reich proper at this time (B35) – produced a further reduction of about 10,000.

For Germany, Sanning cites only those figures provided by the Reich Association. For Austria he refers to contemporaneous Jewish sources in Austria and the United States.

For the Jews to be found in post-war Germany, Benz cites only estimates, and for those in Austria, nothing more than a number pertaining to ‘after the liberation.’ However, due to the chaos reigning at that time, these statistics are very unreliable. Sanning cites data provided by the well-known Holocaust specialist Gerald Reitlinger, and his figures for Austria were not determined until October 1947, after the majority of population transfers in and from Europe had begun to subside.

While Benz ignores the increased mortality rate that characterized the Jewish population in the Reich between 1941 and 1945 due to the emigration of predominantly young people, which resulted in a disproportionate percentage of elderly Jews, Sanning does take this into account, which further reduces his tally of missing persons. This illustrates clearly the contrasting approaches of the two authors: Benz proceeds on the assumption that the difference between pre- and post-war Jewish population figures must be the result of the extermination program, which may make any calculation of natural mortality rates seem superfluous. Sanning, on the other hand, does not automatically consider the difference to be entirely cases of deaths – as yet, to him, these people are only missing, which may, of course, include cases of death. Further differences in the treatment of statistical questions will become apparent in the following, and will be summarized at the end.

I have reduced Benz’s numbers of victims by 21,000 for Germany and by 16,692 for Austria. These represent victims who fled to other European countries not then under German control, where they later came under German rule and were allegedly exterminated (Germany: B64; Austria: B74). However, since these people are also counted as part of the Jewish population of their country of destination (particularly France and Czechoslovakia), it is necessary to deduct them once. For the moment, we shall take note of **37,692 Jewish victims counted twice**, which must be deducted from Benz’s total.

3.2. France, Benelux, Denmark, Norway and Italy

The reason for the great differences between the opening figures for France and the Benelux nations is that, except for the Netherlands, only estimates are available for the numbers of Jews living there before the war, both because these were simply never recorded statistically, and because immigration from Germany and Poland was largely uncontrolled. While Sanning bases his figures on information provided by the *American Jewish Yearbook 1940* (New York) and by Reitlinger,²⁷ who cite almost half a million, Benz uses straight estimates for Belgium and France; among his sources for these estimates are reports from German authorities which, however, frequently inflated the numbers of Jews grossly, probably for propaganda reasons.²⁸

²⁷ G. Reitlinger, *The Final Solution*, A. S. Barnes, New York 1961.

²⁸ W. N. Sanning gives several examples of such exaggerated data from German sources: Rumania, 1.5 to

*fled; ? calculated data from Oct. 1941 minus the number of claimed victims.

For Benz, the number of victims from France is by no means derived from the difference between pre-war and post-war Jewish populations, but rather from the number of those who allegedly were proven to have survived the deportations (2,566 of 75,720), and he cites Serge Klarsfeld to this effect.²⁹ For Klarsfeld, a deportee is considered a survivor, if that person returned to France after the war and officially registered with local authorities, plus those persons whose survival became otherwise known by accident.

Swedish demographer Carl O. Nordling comments rightly that the survivors from among the approximately 52,000 non-French Jews who fled to France before the war and were later deported to Auschwitz would not be very likely to report back to France after the war.³⁰ Similarly, a considerable portion of the survivors among the roughly 23,000 remaining French Jews, some of whom had obtained French citizenship only shortly before the war, will have emigrated without registration after the war, possibly assuming a different name in their new homeland,³¹ thereby becoming very difficult to trace.

Thus, Klarsfeld’s method for determining the number of victims, a method adopted by Benz, can hardly yield a correct result. The statements of former inmates claiming that their relatives had disappeared also fail to convince; to date there have been many cases of chance reunions of family members who each believed for decades that the other had been exterminated.³² Since families were separated and scattered throughout Europe after being imprisoned, and since especially for Jews there were only few ways of searching for their kin amid the chaos of post-war Europe, the lack of proof of a family member’s survival is also no proof of his or her extermination. Carl Nordling demonstrated the fallacy of these incorrect

2 million (in actual fact, approximately 700,000); France, 1.2 million (actually about 300,000) (S45).

and rash conclusion on the basis of an investigation of the fate of the Jewish population of the Polish city of Kaszony.³³

A further example of faulty method used by Klarsfeld and Benz may be found in their approach to those deportees who were not registered in the Auschwitz Camp and therefore did not receive an ID number. Klarsfeld and Benz lump all of these Jews together as victims of gassing because, being allegedly unfit for forced labor, they were all deemed useless. Nordling³⁰ pointed out that the first transports from Slovakia and France, between March and July 1942, were almost completely admitted into Auschwitz, but that larger proportions of the transports were no longer registered in the camp later on.

If one assumes that non-registration at Auschwitz meant death by gassing, and that the Third Reich had indeed been pursuing a policy of extermination, then one might expect to see the opposite trend, since in 1943 the labor shortage was considerably more severe in Germany than in 1942, and therefore Jewish workers ought to have been accorded greater value as the war progressed.

A far-more-reliable approach to determining the mortality of Jews deported from France is to reconcile the lists of names of those deportation trains whose inmates were registered without exception in Auschwitz with the entries in the death records of this camp. Aynat performed this thankless work and presented the results in a study first published in 1997.³⁴ According to this, a large part of the Jews deported to Auschwitz in the first half of 1942 did indeed perish there within a relatively short period of time, not in gas chambers, but in the epidemics raging in Auschwitz, especially typhus.

With regard to the Jews deported from France and other countries of origin in the second half of 1942 and later who were not registered in Auschwitz, in most cases it cannot be determined whether they ever arrived in Auschwitz in the first place. In view of the typhus epidemic that got out of hand in the Auschwitz Camp in the middle of 1942, it is reasonable to assume that these deportees were not even admitted to the camp. Mattogno was able to document one case of Jews deported from the Netherlands with initial destination Auschwitz where the Jews not registered in Auschwitz actually left the deportation trains at various train stations during their journey to Auschwitz and were assigned to other camps, probably to do forced labor in local enterprises.³⁵ Although this says nothing about their ultimate fate, it may be assumed that their chances of survival were far greater than those deportees who were sent to Auschwitz in 1942 and were registered there. That Jews were taken from deportation trains before they reached Auschwitz is also admitted by the orthodoxy, although the scale of these events is downplayed.³⁶

³⁵ C. Mattogno, *Special Treatment in Auschwitz: Origin and Meaning of a Term*, 2nd ed., Castle Hill Publishers, Uckfield 2016, p. 94; on the charlatanry of the Holocaust orthodoxy to classify all Jews deported toward Auschwitz but not registered there lock, stock, and barrel as gassed, see G. Rudolf, "How Danuta Czech Invented 100,000 Gassing Victims," *Inconvenient History*, 11(1) (2019).

³⁶ S. Klarsfeld, *op. cit.* (note 29), notes for Table III, p. xxvi, points out a case where the men of a transport from the year 1942 were not registered in Auschwitz until April 1944. In the second edition of her *Auschwitz Chronicle, 1939-1945* (Henry Holt, New York 1990), D. Czech downplays these events; cf. G. Rudolf, "How Danuta Czech...", *ibid.* R. Faurisson has pointed out (S. Thion, *Vérité historique ou vérité politique?*, La Vielle Taupe, Paris 1980, p. 328) that in the first edition of her *Auschwitz Chronicles (Hefte von Auschwitz* 7 (1964), p. 88), D. Czech claimed that none of the women in Transport No. 71 from France to Auschwitz were given registration numbers, in other words, that all women were gassed on arrival. This is refuted by S. Klarsfeld, of all persons (*op. cit.* (note 29), p. XXVII), who states that 70 women from this transport had survived, among them Simone Jacob (*ibid.*, p. 519), who later became the first woman President of the European Parliament (as Simone Veil). The second edition of D. Czech's *Auschwitz Chronicle* (p. 612) states that 223 women from this transport did receive a number after all (78560-78782), and – as prevailing opinion would have it – had thus been 'selected' as fit for labor. As far as we know it has not been determined whether the 70 surviving women mentioned by Klarsfeld were among these 223.

Thus, it is clear that the statistical data on which Benz’s book is based partially rests on unsubstantiated speculations.

Benz does not even attempt the other method of calculating casualties – namely, the comparison of pre-war and post-war Jewish populations. The post-war data given in the preceding table and identified with question marks are thus based simply on the subtraction of the supposed number of victims from the pre-war population.

Sanning again refers to Reitlinger for his post-war figures. In comparing the figures from Benz *et al.* and Reitlinger – both of them establishment Holocaust scholars – one sees that the estimation of the numbers of missing persons for these countries is very difficult due to the insufficient data available. For this reason, Benz simply assumes that most of the Jews deported from France and the Benelux nations (202,652, B104, 127, 130, 165) were in fact murdered. Reitlinger’s data are obviously not suited to this argument, since they prove this assumption to be false, even if only by the fact that his data suggests that only approximately 134,000 Jews were missing. The question of how many of these missing persons emigrated unregistered immediately after the war is not addressed by Benz and will be discussed here in a later section.

Here, too, Benz’s number of victims was corrected because the Dodecanese Isles off the Turkish coast (Rhodes, Kos, and others) were counted for Italy as well as for Greece. The corresponding 1,641 victims were therefore subtracted from Italy’s original figure of 7,555 (B213, 216). Together with Germany and Austria this makes for **39,333 victims counted twice**.

3.3. Albania

Benz assumes that Albania, with probably fewer than 1,000 Jews at the start of the war, lost a few hundred Jews, but he has only estimates to rely on for this (B236, 238). Sanning does not discuss this country at all, since neither statistics nor any relevant studies are available.

3.4. Greece and Yugoslavia

BENZ	JEWS 4/41	REF.	JEWS 1945	REF.	VICTIMS	REF.
Greece	70-71,500	272	12,726	272	58,885	272
Yugoslavia	80-82,000	312/3	16,000	329	60-65,000	330
TOTAL	150-153,000		28,726		119-124,000	

SANNING	JEWS 4/41	REF.	JEWS 1945	REF.	MISSING	REF.
Greece	65,000	134	12,000	135	53,000	136
Yugoslavia	68,000	136	12,000	136	56,000	136
TOTAL	133,000		24,000		109,000	

Where Greece is concerned, Benz has the better source material, since he had access to the Greek census data that was compiled just before the outbreak of the war (B247), whereas Sanning had to use one from 1931 (S134). Because of intensive emigration, Sanning assumed a decrease in population and therefore mistakenly estimated the Jewish population at 65,000. Benz, on the other hand, arrives at a figure of at least 70,000 Jews in Greece, including the approximately 2,000 Jewish inhabitants of the Dodecanese Isles (primarily Rhodes and Kos).

With respect to Yugoslavia, both authors proceed from the last census data, collected in 1931 (approximately 68,000 Jews). Benz estimates a population growth of some 4,000, and an additional 5,000 or so foreign refugees, as well as another 3,000 – 5,000 persons who, while having renounced their faith, were nevertheless classed as Jews under the Nuremberg Race Laws. Sanning, on the other hand, seconds Reitlinger in the assumption that immigration and emigration balanced out in Yugoslavia, a country that grew increasingly anti-Jewish in its outlook after 1939 (B312). Sanning does not address the matter of persons who had renounced their Jewish faith but were treated as Jews anyway.

For Greece, the difference between the data of the two authors results from Sanning’s deflated pre-war figure and from the 2,000 Dodecanese Jews which he may have missed.³⁷ For Yugoslavia, on the other hand, Benz appears to have estimated the pre-war figures a little too high. The actual number of missing persons, therefore, probably lies somewhere between the two figures, which do not differ very much anyhow.

3.5. Hungary

BENZ	JEWS 1941 (340)	KILLED IN COMBAT, AND SOVIET DEPORTATION (351)	BIRTH DEFICIT (340)	FLIGHT (340)	JEWS 1945 (351)	VICTIMS (351)
Hungary	484,000	Total: 27,000	2,900	9,000	166,000	277,000*

*Discrepancies in calculating the difference result from conversions; see text.

SANNING (144)	JEWS 1941	CON- VER- SIONS	KILLED IN COMBAT	SOVIET DE- PORTATION	BIRTH DEFICIT	FLIGHT	JEWS 1945	MISSING
Hungary	400,000	10,000	27,500	65,500	20,000	6,000	200,000	71,000

First of all, it is necessary to define which Hungary is at issue. Since Hungary had the same borders before the war as it did afterwards, but transitorily made tremendous, short-lived territorial gains in between, we shall here confine our analysis to the area within the borders of today’s Hungary (the so-called “Trianon Hungary”). Since both authors give their Jewish statistics for the newly added and subsequently lost regions separately from those for Trianon Hungary, it should be possible to transfer this definition to the numbers of Hungarian Jews without any difficulty. There is one serious problem, however. Benz’s distribution of the Jews between Trianon Hungary (some 401,000) and the territories gained (approximately 324,000) is based on a total of 725,000 Jews for Greater Hungary (B338), which is also Sanning’s initial figure (S138). But Benz adds approximately 100,000 persons of Jewish descent but non-Jewish denomination (based on the Nuremberg Race Laws), as well as approximately 50,000 immigrants from Poland (B340). This increase of about 20% must be added accordingly to the figure for Trianon Hungary, resulting in 484,000 Jews. The subsequent statistics (casualties at the front in the Hungarian Military Labor Force, Soviet deportations, as well as the numbers of survivors and victims) follow from the number Benz cites for Greater Hungary, if one considers that approximately 55% of all the Jews in Greater Hungary resided in Trianon Hungary, and if one assumes that all changes affected all Jews equally, regardless of where they lived. In fact, however, one cannot realistically assume this, since it is an undisputed fact that the Jews of Budapest – some 150,000 to 200,000 – remained completely unaffected by deportations (B348f.; S143).

Working with Greater Hungary rather than Trianon Hungary would avoid these problems, but we cannot do this because all of Hungary’s territorial gains have been incorporated into other sections of Benz’s book: the Bačka of Yugoslavia, northern Transylvania of Rumania, and southern Slovakia and the Carpatho-Ukraine of Czechoslovakia, with a total of approximately 324,000 denominational Jews, hence 391,000 Jews by descent and faith (+20%). In computing his overall total, Benz counted all these Jews twice, with the exception of the Jews in the territories gained from Czechoslovakia.³⁸ Since the 214,000 non-Jewish persons of Jewish descent who were counted twice amount to about 24.5% of Greater Hungary’s Jews, this corresponds to a duplicate counting of 122,500 Jewish victims out of an overall number of 500,000 Jews said to have been killed by the Germans (B351). If one considers that the proportion of victims in the border territories was greater than that in Trianon Hungary, since all of Budapest, for example, remained unaffected by the deportations, then a duplicate count of as many as 150,000 seems likely. This increases the **number of Jews counted twice to at least 161,833.**

Not all of the co-authors contributing to Benz’s book employed the same methods as in the case of Hungary, where simple estimates added 20% to the initial number of Jews; the

³⁷ Sanning does not mention whether he perhaps listed them under Italy. Since his figures for this country are greater than those of Benz (see above), this is a possibility.
³⁸ Regarding Bačka see B330, regarding Transylvania see B409.

result is that the territorial overlaps and duplicate counts get completely out of hand. Therefore, we shall focus less on the actual numbers in each case than on the methods applied. Hungary is an especially appropriate subject for a closer scrutiny of methods used, since this particular case represents an exceptionally explosive chapter of the (hi)story of the Holocaust. Advocates of the orthodox Holocaust narrative assume as a matter of course that the Germans deported 400,000 to 500,000 Hungarian Jews to Auschwitz, where the majority of them were killed. The basis for this assumption are IMT documents which, according to Benz, prove that in spring and early summer 1944 “444,152 Jews were deported from Hungary” (B344).

In his book, Sanning quotes Arthur R. Butz who pointed out that the International Red Cross made no mention in its Report, published in 1948, of any deportations of Jews to Auschwitz, but only of the beginning of Jewish tribulations in October 1944.³⁹ In addition to violent attacks on Jews, this time did see some deportations, whose purpose and destination, however, was forced labor in the Reich, not Auschwitz (B348, S139f.). Therefore, Butz and Sanning concluded that no convincing evidence exists to prove that Hungarian Jews were deported to Auschwitz at all.

There is no way around the fact, however, that there are still Jews living today who really were deported to Auschwitz in spring 1944 and who have repeatedly testified as witnesses in court.⁴⁰ Further, Pressac states that between $\frac{1}{3}$ and $\frac{2}{3}$ of the Hungarian Jews deported to Auschwitz, whose arrival and selection were photographed by the SS,⁴¹ were considered fit for forced labor, *i.e.*, were not killed.⁴² Furthermore, it can be proven, he says, that in the spring some 50,000 of these Hungarian Jews were transported on to the Stutthof Camp via Auschwitz.⁴³ The actual number of Hungarian Jews transferred elsewhere as substantiated by documents amounts to at least 106,700.⁴⁴ In this respect, therefore, Sanning’s theory rests on a shaky foundation⁴⁵ – but so does that of Benz, who contends that the Hungarian Jews were killed immediately and almost without exception.

There are other indications as well that the theory of mass destruction of the Hungarian Jews is incorrect: the witnesses to this destruction unanimously claim that during these alleged mass exterminations the limited capacity of the Birkenau crematoria necessitated the excavation of enormous pits, in which the bodies were burned. Dark clouds of smoke, they claim, darkened the sky over Birkenau during this process. Fortunately (or unfortunately, depending on one’s perspective) aerial reconnaissance photographs taken by the Allies during this time prove that in the Birkenau Camp, which was not obscured by clouds of smoke when the pictures were taken, there were neither open fires, nor giant pits, nor smoke activity

Grieger, *Das Volkswagenwerk und seine Arbeiter im Dritten Reich*, Econ, Düsseldorf 1996; P. Bölke, “Der Führer und sein Tüftler,” *Der Spiegel* 45 (1996), pp. 138f. A more-recent and -comprehensive overview of the fate of Jews deported from Hungary documents a minimum of some 128,700 of them having been admitted into, or transitted through, the Auschwitz Camp: C. Mattogno, *Politics of Slave Labor: The Fate of the Jews Deported from Hungary and the Lodz Ghetto in 1944*, Castle Hill Publishers, Bargoed, 2023, esp. pp. 124f.

⁴⁵ W. N. Sanning has since reconsidered this theory; personal communication.

on any large scale, nor piles of dead bodies, nor great supplies of firewood, nor anything else of the sort.⁴⁶

Even allegedly probative documents of the Nuremberg Tribunal cannot change this, since such documents are by no means always genuine, or true, and only ever provide evidence for deportations, which are not disputed here in the first place – *they never document an extermination*. The reader is reminded of the example of Dachau, the concentration camp where the IMT alleged that hundreds of thousands were gassed, a claim which in the end turned out to be nothing more substantial than an atrocity-propaganda lie.⁴⁷ We shall come across another case of dubious IMT documents in the discussion of the Soviet Union.

Benz's method proves to be very slipshod where other factors are concerned as well. He states that he can only vaguely estimate the number of Jews who lost their lives due to Soviet deportation and in the Hungarian Military Labor Force (B339), whereas Sanning cites verifiable figures based on Jewish or at least pro-Jewish sources (S140, 142). Benz maintains the birth deficit at pre-war levels, whereas Sanning reasons that the Labor Force for Hungarian Jews as well as the overall poor conditions for Jews during the war would have caused the pre-war birth rate to drop further. Benz completely ignores the numbers of Jews who 'converted' to the Christian faith; in any case, Jews who converted to Christianity were no longer represented in any post-war statistics about Jews, and are thus considered by Benz and his co-authors to have been 'gassed.'

The two authors' contrasting reports regarding the Jews said to be remaining in Hungary after the war are of interest. Whereas Benz suggests a total of 300,000 for Greater Hungary, Sanning cites that some 300,000 Jews were left after the war in Central (Trianon) Hungary alone. He bases his claim on, first, the US War Refugee Board's *Final Summary Report*, which states that more than 200,000 Jews in Budapest were exempted from deportations following negotiations with the SS (S143). Second, in its aforementioned report the International Red Cross stated that some 100,000 Jews poured into Budapest from the provinces.⁴⁸ Furthermore, 200,000 Jews had been counted in Trianon Hungary in 1946, while according to Reitlinger one can assume that by then a veritable mass exodus of Jews to the West had begun (S143). One must also consider, he says, that no doubt a great many foreign, mostly Polish Jews were included in this migration. Sanning thus cites 200,000 as the minimum number of Jews present in post-war Trianon Hungary. For Benz, the number of survivors derives almost exclusively from the number of Jews present before the war, minus the decreases estimated as above, minus the actual or supposed deportations to concentration camps or forced-labor camps (according to Nuremberg documents). Absolutely no other sources are used.

3.6. Czechoslovakia

We shall consider Czechoslovakia as defined by its post-war borders (up to 1992), in other words without the Carpathian Ukraine. Although Benz discusses Czechoslovakia with its borders prior to its first collapse in 1938/39, he does give a breakdown of the proportions for the individual regions.⁴⁹

Benz assumes a migration balance of net 33,000 emigrants up to mid-1943, while no net emigration was allegedly apparent for Slovakia (B369). Regarding emigration from the Protectorate of Bohemia-Moravia, he cites official statistics of contemporaneous Jewish author-

⁴⁸ A. R. Butz, *op. cit.* (note 39), p. 189.

⁴⁹ Whereas the chapter about Czechoslovakia speaks of 102,542 Jews in the Carpathian Ukraine (B355), the chapter about Hungary mentions only 78,000 Jews there (B338). Once again: inaccuracies and contradictions in Benz's book.

BENZ (379)	JEWS 1939	EMIGRATION	JEWS 1945	VICTIMS
Czechoslovakia	251,745	33,000	40,000	164-168,000*

*Should be 178,745; discrepancies in calculating the total in the original.

SANNING (146)	JEWS 1939	EMIGRATION	KILLED IN COMBAT	BIRTH DEFICIT	JEWS 1945	MISSING
Czechoslovakia	254,288	52,300	3,000	5,000	82,000	112,000

ities which, however, did not incorporate illegal emigration (B358). Sanning totals more than 52,000 emigrants, substantiating this with a reference to the Anglo-American Committee, according to which the Jewish population had already decreased by 40,000 by late 1939 (S144). Sanning is the only one to take into account the drop in birth rate and the casualties of the Hungarian Labor Force.

Benz arrives at what he claims to be the approximate number of survivors in the Protectorate by totaling those Jews who officially reported back as survivors of the deportations, or who were otherwise found in Czechoslovakia after the war. Unfortunately, such data were only ever gathered selectively, with respect to specific camps or cities, and never nationwide for any given point in time, so that the results are by necessity incomplete. For Slovakia, Benz derives his survivor statistics from the difference between those Jews who failed to return from deportations, and the population level prior to the deportations. Any westward migration is disregarded. For the regions temporarily ceded to Hungary, Benz assumes that the Jews there suffered the same fate as the remaining Hungarian Jews. Aside from the Carpathian Ukraine, some 45,000 Jews were affected by this. The problems involved in the study of the Jews in the territory of Greater Hungary have been mentioned earlier.

Sanning refers to Reitlinger in pointing out that in 1946, in other words after the westward migration had already begun, some 32,000 Jewish survivors were found in the former Protectorate alone (S145). Also according to Reitlinger, 45,000 Jews – and according to other pro-Jewish sources, as many as 60,000 Jews – were found in Slovakia after the war (S146), which of course stands in clear contradiction to the estimates advanced by Benz, who claims 20,000 Jewish survivors for Slovakia, and bases this assertion largely on Czech publications (B374).

3.7. Rumania

BENZ	JEWS 1941	JEWS 1945 (407)	VICTIMS
Rumania (409)	466,418	356-430,000	107,295

SANNING	JEWS 1941	EMIGRATION	KILLED IN COMBAT	JEWS 1945	MISSING
Rumania (153)	465,242	20,000	11,500	430,000	3,742

Rumania is considered here as defined by its post-war borders, including northern Transylvania but excluding Bessarabia and northern Bukovina. The only disagreement between the two authors consists in the treatment of the Jews of northern Transylvania, who came under Hungarian rule in the Second World War (see above). According to Benz, the majority of these were ‘gassed’ in Auschwitz, whereas according to Sanning, most of their losses were sustained in the Hungarian Military Labor Force. Since the number of survivors – up to 430,000, as Benz and Sanning document several times – rules out any great losses on the part of the North Transylvanian Jews, and since these findings do agree with the aforementioned results of recent investigations, one can assume that the Jews in the territory of post-war Rumania suffered next to no losses. Benz simply bases his calculation of the number of victims on the lowest documented number of survivors, in other words, he ignores the 430,000 Jewish survivors in his estimates, even though he mentioned them himself.

3.8. Bulgaria

Bulgaria is discussed here in its pre- and post-war borders, in other words, without Greek Thrace, without Yugoslav Macedonia, and without the southern Rumanian Dobruja with its quantitatively negligible Jewish population. Benz chose to base his analysis on the larger

BENZ	JEWS 1941	JEWS 1945	VICTIMS
Bulgaria (308)	50,000	50,000	0
SANNING	JEWS 1941	JEWS 1945	IMMIGRATION
Bulgaria (154)	48,400	56,000	7,600

wartime territory, while failing to reduce the regions of Yugoslavia or of Greece accordingly. This results in duplicate counts of 4,200 victims for Greece (B272) and 7,160 for Yugoslavia (B298), increasing the **overall duplicate count to at least 173,193**.

On the whole, there is no doubt that the Jews on Bulgarian soil were not in any danger and suffered no losses.⁵⁰ Sanning even shows a post-war population greater than that of pre-war times, and explains that Bulgaria served as gateway to the Middle East for a vast number of legal as well as illegal immigrants. According to Sanning, it is likely that noticeable numbers of foreign Jews were still in Bulgaria immediately after the end of the war.

3.9. Poland

BENZ	JEWS 9/39	REF.	JEWS 1945	REF.	VICTIMS	REF.
Poland	2,000,000	443	200,000	492f.	1,800,000	495
SANNING	JEWS 1941	REF.	JEWS 1945	REF.	MISSING	REF.
Poland	757,000	44	240,489	45	516,511	45

Poland is discussed here in terms of its post-war borders, without the eastern German regions. While Benz claims to add to this merely the administrative districts of Bialystok and Galicia, he does eventually include the victims for the entire territory that was Polish in the time between World Wars One and Two, *i.e.*, parts of what was known during the Second World War as the Reich Commissariats Ukraine and *Ostland*. But since he deducts only the numbers of victims for Galicia and Bialystok from the total in his chapter about the Soviet Union, this results in duplicate counts which will be discussed in greater detail in the section regarding the Soviet Union.

3.9.1. Poland’s Pre-War Population

The last pre-war Polish census indicated approximately 3.1 million Jews (B416, S20).

On the basis of detailed studies, Sanning shows that, even during the period between the two world wars, the Polish Jews exhibited an extremely low rate of population increase (S26f.). The German official *Institut für Zeitgeschichte* adds that since 1933 some 100,000 Polish Jews per year had turned their backs on radically anti-Semitic Poland and emigrated to western Europe or overseas (S32).⁵¹ Since those leaving the country were predominantly young people, the number of Jews in Poland must have decreased sharply until the outbreak of the war due not only to this migration but also due to an increasingly overaged population. Sanning puts the number of emigrants between 1931 and 1939 at only 500,000 and even factors in a population growth rate of 0.2%. He thus arrives at a population of 2,664,000 Jews at the war’s outset (S32).

This issue, to which Sanning devotes roughly 20 pages of intensive and thoroughly documented analysis, is accorded all of two sentences by Benz (B417):

“[...] if we extrapolate the census figures [of 1931] taking into account natural increase and emigration, we arrive at a 1939 total population of 35,100,000 persons for the Polish nation as a whole, of which the Jewish component is estimated at 3,446,000. We repeat: these figures are not certain [...]”

Benz therefore assumes, first of all, that the numbers of Polish Jews increased like those of the remaining Poles. Since Sanning clearly refuted this assumption eight years before Benz’s

⁵⁰ According to a personal communication by R.H. Countess, at the Stockholm *International Forum on the Holocaust* (26-28 January 2000), Bulgaria was specifically singled out for *protecting* its Jews. That means that Bulgaria will *not* have to pay any ‘reparations’ – unless certain discoveries are made.

⁵¹ H. Graml, “Die Auswanderung der Juden aus Deutschland zwischen 1933 und 1939”, in *Institut für Zeitgeschichte* (ed.), *Gutachten des Instituts für Zeitgeschichte*, Vol. 1, pub. by ed., Munich 1958, p. 80.

work was published, and yet Benz does not even mention Sanning's arguments, much less disprove them, there can be only one explanation for why untruths are clearly being disseminated here: the purpose is to maximize the initial population figure for Polish Jews.

Secondly, Benz assumes that the rate of emigration was essentially negligible. But since his book is a publication of the *Institut für Zeitgeschichte* and since this same *Institut* announced publicly that some 100,000 Polish Jews had left Poland annually since 1933, one wonders whether this is a case of the left hand not knowing (or not wanting to know?) what the right hand is doing.

Benz therefore bases his subsequent arguments on a starting figure of 3,350,000 Jews present in Poland at the beginning of the war (B417), of which 2.3 million are assigned to the western part which the Germans occupied in 1939 (B418). In this way Benz has overstated the number of Jews by probably 700,000 at the least. Are we to believe that Benz was unaware of Sanning's analysis of Jewish population trends in pre-war Poland? This seems out of the question, since after all Benz's book was published eight years after Sanning's. As I see it, the fact that Benz dedicates no more than one sentence and an apologetic comment to this complex topic ("We repeat: these figures are not certain") explains everything: this is an example of statistics being stretched well past the breaking point!

3.9.2. Refugee Movements during the Polish Campaign

According to Benz, some 300,000 of the initial 2.3 million Jews of western Poland fled eastward from the German armed forces during the Polish campaign, into the Soviet-occupied area; of these 300,000, approximately 250,000 were deported to Siberia by the Soviets. Benz states that these are estimates, since allegedly there are no reliable figures (B425f., 443). Accordingly, Benz suggests that approximately 2 million Polish Jews came under German rule in western Poland (B443). To document these statistics, Benz refers first and foremost to data originating with German sources whose doubtful value has already been mentioned.²⁸ Sanning explains that these figures are estimates calculated by the German authorities by extrapolating the census data from 1931 on the basis of a 10% population increase (S44f.). Even during the German occupation of Poland, there were no more-reliable figures and analyses available, and contemporaneous statisticians made the same mistake that Benz repeats in his book.

Sanning quotes numerous Zionist, Jewish and pro-Jewish sources, all of which indicate that between 500,000 and one million Jews fled to the Soviet-occupied zone of Poland during the German-Polish war (S39-43). Again, the majority of these were deported to Siberia. Among the sources cited are Jewish relief organizations, which attended to 600,000 Polish Jews in Siberian labor camps. Since a considerable proportion of these deported Jews already died during the inhumane transports to these camps, Sanning postulates a total of 750,000 Jews who fled into the Soviet zone as well as a further 100,000 who had fled to Rumania (S44).⁵² Thus, the number of Jews in western Poland had decreased from an initial 1,607,000 (S39) to 757,000 (S44), while the number remained unchanged in eastern Poland due to the deportation of predominantly western-Polish refugees (approximately one million, also Benz, B443).

The fact that such migrations of fleeing persons were not unusual is demonstrated by the example of Belgium, where 1½ to 2 million persons fled from the German armed forces at the start of the war, effectively obstructing any strategic movements of the Allied armies (S43).

Benz's and Sanning's figures regarding the number of Jews remaining *after* the war are not very different from each other.

3.9.3. The Destruction of the Polish Jews

Whereas Sanning does not address the methods of the alleged mass murder, Benz makes several observations on this topic, of which we shall quote some aspects, with comments where necessary.

⁵² Cf. also J. G. Burg, *op. cit.* (note 31), pp. 9-17.

First, Benz expounds repeatedly on the alleged exhaust-gas murders in vans, which of course he considers irrefutably proven (Kalisz, B431; Chelmno, B447, 462; cf. Yugoslavia, B320). The reader is referred to the chapter by I. Weckert in the present volume.

Regarding the methods of killing in other camps, he reports the use of bottled Zyklon-B gas in Belzec (B462). But Zyklon-B gas, *i.e.*, hydrogen cyanide, is not and never was bottled. For industrial purposes, hydrogen cyanide is transported in tank wagons, but it is never bottled. Further, he recounts the use of Diesel motors for mass gassings (Belzec, B462; Treblinka, B463; cf. USSR, B540). Regarding gassing with Diesel-exhaust fumes see the chapter by F. P. Berg, and regarding Treblinka see the study by A. Neumaier, both in this volume. Therefore, any commentary would be superfluous here.

A noteworthy admission on Benz's part is the following:

"Considering the fact that there are very few usable sources of documentation about the extermination camps, the number of Jews killed at these murder sites is especially difficult to ascertain, and depends primarily on estimates provided by witnesses, on the analysis of the regular transports and their numeric strengths, and on the population of those areas from which the respective killing centers were 'supplied' [...]" (B463f.)

The unreliable nature of witness testimony is demonstrated repeatedly in the present volume. Furthermore, straight calculations based exclusively on pre- and post-war populations are possible only if no uncontrolled emigration took place and if the initial statistics are sure to be correct. It is quite amazing that Benz nevertheless has the gall to use this method.

Benz finally concedes that the availability of source material leaves a great deal to be desired, not only where the alleged extermination camps are concerned but also with respect to the entire organization of the alleged extermination network structure (B463, footnote), and that there is no written, *i.e.*, documented and thus provable order for the destruction of the Jews (B3, 458f., 512).

3.10. Soviet Union

BENZ	JEWS 6/41	JEWS 1945	VICTIMS
USSR (560)	5,200,000	2,300,000	2,890,000

SANNING	JEWS 6/41	KILLED IN COMBAT	CASUALTIES OF DEPORTATIONS	GERMAN THEATER OF WAR	JEWS 1945 (MILLIONS)	MISSING (MILLION)
USSR (109)	5,439,000	200,000	700,000	130,000	3.5-4.5	0-1

The Soviet Union is considered here as defined by its post-war borders until the early 1990s. To determine the number of victims, Benz merely subtracts the number of Jewish citizens present after the war from the pre-war number. He then subtracts from the result the victims of Bessarabia and northern Bukovina, in other words, 100,000 victims which are included in his count for Rumania (B409), as well as the victims from Bialystok and Galicia (600,000, included in his count for Poland, B451). We do not need to correct this here, since we have discussed Rumania as well as Poland in their post-war borders. But Benz commits two major errors in this context: first, he forgets that after the war the Soviet Union annexed the Carpathian Ukraine, with a pre-war Jewish population of approximately 100,000. But since the victims from this area were included in the count for Hungary (B338, approximately 90,000 victims), this does not affect Benz's statistics. In our analysis, however, we considered Hungary and Czechoslovakia in their post-war borders and must therefore add the Carpathian Ukrainian Jews to the Soviet figures. This increases both the pre-war Jewish population and the number of victims accordingly. Of the approximately 101,000 Jews from the Carpathian Ukraine, Sanning considers 15,000 as missing and 86,000 as absorbed by the USSR (S156).

Secondly, Benz overlooks the fact that, contrary to his own claim, the former regions which made up the Reich Commissariats Ukraine and *Ostland* are included in his discussion of Poland. Since Benz assumes approximately one million Jews in the Soviet-occupied area (B443), of which roughly 600,000 are properly accounted for in the adjustments he makes for Bialystok and Galicia (B457), this means that he counted some 360,000 Jewish victims twice (90% victims of the 400,000 Jews living there).

This brings the total of Jewish victims counted twice by Benz to 533,193.

3.10.1. The Soviet Deportations

Sanning's category "German Theater of War" in the above table includes Jewish losses suffered in the area under German military influence as the results of pogroms not carried out or initiated by German forces, of starvation and epidemics, as well as of the execution of partisans (permitted by international law), of which Jews are known to have comprised a very great percentage. This category, as well as "Casualties of deportation" and "Killed in combat" in the Red Army, are treated rather capriciously by Benz:

"It [the number of victims] also includes the casualties among Jewish soldiers and civilians [partisans] as well as those who succumbed to the strain of flight and to starvation. This is justified. They too were victims of brutal National-Socialist policies." (B560)

Benz neither quantifies these categories, nor does he give reasons for this catch-all approach, for these are the closing words of his book. However, there certainly are clues to be found regarding the biases embraced by the book's collective authorial mind.

For example, Benz speaks of the "attack on the Soviet Union" (B499), and asserts that Stalin had done everything he could to "give Hitler no pretext for anti-Soviet measures, least of all for war" (B507). Further, he believes that the Soviet Union had practiced a "policy of appeasement" (B508). Today it is generally acknowledged even in Russia that the fairy-tale of Germany's aggressive attack on the peace-loving Soviet Union really belongs in the junk room of Communist war-time propaganda.⁵³ In this respect, the losses resulting from the war are not due exclusively to Germany, and they certainly have no relevance whatsoever to any aspect of the Holocaust.

Benz suggests that there are no systematic accounts of the extent and scope of Soviet evacuations and deportations of material resources and human beings. He dismisses this very important aspect in merely two paragraphs, with the comment that Stalin did not wish to provoke Hitler with evacuation activities (no, it's no joke – he really does claim this!) and that there were therefore hardly any noteworthy deportations (B507). Sanning, on the other hand, devotes his pages 53-109 exclusively to this issue and draws on a wide range of Allied, Jewish and Soviet statistics to offer sound data regarding the scope of Soviet evacuation and deportation measures at the start of the war. And with that, Benz's claim that there are no systematic accounts of this topic is already refuted. Did Benz and his co-authors not even read Sanning's book after all? But clearly they must have, for Benz does not deem Sanning's explanations in general to be a systematic account:

"[...] The author [Sanning] distinguishes himself through his methodologically unsound handling of the statistical material as well as through daring and demonstrably erroneous reasoning and conclusions." (B558, footnote 396.)

Unfortunately, Benz does not enlighten his readers as to just what might be erroneous about Sanning's arguments. While Benz assumes that approximately 3 to 3.2 million Soviet Jews came under the control of German forces (B509), Sanning again shows on the basis of un-suspicious sources that the number must have been less than one million (S103). He documents the fact that in most Russian cities a large part of the population that was fit to work, and especially the intelligentsia, had already been evacuated by the time German forces moved in. It is beyond the scope of the present work to detail Sanning's plethora of documentation and proof at this point, but one of his arguments shall be discussed in greater detail. It is generally accepted that some 600,000 Jews wore the Red Army uniform. If one considers that many Jews were deported to labor camps beyond the Ural Mountains, and that the normal recruiting level did not exceed 30% of the male population in any of the

⁵³ Eg. cf. V. Suvorov, *Icebreaker: Who Started the Second World War?* Hamish Hamilton, London 1990; E. Topitsch, *Stalin's War: A Radical New Theory of the Origins of the Second World War*, Fourth Estate, London 1987; W. Post, *Unternehmen Barbarossa*, Mittler, Hamburg 1995; F. Becker, *Stalins Bluts spur durch Europa*, Arndt Verlag, Kiel 1996; Becker, *Im Kampf um Europa*, 2nd ed., Leopold Stocker Verlag, Graz/Stuttgart 1993; W. Maser, *Der Wortbruch. Hitler, Stalin und der Zweite Weltkrieg*, Olzog Verlag, Munich 1994; J. Hoffmann, "Die Sowjetunion bis zum Vorabend des deutschen Angriffs," in Horst Boog et al., *Das Deutsche Reich und der Zweite Weltkrieg*, Vol. 4: *Der Angriff auf die Sowjetunion*, 2nd ed., Deutsche Verlags-Anstalt, Stuttgart 1987; Hoffmann, "Die Angriffsvorbereitungen der Sowjetunion," in B. Wegner (ed.), *Zwei Wege nach Moskau*, Piper, Munich 1991.

nations involved in World War Two (all of which has been documented), then according to Sanning at least 4 million Jews must have been in the non-occupied parts of the Soviet Union.

Now, it may well be that these 600,000 Jews were already conscripted before the war, since as we know the USSR was planning her own large-scale attack on Europe,⁵³ and/or that the Soviets had deported mostly the male population fit for military service during the German advance. This would mean *for Benz* that only few men of an age for military service would have been left to fall into the hands of the Germans, so that in the occupied regions more than 90% of the female Jews would have been exterminated while the conscripted and deported men in the hinterland and in the army would have had a considerably better chance for survival. Hence, the mortality rate among the women would have been greater than or at least equal to that among the men. From this it follows that a demographic analysis of the Soviet Union today should reveal greater or equal numbers of men in the age group that was of military age at the time in question. However, this is clearly not the case. Rather, the sex distribution corresponds to that of the other Soviet population groups, in other words, there is a similar deficit of men. This means either that men and women were deported in roughly equal numbers and consequently relatively few Soviet Jews actually fell into German hands, or that Jewish women who fell into German hands were generally *not* killed.

Regarding the number of Jews to be found in the post-war Soviet Union, Benz cites Soviet census data only. He sets out that “doubts about the reliability of Soviet censuses [...] are not justified” because these data served as the basis for and foundation of the Soviet national economy (B558).

But every child knows nowadays that all conceivable kinds of data have been falsified in the service of precisely this national economy so as to manifest Soviet superiority in economic competition with the capitalist western world. Domestically speaking, these falsifications served to close eyes, ears and mouths to the inexorably approaching collapse. But where the number of Jews identified by the censuses is concerned, there is not even any need for falsification. After all, the radically atheistic Soviet Union was one of those nations that made it difficult also and even especially for the Jews to profess their faith. Therefore, the numbers of Jews that voluntarily acknowledged their faith in 1959 and 1970 (2.2 and 2.1 million, respectively; B559, S117) says little about the number of survivors in the Soviet Union. Jewish estimates dating from the 1970s suggest 3 to 4 million Soviet Jews (S117ff.). More-recent newspaper reports even speak of 5 million Jews and more, which, however, seems unlikely in light of the stagnating demographic trends.⁵⁴ Since Zionist circles have always striven for the emigration of Jews from Russia to Israel, it is possible that they tend to exaggerate the number of Jews in Russia, with the intent to dramatize their hard lot during 70 years of Stalinist oppression. The numbers of presumably present or missing Jews thus serve as object of political scheming in other respects as well.

One point of criticism of Sanning’s approach is that he not only takes at face value the numbers given by German occupation authorities about Soviet Jews who fled or were deported by the Soviets, as they may be exaggerated, but he also overlooks the fact that other German documents of the occupation indicate that many Jews who were missing initially later reappeared in German-occupied Soviet cities. They had just fled into the countryside, but later ventured back into the cities. It can be deduced from the Incident Reports (*Ereignismeldungen*) of the *Einsatzgruppen* (Deployment Groups) that short shrift was often made of these Jews emerging from hiding. To what extent these Incident Reports are reliable is another question that will not be thoroughly treated here, but a few words are due.⁵⁵

3.10.2. Mass Extermination in the Soviet Union

To substantiate claims about the mass murders of Jews on Soviet soil, Benz again cites mostly witness testimony as evidence.

⁵⁴ *New York Post*, July 1, 1990.

⁵⁵ See on this the contribution by H. Tiedemann in the present book as well as C. Mattogno, *The Einsatzgruppen in the Occupied Eastern Territories: Genesis, Missions and Actions*, 2nd ed., Castle Hill Publishers, Uckfield 2022.

Behind the frontlines of the German forces fighting in the Soviet Union, the so-called *Einsatzgruppen* served even according to Benz to combat partisan activity (B514f., 518, 520, 528f., 540). Aside from that, they allegedly were also chiefly responsible for the mass executions of Jewish civilians, whose numbers are very difficult to ascertain (B577). Benz suggests that the statistics about these shootings as circulated during the war by the Jewish Anti-Fascist Committee are much too low, so as to “[...] show the Soviet endeavors to rescue the Jewish population in an (inappropriately) favorable light in the United States.” (B557, footnote.) But since the United States never bothered about the Jewish victims during the war, and in fact exaggerated the number of victims in their own propaganda since 1933, it is not clear just how and whom Jewish anti-Fascists could have impressed in the States with allegedly deflated statistics. Benz’s suggestion, that anti-Fascists should have *downplayed* the alleged Fascist atrocities for propaganda reasons, is something completely new; the opposite is surely more likely. One can only conclude from all this that these numbers of victims that Benz considers to have been deflated by the anti-Fascists are in fact already exaggerated.

Regarding the use of vans for mass gassings in the Soviet Union, Benz offers us a single, particularly suspect source: the Stalinist show trials of Kharkov and Krasnodar (B526f., 540).⁵⁶ Such utterly uncritical, indiscriminate citing almost makes one wonder whether Benz and his co-authors perhaps might even share Stalinist sentiments. Ignorance is no excuse for university scholars.

The mass executions in the East are generally considered proven, *i.e.*, documented by the so-called “Incident Reports USSR” which the *Einsatzgruppen* allegedly sent to Berlin on a regular basis and which detail, among other things, the number of executions. All events, however, were not listed there, so that Benz considers them an insufficient basis for determining the number of victims (B542f.). One exception, it is claimed, is the iconic case of Babi Yar (B530, 534, 542). But as it has been irrefutably proven by now that the alleged massacre of Babi Yar is an atrocity lie of no substance,⁵⁷ this admittedly throws the authenticity or at least the reliability of the entire IMT document series “Incident Reports USSR” and all other such documents into doubt, and hence the entire *Einsatzgruppen* mass murder *per se*. Even Benz’s assertion that “the authenticity of these reports is beyond question” (B541) cannot change this, because H.-H. Wilhelm, whom Benz quotes as proof of his claims, also insists that the reliability of the figures given in these documents is doubtful.⁵⁸ Here is how H.-H. Wilhelm described Benz’s behavior:⁵⁹

“Often, the consensus of research can only be explained by the researchers copying each other’s work uncritically [...]”

Thus, Benz’s argumentation is typical of the reciprocal quoting that characterizes the “standard literature” of Holocaust apologetics, “in which reciprocal citing produces the impression of a scientifically sound network of argumentation [...]” (B8, footnote 24).

It should also be pointed out that Benz repeatedly stresses that the Germans destroyed all evidence of their mass exterminations, mostly through exhumation and complete incineration, for which reason no victims or mass graves remain in evidence (B320; 469; 479; 489; 537f.). Millions of victims allegedly disappeared without a trace. And in the case of Babi Yar, Benz implies, even in a manner invisible to methods of aerial reconnaissance.

Gigantic mass graves cannot be rendered undetectable by exhuming and burning the bodies they contain. Such large-scale disturbance of the soil and the concomitant disruption of soil layers, the settling of the fill etc. would be evident not only in the contemporaneous Allied and German air photos, but also today, if anyone only cared to look. Since according to Benz “this task was [carried out] inadequately in at least a few cases,” there ought in fact

⁵⁶ Cf. the chapters by F. P. Berg and I. Weckert, this volume.

⁵⁷ Cf. the chapters by H. Tiedemann and J. C. Ball, this volume. It must be admitted, however, that German documents speaking of mass execution in Kiev do *not* mention Babi Yar as such.

⁵⁸ Cf. my remarks in the introducing chapter, note 144-146, p. 45.

⁵⁹ H.-H. Wilhelm, in U. Backes, E. Jesse, R. Zitelmann (eds.), *Die Schatten der Vergangenheit*, Propyläen, Berlin 1992, p. 403.

to be much more evidence remaining: bodies or parts thereof that were not burned, millions of bones and teeth, as well as loads of ashes.⁶⁰

If anything of the sort had ever been found, the Stalinist Communists – who were known for their efficient and effective propaganda system – would have made the most of this, naturally *in the presence of international investigative committees*. It would have been a welcome opportunity for revenge for the embarrassment the Germans had inflicted on the Soviets with respect to Katyn, which was only then being revealed, with the assistance of international investigative bodies, as the Soviet mass murder of Polish officers.⁶¹

But no, the oh-so-peace-loving Soviet Union would never have thought of doing anything so mean... Although the Soviets put together a large number of Soviet commissions of inquiry, which then are said to have conducted forensic investigations in many places, all this was done in closed sessions with the international public excluded.⁶² It was only after the turn of the millennium that a French pastor set out to search for mass graves in Ukraine,⁶³ but the results were quite meager, and his team did basically no forensic research at all.⁶⁴ Government authorities avoid to this day any public consideration of systematically locating and investigating these claimed mass graves – after all, this can only be grist to revisionist mills.

When the German army retreated, what *did* turn up instead of mass graves were tens of thousands of women, old men, and children. In his address of indictment to the IMT, General Roman A. Rudenko explained that hundreds of thousands of children, women and old men who were unfit for forced labor were left behind in concentration camps by the Germans during their retreat.⁶⁵ Chief Counselor of Justice L. N. Smirnov submitted a document giving more details of these camps in White Russia.⁶⁶ It would be interesting to find out whether these people unfit for work may possibly have been some of those who were ‘selected’ in the camps further west and who, according to Steffen Werner’s theory, were in fact deported primarily to White Russia.⁶⁷

4. Of Victims and Persons, Lost and Found

4.1. The Number of Victims, *i.e.*, Missing Persons

On pp. 15f. of his book, Benz lists for each country the number of victims on which the co-authors of his book have agreed. In the preceding table, only the entries for Italy and Greece show different numbers – actually those given by the respective authors themselves – since the figures contained in Benz’s list differ slightly from the authors’ numbers and do not appear in the chapters themselves (Italy 6,513, Greece 59,185).

The difference between Benz’s total and the total reduced here by the number of victims counted twice amounts to 517,656, which due to statistical rounding diverges only insignificantly from the 533,193 duplicate counts traced in the preceding. **This proves fully half a million ‘duplicates’ in Benz’s highly lauded ‘definitive work,’ and corresponds to an approximate 10% inflation of the total.** This would not have happened if Benz had taken the trouble to reconcile the individual chapters of his book. In his introduction, however, Benz mentions a sum total of 5.3 to just over 6 million Holocaust victims.²⁰ It seems, there-

*excluding the victims of Polish repatriation; **15,000 missing from the Carpathian Ukraine.

fore, as though Benz had already taken these duplicate counts into consideration, even if his results are not verifiable due to his failure to explain his line of reasoning.

The decisive difference between Benz and Sanning lies in their treatment of three countries: (Greater) Hungary, Poland, and the Soviet Union. On the basis of these examples we have shown here the (possibly deliberately) *erroneous* and *falsifying* methods Benz and his co-authors used when producing their statistical data in order to arrive at the desired result.

4.2. The Orthodoxy’s Distribution of Victims

In 1990, the number of victims for Auschwitz, which had been stated as approximately four million by the Polish authorities ever since the time of the IMT trials, was officially reduced to roughly one million.⁶⁸ In the 1993 French edition of his second book, Jean-Claude Pressac advocates the theory that the mass extermination did not start until 1942, half a year later than assumed previously, for which reason the number of victims, including the murdered Hungarian Jews, should be reduced to 630,000 gas-chamber victims.⁴³ In the 1994 German edition of his latest book, Pressac reduces the number of gas-chamber victims further to a figure somewhere between 470,000 and 550,000.⁶⁹ In 2002, German specialist on Eastern European history Fritjof Meyer lowered that figure even further to merely 356,000 gassing victims.⁷⁰ Neither Pressac’s nor Meyer’s revision was ever accepted by the orthodoxy, though.

A much-more-drastic death-toll revision has been made over the years for the Majdanek Camp. Shortly after the capture of the camp, the Soviets claimed a death toll of some two million for that camp. During the Polish trial in late 1944 against six former camp guards, the Majdanek death toll was set to 1.7 million. Roughly a year later, during the IMT, the Soviets claimed that up to 1.5 million inmates had been killed in that camp. This figure, however, was significantly reduced three years after the war, when Polish judge Zdzisław

Total, appr.	2,710,000		3,000,000
Total Victims, appr.	6,000,000		6,000,000
Remainder, appr.	3,290,000		3,000,000

Łukasziewicz published the findings of the “Commission to Investigate German Crimes in Poland,” which set that camp’s death toll at 360,000. The next downgrading came after the collapse of the communist Eastern Bloc, when Polish historian Czesław Rajca reduced the death toll down to 235,000. In 2005, Tomasz Kranz, head of the Majdanek Museum, reduced the death toll further to 78,000, and decommissioned five of the seven initially claimed gas chambers.⁷¹

Professor Ernst Nolte considered it justified criticism to point out that, while the number of victims of these alleged extermination camps are being steadily reduced, the overall number of victims alleged for the Holocaust remains the same.⁷² But the matter takes a turn for the grotesque when the number of Auschwitz victims is reduced and at the very same time the Israeli memorial institution Yad Vashem hastens to report that new research in Soviet archives has revealed that the number of Jewish victims of mass execution behind the front is actually higher by 250,000 than was assumed to date, so that one should, in fact, reckon 6.25 rather than 6 million⁷³ or even up to 7 million.⁷⁴ One can only wonder with which statistical data and by which methods these revised figures were obtained.

But if the body counts for the individual camps continue to drop and the overall total remains the same or even increases, then one must ask where the victims may have died, if not in the alleged gas chambers? To solve this problem there are always endeavors, for example, to increase the number of victims for other camps. Case in point: for Treblinka, figures ranging from 700,000 to 900,000 have been the standard to date.⁷⁵ Benz now postulates between 1.0 and 1.2 million (B468), of which 974,000 are said to have been Polish Jews (B495). Thus, Treblinka with its more than one million victims is weighted more heavily in Benz’s analysis than Auschwitz is – a completely new trend in Holocaust studies.

Now that the victims of Auschwitz have decreased numerically to far below the one-million mark, the remaining 5 to 6 million victims must be distributed among other purported killing

⁷¹ On this see J. Graf, C. Mattogno, *Concentration Camp Majdanek: A Historical and Technical Study*, 3rd ed., Castle Hill Publishers, Uckfield 2016.

⁷³ “Mehr Judenmorde als bisher bekannt” (More Jews murdered than known before), *Süddeutsche Zeitung*, Dec. 17, 1991, p. 7; similar reports were to be found throughout the other daily media.

⁷⁴ R. Breitman, “Holocaust Secrecy Now Abets More Genocide,” *New York Times*, November 29, 1996; Douglas David, “British Documents: 7 million died in Holocaust,” *Jerusalem Post*, May 20, 1997.

⁷⁵ Cf. the chapter by A. Neumaier, and Ingrid Weckert’s remark about Yad Vashem (p. 225), this volume.

centers. The preceding table represents the distribution of victims, as the official *Institut für Zeitgeschichte* (IfZ) listed it on request in 1990.⁷⁶

It is interesting, first of all, that the IfZ *revised* the statement of its former head, Martin Broszat, who had said that there were no gassings in the concentration camps of the Reich proper.⁴⁷ The fact that the above list once again contains the facilities of Dachau, Sachsenhausen, Ravensbrück, Neuengamme etc.,⁷⁷ is no doubt due to the institute’s realization that one must never partially admit a lie because that means running the risk of being exposed totally. The figures listed in the last column are those given in Benz’s book and originate with a much older publication of the IfZ.⁷⁸ One wonders why Benz did not use more-recent statistics provided by the same source.

It would also be interesting to see how historians might try to explain the 3-million-plus discrepancy between these approximately 2,700,000, *i.e.*, 3,000,000 victims, most of them ‘victims of the gas chambers,’ and the overall total of roughly 6 (or even 7) million victims. If one continues to reduce the Auschwitz death toll in accordance with the new trends to this effect, and simultaneously increases the overall total, this means that there are four million victims that must be freshly redistributed. Benz’s minor increase of the number of Treblinka victims, from 700,000 to 1.2 million (B468), is not enough to solve the problem, and contradicts the above statements of the selfsame *Institut für Zeitgeschichte*. The remaining 3 to 4 million Jews cannot possibly be explained away as victims of *Einsatzkommando* executions, starvation and disease, and the like. Such numbers of people – numbers of a similar magnitude as the total population of Berlin – do not simply vanish without a trace. It is thus not surprising that Benz does not attempt to explain in his book where the missing remainder might have perished.

4.3. The Exodus – the Return of Missing Persons

IMMIGRATION OF EUROPEAN JEWS BEFORE AND AFTER THE SECOND WORLD WAR		
DESTINATION	BEFORE/DURING WAR	AFTER THE WAR
Palestine	293,000 (1932-1944)	73,000 (1945-1948)
Israel		585,000 (1948-1970)
USA ⁷⁹	406,000 (1933-1943)	490,000
Latin America	180,000 (1930s)	150,000
Canada, Australia, England, South Africa	90,000 (1930s)	250,000
TOTAL	969,000	1,548,000

Benz does not spend so much as one single paragraph on the problem of Jewish post-war emigration from Europe. In fact, he does not even *mention* that after the war there was a large-scale migration especially of the European population of Jewish faith which has become known as the modern Exodus. The first ten sections of his book are conspicuous in

⁷⁶ Report of the Institut für Zeitgeschichte, May 1990. Compare these figures with the numbers published in 2011 by the leading orthodox expert in the field as listed in Chapter 3 of Fritz Berg’s contribution to the present volume.

⁷⁷ For a critical review of the evidence for the existence and use of homicidal gas chambers in these camps see C. Mattogno, *Inside the Gas Chambers: The Extermination of Mainstream Holocaust Historiography*, 2nd ed., Castle Hill Publishers, Uckfield 2016, Chapters 9 through 15; *idem.*, *The Dachau Gas Chamber: Documents, Testimonies, Material Evidence*, Castle Hill Publishers, Bargoed, 2022; C. Mattogno F. Jansson, *The Neuengamme and Sachsenhausen Gas Chambers: With a Focus on British Investigations for the Tesch Trial*, 2nd ed., Castle Hill Publishers, Bargoed, 2022.

⁷⁸ Ino Arndt, Wolfgang Scheffler, “Organisierter Massenmord an Juden in nationalsozialistischen Vernichtungslagern,” *VfZ* 24(2) (1976), pp. 105-135.

⁷⁹ Since the United States does not register the religious denomination of immigrants, the official American statistics regarding the immigration of Jews are very unreliable; cf. Sanning, *The Dissolution...*, *op. cit.* (note 18), pp. 160-166. How very problematic statistics on Jews living in the United States are, becomes apparent from a report of the *National Observer* of July 2, 1962, according to which the number of Jews in the States was not 5 to 6 million, as officially reported, but rather 12 million – a most improbably high figure; cf. E. L. Ehrlich, “Die Juden in der Diaspora”, *Aus Politik und Zeitgeschichte* 38(16) (1988), pp. 16-22; *Deutsche Hochschullehrer Zeitung* 4 (1962), pp. 31f.

their lack of any mention of post-war emigration, while others (Greece and Yugoslavia) fashion a fig-leaf for themselves by admitting to a few hundreds or thousands who left the country after the war’s end.

Since Benz usually calculates the numbers of victims as the difference between pre- and post-war populations, this cannot but result in a great margin of error. Sanning, on the other hand, presents a summary of Jewish immigration into non-European nations, which is reproduced in the above table (S173). Due to the lack of any serious response, these data have never been challenged.

Sanning shows that in 1970 there were still some 860,000 Jews in formerly German-occupied Europe, excluding the Soviet Union (S174). Since the Jews of western Europe exhibited next to no population increase after the war, then in light of the post-war emigration (some 1.548 million, cf. above table) at least 2,408,000 Jews must have lived in the formerly German-occupied non-Soviet parts of Europe after the war. Sanning determines that immediately after the war only 1,443,000 Jews were statistically located in formerly German-occupied non-Soviet Europe (S157), while 1.1 million were considered missing (cf. Table p. 190).

Benz arrives at 1.2 to 1.3 million statistically accounted-for Jews in formerly German-occupied, non-Soviet Europe immediately after the war. The difference between this and the 2.4 million Jews which Sanning can account for, a difference of 1 to 1.2 million Jews, therefore, emigrated after the war without registering. If one relates these unregistered emigrations to the 1.1 million Jews which Sanning identifies as missing from the formerly German-occupied parts of Europe, then in view of the great fluctuations in the data one cannot, according to Sanning, make any statistically reliable observations regarding whether or how many Jews died from unknown causes under the Third Reich. In this context, ‘statistically reliable’ means: since the fluctuations in the data range well over several hundreds of thousands, any losses on this order of magnitude cannot be demonstrated with any degree of certainty. In any case, however, it indicates that the Jewish population in formerly German-occupied non-Soviet Europe very likely did not suffer any losses ranging into the millions during World War Two.

4.4. Corrections for Wolfgang Benz

BENZ’S FIGURE	MINUS	REASON
5.3 to 6 million	at least 1 million	unregistered post-war emigration
	at least 1.5 million	Jews not statistically registered in the Soviet Union
	at least 0.5 million	victims of war, partisan warfare and Soviet deportation
	0.7 million	statistically inflated no. of Jews in pre-war Poland
	at least 0.3 million	destruction of the Hungarian Jews refuted

5.3 to 6 Million Minus at Least 4 Million → a Maximum of 1.3 to 2 Million Missing Persons

If one deducts the approximately 1 million unregistered emigrants from the 5.3 to 6 million victims that Benz claims he found, this leaves him with 4.3 to 5 million victims. From this, one must further deduct the difference between the Soviet Jews who appeared in Soviet statistics and the real number (some 1.5 million), the number of Jews who died in the Soviet Union from other causes (deportation, war, partisan warfare, at least 500,000), the number of statistically fabricated additional Polish Jews (some 700,000) as well as the number of Hungarian Jews who probably did not succumb in their entirety (300,000), in other words, a total of roughly 4 million. This would leave Benz with a remainder of at most 1.3 to 2 million unsolved cases.

5. The Jewish World Population

Benz studiously avoids this ‘hot potato’ as well. Sanning, on the other hand, takes the trouble to trace the world-wide development of the Jewish population from before World War Two to today. He points out, among other things, that the official post-war statistics do appear to reflect losses from the Holocaust (S181). However, the Jewish world population outside the Soviet Union increased as rapidly in the first few decades after the war as is normally seen

only in developing countries or in rural populations (S186ff.). Since nearly everywhere in the world the Jews are almost completely urbanized and belong mostly to the middle and even the upper classes, both of which factors would lead one to expect only a low rate of natural increase, this indicates that something is very wrong here. From detailed demographic analyses Sanning draws those conclusions that were quoted here at the beginning, but which we will not discuss further since there appear to be no counter-arguments to them anyhow.

6. Statistical Checks

6.1. The Fate of Jewish Personalities

In the late 1980s, Swedish demographer Carl O. Nordling recreated the fate of Jewry during the Second World War by means of a statistical study⁸⁰ based on the Jewish personalities listed in the *Encyclopædia Judaica*.⁸¹ Following the criteria listed below, Nordling chose 722 Jews listed in this encyclopedia who are known by name and used to live in 12 European countries⁸² that had come under German rule or supremacy in the course of the war. They all:

- were born between 1860 and 1909;
- had not emigrated by January 1, 1938;
- were still alive on January 1, 1939.

According to Nordling's study, 317 (44%) of these 722 Jews had emigrated by late 1941, 256 (35%) were spared internment of any kind. Altogether, 95 of these Jewish personalities died during this time (13%), of which 57 cases (8%) occurred in the eastern camps as well as in unknown places and under unknown circumstances. Aside from such casualties as resulted from disease, transport and starvation, therefore, these 8% must also include the victims of any deliberate mass extermination.

For the Polish Jews, the matter stands as follows:⁸³

Of 65 Jewish notables listed in the *Encyclopædia Judaica* on January 1, 1940, 13 (20%) emigrated, 14 (22%) survived, 38 (58%) died. Of these 38, however, 23 (60%) died, not in the eastern camps, but in ghettos, on transports, as consequence of armed conflict or reprisals, as well as victims of starvation and disease in western camps (Dachau, Nordhausen). In only 15 cases, in other words in approximately 23% of the Polish Jewish notables, the place of death is either unknown or located in one of the eastern camps; and here it is again necessary to consider that some of them succumbed to starvation, disease and forced transports at the end of the war. Even among the Polish Jewish personalities, therefore, probably less than 15% could have been victims of a hypothetical mass extermination. Benz, on the other hand, assumes that approximately 80-90% of all Polish Jews present in Poland in 1940 – some two million, according to him – were murdered in the extermination gas chambers (B495).

In another study, Nordling compares his statistical findings with those of W. N. Sanning, the figures of which I reproduce in the following table.⁸⁴

The percentages determined are astonishingly similar in many respects, which indicates that Sanning's findings do indeed reflect the fates of Jewish notables as these are set out in the *Encyclopædia Judaica*. It is also worth noting that the opportunities for emigration were

fewer, or the desire to emigrate was lower, for Jewish personalities than was the case for the average Jewish population.

But before acknowledging Sanning's statistical findings to be sound, it is necessary to examine the fates of other Jewish population groups in the same way as that of the Jews listed in the *Encyclopædia Judaica* in order to eliminate the following potential distortions:

1. The criteria by which to include Jewish notables in the 1972 edition of the *Encyclopædia Judaica* will have been influenced by the fates of the Jews in question during and after the war:
 - a. Some Jews may have been included only *because* they died as a result of German measures of persecution. Examples: Janusz Korczak (1879-1942) was included because he voluntarily went to Treblinka with a group of children; the nun Edith Stein (1891-1942) was included because she died a martyr. If these people had survived, they might not have been included in the encyclopedia.
 - b. Some Jews, on the other hand, were included only because they survived the war and went on to become famous afterwards. For example: Pierre Mendès-France (born in 1907) was only a little-known Undersecretary of State before the war.
2. International connections or material advantages may have made emigration easier for Jewish notables than for the average Jewish citizen. However, this category of Jews had largely already emigrated by the start of the war.
3. Jewish VIPs cannot change their identity, go underground, flee, or emigrate illegally as easily as can persons who are less-well-known. Unlike for the average citizen, therefore, the life and suffering of Jewish personalities is usually easier to trace.
4. It is possible that due to their greater social and political involvement Jewish notables were subject, especially during the war, to more restrictive measures imposed by the German occupation powers.

6.2. The Korherr Reports

Dr. Richard Korherr was a statistician, and from late 1940, the head of the SS's statistical office. In early 1943, Himmler ordered him to compile a report on the trends of European Jewish population developments since the National Socialists' rise to power. After several discussions and some correspondence with Himmler, Korherr submitted a 16-page long ver-

⁸⁵ H. G. Adler, *Theresienstadt 1941-1945*, Mohr, Tübingen 1955.

⁸⁶ N. Masur, *En jude talar med Himmler*, Albert Bonniers, Stockholm 1945.

sion for Himmler (Nuremberg Document NO-5194), and a 6½-page short version meant for Hitler (NO-5193).

These two reports are seen by the orthodoxy as a smoking gun for the Holocaust. They claim that these documents prove that some two million Jews had been murdered as of early 1943. The subsequent discussion will focus on the long version.

The data used by Korherr to compile these statistics were provided to him by various SS offices. For instance, the number of Jews listed in the long version (p. 9, Point 4) as “passed through the camps in the General Government,” meaning occupied Poland, is identical with the number given by SS official Hans Höfle in a radio message sent in early 1943 to the SS headquarters.⁸⁷ Höfle listed this number as a total of individual “arrival” figures (“*Zugang*”) of all the camps located in that area: Belzec, Lublin (meaning Majdanek), Sobibór and Treblinka. While Höfle had the inmates arrive at these camps, Korherr listed them as “passed through” (“*durchgeschleust*”), suggesting that these camps served as transit camps.

An earlier draft of Korherr’s report used the term “special treatment of the Jews” here (“*Sonderbehandlung der Juden*”). In a letter, Himmler asked Korherr not to use that expression anywhere, and to headline Point 4 of page 9 instead: “Transportation of Jews from the Eastern provinces to the Russian East.” (NO-5197)

Korherr’s report also has 145,302 Jews “passed [...] through the camps in the Warthegau” (*ibid.*). However, there was only one camp in that area: Chełmno. This figure gives a maximum number of Jews deported to that camp. While the orthodoxy claims that they were all killed there in gas vans, Korherr’s report again suggests a mere transit camp.

The orthodoxy claims that the original term used (special treatment) was a euphemism for murder (through gassing). However, the largest of all claimed mass-murder centers – Auschwitz – is not included in that number. Most Jews deported to Auschwitz are instead listed in the next entry of that list (“Evacuations of Jews from other countries,” Point 5, pp. 9f.), which evidently never had the term “special treatment” attached to it, hence was in no need of any changes. Therefore, if special treatment meant murder, then Jews evacuated to Auschwitz were not murdered according to the Korherr Report.

We know from numerous Auschwitz documents, however, that the evacuation of Jews to and through Auschwitz was indeed labeled “special treatment.” However, this referred not to murder, but to the special treatment Jews were getting in comparison to all other groups of people who were arrested, incarcerated and/or deported by the Third Reich. Everyone else had to have committed – or be suspected of having committed – some infraction to get arrested. The Jews, however, got arrested and deported simply because they were Jews. That was their special treatment.⁸⁸

On the other hand, Höfle’s radio message proves that the “camps in the General Government” included the Majdanek Camp. In this case, the rich extant documentation allows us to ascertain that Jews sent to this camp were not murdered there.⁸⁹ Hence, “special treatment” did not mean murder in this case either. By analogy, it may not have meant murder for Jews sent to the other three camps either (Belzec, Sobibór, Treblinka).

Furthermore, the report lists a little over 1.6 million Jews who are said to have been evacuated or transported from Germany, the Protectorate (occupied Czechia) and the eastern provinces to “the East” or the “Russian East” (meaning the then-occupied Soviet territories; p. 9, Points 2 and 4.). It then states that these “evacuations [...] are counted here as part of the decrease” (p. 15), although mere transfers to the European part of Russia, strictly speaking, did not remove them from Europe, which is what this report was all about. However, if they had been killed in the East, they would not just count as decreases, but be irreversible population declines.

⁸⁷ See J. Graf, T. Kues, C. Mattogno, *Sobibór: Holocaust Propaganda and Reality*, 2nd ed., Castle Hill Publishers, Uckfield, 2020, pp. 197f.

⁸⁸ See C. Mattogno, *Healthcare in Auschwitz: Medical Care and Special Treatment of Registered Inmates*, Castle Hill Publishers, Uckfield, 2016; *idem*, *Special Treatment in Auschwitz: Origin and Meaning of a Term*, 2nd ed., *ibid.*

⁸⁹ See J. Graf, C. Mattogno, *Concentration Camp Majdanek: A Historical and Technical Study*, 3rd ed., *ibid.*, 2016

Hence, in this regard as well, Korherr believed – or wrote as if he believed – that mass relocations to Russia happened, and that these relocated Jews were very much alive and kicking. Not a single word, expression or inkling in this document indicates that mass murder was being perpetrated against the Jews.

The orthodoxy insists that all this is a game of smoke and mirrors, where euphemisms are used to hide the ugly truth of genocide. The problem is that this report was not meant to be published or spread. It was for Himmler's and Hitler's eyes only. So why use lies, euphemisms and code language in top-secret documents to be seen only by the nation's top leaders? Who was Korherr or Himmler trying to dupe?

6.3. Compensation

A common question is whether the number of Jewish applications for compensation from Germany might reveal how many Jews survived the Third Reich. However, any such attempt runs into insurmountable problems. Although the German Federal Ministry of Finance does provide detailed information about compensation payments made to persons persecuted in the Third Reich, it cannot serve to determine the number of Jewish individuals receiving such payments.

As of July 1, 1979, approximately 4.3 million individual applications for compensation had been filed; 13 years later, the Ministry cites some 4.4 million individual applications.⁹⁰ For several reasons, however, this number is difficult to interpret. For one thing, the Ministry does not register the faith group of the applicants, so that there is no way of telling how many Jews are included in the total. Second, approximately half the applications were rejected, but no reasons for the individual decisions are given; perhaps the applicant had never actually been in the German sphere of influence, or perhaps he had not suffered any losses despite his/her alleged Jewish identity. The rejections can thus also not be interpreted. Third, the ministry's statistics reflect the number of applications, not the number of applicants. Since each kind of compensation (damage to life, health, property, fortune, professional advancement, etc.) must be applied for separately, any one applicant may very well have applied several times. On the other hand, many applications were made collectively by groups of persons, so that the statistics reflect entire families or even larger groups with one single application. One must also consider that, until the collapse of the Soviet Union in 1991, Jews from that country could not collect any compensation and are thus not included in the figure.⁹¹ And finally, an American newspaper reported that only one in two Holocaust survivors receives compensation payments from Germany.⁹² Thus, at the present time, the statistics available regarding applications for compensation do not lend themselves to answering demographic questions.

6.4. Holocaust Survivors

According to information from the Israel-based official organization *Amcha*, which devotes all its activities to taking care of Holocaust survivors, 834,000 to 960,000 Holocaust survivors were still alive in the summer of 1997. The same organization defines a *Holocaust survivor* as

*“any Jew who lived in a country at the time when it was: – under Nazi regime; – under Nazi occupation, – under regime of Nazi collaborators as well as any Jew who fled due to the above regime or occupation.”*⁹³

⁹⁰ J. Fisch, *Reparationen*, C. H. Beck, Munich 1992; E. Rumpf, *Wiedergutmachung*, Kultur- und Zeitgeschichte – Archiv der Zeit, Rosenheim n.d. [1992]; cf. M. Weber, “West Germany's Holocaust Payoff to Israel and World Jewry,” *JHR* 8(2) (1988), pp. 243-250.

⁹¹ This topic was raised between International Jewish Organizations and Germany only in mid-1997; cf. The American Jewish Committee, “Holocaust survivors in Eastern Europe deserve pensions from the German Government,” Open Letter to the German Government, signed by 83 Senators, *New York Times*, August 17, 1997; Erik Kirschbaum, “Jewish leader urges Bonn to pay Holocaust claims,” *Reuter*, Bonn, August 19, 1997; “Jewish group rejects offer to Holocaust survivors,” *Reuter*, Bonn, August 24, 1997; “Jewish group to issue list of holocaust fund recipients,” *Reuter*, New York, September 17, 1997.

According to a letter from the German section of this organization, roughly $\frac{1}{3}$ of all Holocaust survivors are so-called “child survivors,”⁹⁴ where “child survivors” means that the Holocaust survivors in question were not older than 16 years at the end of the war.⁹⁵

If the average life expectancy of all age groups of these survivors as well as the statistical distribution of the Jews over these age groups in 1945 were known, it would be possible to calculate approximately how many Holocaust survivors were still alive in 1945, *i.e.*, after the war ended. Unfortunately, we do not have such data, but we can on the one hand estimate this age distribution by extrapolating it from the known statistical distribution of the Jews of the 1920s and 1930s,⁹⁸ corrected by Amcha’s statement about the $\frac{1}{3}$ of “child survivors” in 1997. On the other hand, we can draw on the life-expectancy statistics of another people whose fate from 1945 onwards was at least similar to that of the surviving European Jews of that time.

Since the German people as a whole experienced terrible living conditions from 1941 to 1948, it seems appropriate to use their mortality statistics.⁹⁹ For our calculations we have assumed two different age distributions in 1945: the first as given in the *Atlas* quoted,⁹⁸ and the other based on the assumption that $\frac{1}{3}$ of all survivors in 1997 must have been between 0 and 15 years of age in 1945.¹⁰⁰ The rest of the calculations simply draw on the German “death tables.”

Aug. 13, 1997, 16:17:20 CDT, to multiple recipients of list H-HOLOCAUST <H-HOLOCAUST@H-NET.MSU.EDU>; E. Spanic, H. Factor, V. Struminsky, “Number of Living Holocaust Survivors,” Amcha Press Release, PO Box 2930, I-91029 Jerusalem, July 27, 1997.

⁹⁴ Amcha Germany, letter from Aug. 22, 1996, to all Germany mayors in order to raise funds for Amcha; facsimile in *VffG*, 1(2), (1997), p. 70.

⁹⁵ Letter of A. Mishkoff, *Amcha Israel*, Jerusalem, May 17, 1998, in which the $\frac{1}{3}$ - $\frac{2}{3}$ -distribution is confirmed.

⁹⁶ Equation used: (distribution[%])/Σ((1997 from survivors 1945)·(distribution[%]))·Σ(survivors 1997); for 0-4 years in 1945, *e.g.*: distribution[%] for *Atlas* = 5.0%; Σ((1997 from survivors 1945)·(distribution[%])) = 19.2 (*i.e.*: 19.2% of all survivors of 1945 still alive in 1997); Σ(survivors 1997) = 834,000, result: 217,231 for ages 0-4 in 1945; total survivors in 1945: 4,344,614.

⁹⁷ Surviving rates 1997 divided by those of 1945. Only one decimal digit given.

⁹⁸ E. Friesel, *Atlas of Modern Jewish History*, Oxford Univ. Press, Oxford 1990.

⁹⁹ Cf., *e.g.*, the ‘Death tables’ (*Sterbetafeln*) for Germans in Lexikon Institut Bertelsmann (ed.), *Ich sag dir alles*, Bertelsmann, Gütersloh 1968.

¹⁰⁰ For more details on this see my article, note 94. Since we divided our age distribution list into 5-year brackets, we could not calculate a ‘child’-age of 16 years. Thus, the real numbers will be a bit lower

The results as shown in the following table may change if we get better data about the death rates of the Jewish survivors and about their age distribution then and today. But certainly, our results are at least likely to approximate reality. If one assumes a more-severe fate for the average Holocaust survivor than for the average German – which most scientists tend to do – then this would result in an even-higher number of survivors in 1945.

The number of Holocaust victims would be the difference between our calculated number of survivors, and the number of Jews who were alive in Europe prior to National-Socialist persecution. The inflationary definition of ‘Holocaust survivor’ by *Amcha*, however, makes our task difficult. Given this definition, it is for example not clear how one should handle the hundreds of thousands of Jews who were deported to Soviet slave-labor camps by Stalin or who fled voluntarily with the Red Army to the East right at the beginning of the German-Soviet war.¹⁰¹

According to Sanning, and corresponding to the findings of other statistical studies, in the late 1920s and early 1930s there were roughly 6.1 million Jews in those European countries, excluding the Soviet Union, which later came under the control of National Socialism.¹⁰² Undoubtedly some 3 million Jews lived in the pre-war Soviet Union, of whom at least one million lived in areas that were never occupied by German forces. Thus, in the late 1920s and early 1930s, some 8.1 million Jews lived in what was to become the German sphere of influence. According to our calculations, 3.46 to 5 million of them survived the ‘Holocaust,’ and 3.1 to 4.64 million did not.

The word ‘Holocaust’ is placed in quotation marks here because this figure includes not only victims of arbitrary killings by the National-Socialist regime (which is a more-specific definition of the term ‘Holocaust victims’), but also many other categories, such as victims of Stalinist mass deportations, Stalinist slave-labor camps, victims of regular combat (as soldier, labor-force or air-raid victims) as well as irregular combat (partisans), victims of non-German pogroms, natural excess of deaths over births, etc. All these reasons, which certainly did reduce the numbers of Jews compared to the time prior to National-Socialist rule, may add up to more than one or even two million.¹⁰¹ *Consequently, the number of possible real Holocaust victims – according to official data provided by Israel – is probably less than 3 or even 2 million Jews.* This admission is fair enough to start with.

However, one should be aware that even the published number of Holocaust survivors is a figure likely to be manipulated due to its financial implications for Jewish organizations who are permanently claiming compensations.¹⁰³ Thus, it was not very surprising that R. Bloch, Jewish head of the Swiss Holocaust fund, the task of which was the collection of money for Jewish Holocaust survivors, announced in early 1998 that there were more than 1,000,000 Holocaust survivors still alive at that time.¹⁰⁴ Three years later, the number of Holocaust survivors was gauged at 1,092,000 – if we are to believe the Israeli professor Sergio DellaPergola.¹⁰⁵ There appears to be a limitless Jewish resurrection nowadays...

7. Conclusions

In its analysis of the central and western European nations, W. N. Sanning’s book rests on a somewhat shaky foundation. Benz has the better material in this instance. Neither of the two

than those given in the table’s row for 0-15 years. We didn’t correct them since the base on which these figures were calculated is not very reliable anyway, as Prof. Alan Glicksman, responsible for compiling the data for the USA, stated in an e-mail message to me. This is just in order to give us a clue.

¹⁰¹ Cf. W.N. Sanning, *Die Auflösung...*, op. cit. (note 18), pp. 53-136.

¹⁰² *Ibid.*, p. 243; the value for Germany has to be increased to 539,000, and the Jews of the Baltics must be added to the value for occupied Europe.

¹⁰³ See Norman G. Finkelstein, *The Holocaust Industry: Reflections on the Exploitation of Jewish Suffering*, Verso, London/New York 2000.

¹⁰⁴ *Handelszeitung* (Switzerland), February 4, 1998. Even the Israeli Prime Minister’s office recently stated that there were still nearly one million living survivors, see Norman Finkelstein, “How the Arab Israeli War of 1967 gave birth to a memorial industry,” *London Review of Books*, January 6, 2000. I owe this information to David Irving.

¹⁰⁵ Sergio DellaPergola, “Review of relevant demographic information on world Jewry,” Hebrew University, Jerusalem 2003, p. 6; www.claimscon.org/forms/allocations/Review_Della%20Pergola%20ICHEIC_.pdf.

works addresses the problem of ‘de facto Jews’ in sufficient detail; while each of Benz’s co-authors deals with the problem as far as he sees fit, Sanning touches on this matter only marginally.

But it is the analyses of the nations Poland, the Soviet Union and Hungary, as well as the issue of post-war emigration, that are of vital significance to a determination of the number of Holocaust victims. In this respect, Benz’s work fails miserably.

In order to assess the two books, let’s take a look at Chart 1. The overall height of the bars represents the number of Jews prior to World War Two in the area that later came under German dominion. Roughly speaking, Benz determines his number of Holocaust victims by subtracting from the initial pre-war population the number of Jews still in each affected country after the war, plus those whose emigration was registered during and after the war.

He blames on the Germans Jewish victims of Soviet deportation and imprisonment no less than the victims of pogroms that took place neither with the participation nor even with the tacit approval of German forces, as well as the victims of Allied bombings, the casualties of the Labor Services, the Jewish soldiers who fell in the ranks of the Soviet armies, and the casualties from partisan warfare. Since none of these victims lost their lives due to deliberate or negligent, illegal measures or actions by the Germans, this method of maximizing the number of victims can only be called dishonest. Sanning rightly excludes these victims from his analysis, of course with the exception of the regular partisan victims, whose numbers are difficult to estimate and which must not be lumped together with any victims of potential irregular executions.

Benz also all but ignores actual or apparent losses through non-military means such as natural excesses of deaths over births, religious conversions, unregistered emigration during and especially after the war, as well as Jews not statistically recorded as such today. In particular, Benz fails to make any mention of the partly uncontrolled and unregistered post-war mass emigration that has become known as the ‘modern Exodus’; of the fact, generally acknowledged today, that Soviet statistics reflect only a fraction of the Jews actually living in the Soviet Union; and of the fact that the Polish Jews also suffered great population decreases in the inter-war period due to emigration, overaging of the population, and the excess of deaths over births.

Benz emphasizes that where the Soviet evacuations, the Jewish population trends in Poland, and the Polish flight migrations are concerned, there are no definite figures, and one must rely on estimates alone. He arrives at his estimates in the space of a very few sentences,

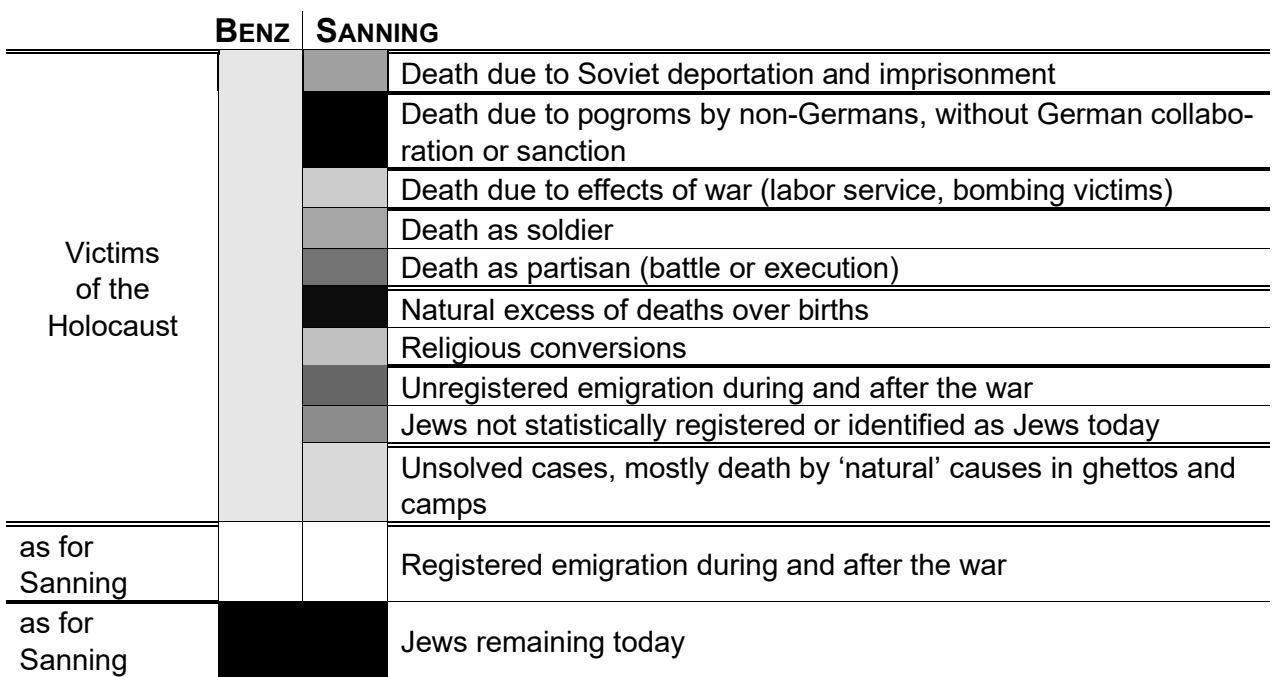

Chart 1: Schematic representation of W. Benz’s and W. N. Sanning’s approaches to determining the number of Holocaust victims. The size of the individual bars does not reflect the number of cases.

without any sort of logical line of reasoning or evidence. Even though he admits that these issues are in dire need of further research, he avoids any such endeavor.

Instead, the book unleashes a prodigious verbal deluge in order to rehash early Jewish history and the history of each nation's anti-Jewish measures, something which countless other authors have already done (some of them much better) and which contributes nothing to solving the authors' self-appointed task.

Recent findings, such as the evidence which air photos can provide regarding the alleged extermination of the Hungarian Jews, are also studiously ignored. And what is worse: where the alleged methods of killing are concerned, Benz regurgitates old, oft-refuted claims and ignores the fact that engineers and scientists are the sole experts in this field.

Also, Benz and his co-authors quote Stalinist and Communist sources with not so much as half a thought to critical assessment, even when these sources clearly go back to show trials, and blithely adopt Stalinist terminology in their arguments, showing themselves in a dubious and unscientific light in the process.

And finally, fourteen of the supposedly best subject historians in the world¹⁰⁶ were evidently incapable of collectively ensuring uniform treatment of national borders in the individual chapters. An eye to this would have avoided counting half a million victims twice in the overall total.

Thus, the judgment they thought to pronounce on another scholar ultimately reflects on themselves:

"[...] almost all other studies of the Holocaust give the impression that the number of victims could be [...] determined directly from the retrospective number of [counted] Jews." (B408)

"[...] The author [in this case, Benz et al.] distinguishes himself through his methodologically unsound handling of the statistical material as well as through daring and demonstrably erroneous reasoning and conclusions." (B558, footnote 396.)

Like Benz, Sanning commits the error of placing too much faith in those statistics which are available. In actual fact, the variances in the data preclude any definitive answer to the question of how many hundreds of thousands of Jews lost their lives in the German sphere of influence. These figures are lost in the variances characterizing the statistical material. To date, only those figures provided by the International Committee of the Red Cross can be regarded as certain. The ICRC's Special Office in Arolsen keeps track of all officially documented deaths in German concentration camps of the Third Reich. A summary from January 1, 1993 documents 296,081 deaths. The distribution of these deaths among the individual camps is shown in my last table.

Jews probably constitute about half of the total. One must keep in mind, however, that this list is not complete. The camps Chelmno, Belzec, Sobibor and Treblinka are missing from the table, as are those who died in the ghettos and during executions in the East. And finally, one must remember that according to the *Auschwitz Death Books* approximately 66,000 people died in Auschwitz by late 1943 alone,¹⁰⁷ and that the Americans mentioned 25,000

**DOCUMENTED DEATHS IN
GERMAN CONCENTRATION CAMPS
as of Jan. 1, 1993**

Total	296,081
Auschwitz	60,056
Bergen-Belsen	6,853

Other camps	4,704

¹⁰⁶ Aside from the contributors to his volume, Benz also thanks Professors Yisrael Gutman, Otto D. Kulka, Yehuda Bauer, Christopher Browning, Czeslaw Madajczyk, Helmut Krausnick, H. D. Looock, Randolph L. Braham and Wolfgang Scheffler, p. 20.

¹⁰⁷ Cf. Staatliches Museum Auschwitz-Birkenau (ed.), *Die Sterbebücher von Auschwitz*, Saur, Munich 1995; for the entire time of the camps' existence, Pressac estimates the total at a reasonable 130,000: *op. cit.* (note 43), pp. 144ff.

dead in the Dachau Concentration Camp during the war.¹⁰⁸ A realistic estimate of the actual number of victims, therefore, may be twice as high as the total of victims registered by name in the records at Arolsen. The number of victims registered by name is now said to be about 450,000.¹⁰⁹ Doubtless the greater part of these are Jews, but exact figures are as yet unknown.

Even from this perspective, death clearly took a heavy toll.

¹⁰⁸ Prosecution Exhibit no. 35, National Archives USA, May 13, 1945, ref. no. M-1174, roll 4, frame 54; cf. G. Rudolf, *Lectures on the Holocaust*, 4th ed., Castle Hill Publishers, Uckfield 2023, p. 539. For death-toll statistics on other camps, see J. Graf's contribution in this volume.

¹⁰⁹ Without specifying the exact source, W. Sofsky (*Die Ordnung des Terrors: Das Konzentrationslager*, Fischer, Frankfurt 1993, p. 331, footnote 37) quotes the Red Cross regarding 450,000 victims registered by name.

The Gas Vans: A Critical Assessment of the Evidence

INGRID WECKERT

1. The Problem, and the State of Subject Research

Among the accusations that are brought against National-Socialist Germany we also find the claim that in 1941 and 1942 so-called ‘gas vans’ were used for killing victims locked into them. This was allegedly done by channeling the exhaust gas into the hermetically sealed body of the vans. ‘Gas vans,’ it is claimed, were used, on the one hand, in euthanasia institutions (homes for mental patients) and, on the other, by the *Einsatzkommandos* behind the Russian front, in Serbia, and particularly in the Kulmhof/Chelmno Camp.

‘Gas vans’ are mentioned in numerous publications among the subject literature, but their existence is never examined critically or even questioned. The state of subject research was outlined by Mathias Beer in 1987,¹ and as a rehash again in 2011.² I shall refer to the 1987 summary on occasion. Unfortunately, space limitations preclude an analysis of the general thesis; I must limit myself to touching on those points which, in my view, require closer examination in the present context, which has as its purpose the critical assessment of the evidence in the issue of the ‘gas vans.’

There is no document to indicate that ‘gas vans’ had ever come up for discussion in the Third Reich. The term dates from post-war times. The documents advanced as evidence for the ‘gas vans’ mentioned “*Sonderwagen*,” “*Sonderfahrzeuge*,” “*Spezialwagen*” (‘Special Vehicles’) or “*S-Wagen*.” It was the term ‘Special Vehicle’ which prompted contemporary historians to speculate that this must have been a special kind of vehicle, one whose nature was probably kept secret. Beer writes:³

“*The connection with the code word Sonderbehandlung [special treatment], i.e., killing [...] is obvious.*”

However, it is obvious only to those who conclude the existence of ‘gas vans’ solely on the basis of the belief that unpopular persons, especially Jews, were murdered *en masse* in the Third Reich. In this way, the fact that is supposed to be proven is already taken for granted beforehand, and presented as a factual argument. In fact, the German *Wehrmacht* had hundreds of different kinds of “*Sonder-Kraftfahrzeuge*” (Special Motor Vehicles), which were known as “*Sd. Kfz 1*” to “*Sd. Kfz 250*” and even higher.⁴ Every vehicle that required specialized equipment for any purpose was a ‘Special Motor Vehicle.’ These included, for example, the heavy-goods vehicle type known as “*Maultier*” (Mule; vehicles whose rear wheels were tracked – half-tracks), tractor vehicles for cannons and anti-aircraft guns, but also gas-detecting and decontamination vehicles for units that were specialized on gas warfare but which, fortunately, were never needed since gas was not used in combat during the Second World War. Their production and outfitting were no more secret than that of other *Wehrmacht* vehicles. To automatically connect the term ‘Special Motor Vehicle’ with the murder of Jews reveals either gross ignorance of the facts or intent to mislead the uninformed.

There was also the description “*S-Wagen*” (S-Vehicle). Beer believes that the “S” was “the abbreviation of *spezial* or *sonder*” (*i.e.*, special; p. 403), but this is incorrect. The “S” stood for “*Schell-Typ*” and referred to the type of drive:⁵

¹ M. Beer, “Die Entwicklung der Gaswagen beim Mord an den Juden,” *VfZ* 35(3) (1987), pp. 403–417.

² M. Beer, “Gaswagen. Von der Euthanasie zum Genozid,” in: Günter Morsch, Bertrand Perz, (eds.), *Neue Studien zu nationalsozialistischen Massentötungen durch Giftgas: Historische Bedeutung, technische Entwicklung, revisionistische Leugnung*, Metropol, Berlin, 2011, pp. 153–164.

³ Beer, *op. cit.* (note 1), p. 403, note 5.

⁴ Cf. W. Oswald, *Kraftfahrzeuge und Panzer der Reichswehr, Wehrmacht und Bundeswehr*, Motorbuch, Stuttgart 1990, p. 435; W.J.K. Davies, *German Army Handbook*, Arco Publishing, New York 1973; cf. R. Frank, *Lastkraftwagen der Wehrmacht*, Podzun-Pallas, Friedberg 1992.

⁵ W. Oswald, *op. cit.* (note 4), p. 177; cf. W.J. Spielberger, *Spezial-Panzer-Fahrzeuge des deutschen Heeres*, Motorbuch, Stuttgart 1977, pp. 153f.; *Die Halbkettenfahrzeuge des deutschen Heeres*, 2nd ed., *ibid.*,

“The standard vehicle types were known as S-types, whereas the A-types had all-wheel drive, while being identical in every other respect”

Therefore the ‘S’ is also no identifier of vehicles intended for killing their passengers.

Two documents from the time of the Third Reich are generally cited in support of the ‘gas-van’ theory: one of them is a letter dated May 16, 1942, that was submitted as Document PS-501 at the Nuremberg Trial (International Military Tribunal, IMT), and the other is a file from the Federal Archives at Koblenz, numbered R 58/871 – a note from the RSHA (*Reichssicherheitshauptamt*, the Reich Security Main Office) dated June 5, 1942.

Aside from these documents, there are basically only statements of defendants and witnesses in trials due to National-Socialist crimes who claim they saw or heard about the ‘gas vans,’ as well as comments made in indictments and verdicts.

To quote Mathias Beer:⁶

“However, it is not acceptable for an historian to make use of court verdicts without examining them critically, since the justice system and the science of history are guided by different objectives. For an historian, eyewitness testimony is of foremost significance because it helps to fill gaps in other sources. But due to its special nature, eyewitness testimony can be accorded a status equal to that of documents, and can be profitably exploited in historical research, only if certain principles are observed. The fundamental prerequisite is to establish, whenever and wherever possible, the connection between testimony and documents which have been critically substantiated as to their source.”

In other words: witness statements ought to be corroborated by documents that have stood up to critical examination. This applies particularly to eyewitness testimony whose content is already questionable because it contradicts other eyewitness testimony of equal value. And we shall see that what we are in fact dealing with in the case of the ‘gas vans’ are exclusively such questionable witness statements.

To date, no vehicle which clearly could have served as a ‘gas van’ has ever been found. Allegations that the Polish town Konin near the former Chelmno Camp uses such a gas van as a memorial⁷ were refuted by the town’s officials.⁸ On the author’s inquiry regarding alleged photos of such vehicles, both the Yad Vashem Museum in Jerusalem and the Auschwitz Museum in Auschwitz, Poland, sent the author a copy of the same photograph of unknown origin, showing the front view of a damaged heavy-goods vehicle of the type Magirus-Deutz with no visible indication that it was modified and subsequently used for sinister purposes.⁹ Aside from this, a Magirus-Deutz lorry was never claimed to have served as a homicidal gas van. Since the license plate was removed from the van, it is not even certain whether this vehicle was really used by German authorities. The Yad Vashem Institute responded to an inquiry by stating that no other photo of a ‘gas van’ is known to exist and that if the author were aware of any other, the Institute would appreciate receiving it.¹⁰ The truck had in fact been examined by a Polish commission of inquiry on suspicion that it might have been a “gas van,” but it turned out to have been a simple moving van.¹¹

2. Origins of the ‘Gas-Van’ Reports

2.1. ‘Murder Vans’ in the Soviet Union

Beer advances the following theory:¹²

“The term ‘gas vans’ refers to a special creation of the Third Reich, namely a heavy vehicle on whose chassis an airtight body had been mounted in which people were killed by means of the introduction of exhaust gas.”

This claim is open to dispute. Gas vans, if they even existed, were not a “special creation of the Third Reich.” The Soviet dissident Pjotr Grigorenko speaks of ‘death vans’ in his memoirs. He recounts what a former friend, Vasili Ivanovich Tesslia, had told him. In the late 1930s, this Vasili Ivanovich had been an inmate in the prison of Omsk, and from his cell he observed how a Soviet prison transport, a so-called “Black Raven,” drove into the prison yard. A group of prisoners had to get in and the truck left, to return about a quarter of an hour later. Then we read there:¹³

“The wardens opened the door: black clouds of smoke rushed out, and dead bodies toppled onto the ground one on top of the other.”

The documental value of this hearsay story may not be very great – even though Nolte rates it as ‘testimony.’¹⁴ The claim itself, however, recently received some astonishing corroboration.¹⁵ In spring 1993, a four-part television series dealing with the Soviet Union was broadcast in the United States. The title was “Monster: A Portrait of Stalin in Blood.” In the second part of this series, subtitled “Stalin’s Secret Police,” the former KGB officer Alexander Mihkailov was quoted as saying that gas vans, or trucks, had already been invented before the war, in Moscow, by one Isai Davidovich Berg, and had been used by the NKVD.¹⁶ This was later confirmed by Russian researcher Michael Voslensky, who wrote, based on his investigations of released NKVD files:¹⁷

“In the USSR a truck was constructed, whose exhaust gases were piped into the enclosed coachwork box. The inventor was a certain Berg, head of the economic department of the NKVD for Moscow and the area around Moscow. Long before the war – in 1936 – one began to use Berg’s invention.”

Hence, the ‘gas vans’ were a Soviet invention, not a German one. This fits in with the fact that the Soviets were the first to ever make any mention of ‘death vans’ or ‘murder vans.’

The first trial in which ‘murder vans’ were an issue took place during the war, on July 14–17, 1943 in Krasnodar, USSR. From July 15 to 19, the newspaper *Pravda* brought a trial report which was later published in English translation as *The Trial*. Eleven Ukrainians had been charged with treason for their activities assisting German forces. Eight of them were sentenced to death; three received twenty years each in a penal camp.

As usual in those days in the Soviet Union, the defendants confirmed everything that they were supposed to – among other things, that the *Sonderkommando* 10a of *Einsatzgruppe D*, led by SS-*Sturmbannführer* Kurt Christmann, had been killing Soviet prisoners with Diesel

¹² M. Beer, *op. cit.* (note 1), p. 403.

¹³ P. Grigorenko, *Erinnerungen*, Bertelsmann, Munich 1981, pp. 275f.; cf. U. Walendy, “Das verbrecherische System,” *Historische Tatsachen* No. 48, Verlag für Volkstum und Zeitgeschichtsforschung, Vlotho 1991, pp. 35f.; this source also contains the complete quotation. Another interesting report about mass killings by means of gas by the Soviets prior to WWII was published by W. Bobrenjow, W. Rjasanzwe, *Das Geheimlabor des KGB*, edition q, Berlin 1993, pp. 43, 171; I owe thanks to Gerd Selbach for the latter information; W. Strauss (“Fortschreiten des Revisionismus in Rußland (2),” *Staatsbriefe* 8(9) (1997), pp. 16–20, here p. 19) reported about a Russian publication describing among other outrageous cruelties Soviet experimental gas chambers where prisoners of the GULag were killed: Dantschik Baldajewa, *GULag Zeichnungen*, Zweitausendeins, Frankfurt 1993.

exhaust in ‘murder vans’ since the fall of 1942.¹⁸ Soviet witnesses confirmed the use of ‘murder vans’ to eliminate the mentally ill (*ibid.*, pp. 4ff.). The claim at the heart of all the testimony was that the highly toxic Diesel-exhaust gas had caused the death of those locked into the vans. Since this claim cannot be true (for the nontoxic nature of Diesel exhaust, see the contribution by Fritz Berg, this volume), it is only reasonable to question the credibility of the rest of the witness statements as well.

One month later, on August 14, 1943, the Soviet Embassy in Washington published a brochure titled “On Crimes Committed by the German-Fascist Occupation Troops in the Stavropol Area.”¹⁹ The contents are crass anti-German atrocity propaganda. Among other things, the testimony of a German prisoner-of-war named Fenichel is quoted, confirming the evidence of ‘murder vans’ and describing the vehicles. The statement gives no information about Fenichel himself nor about the circumstances under which his testimony was given. One can therefore accord these claims no factual value whatsoever. They were, however, presented at the Nuremberg Trials as incontrovertible evidence to prove that “[...] the mass extermination of people in gas vans was ascertained without reasonable doubt.”²⁰ In this instance, the name of the German prisoner-of-war was given as “E. M. Fenchel.”

Another trial took place in the Soviet Union, this time at Kharkov, from December 15 to 17, 1943. The defendants were three German prisoners-of-war and one Ukrainian laborer who had served as driver with the *Sonderkommando* at Kharkov. All four of them were sentenced to death by hanging, and the sentence was carried out on December 18, 1943. The English-language trial report appeared in the volume *The People’s Verdict*.²¹ During this trial as well, the allegation came up that the German forces had used heavy Diesel vehicles to murder the Soviet population. And again, the defendants confirmed all the crimes they were charged with.

In his book *Der Yogi und der Kommissar*, the Russian-Jewish author Arthur Koestler wrote:²²

“The method of gross oversimplification in Soviet domestic propaganda resulted in the tradition that a defendant in a political trial had to admit his alleged crimes freely and voluntarily, and once this tradition had become established there was no going back. Hence the strange phenomenon in the 1943 Kharkov trial of German war criminals, where the accused German officers were made to behave like characters out of a story by Dostoyevsky. [...] To a foreign observer, the Kharkov Trial (which was filmed, and screened publicly in London) seemed as surreal as the show trials of Moscow, since the defendants gave their statements in pompous phraseology they had obviously memorized, and sometimes digressed into the wrong role, that of prosecutor, before returning to their starting point.”

Regarding the value and the practice of Soviet trials, Adalbert Rückerl – then chief public prosecutor at the German Nazi-hunting Central Office of the State Administrations of Justice at Ludwigsburg (Zentrale Stelle der Landesjustizverwaltungen) – commented, decades later:²³

“No reliable information exists about the extent of the criminal trials conducted by Soviet courts against Germans. It may be assumed with certainty, however, that the number of convicted is many times greater than that of all the persons convicted by courts of the western occupation powers put together.”

²² A. Koestler, *Der Yogi und der Kommissar*, Bechtle, Esslingen 1950, pp. 259f.

²³ A. Rückerl (ed.), *NS-Verbrechen vor Gericht*, C.F. Müller, Heidelberg 1984, pp. 99f (the first edition of 1979 was titled *Die Strafverfolgung von NS-Verbrechen*).

The first trial already took place during the war, on December 15-18, 1943, in Kharkov. In this show trial, a Captain of the German Army, an SS-Untersturmführer of the SD, a Private First Class of the Secret Field Police of the Army, and a Russian laborer working for the SD as driver, were sentenced to death by hanging, and were hung publicly one day later on Red Square in Kharkov.”

With respect to the question of how the confessions were elicited in Soviet military trials, Rückerl proceeds to quote a February 26, 1965 report of the German federal minister of justice to the president of the German *Bundestag* (parliament; *ibid.*):

“‘Confessions’ were extracted by means of starvation and sometimes also with torture, and these confessions became the basis of proceedings before the Soviet military courts [...].”

That this assessment of Soviet military trials was correct is a well-known fact today, and has been corroborated by testimony given by Russian military officers, and by documents recently discovered in Moscow.²⁴ After the collapse of the Soviet Union, the Russian law courts consequently began mass rehabilitation of former German soldiers who were convicted for alleged war crimes between 1941 and 1945.²⁵ Thus it would run counter to any logic to accept the statements made in the Soviet trials of 1943 as legitimate evidence for the existence of ‘gas vans.’

What might have been the reason why it was so important to the Soviets to blame such crimes on the Germans in 1943? In early 1943, German forces had discovered the mass graves in the forest of Katyn and had arranged for an international investigation, which clearly showed the Soviets to be the guilty party. A report about this was published in the summer of 1943,²⁶ but it was not made available to the public abroad. The Soviets, who had no way of knowing what the international reaction to their massacre of Polish officers would be, wanted to have an ace up their sleeve, ‘just in case,’ in order to be in a position to counter-charge the Germans with atrocities of their own. And so, the ‘gas vans,’ which may perhaps actually have existed in the service of the NKVD, were imputed to the Germans and, to make the allegation seem more credible, were equipped with Diesel engines, a typical German feature. The inventors of this legend clearly did not realize that their crowning touch in fact defused their weapon, since the mere introduction of the exhaust gases generated by a Diesel engine has no lethal effect on the passengers. (See the chapter by Fritz Berg.)

2.2. ‘Gas Vans’ in the Nuremberg Trials

2.2.1. Soviet-Russian Accusations

In the course of the Nuremberg Trials, the public heard its first mention of ‘gas vans’ – albeit not of the Soviet vans but of the alleged German ones. The Soviets brought their charges (already known) against the German forces, and Chief Prosecutor R. A. Rudenko argued:²⁷

“[...] the mass extermination of people in gas vans was ascertained without reasonable doubt for the first time in the report of the Extraordinary State Commission on atrocities of the German occupiers in the Stavropol region.”

He then quoted the alleged testimony of the “prisoner-of-war E. M. Fenchel.” Why him? Why not the statements made during the trials of Krasnodar and Kharkov? Could it be because, due to the published trial reports and the film records, these could have been critically evaluated, whereas the “prisoner-of-war E. M. Fenchel” conveniently offered no footholds for verification? Whatever the case may be – repetition of the charge does not make it more credible.

²⁴ A.E. Epifanow, Hein Mayer, *Die Tragödie der deutschen Kriegsgefangenen in Stalingrad von 1942 bis 1956 nach russischen Archivunterlagen*, Biblio, Osnabrück 1996, pp. 71-77, 105-129; cf. “Freisprüche für die Wehrmacht,” *Focus* 49/1996, p. 25.

²⁵ A.E. Epifanow, Hein Mayer, *ibid.*, p. 105.

²⁶ Auswärtiges Amt (ed.), *Amtliches Material zum Massenmord von Katyn*, Comp. and ed. from documental evidence, Eher Nachf., Berlin 1943.

²⁷ *IMT*, Vol. VII, p. 572.

In the collection of materials that were published from the Nuremberg Trial, the trial transcript itself has been published in its entirety, but of the documents that go with it, only a selection has been published. It is reasonable to assume that many of the documents would not have stood up to critical examination by later historians. At any rate, this is the impression one gets when one finds, time and time again, that documents especially in need of examination are conspicuously absent from the collection of materials. Not even the archives in charge (Koblenz Federal Archives, Nuremberg City Archives, National Archives in Washington) can help in such cases. Evidently, anything that was not published in the IMT volumes has disappeared, or in any case is not accessible to the public. All the Russian papers which the Soviets submitted in Nuremberg as evidence for their ‘gas-van’ claims also number among these ‘vanished’ documents. The IMT volumes contain no documental evidence whatsoever for these Soviet allegations.

2.2.2. American Evidence

The Americans presented written evidence. The first is Document PS-501, a collection of papers – one letter and several notes or telexes – of which the letter only was later used as “evidence for gas vans.”²⁸

Second, they submitted an ‘affidavit’ in which the recipient of the letter from Document PS-501 confirmed, on October 19, 1945, that he had received this letter three years previously.²⁹

Third, they presented an ‘affidavit’ by Otto Ohlendorf, dated November 5, 1945, in which Ohlendorf wrote about the use of the ‘Death Vans.’³⁰

And, fourth, there is an ‘affidavit’ by Hans Marsalek, dated April 8, 1946, about the May 22, 1945, testimony of Franz Ziereis, commandant of the Mauthausen Concentration Camp.³¹ In this ‘affidavit,’ Marsalek ‘confirms’ that a “specially constructed vehicle” ran between the Concentration Camps Mauthausen and Gusen, “in which inmates were gassed to death during the trip” (*ibid.*, p. 281). From a more-recent publication by Hans Marsalek, one can conclude that this ‘affidavit’ is false. In the second edition of his book *Geschichte des Konzentrationslagers Mauthausen*, he tacitly corrects his earlier statements. Regarding the death of Ziereis, Marsalek writes:³²

“On May 23, 1945, Ziereis was apprehended in his hunting cabin on the Phyrn (upper Austria) by American soldiers, and was injured by two bullets when he attempted to flee. As a result of these injuries Ziereis died on May 25, 1945, in the 131st American Evacuation Hospital, Gusen.”

Here, Marsalek no longer knows anything of his interrogation of Ziereis, which according to his ‘affidavit’ had taken place during the night of May 22-23, in other words, even before Ziereis was discovered by American soldiers. His statement in the preface to the second edition of his book may also be considered a correction of his affidavit of April 8, 1946:

“Further, all statements that cannot be documented [...] have been deleted.”

This is an example of the audacity and unscrupulousness with which confessions of guilt were fabricated.

Regarding the problem of the evidence submitted in the Nuremberg Trial, I wish to remind the reader: in the course of this trial, the defendants, the defense counsels and the witnesses found themselves faced with thousands of documents on which they had to comment immediately. There were only a few cases where the persons in question were not intimidated by the court. The presiding judge constantly urged them to answer immediately, ‘yes or no.’ The result was that many defendants and witnesses gave up and simply answered in which-

²⁸ IMT, Vol. XXVI, pp. 102-110.

³⁰ IMT, Vol. XXXI, pp. 39-41, here p. 41.

³¹ PS-3870, IMT, Vol. XXXIII, pp. 279-286.

³² H. Marsalek, *Die Geschichte des Konzentrationslagers Mauthausen*, Österreichische Lagergemeinschaft Mauthausen, Vienna 1980, p. 200, note 15.

ever way was easiest, and that, as a rule, was to confirm the correctness of the document shown to them. They generally did not even get to see the evidence.³³

The situation was not much different for the witnesses, who were interrogated even before the trial began. Without being expressly told each time, they knew very well that their only choice was between acting as a witness for the prosecution, or if they did not please the prosecution, as a defendant in their own right in a subsequent trial. For those witnesses who were likely to break down under cross-examination by the defense – and this category included most of them – the Allies invented the ‘affidavit.’

An affidavit was the result of an interrogation; it was drawn up by the interrogating officers and given to the witnesses to sign. It usually contained only half the truth, since – as one defense counsel stressed:³⁴

“An affidavit only reiterates the answers to questions which were put to the person. Very often conclusions can be drawn from unanswered questions.”

At this point I would add that witness statements which did not serve the purpose of the prosecution were not even included in the affidavit. The presiding judge to whom the defense counsels had repeatedly pointed out the questionable nature of the affidavits explained succinctly that:³⁵

“The Tribunal is not bound by technical rules of evidence, but shall adopt and apply to the greatest possible extent expeditious and non-technical procedure, and shall admit any evidence which it deems to have probative value.”

By now these facts are all well known. Therefore, it can only be described as amateurish when historians still ascribe probative value to IMT documents whose content cannot be confirmed through other sources.

2.3. ‘Gas Vans’ in National-Socialist Trials

While there is only little documental evidence for the existence of ‘gas vans,’ we do have numerous statements by defendants and by witnesses in trials of alleged National-Socialist crimes, mainly staged on German territory, which confirm that ‘gas vans’ had indeed existed and that people were killed in them. Especially in the 1960s and 1970s trials took place which dealt with the use of ‘gas vans,’ among other things. In the orthodox literature on this subject, therefore, arguments are based primarily on this testimony.

In Chapter 4 we shall take a closer look at the content of these witness statements, but first of all, let us consider the value which such testimony *per se* has as evidence.

The fundamental problem of testimony before a court and its relation to objective truth is nothing new. We have already quoted M. Beer in this respect. He is not alone with his doubts that historical truth is to be found in court transcripts. The question has repeatedly come up, at least since the Nuremberg Tribunal: Can historical insights be gained from court cases? Wilhelm Raimund Beyer writes:³⁶

“The ‘truth’ ascertained by the court must not be equated with historical truth. During the Nuremberg Trial of the major war criminals (IMT) and the following trials, and especially in connection with the Justice Case, heated discussions during conversations with defense counsels and especially with press reporters yielded the following maxim: trial truth is not historical truth. [...] Any accused person will hardly wish to describe the actual, so-called objective events of the case at issue, even if he were in a position to do so.”

The same, of course, also goes for the statements of witnesses, even if they were made under oath. In this context, Professor Dr. Martin Broszat, former Director of the Institute for Contemporary History in Munich, spoke of

³³ W. Maser, *Nürnberg: Tribunal der Sieger*, Droemer Knaur, Munich 1979, chapter “Das Beweismaterial,” starting on p. 163.

³⁴ *IMT*, Vol. II, p. 351.

³⁵ *IMT*, Vol. II, p. 203; this is Article 19 of the Charter of the International Military Tribunal, *ibid.*, Vol. I, p. 15.

³⁶ W.R. Beyer (ed.), *Rückkehr unerwünscht*, dtv, Munich 1980, p. 180.

"[...] *actually incorrect or exaggerating* [...] *statements of former inmates or witnesses.*"³⁷

The American Holocaust expert Lucy Dawidowicz corroborates this:³⁸

"*Many thousands of oral histories by survivors recounting their experiences exist in libraries and archives around the world. Their quality and usefulness vary significantly according to the informant's memory, grasp of events, insights, and of course accuracy. [...] The transcribed testimonies I have examined have been full of errors in dates, names of participants, and places, and there are evident misunderstandings of events themselves.*" (Emphasis added)

One need not necessarily assume that the witnesses lied intentionally, or deliberately distorted facts. But what degree of objectivity can one even hope for where the matters in question are already years or even decades in the past, and the events testified to took place in situations marked by distress, fear and terror? Is it even reasonable to expect objective, truthful statements in such cases?

By its very nature, eyewitness testimony is based on subjective impressions. In addition to this, it often contains unverified rumors. In many cases, gaps in personal recollections were patched up later through accounts given by third persons or by the media (newspapers, books, radio and television), accounts that the witnesses accepted credulously without giving any thought to their veracity.

The credibility of eyewitness testimony is a common and well-known problem in the justice system and does not apply only to National-Socialist trials.

The observation I already made at the beginning of this study thus holds true: eyewitness testimony and court verdicts must be analyzed and can be credited with probative value only if other evidence confirms their objective correctness.

3. Critical Assessment of Important Documents

3.1. Nuremberg Document PS-501

The most-important piece of evidence from Document File PS-501 is a letter dated May 16, 1942, from SS-*Untersturmführer* Dr. August Becker to SS-*Obersturmbannführer* Walther Rauff. Dr. Becker was an accredited chemist with the Forensic Institute of the RSHA [the Reich Security Main Office] in Berlin; Walther Rauff was chief of Department II D in the RSHA.

The letter reads as follows [transcript of official Nuremberg translation]:

"*Feldpostnummer 32704*

B. Nr 40/42 SECRET

To

SS Obersturmbannführer R a u f f

Prinz Albrecht Str. 8

Berlin

The taking over [=overhauling] of vehicles by Groups D and C^[39] is finished. While the vans of the first group can be utilized in not too bad weather, the cars belonging to the second group (SAURER) are absolutely immobilized in rainy weather. For instance, often it has rained for half an hour, these vehicles cannot be used because of skidding. They

³⁷ M. Broszat, "Zur Kritik der Publizistik des antisemitischen Rechtsextremismus," *Aus Politik und Zeitgeschichte*, 26(19) (1976), pp. 3-7, here p. 5.

³⁸ L. Dawidowicz, *The Holocaust and the Historians*, Harvard Univ. Press, Cambridge, Mass., 1981, pp. 176f.

³⁹ Mistranslation in Nuremberg translation; the original German document reads "*Die Überholung der Wagen bei der Gruppe D und C* [...]," which means "the overhauling of the vehicles with [*i.e.*, at the location of] Groups D and C..." not "the taking over of the vehicles by Groups D and C." This is only the first of numerous mistranslations and grammatical and spelling errors which riddle this Nuremberg translation; all peculiarities have been retained in this transcript. —translator.

can only be used in absolutely dry weather. The only question is whether these vehicles can be put into action only on the execution spot.

First, a vehicle must be brought to this place, what is only possible in good weather. The execution spot is generally stationed 10 to 15 kms from main roads and due to such location already of difficult access, but in wet weather absolutely impossible to reach. If those to be executed are driven or conducted to this place, they notice at once what is wrong and become frantic, which is most of all to be avoided. There is only one solution: to gather them on the same spot and then to drive off.

As for the vehicles of Group D, I had them camouflaged as cabin trailers by putting on them little windows, one on every side of the small vans and two on every side of the big ones, like windows which are seen on peasant houses. But the vehicles were so well known that not only the authorities, but also the civilian population, called them 'Death Vans.' My opinion is that we shall not be able to keep this camouflage secret a very long time.

On the way up from Simferopol to Taganrog, I had brake troubles with the vehicle Saurer, which I was conveying over there. At the S.K. in Mariupol, it was found out that the brake sleeve [Manchette] of the combined Oil and Westinghouse brakes, was broken in several places. Through persuasion and bribery, I obtained from the H.K.P. (Army Motor Pool) to have a pattern made, after which two brake sleeves have been cast. When I arrived some days later at Stalino and Gorlowka, the drivers of the vehicles there complained of the same trouble. After an interview with the commanding officer of the Commando, I returned to Mariupol to have another brake sleeve made for these vehicles. It has been agreed that two brake sleeves will be cast for these vans; six brake sleeves will stay in reserve in Mariupol for Group D; and six will be sent to SS Untersturmfuehrer E R N S T in Kiew for the vehicles of Group C. With regard to Groups B and A, the brake sleeves could be obtained through Berlin, as the transportation from Mariupol to the north seems to[o] hazardous and would take too long. Small repairs of vehicles will be handled by Commando technicians; that is to say, repairs will be made in their own workshops.

Due to the uneven terrain of the region and the very bad state of the roads, the joints and rivets become loose within a short time. I was asked if, in such cases, the vehicles must be taken to Berlin. Transportation to Berlin would be too expensive and would require too much gasoline. To save such expenses, I gave the order to solder the small leaky spots, and when this could not be done any more to inform Berlin at once: by radio that the vehicle Pol.Nº... was out of working order.

Furthermore, I ordered, during the gassing, to keep all the men as far away as possible, in order that they could not eventually be injured by gas fumes. On this occasion I wish to draw your attention to the fact that after the gassing several Kommandos let their own men unload the van. I have drawn the attention of the Commanding officers of the concerned S.K. to the atrocious spiritual and physical effect that this kind of work may have on the men, if not just now, then in the future. The men complained to me that they got headaches after every van-unloading. Anyhow, this order is not observed, as it is feared that the prisoners chosen for this work will use the opportunity to try an escape. In order to prevent the men from being injured, I should be obliged if orders were given accordingly.

The gassing is not done in the right manner. In order to get over the work as quickly as possible, the driver gives full gas. Through those measures the people to be executed die from suffocation and not as foreseen by being put to sleep. My method has proved that by releasing pressure on the lever at the right time death comes more quickly and the prisoners slip peacefully away. Distorted faces and excretions, which have been previously seen, are not more to be observed.

I am leaving in the course of the day for Group B, where you can forward me further information.

*Sgd: B E C K E R
SS Untersturmfuehrer"*

3.1.1. Origin of Document PS-501

The author has in her possession two letters from the National Archives in Washington D.C., USA, each of which attests to a different origin of the Nuremberg Prosecution Document PS-501.

An April 26, 1945 memo from the Headquarters of the 12th US Army states that a unit of the 12th Army had found the documents in the “RSHA reserve depot in Bad Sulza.” The originals, the memo states, were sent to the document center in Paris.

The docket which usually accompanied the documents that were presented to the Nuremberg Tribunal is dated September 7, 1945. This paper states that the place where the document was found, as well as its source, is unknown and that it had been received from the OCC London (the British Prosecution).

In view of this, it is not impossible that further references to yet another origin for this document may well turn up, whether from Washington, Moscow, or a different archive.

For the moment, we can only say that the origin of document PS-501 is unknown and hence dubious. Given this situation, it ought never even to have been admitted as a document for the prosecution. According to an affidavit of the head of the Document Section in the US Chief Prosecutor’s Office which was read into evidence at the start of the Nuremberg Trial,⁴⁰ all materials which could serve to prosecute Germany’s leadership were registered accurately, with information as to the place and circumstances of how and where they had been found. A document without such identification, *i.e.*, with the note “source and origin unknown,” lacks even slightest evidentiary value. If the defense had submitted an equally dubious paper, the court would have rejected it instantly.

3.1.2. External Characteristics of PS-501

3.1.2.1. Rubber Stamps and Handwritten Notations

The letter bears the following markings on the first page:⁴¹

Two red rubber stamps:

- 1. “*Geheime Reichssache!*” [Top secret!], top right, below the place and date;
- 2. Bottom left, at the margin, the Received stamp of the archive, *i.e.*, the registry.

There are also the following *handwritten notes*:

- 1. Top right, beside the address field, in orange: “R 29/5 erl. b/R.”
- 2. Above that, in red pencil: “pers. Pradel n.R.”
- 3. In the left margin, in indelible pencil: “Sukkel b. R p16/6.”

These notes indicate that “R” processed this on May 29 and initialed it with “b/R.” The note was written in Latin script.

The meaning of the red entry, “pers[onal?] Pradel n.R.,” is not quite as clear. This note was also written in Latin script. Whether it is the same handwriting as that of the orange entry is not certain.

Illustration 1: Rauff’s original initial and signature. Rauff always wrote it that way.⁴²

Illustration 2: alleged signature of Rauff in RS 58/871 (and nearly the same in PS-501): too tall, too slim.

⁴⁰ PS-001a, *IMT*, Vol. XXV, pp. 2-7.
⁴¹ The following information about the color of the stamps and the various color pencils are excerpted from the description of the original document as related in *IMT*, Vol. XXVI, p. 102.

The note at the left margin, “Sukkel b.R.,” is initialled “p [or “P”] 16/6.” It was written in German cursive (Sütterlin) script. Is it supposed to mean that “P” confirmed on June 16 that Sukkel had come to see [*i.e.*, was “b”(ei?)] “R”?

None of the three notes is clear and unambiguous, because even for the first note it is not known what “b/R” is supposed to mean.

One may assume that the initials ‘R’ and ‘P’ are supposed to stand for ‘Rauff’ and ‘Pradel,’ respectively. The RSHA also had a staff member by the name of ‘Suckel,’ but his name was spelled with a ‘ck,’ not with a ‘kk’ as shown on the document.

Rauff, however, consistently wrote German texts in German cursive script (Sütterlin), not in Latin script. His initial ‘R’ had a characteristic appearance⁴² which was not identical to that of the ‘R’ on the letter (see Illustrations 1f.). Hence, he may not have written these notes. What is more, all the handwritten entries are apparently ‘adapted’ from genuine notes written by Rauff and Pradel, as we shall see later, so that it seems reasonable to suspect a deliberate forgery here.⁴³

3.1.2.2. Three Different Copies but No Original

By now the author has in her possession three different ‘copies’ of the letter from Becker to Rauff, but the original letter is still not to be had. Apparently no such ‘original’ exists.

The three ‘copies’ differ as follows:

Specimen A:⁴⁴

Photocopy of a photo negative (black paper, white text). Three pages. On the upper edge (but clearly visible only on pages 1 and 2) there are two holes made by a hole puncher, obviously for filing – but they are at a location and a distance that is typical for U.S. filing practice but unknown for filing holes in German office practice. On the copy in my possession, only page 3 is numbered at the top: – 3 –

Each page has an archival number stamped at the bottom: A092586-88.

In the left margin of page 1, diagonally handwritten: “*Diesen Brief habe ich im Mai 1942 empfangen. 18. October 1945. Rauff*” [I received this letter in May 1942. October 18, 1945. Rauff]

The first line of text is missing at the top of page 2.

According to a memo in the IMT volumes (XXX, p. 258) this is a *photocopy of the original letter* from Becker to Rauff, which had been given to Rauff in Ancona, Italy on October 18, 1945, to authenticate.

Specimen B1:⁴⁵

Photocopy of the carbon copy of what was presumably the original letter. Three pages. The consistency of the paper is clearly apparent and permits the definite conclusion that it was not a solid piece of paper such as is usually used for original letters and photocopies, but rather a piece of thin carbon-copy paper (photocopy machines can’t process thin carbon-copy paper, also known as onionskin).

On the left edge there are two holes made by a hole puncher, for filing in a binder. They are located at the place where Specimen A shows Rauff’s confirmation of receipt. The left margin is torn, or creased, and the punching is reinforced. On the *photograph* (Specimen B2) the reinforcement strip is clearly visible through the thin paper.

Along the upper edge there is a handwritten note: “Copy of [...]” (the rest is illegible).

At the bottom are archival numbers: p. 1: A090025; p. 2: A090027; p. 3: A090028. Strangely enough, A090026 is missing – in other words, pages 2f. of the document were numbered incorrectly. This is all the more strange because these numbering machines ad-

⁴² See Rauff’s confirmation on PS-2348; cf. P. Marais, *op. cit.* (note 7), pp. 211, and his many confirming initials on the corresponding affidavit, or the other correspondence of RS 58/871; cf. P. Marais, *op. cit.* (note 7), pp. 134, 140, 151.

⁴³ For example, cf. back page of letter from Gaubschat to the RSHA, May 14, 1942 (R 58/871, fol. 13).

⁴⁴ PS-2348; cf. P. Marais, *op. cit.* (note 7), pp. 211-213.

⁴⁵ U.S. National Archives, HLSL_NUR_02459001 to 3; PS-501.

vance automatically after each depression. Therefore, some different document, or sheet, must have been given the number A090026.

The Harvard Law School's Nuremberg Trials Project, striving to make accessible online all Nuremberg documents in its possession, has posted a white-on-black photostat copy of this version.⁴⁶

Specimen B2:⁴⁷

Photograph of page 1 of Specimen B1. The consistency of the paper (thin copy paper) is even more clearly apparent here.

Specimen C:⁴⁸

A copy written for the IMT, peppered with spelling and typing mistakes – obviously written by an English-speaking person. To this day the staff at the American National Archives in Washington claim that this is a “copy of the original.” This copy bears handwritten notes which are very similar to those on Specimens A, B1 and B2. Apparently, the person who rewrote this letter tried to imitate these annotations as well. A closer comparison of these notes reveals that there is a small difference between these documents: Whereas document A bears no angle-shaped paragraph marks, Specimen B and C have two ‘└’-shaped marks at the start of the first and at the end of the second paragraph, but only Specimen B has three ‘>’-shaped paragraph marks (end of paragraph 1, and start and end of paragraph 2). Since the writer of Specimen C tried to match the document he was copying as well as possible – especially the handwritten notes and marks –, this suggests that the document he was copying showed only the ‘└’-shaped marks, *i.e.*, that he must have copied a different document than Specimen A or B (or that the ‘>’-shaped marks were added only later onto Specimens A and B).

3.1.2.3. Congruencies between Specimens A and B

Astonishingly enough, the stamps as well as the handwritten comments on Specimens A and B match – precisely at the same places on the paper, except for the above-mentioned paragraph marks which probably were added later.

As already mentioned, Specimen A is allegedly a photocopy of the original letter. In this sense it is only to be expected that the copy corresponds precisely to the original, on which these notes were written. It *is* odd, however, in the case of Specimen B, which was described as a ‘copy’ and is clearly a carbon copy of the original letter. It is odd in the sense that the notes give the impression that they were added by the recipient, whereas carbon copies of letters are usually retained by the sender. Moreover, even if the copy should actually be in the recipient's possession, such notes would be written on only one of the two specimens, not on both. And what is entirely impossible is that these notes, which must have been written by at least two different persons on two separate days (May 29 and June 16), could be identical and could be located in the exact same places on both specimens, exact to the millimeter.

It is also very unusual that the carbon copy bears the same signature as the original letter. It used to be customary in German offices to sign carbon copies with one's initials at the most, and usually not at all, since after all these copies were only intended for the files.

The congruence of the handwritten notes on the photocopy of the original letter and on the carbon copy suggests that these notes were added photo-mechanically or in some other way. If this is correct, it would be another proof of forgery.

3.1.3. Content of Document PS-501

It is almost superfluous to comment on the contents of the letter, which are extremely strange and quite hard for common sense to accept. We shall mention only a few points.

⁴⁶ <http://nuremberg.law.harvard.edu/documents/2459>

⁴⁷ As displayed in a showcase of the National Archives in Washington; cf. P. Marais, *op. cit.* (note 7), p. 210.

⁴⁸ National Archives, Washington, PS-501; cf. P. Marais, *op. cit.* (note 7), pp. 208f.

First at issue are heavy vehicles from the firm of ‘Saurer’ which can allegedly drive only under ideal weather conditions and on absolutely dry ground. It is both surprising and hard to believe that the Army Motor Pool would send vehicles to the Russian front if they were not at all suitable for the road conditions there. Moreover, even the lighter vehicles from ‘Saurer’ generally had dual wheels in the rear, and the heavier ones had two axles. Thus, one might assume that they could have handled even poor road conditions.

The writer complains that the “brake sleeves [“Manchette”] of the combined Oil and Westinghouse brakes was broken in several places.” According to an information provided by the company Steyr-Daimler-Puch, successor of Saurer Company, the mentioned brake sleeves were rubber-made cup packings of the vacuum power-steering device which broke frequently. The described pattern was not used to cast the sleeves but to vulcanize them.⁴⁹ Consequently, Becker would not have been able to produce his own sleeves, since casting air-tight, vacuum-proof rubber sleeves in patterns behind the Russian front is nearly impossible, but had to order them in an unvulcanized form from the manufacturer in order to vulcanize them in his self-made patterns (if this was possible at all, has not yet been checked). Thus, the statement of Becker that “[w]ith regard to Groups B and A, the brake sleeves could be obtained through Berlin” doesn’t make sense, since he had to order the unvulcanized ones from Berlin or elsewhere in the Reich as well.

Additionally, Becker remedied this problem by resorting to ‘bribery.’ Even though everyone knows that there are occasionally things that can be obtained only by ignoring regulations, *i.e.*, illegally, and that certain compensation is involved in such transactions, one would certainly not call this ‘bribery.’ And most of all, no minor SS-*Untersturmführer* would literally brag about such activities in an official document to a higher-ranking officer and his superior.

What the writer claims with regard to the problems encountered during ‘gassing’ must be read in conjunction with Friedrich Berg’s chapter in this volume. For as long as there is no proof that the RSHA’s Saurer vehicles were *not* equipped as a standard with Diesel engines, as was normally the case, the gassing tales cannot be given any credence. But apart from this, Becker’s description of the alleged influence of the lever position on the *way* the victims die is utter nonsense. Only the dying process can be accelerated by giving full gas, but it would have no influence on the way people die.

3.1.4. Summary

We have found that the origin of the letter from Becker to Rauff which was submitted to the Nuremberg Tribunal as Prosecution Document PS-501 is uncertain, and hence dubious.

The handwritten notes on the first page of the letter appear to be nonsensical and probably were not written by the persons (Rauff and Pradel) whom the initials ‘R’ and ‘P’ are supposed to suggest. This would indicate a forgery.

The carbon copy bears the same notes at precisely the same places as the photostat copy of the original letter. This is not only unusual, but also an impossible feat of handwriting. At least on the carbon copy, the notes can only have been added photo-mechanically. This too would indicate a forgery.

The contents of the letter are not credible, especially in their nature as letter from a subordinate to his superior.

All in all, these points are cause for grave doubts as to the authenticity of the document.

3.2. Affidavits

Regarding the general problem posed by the Nuremberg affidavits, see Section 2.2.2.

3.2.1. Nuremberg Document PS-2348, the Affidavit Rauff

When the German front in Italy collapsed, Walther Rauff was taken into American captivity, and was held in Ascona where, on October 18, 1945, he was presented with a photocopy of a letter which Becker had allegedly sent him on May 16, 1942. He was told to confirm its

⁴⁹ Letter from Steyr-Daimler-Puch Aktiengesellschaft to P. Marais, January 1, 1987, facsimile in P. Marais, *op. cit.* (note 7), p. 310.

authenticity. Rauff wrote the requested statement vertically across the left margin of the copy.

The next day, October 19, 1945, he also swore an affidavit in which he again affirmed that the letter was genuine.⁵⁰ The affidavit was recorded in the manner already described: the American interrogator asked questions and wrote down the answers. The interrogation was conducted in English, and the answers were also given in English since Rauff was familiar with that language. Consequently, the documental volumes of the Nuremberg Trial contain only the original English version.

The affidavit contains numerous factual errors. While Rauff did make some corrections, he let other mistakes stand, for example the spelling ‘Pradl’ instead of ‘Pradel’ and the assumption that the ‘Saurer Works’ were located in Berlin, whereas they were actually in Vienna. Very obviously he provided the affidavit under pressure. Possibly he meant the errors contained in it to hint at his condition.

He did, however, take care to stress that he had no particular connection with the ‘death vans’ and their operation – the usual conduct of all defendants who knew that it would have been hopeless to dispute the basic charge (‘genocide,’ ‘mass murder’) as a whole and could only speak for themselves.

The affidavit states, “In so far as I can state these vans were probably operating in 1941.” According to Kogon,⁵¹ the plan to construct such ‘gas vans’ was not formulated until autumn 1941, and construction did not begin until 1942. Rauff’s statement thus contradicts this theory.

Further, Rauff claimed that he had referred Becker’s letter to Pradel and that he believed he had instructed Pradel “to have the technical matters complained of in the letter remedied.” However, the Becker letter makes no mention of any technical matters that needed to be remedied. Becker did not request any technical measures to be taken; on the contrary, he had everything admirably under control. He had already changed what needed changing, and *that* was not even a technical defect, but rather the “incorrect” use of the accelerator pedal – whatever that may mean. (Regarding the absurdity of the claim that the CO content of Diesel exhaust could be regulated by the adjustment of control levers, cf. the chapter by Friedrich Berg, this volume.)

Moreover, Rauff said:

“I was chief of this technical section [at the RSHA, Group II D] from February 1940 to March 1940. From May 1940 to May 1941 I was in the German Navy. September 41 to May 1942 I was in Prague. I then became chief of the section again from May 1942 to June 1942.”

In other words, during his entire time of service at the RSHA he was chief of the technical section twice, each time for only one or two months: from February to March 1940 and from May to June 1942. Therefore, he cannot possibly have played the role attributed to him in supplying the ‘gas vans.’ According to the orthodox Holocaust literature, Rauff had worked to supply the ‘gas vans’ as of autumn 1941, in other words at a time when he was not even in Berlin.⁵²

Regarding the personnel structure of the RSHA, Rauff claimed:

“I wish to state that my immediate superior was an individual of ministerial grade by the name of Standarten Führer Siegert. He was chief of Amt II RSHA [...] The immediate superior of Stnd Führer Siegert was Obergruppen Führer Reinhardt Heydrich chief of S.D.”

⁵⁰ PS-2348, IMT, Vol. XXX, pp. 256-258.

⁵¹ E. Kogon, H. Langbein, A. Rückerl (eds.), *Nazi Mass Murder*, Yale Univ. Press, New Haven 1993, p. 53.

⁵² Cf. the detailed account in E. Kogon *et al.*, *ibid.*, pp. 53f., which completely disregards the facts claimed by Rauff. His personnel file (copies in the author’s possession) shows that his initial profession was “marine officer.” He left the navy in late 1937 for personal reasons and transferred to the RSHA. In May 1940, however, he returned to the navy and left it one year later as lieutenant commander. From autumn 1941 to May 1942 he was stationed in Prague, just as he claims. As of June 1942 he was on SD duty in north Africa, and later in Italy, at least until May 1944, when the Italian front collapsed. Thus, it is not clear how he could have been involved in design and construction of these vans, the purpose of which is still hidden from us.

These claims are not in accord with the facts either. Like Rauff, Siegert was a group leader at the RSHA (Office II C a, Budget and Economy of the Security Police), and as such Rauff's peer.⁵³ As is well known, the chief of the RSHA was Heydrich.

The Americans obviously tried to confirm the authenticity of the letter, because as we have already seen, the document was identified as "source and origin unknown." Rauff simply authenticated what he had been given to authenticate. In any case, he did not take the trouble to bring the affidavit into accord with the facts. Shortly afterwards, he emigrated to Chile, where he remained until his death on May 14, 1984.

The numerous, demonstrable inaccuracies in this affidavit render it devoid of any probative value. This in turn makes Rauff's confirmation of the authenticity of Document PS-501, which is the purpose of the affidavit, no less dubious than the content of that document itself.

3.2.2. Nuremberg Document PS-2620, the Affidavit Ohlendorf

The second affidavit which the American prosecution presented in Nuremberg was that of Otto Ohlendorf, chief of the SD and leader of *Einsatzgruppe D*. This affidavit had obviously also been recorded by one of the American interrogators and given to Ohlendorf to sign. In it he confirmed that his *Einsatzgruppe* had been sent "death vans" from Berlin, and that women and children were killed in them by "turning on" the gas. The affidavit was dated November 5, 1945.⁵⁴

On being questioned as a witness during the trial he stated that in spring 1942 his *Einsatzgruppe* had been assigned a special unit led by Dr. Becker which used 'gas vans' to kill Jewish women and children as well as Soviet political commissars. Death took ten to fifteen minutes, he said. He claimed not to know any technical details regarding these 'gas vans'.⁵⁵

Ohlendorf was also shown the letter from Becker to Rauff (PS-501) and he supposed it might be "correct" since it "approximated his [Ohlendorf's] experiences."

Two things contradict this account.

1. In the letter the writer (Becker) gives the impression that he was on an inspection tour of the various *Einsatzgruppen*, specifically from the south (Group D) moving northwards (on his way to Group B). But this activity does not agree with that specified by Ohlendorf, according to whom Becker was the chief of a special unit which had been assigned specifically to *Einsatzgruppe D*.
2. In the letter, the writer specifically mentions vehicles of the Saurer Type, which were equipped exclusively with Diesel engines and for this reason were not suitable for murder with exhaust gas. However, the writer does not find any fault with this – he only criticizes that they were "absolutely immobilized in rainy weather." How such vehicles, which were as unsuitable as could be for killing human beings, could nevertheless be used to murder Jewish women and children, remains a mystery.

Ohlendorf's affidavit and witness testimony contradict the facts in several decisive respects and cannot in any way be considered evidence for claimed events which are technically impossible.

3.3. The Koblenz Document R 58/871

Similar to the Nuremberg Document PS-501, the File R 58/871 consists of several papers. There are eight documents altogether, which we have grouped into three categories for the sake of clarity:

1. Letter from the RSHA to the Forensic Institute, Berlin, dated March 26, 1942, (R 58/871 fol. 7);
2. Correspondence between the RSHA and the firm of *Gaubschat Fahrzeugwerke GmbH*, Berlin, of April 27, 1942, to September 24, 1942, including notes and Memos (R 58/871 fol. 4-6, 8-14);

⁵³ Schedule of Responsibilities RSHA as of Jan. 1, 1941; L-185, *IMT*, Bd. XXXVIII, pp. 1-24, here p. 8.

⁵⁴ PS-2620, with notes, *IMT*, Vol. XXXI, p. 41.

⁵⁵ *IMT*, Vol. IV, pp. 311-355. esp. pp. 322ff., 331f.

3. Memo of the RSHA (re.: technical modifications) of June 5, 1942 (R 58/871 fol. 1-3). The letter mentioned in Point 1. stands on its own and does not require consideration in our current context.

The correspondence between the RSHA and the Gaubschat Firm, grouped under 2., includes six letters and deals with vehicles whose chassis the firm of Saurer, Vienna, supplied to Gaubschat, Berlin, and which Gaubschat was to equip with a body for the RSHA.

The Memo identified in 3. is considered evidence for the existence of ‘gas vans.’

3.3.1. Correspondence between the RSHA and Gaubschat

The following course of events can be reconstructed from the RSHA-Gaubschat correspondence detailed under 2.:

In April 1942, the RSHA considered having “special vehicles,” which are not described in any detail, equipped with a quick-unloading mechanism. The chassis for these vehicles was supplied by the Saurer Company, Vienna, to the Gaubschat Company, where the vehicle body was added. As a rule, the heavy-goods vehicles built by Saurer had Diesel engines. The correspondence makes no mention of a possible special model with gasoline engines, so that one must assume that these ‘special vehicles’ also had Diesel engines.

Various consultations took place between the members of the RSHA and the Gaubschat Company regarding specifics of the quick-unloading mechanism and other construction requests. The results of these consultations were recorded in a letter sent by the RSHA to Gaubschat on June 23, 1942. Specifically, the following work was commissioned:

1. shortening the cargo box by 80 cm (31.5");
2. extension of the front and rear wheel houses, so that a continuous base is created for the grating on both interior side walls;
3. shortening the individual grating sections to 70 cm (27.5");
4. casing of the door posts, with resultant narrowing of the box interior at the door;
5. open slits in the back wall above the door, instead of the openings in the doors that had been there previously;
6. modification of a drain opening in the floor;
7. reinforced interior light guards.

Gaubschat confirmed the order with two further letters of September 18 and 24, 1942.

This correspondence, running from April 27 to September 24, 1942, forms a logical sequence. All letters from the RSHA bear the same reference number: II D 3 a (9) Nr. 668/42-121. The RSHA letters are written on plain white paper without a printed letterhead, and without any special markings, for example pertaining to secrecy or classification. In each case the text is written on the front and back of a sheet, but only the sheets were paginated, not the pages. Gaubschat used their own letterhead.

3.3.2. RSHA ‘Note’ of June 5, 1942

This correspondence, which is really of no interest in and of itself, provides the background for the RSHA ‘Note’ of June 5, 1942, which I have listed under Point 3 of the contents of File R 58/871. This ‘note’ is the second document (next to Nuremberg Document PS-501) which is cited as proof of the ‘gas-van’ theory. There are no further Third Reich documents on this matter.

The vehicles at issue in the correspondence between the RSHA and Gaubschat are those allegedly used as ‘gas vans.’ However, this interpretation does not follow from the correspondence mentioned. On the contrary, said correspondence shows that, whatever the load to be transported by these special vehicles may have been, it was not living human beings. I shall return to this point later. The fact that Saurer vehicles always had Diesel engines also contradicts the claim that they were used as ‘gas vans.’

The ‘note,’ however, clearly and unequivocally speaks of ‘gassing,’ and for this reason this document has been used to this day by the orthodoxy as incontestible evidence in support of the ‘gas-van’ theory.

3.3.2.1. Discrepancies in External Form

The ‘note’ gives the impression that it is part of the sequence of correspondence between the RSHA and Gaubschat. It is dated June 5, 1942, *i.e.*, prior to the RSHA letter of June 23 which itemizes the construction modifications.

However, there are some notable discrepancies:

1. The reference number on the ‘note’ is II D 3 a (9) Nr. 214/42 g.Rs. – but that on the other letters was II D 3 a (9) Nr. 668/42-121.
2. The ‘note’ is rubber-stamped “*Geheime Reichssache*” (Top Secret). None of the other documents were classified as secret.
3. Beneath the date is the remark: “*Einzigste Ausfertigung*” (intended to mean ‘only’ or ‘sole specimen’). It is important to note that the superlative form *einzigste* does not exist in the German language (even though it is, by mistake, more and more used in modern German); ‘*einzig*’ remains ‘*einzig*’ and cannot be rendered comparative or superlative (like there is no “onliest” in English either).

Interestingly enough, however, this letter, which is allegedly the only, sole specimen in existence, actually exists in at least three different ‘original’ forms, which differ from each other in text underlining and in handwritten additions: one ‘original’ is in the Koblenz Federal Archives.⁵⁶ In this, the registration number, the remark “*Einzigste Ausfertigung*” and the word “*eine*” on the last page are underlined. The last page additionally bears vertical marks on the left edge with an initial of “Ju” besides it as well as those of “R 10/6,” “i.A. Just” and “Lu 4/6.” Furthermore, on top of page one a handwritten note reading “b – 12 – 14” is added above the date, perhaps written by an Anglo-Saxon writer, since Germans always write ‘1’ instead of ‘l’ for the digit one.

Another ‘original’ was used by the editors of the book *NS-Massentötungen durch Giftgas* for their facsimile reprint.⁵⁷ In this version, also the date is underlined as well as the first sentence of the letter’s text itself, the last sentence of page 4/first of page 5 and the rank and name of Rauff on the last page. Surprisingly, the vertical marks at the edge of the last page are missing, and the signature of Rauff as well (“R 10/6”), to whose attention, according to the letter itself, this document had to be brought.

A third ‘original’ was reprinted in facsimile by Rückerl.⁵⁸ Regarding the underlining it is the same as the one from the Bundesarchiv, but here, too, the vertical marks and the signature of Rauff on the last page are missing. Additionally, a different handwritten note on top of page one, written by a different person on a different location, can be found, reading “b – 2 – 14.”

This author’s correspondence with the Federal Archives also failed to shed light on the matter, as the archives insist that theirs is the only original in existence. The official in charge at the archives was much amazed when this author pointed out the differences to him.

4. The RSHA’s letters and notes were consistently written on the front and back of the sheets of paper, but only the sheets were paginated, not each page. The note of June 5, 1942, was also written on both front and back, but every page was individually paginated. At the very least this indicates a different typist.
5. Rauff’s initial on the alleged original document from the Bundesarchiv is very similar to that on IMT Document PS-501, but decisively different to Rauff’s signature and initial on other documents (see Illustrations 1f.).⁴² Apparently both documents were signed by the same person, which was *not* Rauff. Is this the reason that Rauff’s initial was deleted from the versions published in facsimile in widespread German literature?^{51,58}

3.3.2.2. Contents of the ‘Note,’ and Comparison with the RSHA Letter of June 23, 1942

The subject line states: “Technical modifications to the special vehicles [*“Spezialwagen”*] used in the operations and to those currently in manufacture.” This subject line already distinguishes this document from the other letters in this matter. The other correspondence makes no mention of any modifications to be made by Gaubschat on vehicles already in service. Also, the German term meaning ‘special vehicles’ which the RSHA used to describe the vehicles was not *Spezialwagen*, but rather *Sonderfahrzeuge*, the usual term.

Linguistically speaking, the opening text of this document is downright impossible. It begins by stating:

“Since December 1941, for example, 97,000 were processed with the use of 3 vehicles, without any defects in the vehicles becoming apparent.”

It makes no sense to begin a letter with “for example.” The term “for example” has meaning only when something was described or claimed in the foregoing, for which an example then follows. In this particular case, “for example” cannot even refer to the subject line, because the subject line speaks of technical modifications which are necessary, but the text immediately states that no defects have occurred in the vehicles. And that is not exactly an example to demonstrate the necessity for technical modifications!

The text does not indicate what the “97,000” that were “processed” might be.

A closer examination of the note of June 5 and a comparison with the RSHA letter of June 23, 1942, shows that the note is a sort of plagiarism of the letter of June 23. Both letters are subdivided into 7 points pertaining to the RSHA’s requested changes. The note interprets these requests in a way that points to exhaust-gas murders of human beings.

I posit that the note of June 5 is a fabrication. Its authors wrote it after the letter of June 23 was written, and back-dated it. The various points were rewritten and supplemented with additional remarks in such a way that murderous intentions are made apparent. One proof for this fabrication is the fact that the note of June 5, in Point 2, refers to a consultation between the RSHA and Gaubschat which the letter of June 23 shows to have taken place only on June 16, fully eleven days after (!) the alleged writing of the note of June 5!

To further substantiate my claim, I have juxtaposed the corresponding points from the letter of June 23 and the note of June 5 in the following table. All those remarks in the note which point to gassings, *i.e.*, the loading of the vehicles with humans, and which do not occur in the letter of June 23, are rendered by me in bold print.

The letter of June 23 contained seven points. The note of June 5 is also organized into seven points, but not all of them correspond even partly to the content of one of the points of the letter. Evidently some of the RSHA’s June 23 requests for modification did not lend themselves well to the gassing theory, and so they were left out. Instead, two supplements were added.

For example, Point 3 in the note of June 5 reads:

“The connecting hoses between the exhaust and the vehicle frequently rust through because they are corroded on the inside by fluids. To prevent this, the filler pipe is henceforth to be mounted in such a way that input proceeds from above downward. This will prevent fluids from entering.”

Connecting hoses for exhaust gas are added to the text here, whereas there was no mention of such a thing in the original letter.

Another supplementation is to be found in Point 7 of the note, where the need for a removable grate is mentioned. The text states that since “[...] the firm commissioned with this work [...] considers this design [...] to be impracticable at this time,” the design should be submitted “to a different firm.” This is entirely new to anyone familiar with these matters, and contradicts the urgency of the commission which is repeatedly expressed in other letters. Besides, internal notes jotted by members of the RSHA onto the back of Gaubschat’s letter of May 14, 1942 confirm that the RSHA decided to dispense with the removable grate and agreed to “production as to date.” There is no mention of a different firm to be consulted.

LETTER OF JUNE 23, 1942	‘NOTE’ OF JUNE 5, 1942
<p>“1. The cube body is to be reduced in length by 800 mm [31.5"]. [...] We herewith acknowledge the objections raised, that such a shortening would cause a disadvantageous distribution of weight. [The preceding text shows that this objection was raised by Gaubschat on the occasion of a verbal discussion on June 16, 1942.] Any disadvantages resulting therefrom will not be complained of to the firm of Gaubschat.”</p>	<p>“2. It would seem necessary to decrease the load area. This will be achieved by shortening the body by approximately 1 m [39"]. The above problem cannot be solved, as has been attempted, by reducing the number of objects per load. This is because a reduction in the number necessitates a longer operation time, since the empty space also must be filled with CO. [...] In a discussion with the manufacturer it was pointed out by the latter that a shortening of the cube body would result in a disadvantageous weight displacement. In fact, however, an involuntary balancing in weight distribution occurs because during operation the load strives towards the back door and always largely ends up there.”</p>
<p>“5. The slide-covered openings in the rear doors are to be omitted, and replaced with open slits of 100 × 10 mm [4" × 0.4"] in the upper back wall (not door). They are to be covered on the outside with easily movable, hinged metal flaps.”</p>	<p>“1. To allow for the rapid inflow of the CO while preventing excessive pressure, two open slits of 10 × 1 cm [4" × 0.4"] are to be located in the upper back wall. These are to be covered on the outside with easily movable, hinged metal flaps to allow for self-regulation of any potential excess pressure.”</p>
<p>“6. The closeable drain opening in the right front part of the cube floor is to be omitted. Instead, a drain opening of about 200 mm [9"] in diameter is to be cut into the cube floor. This opening is to have a strong, tight-fitting, hinged lid that can be closed and safely opened from outside.”</p>	<p>“4. To allow for easy cleaning of the vehicle [this expression builds on the implied allegation that the gassed people were covered with excrement and filth and had dirtied the vehicle accordingly], a tightly closeable drain opening is to be located in the center of the floor. The drain cover, about 200 to 300 mm [8" to 12"] in diameter, is to be equipped with a U-trap so that thin fluid can also drain out during operation.” [This too is a reference to excretions from the dying people.]</p>
<p>“7. The interior lights are to be protected with a domed wire guard that is stronger than that used to date.”</p>	<p>“6. The lighting appliances are to be more strongly protected from destruction than they have been so far. The iron grid guard over the lamps is to be domed enough to render damage to the lamp glass no longer possible. From practical experience it was suggested that the lamps should be omitted altogether, since allegedly they are never needed. It was found, however, that when the back door is closed, i.e., when the interior becomes dark, the load urgently strives towards the door. This is because, at the onset of darkness, the load strives towards the light. [Utter nonsense. Once the door was closed, it would have been no lighter there than in the rest of the cube body.] Further, it was found that a commotion, probably due to the eerie nature of darkness, always breaks out at the point where the doors are closed. For this reason, it would be expedient to turn the lights on before and during the first minutes of operation.”</p>

3.3.2.3. 'Special Vehicles' for Passenger Transport?

The correspondence does not allow for any inference of what the RSHA intended to use these 'special vehicles' for. On the other hand, it is possible to say with complete certainty what these vehicles could *not* be used for, namely for any kind of transports of living human beings.

From the correspondence and the related memos of the RSHA some conclusions can be drawn regarding the nature of the cargo box of these 'special vehicles.'

The RSHA memo of April 27, 1942 investigates the various options for a quick-unloading mechanism: a) a tipping mechanism for the cargo box; b) making the floor grate tippable; c) a removable and re-insertable grate.

The interior height of the cargo box is given as 170 cm (67"). The planned elevation of the grate onto the wheel houses reduces this height by 7.5 cm (3"), leaving only 162.5 cm (64"). This is entirely inadequate for transports of living, standing people.

Under b), making the floor grate tippable, the hoped-for result is specified as a sort of "smooth sliding" of the load, which required an angling of the floor by 30 to 35 degrees. However, it is stated that the load required at least *one meter* (3' 4") of clearance between the floor and the ceiling because otherwise it would be crushed. This clearance requirement allowed for only a 10° incline, which did not suffice for "smooth sliding" of the load. This too shows that the 'load' could not have been people, since in such a case one meter's clearance would not have sufficed.

"So that the load does not fall over the last grate towards the back of the driver's cabin," an "angled gridwork" of 30 to 40 cm (approximately 12 to 16") in height was to be affixed to the grate. Such a grid would not have been nearly high enough to keep people, standing closely crowded together, from falling against the back of the driver's cabin.

The RSHA's construction suggestions are concerned with the speedy unloading of the 'special vehicles.' But – according to Kogon *et al.*, *Nazi Mass Murder* (note 51) – this was no problem at all for the 'gas-van' murderers. A few quotations from that work shall demonstrate this point.

For example, it is claimed that 50 to 80 persons were crowded into the Saurer-type 'gas vans' (pp. 54, 58, 59, 63, 64, 69).

"The victims [...] were herded into the vans" (p. 69).

"We shoved them into the gas vans. These vans were packed full of people" (p. 59).

The vehicles were always

"[...] crammed full, so that when the doors were opened the bodies fell Out." (p. 59).

Regarding the number of 50 to 80 people, it ought to be borne in mind that, for a maximum payload of 4.5 tons, no more than 60 people could have been loaded at a time.

"The van was opened. Some bodies fell out; the others were unloaded by prisoners" (p. 54).

"The doors were opened and the bodies thrown into the ditch" (p. 69).

"The back doors of the van were opened, and the bodies that had not fallen out when the doors were opened were unloaded by Jews who were still alive" (p. 61).

"As the doors were opened, dense smoke emerged, followed by a tangle of crumpled bodies" (p. 61).

But evidently there already existed 'gas vans' with tipping mechanisms:

"Then it backed up to the edge of the grave, the rear doors were opened, and the cargo compartment tipped up. This made the victims fall out into the grave" (p. 70).

One thing becomes perfectly clear from these witness statements: the 'gas vans' cannot be the same contraptions as the RSHA's 'special vehicles.' The latter would have lent themselves neither to the transport of living passengers (their load room was not high enough) nor to murdering the occupants with exhaust gas (they had Diesel engines).

3.3.2.4. A Few Remarks about Handwritten Notes on the Documents of RS 58/871

The back side of the Documents R 58/871 fol. 13, a letter from Gaubschat dated May 16, 1942, a completely unsuspecting document, bears a lot of handwritten remarks by Rauff and others. Regarding their content, these notes are similar to those which can be found on Document PS-501. It seems to have been usual that handwritten notes were written on the back side of received documents. Anyway, the handwritings here are remarkably different from those that can be found on Becker's letter dated May 16, 1942, *i.e.*, the central document of the PS-501 folder.

4. Eyewitness Testimony

The critical assessment of the two main incriminating documents in support of the 'gas vans' has turned up very little in the line of substantiating their credibility. All we have left now are the statements of eyewitnesses; perhaps an examination of these may yet provide some convincing information.

We shall dispense with a repetition of the general reservations that must be kept in mind where eyewitness testimony is concerned, and refer the reader instead to the cautions set out in Section 2.3. But in our particular case there is an additional serious problem. As a rule, eyewitness testimony is part of trial or pretrial proceedings, and in Germany transcripts of these are not made available for free historical research. Therefore, the statements are not accessible to us in their original form, *i.e.*, in the context of the witnesses' overall testimony. We have access only to those short excerpts that have been quoted elsewhere. It is obvious that this can lead to misinterpretations. Every author is interested only in the topic that s/he is working on at the time, and will select sources accordingly. Therefore, we can only quote eyewitness testimony that has already been selected by other authors, and we have no way of determining the contexts. For this reason, we shall restrict ourselves largely to descriptions of factual matters.

The large number of eyewitness statements dealing with 'gas vans' could potentially, in and of itself, be taken as evidence for the actual existence of these vans, and prompts us to examine all such statements especially carefully.

4.1. 'Murder Vans' during Soviet Trials

The 'murder vans' claimed by the Soviets came to our attention through the conformist testimony in the trials of Krasnodar and Kharkov.⁵⁹

The defendants and the witnesses described the 'murder vans' almost identically, as follows:

- dark gray, box-shaped heavy-goods vehicle
- a large, two-axle heavy-goods vehicle
- 5 or 7 tons
- Diesel engine
- six-cylinder engine
- interior lined with galvanized iron
- at the back, double doors that sealed hermetically
- rubber lining on the doors
- on the floor, a (wooden) grate
- underneath, one or more tube/s connected to the exhaust pipe
- looked like a normal prison or delivery van
- vehicle holds about 60 – 70 people
- it was called 'murder van,' 'death van,' 'Black Raven'

The almost identical nature of the descriptions, which in one respect could be taken as an indication of the correctness of the statements, may in this case actually be the result of

⁵⁹ I.F. Kladov, *op. cit.* (note 21), pp. 8f., 49, 50, 65, 69, 77f., 85, 89f.; cf. also note 13, and the report in the *Moscow News* no. 7, July 1990, quoted in U. Walendy, *op. cit.* (note 13), p. 21; also John Lauck, *Katyn Killings: In the Record*, Kingston Univ. Press, Kingston 1974/1988, pp. 18-21.

Soviet interrogation methods, and thus of no evidential value. This, in any case, is indicated by the Diesel engines, which were emphatically confirmed by all witnesses and which render the alleged murder method impossible.

It is virtually impossible to check the witnesses' claims. Nevertheless, some of these accounts have even been factored into German court verdicts!

4.2. 'Gas Vans' in Trials of National-Socialist Crimes

4.2.1. Various Types of 'Gas Vans'

According to the account contained in the documental volume *Nazi Mass Murder* (on pages 52-72 of note 51; page numbers in the text from there), the vehicles used as 'gas vans' were those special vehicles of the RSHA which the firm of Gaubschat was supposed to equip with specially modified bodies. I have already shown that this claim is untenable.

Witnesses, however, do not speak only of Saurer 'gas vans,' and even in this respect not just of a single model, but of other 'gas-van' types as well.

Regardless of the fact that the Saurer 'gas van' is consistently described as a 5-ton vehicle, it must have existed in two different sizes – one size with a capacity of 50 to 60 persons (p. 54), and another with a capacity of 80 (p. 64). In fact, the Saurer heavy goods vehicles had a maximum capacity of 4.5 tons and, as we have already seen in Section 3.3.2.3., could not have held more than 60 people.

Another 'gas van' type is said to have been an American truck manufactured by the firm of Diamond – a 3-ton model which also occurred in two different sizes: one with a capacity of 25 to 30 people (p. 54) and one large enough for 50 people (p. 64).

Other vehicle types that were identified as 'gas vans' were: "medium-weight Renault trucks" (p. 77); and an Opel Blitz.⁶⁰ One witness claims she saw a gigantic car ("Riesenauto") which "could hold a hundred people standing up" (p. 71).

And then there was also "something like a moving van" bearing the logo "Kaiser Coffee Company" ("*Kaisers Kaffee-Geschäft*") on either side (p. 38). However, two other witnesses who claim they saw the same vehicle did not notice this logo.⁶¹ The appearance of these special vehicles is also described differently from case to case. Once it was "an enormous windowless vehicle covered with metal sheeting, and closed at the back by a large metal door. [...] A tank was fitted under the van, from which pipes led to the interior of the vehicle" (p. 38). A different witness, on the other hand, claims that it was an "institutional tractor with a large, hermetically sealed steel trailer."⁶¹

4.2.2. Description of the 'Gas Vans'

As if the differing descriptions of the van types and sizes were not enough, the details given regarding their outfitting and appearance are even more grossly contradictory. Kogon's book in particular presents a wild conglomeration of conflicting claims:

The van bodies were "windowless" (pp. 38, 63); they had "a peephole or a small window into the inside of the truck" through which the persons outside could look in (p. 54); they had a window from which "it was possible to see into the van from the driver's cab" (p. 77); or they had "false windows painted on the sides" (p. 68).

Regarding the door/s of the 'gas vans' there are the following witness statements: There was a large door at the back of the vans (pp. 38, 55, 62, 63, 69); there were (two) doors or a double door (pp. 57, 59, 61 (twice), 63, 65, 66, 68, 69, 70, 77, 86 (twice)). This door "could be hermetically sealed" (pp. 38, 57, 59 (twice), 64, 69); it was "latched" (p. 55);⁶² "bolted shut" (p. 62); locked with a padlock, the key to which hung in the driver's cab (pp. 86); it was screwed shut with "three screws: at the top, in the middle and at the bottom."⁶¹

Considering that the 'gas-van' cargo boxes were supposed to be a standard model, these widely divergent features are astonishing. What is more, the contradictory claims often refer to one and the same specific vehicle which different witnesses claim to have seen.

⁶⁰ M. Beer, *op. cit.* (note 1), p. 414.

⁶¹ E. Klee, "*Euthanasie*" im NS-Staat, Fischer, Frankfurt/Main 1983, p. 107.

⁶² A quote from the RSHA 'Note' of June 5, 1942, where the German original says "einklinken"; Kogon's English translation has it somewhat inaccurately as simply "locking."

One thing, however, has gone entirely unmentioned by almost all witnesses: the device or setup by means of which the inmates were to have been gassed. This typical feature of the ‘gas vans’ – the crux of the matter we are concerned with – is entirely absent from the witnesses’ testimony.

One special sub-aspect of this topic are the claims that the ‘gas vans’ were also said to have been used to kill the mentally ill (euthanasia), as well as Jews deported to the Kulmhof/Chelmno Camp. There is no written, documental evidence for these accusations – only eyewitness testimony. It is beyond the scope of this work to discuss these claims here. It suffices to say that they are no more credible than the others we have examined.

So, in the end, we don’t know more than at the start. The witness statements have also failed to provide conclusive proof of the existence and use of ‘gas vans’ for the purpose of murdering their passengers.

4.3. The Real Problem Is the Eyewitness Testimony

Several years ago, I visited the Yad Vashem Museum in Jerusalem to learn details about the Treblinka Extermination Camp. To my surprise, the Israeli official in charge there told me on July 10/11, 1985:

“We have known for a long time that there was never any such thing as an ‘extermination camp Treblinka.’ Israeli scientists, historians and geologists have repeatedly examined the sites described by the witnesses, and their detailed investigations have not turned up a single shred of evidence for the existence of an extermination camp. Such a camp, and the events there, would have to have left traces behind, which could be found. But there are no such traces. The real problem with Treblinka is the eyewitness testimony.”

This assessment also applies to the ‘gas vans.’ However, it would be unrealistic to assume that all those people who claim to have seen ‘gas vans’ deliberately and knowingly lied, *i.e.*, perjured themselves. They must have seen vans or trucks of some sort which, for whatever reasons, struck them as unusual or dangerous.

The simplest explanation may be that people were taken by truck or van from one place to another. The witnesses saw people getting into a vehicle and not returning. The idea to connect that fact with ‘gas vans’ may not even have occurred to them until after the war.

As we have already seen, the term ‘gas vans’ – as a description of murder vans – did not exist in the Third Reich. But there *were* various special vehicles which were called ‘gas vans,’ ‘gassing vans,’ or ‘gas generator vans.’ F. P. Berg has discussed these latter vehicles in detail in his chapter in this volume.

I believe that what so agitated the imagination of the witnesses was first and foremost a different kind of ‘special vehicle.’ Particularly in Polish and Russian areas behind the front, the German forces saw themselves faced with the problem of typhus. This same problem also existed in the concentration camps and ghettos. Combating this danger was one of their most pressing tasks. The extensive contemporaneous literature shows this clearly.⁶³

Gassing vans, also called gas vans for short, were often used as mobile disinfestation stations. The term ‘gassing vans’ was a result of the procedure used: the lice, which were the main carrier of the typhus pathogen, were destroyed (gassed) with hydrogen cyanide (HCN). There were other decontamination procedures as well (hot air and hot steam, for instance), but fumigation with HCN was recommended as the most-expedient. The disinfestation stations for clothing were supplemented with disinfection stations for people. As a stopgap, makeshift measure, moving vans were sometimes re-rigged and used for this purpose.⁶⁴ After all, some of the witnesses claimed to have seen these, and considered them to be ‘gas vans.’

⁶³ Cf. in the bibliography the literature listed under the following names: Gassner, Kayser, Konrich, Mrugowsky, Pappenheim, Peters, Peters/Rasch, Puntigam, Puntigam/Breymesser/Bernfus, Puntigam/Pichler, Ruppert, Weidner, Wohlrab and Wüstinger.

⁶⁴ Gerhard Peters, W. Rasch, “Die Blausäure als Entlausungsmittel in Begasungskammern,” *Der praktische Desinfektor*, September 1941, pp. 93-96, here p. 94: “We note the attempt to use moving vans for delousing purposes in places where it was necessary to come up with makeshift fumigation facilities on short order.”

In this context, it is also interesting to note that some of the witnesses spoke of “painted-on, fake windows.” This is reminiscent of the “windows” mentioned in Nuremberg Document PS-501. In fact, there were ‘window shutters’ on the “*Bekleidungs-Entgiftungs-Kraftwagen*” [clothing-detoxification vans], Sd. Kfz. 93,⁶⁵ which were normally at the disposal of the *Nebeltruppen* (operators of fog throwers to produce smoke screens as an air-defense measure). These detoxification vans also were not a device for ‘gassing’ humans, but rather for neutralizing clothing that had been contaminated with chemicals spread by chemical weapons or used by the fog throwers.⁶⁶

It is also possible that the RSHA’s special vehicles were used for disinfection purposes. In any case, an SS-*Obergruppenführer* confirmed in April 1942 that the RSHA had supplied him with a ‘delousing van.’⁶⁷

Together with rumors (which are well known to run rampant in closed-off areas such as ghettos and camps), such vehicles may very well have been the foundation for speculations. The post-war stories which filled in the gaps in the witnesses’ knowledge with uncontrolled reports and tales probably did the rest.

I am no more able to offer a solution to the problem of the eyewitness testimony than was the official in charge at the Yad Vashem Museum. To bring light into this darkness would be the responsibility of free and unfettered historical research.

5. Conclusion

My critical assessment of the evidence in the case of the ‘gas vans’ has the following result:

According to Soviet officers, ‘murder vans’ in which the passengers were poisoned with the exhaust gas already turned up in the Soviet Union in the 1930s. In 1943 the Soviets claimed that German forces had used such ‘murder vans’ to kill thousands of innocent Soviet citizens. The vehicles mentioned in these allegations were exclusively heavy-goods vehicles which had Diesel engines, whose exhaust gas demonstrably does not contain enough carbon monoxide to have a lethal effect. On the basis of these accusations, Ukrainians as well as German prisoners-of-war were unlawfully executed.

In the Nuremberg Trials, the Soviets repeated their accusations, in which they were supported by the American prosecutors, who presented written documents: affidavits, and Document PS-501 – one of two documents on which the ‘gas vans’ theory rests to this day. We have shown that neither the affidavits nor PS-501 are probative documents. In the 1970s another document, R 58/871, suddenly surfaced from the Koblenz Federal Archives, to also allegedly substantiate the existence of ‘gas vans.’ We have clearly shown this item to be a fabrication.

The 1960s and 1970s saw many NS trials, in the course of which the ‘gas-van’ theory was supposed to be corroborated – by internally inconsistent and at times nonsensical eyewitness testimony. In this context we have demonstrated the problem of the eyewitness testimony by means of neutral assessments, and have come to the conclusion that in order to be credible, eyewitness testimony must be authenticated by provable facts or by documents that have

⁶⁵ W. Oswald, *op. cit.* (note 4), p. 210; cf. John Milsom, *German Military Transport of World War Two*, Arms & Armour Press, London/Hippocrene Books, New York 1975, p. 145, Ill. 261: “Henschel 33G 1, clothing decontamination truck, Kfz 93”; R. Frank, *op. cit.* (note 4), p. 93.

⁶⁶ The fog throwers were machines that could turn concentrated sulfuric acid (called ‘oleum’ due to its high viscosity) or sulfuric acid anhydride (SO₃) into an extremely fine spray and blow it straight up into the air. These hazardous substances combine with the moisture in the air, and real fog is formed as a result. The extremely aggressive sulfuric acid used was also a danger to the personnel; for this reason, Special Vehicles 93 always had to be on stand-by, so that the operators of the fog throwers could promptly clean themselves up with the warm water and neutralizing solutions (such as sodium hydrogen carbonate, NaHCO₃) that were kept at the ready there. Since the Allies soon learned to drop bombs accurately despite such fogging, the procedure was abandoned in the course of the war. I owe this information to O.W. Grussendorf. Besides that, another task of these Special vehicles clearly was the defense against attacks with chemical weapons, cf. Oberkommando des Heeres (ed.), *Die Nebeltruppe*, Waffenhafte des Heeres, Deutscher Volksverlag, Munich 1941, p. 24; Adolf Röpneck, *Die Geschichte der Raketenartillerie von den Chinesen bis zu den Deutschen über ignis volans bis zur V-2*, pub. by author, Bad Aibling 1960, p. 129.

⁶⁷ E. Kogon *et al.* (eds.), *op. cit.* (note 51), p. 71.

stood up to close critical examination. In the case of the ‘gas vans,’ this authentication has not been possible in so much as one single instance.

On the whole, the evidence submitted for the ‘gas vans’ cannot be accorded any evidential value, and the claim that Germans had murdered thousands of human beings in ‘gas vans’ must be regarded strictly as rumor.

6. Editor’s Supplement

Pierre Marais’s French monograph on the gas vans, first published in 1994, was published in 2011 by Santiago Alvarez in a heavily revised and significantly expanded English edition (2nd ed. in 2023). It forms Volume 26 of the series *Holocaust Handbooks*, and is available as a free PDF file; see the introduction of this volume in the appendix to this book.

Those who consider Mrs. Weckert’s criticism of the divergent testimonies about gas vans as petty nit-picking may consult the long list of divergent statements in the book by Alvarez/Marais, which is based on many more sources. Here is a summary (for the sources see Subchapter 4.2. in Alvarez/Marais):

6.1. Vehicle Models

- | | | |
|------------|-----------|-----------------|
| – Saurer | – foreign | – Daimler Benz |
| – Diamond | – Opel | – Magirus Deutz |
| – American | – Renault | – Russian Ford |

6.2. General Appearance

- large former refrigerator truck
- all-metal cargo box
- false windows
- false windows and closed curtains
- camper van with windows, curtains and shutters painted on, including a chimney
- black
- yellow
- green
- grey-green
- grey
- grey Saurer truck with ten benches for the inmates to sit on
- very big armored vans
- trailers attached to trucks
- ordinary box car, possibly with windows
- like a moving van
- interior lined with sheet metal; wooden floor grate
- grey truck, like a bathroom, with straw mat
- cargo box of 7 to 8 m length
- cargo box of 5 m × 2.5 m × 2.5 m
- 5 or 7 metric tons
- 3 metric tons, cargo box 4 m × 2 m
- prisoner-transport van, 1.5 to 2 metric tons
- tiltable cargo box for fast unloading
- warning sign “dangerous stinker” painted on

6.3. Passenger Capacity

- | | | |
|-----------|----------|---------|
| – 170 | – 100 | – 80 |
| – 150-175 | – 80-100 | – 70-80 |
| – 130 | – 80-90 | – 60-70 |
| – 100-120 | – 70-90 | – 50-80 |

- | | | |
|-----------------|---------------|--------------------------|
| – at least 60 | – 40-45 | – 25-30 |
| – 50-60 | – 35-40 | – 25 |
| – 40-60 | – 30-40 | – 15 (small), 30 (large) |
| – several dozen | – at least 30 | – 15-25 |
| – 30-50 | – 30 | – up to 14 |

6.4. Duration of the Gassing Procedure

- | | | |
|--------------|---------------------|----------------------|
| – 20-30 min. | – 10 min. | – 5-7 min. |
| – 15-30 min. | – 7-10 min. | – at least 5 minutes |
| – 15-20 min. | – 7-8 min. | – 4-5 min. |
| – 15 min. | – several minutes | – 2-3 min. |
| – 10-15 min. | – a few / 5-10 min. | |
| – 12 min. | – 6-7 min. | |

6.5. Poison Source

- | | |
|---|--|
| – Diesel-exhaust gases | – exhaust gas from engine fueled with methanol |
| – gas and exhaust fumes from burning gasoline in the engine | – carbon monoxide |
| – exhaust gases | – bottled carbon monoxide |
| – exhaust gases and other gases | – Zyklon B dumped in from the driver’s cabin |

6.6. Gassing Procedure

- removable metal hose leading from exhaust pipe into cargo box
- from a device in the driver’s cabin, upon pressing a button piped from there into the cargo box
- a valve in the driver’s cabin, turned on during a transit
- a lever in the cabin, operated by the driver
- a lever outside the cabin (Manoschek 1998, p. 230)
- gassing device inside of truck, operated from the driver’s cabin during transit
- custom-built device by Auschwitz motor pool
- exhaust pipe forking mechanism
- gassing during transit
- driving to mass grave, then gassing while standing still
- gassing while standing still, then driving to mass grave

This list is essentially based on a long list of court rulings and statements quoted or published in the media and literature. The extensive investigation files that led to the more than 30 German court decisions in which gas vans were a subject of negotiation could not be evaluated so far. These files are in German archives. If individuals publicly known as revisionists tried to gain access to them, they would have to expect being arrested upon visiting the archive... The evaluation of these materials should further enrich the above divergent lists with even more divergent statements, especially since it is likely that the prosecution introduced only such testimonies into the criminal proceedings, and the courts only mentioned those testimonies in their verdicts that appeared reasonably credible and were conducive to convicting the defendants.

The Editor

Do Photos Prove the NS Extermination of the Jews?

UDO WALENDY AND GERMAR RUDOLF

1. Introduction

Photographs played a central role in the arsenal with which Allied war propaganda slandered the enemy in World War One, as Ferdinand Avenarius has shown with numerous examples.¹ Retouching techniques were admittedly quite crude in those days, and the falsifications were thus easy to detect by critical individuals. However, during the agitated atmosphere of the First World War, such highly critical minds were few and far between and, more important, not at all welcome. Today people shake their heads in astonishment that even drawings and caricatures, crudely drawn and easily recognizable as such, were accepted as sterling truth by contemporaries. But do we really have any cause for such a condescending attitude?

Alain Jaubert has shown that dictatorships in particular have a strong inclination for manipulating photos or producing posed and even completely faked photographs.² Jaubert deals primarily with the self-portrayal of rulers by means of altered and ‘improved’ photographs and, unfortunately, all but passes over the interesting aspect of wartime propaganda – as well as the propaganda engaged in by democratic nations which – led by Great Britain since the “Great War” – rarely exhibited any greater scruples in this matter than dictatorships.

One of Jaubert’s examples warrants a closer look here. On page 78 of his book he reproduces a photograph that shows the abuse of English prisoners-of-war in France by French civilians at the time of the German occupation during the Second World War. Jaubert interprets this as a photo made up by the German occupation troops. However, he provides no evidence to support his claim. Since the Allies launched massive air raids also on French cities, resulting in heavy losses of life among the civilian population,³ it certainly is not inconceivable that the French might have vented some anger on Allied prisoners-of-war, especially in light of the fact that a considerable part of the French population collaborated with the Germans, partly out of opportunism, partly out of conviction. But the Allied bombing of French targets as well as the war-time collaboration with the Germans are taboos in today’s French society. Therefore – is the photograph Jaubert shows really posed, or is his interpretation incorrect because in his opinion that which *must not* be *cannot* be?

2. On the Techniques of Photo Forgery and Their Detection

We distinguish among three kinds of forgery, as follows:

1. *Genuine and unretouched photographs are given false captions.* This is not actually a falsification of the photos *per se*, but rather a false account of what is shown. However, this has always been one of the most-effective methods of deception, since the photo itself is genuine after all, and the misleading caption can often be exposed only if what the picture actually does show can be demonstrated by means of reliable sources. In some cases, though, details in a photograph can suffice to prove that the claims made about it are wrong – for example, when the location, persons or objects appearing in the photo cannot be reconciled with what the caption claims.
2. *Genuine photos are altered as to their details.* This entails, first, to show only specific sections of a photo in order to crop such parts as would refute the false, alleged message the photo is to convey. A second variation involves the addition or insertion of a gen-

¹ F. Avenarius, *Das Bild als Verleumder*, Callwey, Munich 1916; F. Avenarius, *Das Bild als Narr*, *ibid.*, 1918; cf. U. Walendy, *Historische Tatsachen* No. 22: “Alliierte Kriegspropaganda 1914-1919,” Verlag für Volkstum und Zeitgeschichtsforschung, Vlotho 1984, cited in the following as *HT*.

² A. Jaubert, *Fotos, die lügen*, Athenäum, Frankfurt/Main 1989.

³ Cf. the introduction to A. Grosser, *Ermordung der Menschheit*, Hanser, Munich 1990, p. 9; a detailed survey about Allied air raids against non-German cities cf. M. Czesany, *Europa im Bombenkrieg 1939-1945*, Leopold Stocker, Vienna 1998.

uine – changed or unchanged – portion of one photo into another photo, which in turn may also be genuine or faked, resulting in an alteration of the overall message the photo conveys. Alteration of the genuine portion is then usually confined to a change in the faces shown, or to making undesired parts of the photo unrecognizable. Up until the late 1970s and early 1980s, this was done by hand, by artistically changing or supplementing enlargements of the photo. Falsifications of this type are usually easy for the practiced eye to detect, since shadows, perspective, and realistic depictions are rarely rendered perfectly. There are cases, however, where such changes are made with brilliant precision, and cases where such changes are deliberately made difficult to prove by photographing the altered copy slightly out-of-focus.

Today, advanced computer technology allows for the almost limitless manipulation of photo documents. Modern computer systems can perform near-perfect manipulations of shadows and distortions of perspective as well as of natural colors and shapes on existing photographs that are scanned into a computer. Such changes may be invisible to the naked eye, but they typically leave tell-tale traces on the pixel level that can be visualized using enlargements and the appropriate software. On the other hand, this technology also makes it possible to delete these traces, so that perfect image manipulation is possible in principle today. For this reason, any picture relating to controversial historical topics and published for the first time nowadays must be strictly rejected as evidence. Only proof that the physical material of the corresponding original negative or transparency dates from pre-computer days could restore a photo to its status of a historical document.

3. *Complete forgery.* If an alleged documental photograph consists of a photographed drawing, or if it has been assembled from parts of other photos, this represents a complete forgery. The dividing line between altered photos and complete forgeries is by its very nature a fluid one. Like retouched photographs, such forgeries may be exposed through the detection of inconsistencies in the way shadows are cast, in perspective, shape and color, line direction, as well as by a proof of the impossibility of certain combinations of persons, objects and locations shown.

Thanks to modern computer technology, the considerations set out in 2. also apply to the evidential value of recent documental photographs.

3. Photographs Regarding the Persecution of the Jews in the Third Reich

In light of the dubious circumstances under which witness testimony, confessions and affidavits, but also documents of all kinds attesting to the National-Socialist persecution of the Jews came and continue to come about, which the present volume points out time and time again, can one really assume without any critical second thoughts that all the photographs about the National-Socialist persecution of the Jews which have been shown to us since the war are genuine? Or would it not be more prudent to proceed with caution, and to subject each of these photos to critical examination?

In fact, so far only one monograph exists which deals with the actual or alleged documental photographs of the National-Socialist persecution of the Jews.⁴ Jaubert² does not discuss this subject, perhaps because he does not consider it politically opportune to do so. Gerhard Frey⁵ touches on this topic, but in my opinion, he does not give it as much attention as it deserves. Aside from these examples, any discussion by the establishment's historians of the authenticity of such documental photographs has been confined to polemics and to filing

⁵ G. Frey (ed.), *Vorsicht Fälschung*, FZ-Verlag, Munich 1991, pp. 246-267.

criminal charges against doubters and critics until recently, but has changed in 1996/97, as we shall see.

This was indeed an alarming state of affairs, since in this age of illustrated magazines and television, photographs have a powerful pedagogic influence on the people, and faked photos therefore have a propagandistic and even incendiary effect that can hardly be overestimated. This is particularly so in the context of the National-Socialist persecution of the Jews, as this is a topic for which the vast majority of the people have by now been conditioned to manifest a Pavlovian response, a reflexive horror that renders any critical assessment of the evidence presented virtually impossible.

In the following, some pictures that are offered over and over again as proof of actual or presumed events of the National-Socialist persecution of the Jews will be discussed and critically analyzed. Due to the limited space available, this discussion cannot be anything near comprehensive, neither with respect to the number of photos requiring analysis nor in terms of the scope of each analysis. A comprehensive critique of the well-known photographs on this topic, which would go beyond my previous work,⁶ needs yet to be compiled.

3.1. Mis-Captioned Photographs

It is often difficult to prove that a photograph shows what the caption claims it shows. One generally has only eyewitness testimony as corroboration, namely that of the photographer on the one hand and, on the other, that of people who claim to have witnessed the event and perhaps appear in the photo. The location depicted on the photo helps to determine the place and sometimes the time that a picture was taken. The presence, in the photo, of well-known personalities whose participation in the event is verifiable can go a long way towards facilitating identification. If, however, a photo shows only people whose identities cannot be ascertained, and if the background of the photo shows nothing unique or characteristic that would permit the picture to be spatially and perhaps also temporally placed, then one is truly at the mercy of the purported photographer and his statements. If even the photographer is unknown, and all the evidence one has depends on hearsay testimony, then such photographs are all but worthless as historical documents, since anyone is free to make any unverifiable claims he wants regarding the alleged contents.

In fact, both the persons shown as well as the originators of the photos are completely unknown for many of the pictures reproduced in the following. This is a condition that applies to almost all so-called photographs pertaining to the murder of the Jews. This in itself ought to be reason enough to dispense with 'photo documents' altogether, except where all or most data about the photo (taken by whom and when) and the items shown (persons, locations) can be verified by external evidence. But let us take a look at some examples anyhow.

Illustration 1 shows two shrunken heads which the American troops allegedly found on liberating the Buchenwald Camp. These and other medical specimens are said to be parts of the bodies of deceased inmates. Lampshades, book bindings and book-marks of tattooed human skin, as well as these two shrunken heads, caused a particular sensation. Aside from the general Nuremberg indictment, these served as the primary evidence in the trials of Ilse Koch, the wife of the former commandant of Buchenwald. She was said to select living inmates on the basis of their tattoos, and to have

Illustration 1: Shrunken heads, from R. Neumann, *Hitler – Aufstieg und Untergang des Dritten Reichs*, Munich: Oldenbourg, 1961, p. 183.

⁶ Aside from the works cited previously (note 4), reference is also made in this context to the many individual examples which have been published time and time again in the various issues of *Historische Tatsachen*, Verlag für Volkstum und Zeitgeschichtsforschung, Vlotho 1975-2012.

them killed in order to have various articles manufactured from their skins.

According to a statement of the American General Clay, the alleged lampshades from human skin were in fact made of goat hide.⁷ In his detailed study of the matter, A. L. Smith found that the objects which the U.S. Commission had identified as consisting of human skin disappeared without a trace after being sent to the International Military Tribunal (IMT) in Nuremberg.⁸ All the objects discovered later were either of imitation leather or animal hide, fabric or pasteboard. In 1973, the U.S. National Archives discovered two books which allegedly were bound in human skin. In 1982, a forensic analysis of these book covers led to the conclusion that it was the skin of a big animal.⁹

The charges brought against Ilse Koch later, before a German court, were based solely on the untrustworthy testimony of the professional witnesses from Dachau trials, which German Rudolf has already discussed in the present volume. Amid the atmosphere of hysteria, “propaganda and mass suggestion”¹⁰ prevailing at the time, Ilse Koch – who had previously been sentenced to life imprisonment by the Americans in Dachau, but had eventually been pardoned – was again sentenced to life imprisonment by a German court, and later committed suicide. The two shrunken heads that were submitted in evidence turned out to be of South-American origin, and bore the inventory control number of a German anthropological museum.¹¹ They, too, have disappeared without leaving any trace.

Arthur L. Smith suggests that there had been a medical student from the University of Jena in the Buchenwald Camp who had written his dissertation on the relationship between skin tattoos and crime. In this context, use may possibly have been made of tattooed skin, albeit taken from inmates who had already died.¹² Since the taking of organs or tissue from deceased persons is neither unusual nor reprehensible when done for medical and educational purposes and with the consent of the deceased or their relatives, the question is whether and in what context the skin was taken. In any case, mis-captioned photographs and lies are attributed to the objects in the Buchenwald case and elsewhere.¹³

Illustration 2: Allegedly these are victims of a massacre perpetrated by the battalion Nachtigall. From H. Bergschicker, *Der Zweite Weltkrieg*, Deutscher Militärverlag, Berlin 1968.

⁷ A. L. Smith, *Die "Hexe von Buchenwald"*, Böhlau, Cologne 1983, p. 227.

⁸ *Ibid.*, pp. 103, 138, 153, 164; U. Walendy, *HT* No. 43, 1990, pp. 15ff.; G. Frey, *op. cit.* (note 5), pp. 200ff., 211; A. Mohler, *Der Nasenring*, Heitz & Höffkes, Essen 1989, pp. 133ff.

⁹ Cf. David Irving, "Menschenhäute," *Vierteljahreshefte für freie Geschichtsforschung*, 3(2) (1999), pp. 214ff.; English: www.fpp.co.uk/Auschwitz/docs/controversies/humanskin/IlseKoch1.html.

¹⁰ A. L. Smith, *op. cit.* (note 7), p. 138.

¹¹ Perhaps they belonged to the *Naturkundliches Museum* in Weimar near Buchenwald, which no longer exists. Its exhibits now belong at least partly to the *Naturkundemuseum* in Gotha. Personal communication of Peter Lange. Helmut Rehm remembers from the media coverage of those years that it turned out that these heads had an inventory number of the *Anthropologisches Museum* of Berlin Dahlem, personal communication. It certainly is worth exploring the Koch files to find out where these heads really came from – and where they are now.

¹² A. L. Smith, *op. cit.* (note 7), pp. 127f.

¹³ On the Allied propaganda efforts surrounding objects allegedly made of human skin and the two shrunken heads, see Dean Irebodd's documentaries *Buchenwald: A Dumb-Dumb Portrayal of Evil*, 2nd ed., 2009; <https://holocausthandbooks.com/video/buchenwald/>; and *Nazi Shrunken Heads: A 24-Minute Free Video about Lies Which Justify War*, 2nd ed., 2008; <https://holocausthandbooks.com/video/nazi-shrunken-heads/>.

According to the communist East-German author Bergschicker, Illustration 2 shows the victims butchered by the Ukrainian nationalist battalion *Nachtigall*, whose political officer allegedly was Theodor Oberländer.¹⁴ In his book *Der rote Rufmord*, Kurt Ziesel proved that this campaign against the then West-German Federal Minister was based on a false caption.¹⁵ The photo in fact shows victims of the Soviet NKVD, which liquidated enemies of the regime *en masse* before the Red Army retreated in 1941. This case is not an isolated one. It is common practice to blame heaps of dead bodies on some putative culprit, and since the Germans have been conditioned to be credulous and ever ready to make over-hasty declarations of guilt, they are the favored target.

Illustration 3 shows a similar example, which was reprinted in the May 21, 1945, issue of the American magazine *Life*, among others. The photo allegedly shows dead slave laborers from the Nordhausen Camp. In its commentary, the magazine suggested that these inmates died of starvation, overwork, and beatings. In fact, however, Martin Broszat and other mainstream scholars have determined that these dead concentration-camp inmates were victims of an Allied air raid against the Nordhausen Camp.¹⁶

Illustration 4 allegedly shows victims of mass murder in Auschwitz.¹⁷ The bodies are actually those of inmates who had succumbed to typhus in the Bergen-Belsen Camp. To date, no similar photos have been found of Auschwitz or other sites of alleged mass exterminations. The deliberate misrepresentation of victims of starvation, diseases, supply shortages of all kinds, and unhygienic conditions in the camps of the Third Reich towards the end of the war is thus probably done out of sheer necessity, due to the painful lack of other, real pictures.

Illustration 3: The photo reproduced in the American magazine *Life* of May 21, 1945, showing the “bodies of almost 3,000 slave laborers in Nordhausen.”

Illustration 4: Photo of typhus victims, taken following the British occupation of the Bergen-Belsen Camp and published as “victims of Auschwitz” in various periodicals, e.g., the German magazine *Quick* in 1979.

¹⁶ M. Broszat, *Studien zur Geschichte der Konzentrationslager*, Schriftenreihe der Vierteljahrshefte für Zeitgeschichte, No. 21, Stuttgart 1970, pp. 194f.; cf. U. Walendy, *HT* No. 34, 1988, p. 37.

¹⁷ From a 1979 issue of *Quick*, cited as per G. Frey, *op. cit.* (note 5), p. 259, who does not give a precise date.

Illustration 5 (a,b): The photo at left was published in the news magazine *Spiegel* (42/1966) with the caption, "Perfect slave system in the SS-state"; at right we see a variation on this theme, captioned "SS-sadists 'prescribe' 'tree-hanging,'" reproduced in H. Eschwege, *op. cit.* (Note 32), p. 266.

It was no doubt the case that the hellish conditions prevailing in the camps of West Germany gave the uninformed western Allied observers the impression that mass killings had been carried out deliberately in these camps, so that the corresponding initial Allied reports may be understandable enough. In truth, however, these conditions were the result of external circumstances such as, for example, the evacuation of camps near the front, whose inmates were (foolishly enough) transferred into the national interior at this time on Himmler's orders;¹⁸ the total overcrowding resulting from this measure for the remaining camps, as well as the break-down of sanitary-, medical- and food-supply lines to the camps due to the collapse of the infrastructure of the Third Reich which was being bombed to death at this time, combined to give rise to the horrific conditions in the camps.

Norbert Frei comments on the reaction of the western Allies when they arrived in the concentration camps:¹⁹

"The shock at what they discovered infrequently led to factually incorrect conclusions, some of which were to prove rather persistent. Paradoxically enough, they could also give rise to politically and historically correct conclusions."

By "historically correct conclusions" he probably means those allegations of mass extermination that have been refuted for the western camps but are said to be correct for the alleged extermination camps in the East. As for the "politically [...] correct conclusions," these probably relate to the desirable effects that such miscaptioned photos have in terms of 'public education.'²⁰

The fact that the conditions for example in the concentration camp Dachau were actually not too bad prior to the winter of 1944 can be seen from the published diary of a former internee who was imprisoned in Dachau from November 1942 to June 1945.²¹ In contrast to this, and according to the published diary of a former German soldier, the conditions under which German soldiers were imprisoned by the US Army in Dachau and elsewhere after the war were much more severe,²² and this time deliberately so, in order to harm as many Ger-

²² G. Naumann, *Besiegt und "befreit."* *Ein Tagebuch hinter Stacheldraht in Deutschland 1945-1947*, Druffel, Leoni am Starnberger See 1984. A comparison of both books was compiled by I. Weckert, "Zweimal Dachau," *Sleipnir* 3(2) (1997), pp. 14-27; reprinted in *VffG* 2(1) 1998, pp. 22-34. Because of this article that issue of *Sleipnir* was confiscated and the publisher prosecuted, cf. Peter Töpfer, "Iren-Offensive", *VffG* 2(1) (1998), pp. 35f. Weckert's review is also available in English: "Two Times Dachau," *The Revisionist* 2(3) (2004), pp. 260-270.

Illustration 6: Allegedly corpses of murdered Jews to be burned on a pyre.²⁶

mans as possible.²³

According to the German news magazine *Spiegel*, Illustrations 5a and b show a concentration-camp guard with his victims in Buchenwald. The inmates are said to have their hands tied and been hanged from trees.²⁴ There is no need to analyze these photos in detail, because an official German authority revealed in 1996 that these are stills from a 1958 East-German, *i.e.* communist, propaganda film produced by their *Deutsche Film-Aktiengesellschaft (DEFA)*.²⁵

Illustration 6 is a photo taken by the Soviets toward the end of the war allegedly showing a pyre with Jews killed by the Germans in the Estonia Klooga Camp.²⁶ What is remarkable here, for one, is that some of the bodies stacked between the wooden beams are wearing their hats (top left). This would be possible only if the ‘Nazi thugs’ had glued the caps onto the heads of these corpses – or if the people lying there were not dead at all, and had put their caps on by themselves after getting into the position shown. The latter possibility is supported by the fact that the people depicted in this photo show not even the slightest sign of rigor mortis: their limbs are perfectly adjusted to their new position on the pyre; see for example the arms of the man at bottom left, or the arm of the man at top right. In fact, what we have here is not only a mis-captioned photo, but one that probably has also been cropped. Off towards the side, a photo of the same scenery, but a different perspective, shows people in Soviet uniforms, and their smug grins at this posed scene are clearly visible. There exist at least seven different photos of this scene, all of them showing men with hats, but without any sign of rigor mortis, as J. Kuras has shown.²⁷

Illustration Group 7 is said to show mountains of shoes collected from inmates murdered in Auschwitz – or in Majdanek, depending on whose version one chooses.²⁸ The fuzzy background and the unrealistic, drawing-like appearance of the shoes in these pictures (especially the right version) suggest that this is at best a heavily retouched photograph.

Illustration Group 7: left, from R. Schnabel, *Macht ohne Moral*, captioned: "Thousands of shoes from murdered inmates in Auschwitz"; right, from C. Simonov, *The Lublin Extermination Camp (Majdanek Camp)*.

The public is often shown heaps of shoes, eyeglasses, shaving brushes, wedding rings or similar artifacts as proof of the extermination of the Jews. From a logical point of view, this evidence is just about as conclusive as the claim that the great piles of used clothing which are collected in Germany each year, for example by the Red Cross, prove that the Red Cross exterminates the German people while collecting the clothing. In fact, it seems to have been largely forgotten today that due to the chronic shortage of raw materials, virtually everything was collected and recycled under the Third Reich, especially during the war.

If the shoes shown in these illustrations were real, indeed, and were found at the former Majdanek Camp by the Soviets as is claimed,²⁹ then their background is actually quite innocuous, as Polish historian Czesław Rajca from the Majdanek Museum stated in 1992:³⁰

"It had been assumed that this [quantity of shoes] came from murdered detainees. We know from documents that have later come to light that there was, at Majdanek, a store which received shoes from other camps."

Majdanek simply had a large cobbler's workshop where shoes were being refurbished. There is no evidence that the former owners of these shoes had been murdered.

This kind of 'evidence,' which in any case is utterly unsuited to prove claims of mass murder, has a particularly tragic aspect, in that for some strange reason such collections of objects impress the average viewer as especially convincing, and ensure a fundamental feeling of consternation, as was revealed by the movie *Todesmühlen*, which was shown to the German people after the war and which contained scenes of this sort.³¹

3.2. Doctored Photos

Illustration 8a has been repeatedly presented as proof of inhumane deportations of Jews into ghettos and extermination camps,³² and has also been broadcast as such on German television.³³ The photo archives of the Federal Railway Administration in Hamburg, however, reveal what this picture really shows. It is a freight train crowded with German refugees bound for the Ruhr region, standing in the Hamburg Main Train Station in 1946. The unretouched original photo, Illustration 8b, hangs in the Hamburg Main Train Station.³⁴ This photo shows, on the left, double decker passenger carriages on their way to Lübeck, and on the right, parts of the Main Railway Station buildings. Both of these elements would have allowed for the photo location to be identified as the Hamburg Main Train Station, and both were retouched or cut out in the doctored version. This is by no means to say that there were no deportations of Jews into ghettos or concentration camps, and it is also not meant to suggest that these transports took place only in comfortable passenger trains, although this certainly was the case particularly in the early stage of the deportations and especially as transports from western Europe are concerned.³⁵ The exposure of this forgery is only meant to urge a more skeptical approach to alleged documental photographs.

Illustration Group 9 really needs no further comment.³⁶ Depending on which version one looks at, it is alleged to show the Munich Jew Dr. S(p)iegel (or, alternatively, A. Schwartz) who asked the police for protection in 1933 but was instead supplied with a poster, deprived of shoes, socks and trousers, and paraded through the city center. Other sources claim that this is a scene from the so-called *Reichskristallnacht*, i.e., from the night of November 9, 1938 (since when is there broad daylight at night?). Since violent assaults against Jews hardly ever occurred before the *Reichskristallnacht*, – even if Al-

³³ *Der Tod ist ein Meister aus Deutschland*, Part 3, May 2, 1990.

³⁴ Published as such in *Hamburger Abendblatt*, Oct. 21, 1981, p. 4; cf. G. Frey, *op. cit.* (note 5), p. 258; U. Walendy, *HT* No. 13, 1982, p. 16.

³⁵ Some of the best-known eyewitness accounts regarding these comfortable passenger trains for deported Jews on their way to eastern camps can be seen in C. Lanzmann’s documentary *Shoah*.

³⁶ For even more versions of this photo and the many individual sources, cf. U. Walendy, *Bild-“Dokumente”* ..., *op. cit.* (note 4), p. 68; U. Walendy, *HT* No. 34, 1988, pp. 38ff.; U. Walendy, *HT* No. 38, 1989, pp. 31ff.

lied propaganda suggested this³⁷ – the allegations about an origin of this picture prior to this date seems rather unlikely.

Despite intensive research it has not yet been possible to learn the true identity of this man. It was determined that in 1979 a Jew known as Dr. Michael Siegel, holder of the *Bundesverdienstkreuz* (the Order of the Federal Republic of Germany), passed away at his home in Peru, but no one has yet been able to provide the public with a photo of him.³⁸

The photos on which the picture is based have obviously been greatly retouched, which is revealed not only by the ever-changing text on the poster but also by the surreal and out-of-focus lower half of Mr. S(p)iegel/Schwartz.

Illustration 10 is an interesting caricature that looks astonishingly like Illustration Group 9; it had already been published in 1935, but it was not claimed to be based on a real photograph.³⁹ The photos shown in Illustration Group 9, on the other hand, were published one by one after the war. This begs the interesting question: what came first, the cartoon or the photo? Could it possibly be a complete fake? Grounds enough for suspicion.

In early 1994, Illustrations 11 (a, b, c) took on modern-day significance in Germany when a girl in the city of Halle drew a swastika on herself and proceeded to lead the media, the public prosecutors and the entire left-wing German-guilt clique by the nose, in the process giving rise to massive demonstrations protesting against ‘the right-wing radicals.’⁴⁰

Her idea of blaming right-wingers for (invented) criminal drawings was nothing new, as one can see from the ever-changing Stars of David on the heads and foreheads of the three anonymous persons anonymously photographed here before a completely neutral background.⁴¹ Staged, retouched photo, photomontage or painting?

Illustration Group 9: three examples of a broad variation.

Illustration 10: Caricature from the French work *Israël souviens-toi! Think of it, Israel! Israel, denke daran!*, ed. by E. Varlin and published in Paris in 1935.

³⁷ The German historian A. Schickel published a fine article about the hysteria and false propaganda by western media in the early years of the NS Government in Germany: “Notizen zur Zeit,” in *Freiheitliche Akademie der FPÖ* (ed.), *Freiheit und Verantwortung*, Jahrbuch, publ. by ed., Vienna 1995; cf. “The Jews under the Nazis: Public Perception and Reality,” in *Anglo-Hebrew Publishing* (ed.), *Holocaust Denial: New Nazi Lie or New Inquisition?*, InfoText, London, undated, pp. 17-22.

Neumann, *The Pictorial History of the Third Reich*, Bantam Books, New York 1962, p. 148 (this is the English edition of the book cited above); Ill. c): Adam Rutkowski, Tadeusz Kotarbinski, *Męczeństwo walka, zagłada Żydów w Polsce*:

Illustration 11 (a): Captioned “SS-men cut stars into Jews’ skin,” this picture appeared in *Faschismus, Getto, Massenmord*, pub. in Frankfurt/Main by the Jewish Historical Institute of Warsaw, 1960, p. 42.

Illustration 11 (b,c): left: detail, published in R. Neumann, *Hitler – Aufstieg und Untergang des Dritten Reichs* (note 41); note that the ‘stars’ have moved; right: the same picture as shown in T. Kotarbinski, *Męczeństwo walka...*, (note 41).

According to R. Schnabel, Illustration 12 shows living inmates sitting near dead ones in Mauthausen Concentration Camp.⁴² Illustration 13 is a genuine photo, a portion of which is very similar to part of Illustration 12. It shows sick inmates sunning themselves in the Russian section of the Mauthausen Camp.⁴³ The inmates shown correspond almost perfectly. What is noteworthy about Illustration 12 is, first of all, its lack of focus compared with the original, which makes any manipulation more difficult to detect. Also, it is clear that the barracks in the background at left have been completely drawn in, just as the entire right-hand portion of the picture was added. The barracks at right have a crooked window, and their shadow extends in the wrong direction.

Time and again, some major newspapers or other media reveal forgeries, for example the manipulated photo of the allegedly burning synagogue in Berlin-Oranienburger Straße, see Illustration 14. This photo is one of the most widely spread pictures regarding the 1938 November pogroms in Germany against the Jews. There is no doubt that arson against sev-

Illustration 12: from R. Schnabel, *Macht ohne Moral*.

Illustration 13: from V. Berdych, *Mauthausen*.

eral synagogues in Germany did occur at that time, but since obviously no really good photo could be presented for this, someone decided after the war to manipulate a photo, taken in 1948, of the well-known synagogue in Berlin-Oranienburger Straße. Already in 1990, the author Heinz Knobloch claimed to have proved this fabrication,⁴⁴ but he could not tell who the culprit was. It remained so until 1998 when a certain Kurt Wernicke revealed the culprit. According to information he obtained from a former exhibition expert, the original photo was probably manipulated by Klaus Wittkugel, a former expert for photomontages.⁴⁵

In 1999, the Simon Wiesenthal Center published Illustration 15b on their website with the following caption:⁴⁶

“As these prisoners were being processed for slave labor, many of their friends and families were being gassed and burned in the ovens in the crematoria. The smoke can be seen in the background.”

No smoke can be seen on the original photo, which was taken in Birkenau concentration camp in spring 1944 (Illustration 15 a).⁴⁷ Apparently, Holocaust propagandists, second generation, can accomplish with current computer software technology what their predecessors could only imagine. With a little ‘photoshop’ help, any document can be made to confirm whatever an ‘eyewitness’ wants it to. In this case, the smoking chimneys.

Illustration 14: Large: The fabrication; small at the top left: The original from 1948 – undamaged.

Illustrations 15a and b: Left the original, right the forgery of the Simon Wiesenthal Center: Smoke coming out of a fence post.

(Un)Fortunately they chose a fence post instead of a chimney as a source for the drawn-in ‘smoke.’

3.3. Total Fabrications

Illustration 16 allegedly shows the open-air cremation of victims of mass gassing in Crematorium V in Birkenau, as photographed from a window or door of Crematorium V.⁴⁸ And in fact, the fence in the background and the forest beyond do approximate the site as it was at that time. Several air photos available today also show minor traces of smoke at or near the location in question.⁴⁹ It is thus possible that this picture is based on a genuine photo. Some details of Illustration 16, however, give grounds for suspicion, see the section enlargements in Illustration 17. There is, for example, the figure standing in the left background, appearing as little more than an outline and leaning on a stick. Since all the other figures in this picture are brightly illuminated by the sun, this inexplicably dark and shapeless figure does not fit in (Illustration 17a). The man in the white shirt walking among what appears to be corpses has a strange left arm that bends at a point where it shouldn’t (Illustration 17b). The shapes of the alleged corpses are also strange, especially those at the feet of the person in Illustration 17b.

One detail in that picture gives us a clue that it can’t be what the orthodoxy claims it to be: the shape of the fenceposts in the background. Their top part is clearly angled off (Illustration 17c), while all the real fenceposts in the Auschwitz-Birkenau Camp were round at the top, see Illustration 18.

It may therefore be that this is actually not a photo at all but a painting. Or else it is a photo that has been heavily reworked. In that case, therefore, the desired ‘truth’ was given a boost here by adding bodies and workers to turn a real fire into a cremation scene. But even if the picture were genuine: what does it show? Are the bodies shown those of victims of gassing or of a typhus epidemic? Anyway, the fact that the smoke wallows along ground level shows that a hypothetical pyre cannot have a height exceeding the ground level, and air photos don’t show any deep pits.⁵⁰ Thus, it might be that this photo simply shows the burning of lice-infested clothes of inmates who died of typhus.

Illustration 16: Shown as Document 57 by Pressac, also in the German edition *Die Krematorien von Auschwitz*, Piper, Munich 1994.

Illustration 17a-c (top left, right, bottom): Detail enlargements of Illustration 16.

Illustration 19: Allegedly a photograph taken in Auschwitz-Birkenau from Crematorium V, showing the yard to the north of the building. But this is clearly either a photographed drawing or a heavily retouched photograph (Pressac 1989, p. 422).

A second alleged photograph, claimed to have been taken of the same scene roughly at the same time, is shown in Illustration 19.⁵¹ To me, it looks even more like a sophisticated pencil drawing than the one shown in Illustration 16, but not like a photograph.

The next sets of photographs have been published numerous times, and each printer working on reproducing them seems to have retouched them one way or another, making the reproductions look all a little different, with many of them showing clear traces of manipulations. If they are based on a real photo, it has so far remained unknown to me where these original photos or negatives are, who made them, if that is known at all, and what the photographer claimed the scene actually depicts.

Illustration Group 20 (a, b, c) is said to document the execution of Polish Jews at the edge of an open grave.⁵² Sometimes the shooting soldier is wearing glasses, sometimes he is not; sometimes his collar patch has white edges, sometimes not. Especially in Illustration 20c he looks as though he was cut out and pasted in. There are white outlines around his uniform, and he lacks a shadow. The men at the transition into the background also look cut-and-pasted. Try to match their legs to their bodies! This is possibly a photomontage at best, but definitely at least a forgery with drawn-in sections. Again, this does not prove that the Germans did not shoot people, especially partisans, after they were condemned to death, and buried them in mass graves. This certainly happened and has been documented by the Germans themselves, since this was neither illegal nor unusual during time of war.

Illustration Group 21 allegedly shows naked inmates lined up outside the gas chambers of Treblinka.⁵³ From Illustration 21a to c, the quality sinks dramatically due to increased retouching, provided that these pictures are based on a photo. Neither the photographer nor the location is documented, and it remains a mystery how one can possibly claim that anything in this picture indicates that this is an execution. It could as well be that Illustration 21c is the original picture, i.e., a drawing or montage, and that the others were adopted from it by refining this painting.

The same goes for Illustration Group 22, purported to show naked inmates prior to mass execution in Latvia. It speaks for itself that several versions of these pictures exist.⁵⁴ The left one especially cannot be called a photo. At the best, it is a painting based on a photo. Compare the two women in the background who appear to have been drawn in.

3.4. Movies

Shortly after the end of the war, the Americans showed the movie *Death Mills* (*Die Todesmühlen*) to the German civilian population as well as to the many hundreds of thousands of German prisoners-of-war.⁵⁵ It allegedly showed the atrocities committed in the concentration camps, and was meant to initiate the reeducation of the German people. The authenticity of the movie by no means went uncontested. For example, B. S. Chamberlin reports occasional disturbances during the screenings, but the protests were nipped in the bud, at times violently, by the deeply affected remainder of the audience.³¹ However, a closer analysis shows for instance that the scenes of injured and dead inmates starting at 2 min 30 sec into the movie actually show scenes from the Nordhausen Camp, whose casualties were caused by Allied air raids, not by German atrocities. Many other claims in this and other similar post-war “documentaries” made by the Allies are just as untenable and misleading, if not outright malicious lies.⁵⁶ Chamberlin reports that the occupation authorities in Germany had trouble finding enough material to put their propaganda movie together,⁵⁷ which could explain their resorting to these methods.

A complete forgery of a film that has meanwhile been proven as such was shown by the Americans during the IMT trials. It was the cinematic record of the alleged discovery of gold teeth from murdered Jews in the Reichsbank in Frankfurt.⁵⁸ During the trial and in the course of the later investigations, however, it turned out that the Americans had staged this scene from beginning to end.⁵⁹ Where the alleged gold fillings came from and where they went is no less a mystery than is the fate of the human skins allegedly discovered in the Buchenwald Concentration Camp.

A more complicated matter, on the other hand, is that of the film which the Americans also showed during the IMT trials and which, like *Todesmühlen*, was also claimed to show alleged atrocities in the concentration camps.⁶⁰ Aside from presenting the false claim that inmates were gassed in the showers of Dachau, this movie also showed the infamous shrunken heads and the supposed artifacts made from human skins, as well as many inmates who had died of malnutrition and typhus; the movie commentary, however, was misleading.

⁵⁵ English: <https://youtu.be/sv4MXdFKfi4>; German: <https://youtu.be/OxJZBrFD6Y>.

⁵⁹ Cf. H. Springer, *Das Schwert auf der Waage*, Vowinckel, Heidelberg 1953, pp. 178f.; P. Kleist, *Aufbruch und Sturz des Dritten Reiches*, Schütz, Göttingen 1968, p. 346; U. Walendy, *HT* No. 43, 1990, pp. 12ff.

⁶⁰ *Nazi Concentration and Prison Camps*, IMT Doc. PS-2430, shown during the trial on Nov. 29, 1945, IMT, Vol. 30, p. 470; https://youtu.be/_pQJ42ONPDc; see on this G. Rudolf, *op. cit.* (note 56).

The film the Soviets made after they had occupied the Auschwitz Camp, which was not released until the mid-1950s,⁶¹ is also liberally sprinkled with false claims by the narrator to authentic footage, most prominently among them the oft-repeated yet long-refuted death-toll claim of four million.⁶²

What strikes me as odd in this context is that no Soviet film of alleged atrocities committed by the Americans in Korea or Vietnam would ever be accepted as the truth by the western nations without a prior, thorough critical analysis, yet this film and others like it that incriminate the Third Reich are used without any second thoughts as educational material in western schools.

Feature films such as *Holocaust*, *Shoah* and *Schindler's List* are in a completely different category. They naturally have no evidential value whatsoever, but their psychological impact on the masses is immense and powerful.⁶³ Even though the orthodox historians' assessment of the movie *Holocaust* – namely, that it is factually untenable – applies equally to the other movies, they are nevertheless gladly received for the welcome effect they have on “public education and opinion steering”!⁶⁴

One example shall suffice to demonstrate the historically unacceptable nature of such movies. Illustration 23 shows a scene from *Schindler's List* where Camp Commandant Göth, standing on the balcony of his house, takes random potshots at the inmates of the Plaszow Camp. Air photos from that time, however, reveal that the commandant's house was located at the foot of a hill, while the camp itself was on top of that hill (Illustration 25).⁶⁵ The scene shown in the movie, which would have required a configuration of house and camp such as shown in Illustration 24, was thus impossible, if only for topographical reasons. And this is certainly not Steven Spielberg's sole forgery.

Schindler's List, which is based on a novel that in turn is only loosely based on historical events,⁶⁶ was deliberately filmed in black-and-white and with unsteady camera work in order

Illustration 23: Scene from the movie *Schindler's List*.

⁶⁵ From air photos, National Archives, Washington, D.C., nos.: DT RL 751, Krakow, May 3, 1944; TuGx 895 A SK, exp. 382f., October 1944; J. C. Ball, *Schindler's List – Exposed as Lies and Hate*, Samisdat Publishers, Toronto 1994.

⁶⁶ T. Keneally, *Schindlers Ark*, Hodder & Stoughton, London 1982; simultaneously: *Schindlers List*, Simon & Schuster, New York 1982. Keneally states that he has spent two years with research on surviving Jews worldwide. Interesting regarding the first printing of the second edition, published 1993, is a passage on the copyright page: “This book is work of fiction. Names, places, and incidents are either products of the author's imagination or are used fictitiously. Any resemblance to actual events or locales or persons, living or dead, is entirely coincidental.” The Library of Congress Cataloging-in-Publication Data registered this book as “fiction” (Print Codes 7 9 10 8 6 and 5 7 9 10 8 6). Whereas in later reprints of this second edition this passage disappears (Print Code 9 10 8 only whitened, later on even the blank lines were removed: Code 13 15 17 19 20 18 16 14 12), it obviously took somewhat longer, until even the cataloging information (“fiction”) is removed from the book (Code 15 17 19 20 18 16). In view of the fuss about Steven Spielberg's movie, it apparently was no longer opportune to categorize Keneally's book as fiction, based only marginally on true facts. The Oskar-Schindler myth was corrected only in 2004 with a meticulously researched biography: David M. Crowe, *Oskar Schindler: The Untold Account of His Life, Wartime Activities, and the True Story behind the List*, Westview Press, Cambridge, Mass., 2004.

The Plaszow Concentration Camp

Illustration 24: The camp in the movie: rebuilt following eyewitness accounts. It is surrounded by a steep hill; thus it cannot be viewed from outside. The camp's inmates were shot by Commandant Göth from the balcony of his house. His house is on the top of the hill, above the inmates' huts.

Illustration 25: The camp according to air photos from 1944: the camp, situated on the top of a hill, could be seen into from three surrounding villages through a wire-mesh fence. Since Göth's house was at the bottom of the hill, he could not see into the camp and thus was unable to shoot inmates from his balcony.

to convey to the audience the false impression that the film is a documentary; contributors to the movie have freely admitted this.⁶⁷ This clearly shows the intentions of the film-makers and of those who take school classes and even entire schools to see this movie, and not only in Germany and Austria.

What is particularly perfidious about this film is that, whenever German soldiers or SS men give orders, yell and scream and engage in any kind of violence, this is not shown in English or in whichever other language the film is dubbed, but in German. In this way the entire world is made to feel that German is the language of cruel subhumans. And the German viewing public is the only one not to notice this, because in Germany, *Schindler's List* is dubbed entirely in German. In this way, underhanded psychological tricks incite the peoples of the world against the Germans, their language and their culture, and the Germans themselves have no clue what is going on.

Besides, Spielberg is hiding the fact that the commander from Plaszow Concentration Camp was prosecuted by the SS, as SS Judge Konrad Morgen testified during the IMT:⁶⁸

"Individual criminal acts – in these cases having broad implications – included: the assumption of a license to kill by commandants and subordinates concealed through falsification of medical death certificates.

Arbitrary conduct, chicanery, unlawful corporal punishments, acts of brutality and sadism, liquidation of no-longer-convenient accomplices, theft and black-market profiteering.

All of these offenses were committed both alone by prisoners as well as by personnel of the SS, most however in conspiracy between SS personnel with Kapos (Jewish concentration-camp guards).

4. The intervention of SS jurisdiction in the concentration camps commenced with the initiation of my investigations in July 1943 and lasted until the conclusion of the war. It could not have started sooner, because there were no suspicions in this regard.

Arrested were the commandants of Buchenwald, Lublin, Warsaw, Herzogenbosch, Krakow-Plaszow. Executed were the commandants of Buchenwald and Lublin [Majdanek]. Several hundred cases ended with convictions. Severe and most severe punishments were meted out against members of all ranks. The total number of investigated cases was 800, where one case often concerned several individuals."

Spielberg certainly wished to conceal these investigations and punishment of perpetrators from his gullible movie audience since he was and is *not* interested in an historically accurate

⁶⁷ *Film & TV Kameramann* No. 2/1994, pp. 24ff., esp. the statement of chief cameraman J. Kaminski, p. 27.

⁶⁸ Affidavit SS-65, IMT, Vol. 42, p. 556.

film, but rather in molding public opinion to accept the orthodox Holocaust ideology. Audiences may be gullible and dumb, but Spielberg is a deceiver and denier of historical reality.

4. Propaganda with Pictures: The Anti-*Wehrmacht* Exhibition

Since 1995, a traveling exhibition has been moving through Germany and Austria for several years professing to show the crimes of the *Wehrmacht*, primarily by means of pictures.⁶⁹ This exhibition was sponsored by the multimillionaire Jan Philipp Reemtsma, who ever since the late 1960s has been a major source of funding for the leftist extremist and anarchist scene in Germany. The exhibition was put together by Johannes Heer, a former Communist who even today makes no bones about his sympathies for the leftist extremist scene. Essentially, the exhibition as a whole came into being through the contributions and support of people who have distinguished themselves by their leftist ideological blindness ever since the radical leftist student revolts of the late 1960s – as journalist Rüdiger Proske pointed out, who was once a member of these circles himself.⁷⁰

On the whole, therefore, this exhibition represents a continuation of Communist and left-wing extremist disinformation campaign whose goal it is to destroy the historical roots of German identity while strengthening the political and cultural hegemony of its left-wing extremist malefactors. By forcing the political moderates to repeatedly affirm their own opposition to the “Nazi” crimes – because one would automatically make oneself suspect of Fascist leanings by doing otherwise – these leftist extremists circles attain a degree of opinion leadership and moral authority which they were unable to achieve in past decades due to the massive human-rights violations committed by the left-wing extremist regimes of the Eastern Bloc.

As German professor of political science Dr. Knütter pointed out, the goal behind this concept is to dissolve the traditional value system and thus to create an ideological vacuum in which socialist, anarchist and communist teachings of salvation will ultimately find fertile ground. This process, he states, is augmented by the parallel process of replacing the German people with a multicultural mixture, devoid of any identity but full of revolutionary potential due to the inevitable conflicts and the concomitant social and economic problems.⁷¹

Of course, this political background must certainly not be used as an excuse to dismiss the photos shown by the exhibitors as pure propaganda. Several academic investigations into the question as to how this exhibition was put together by Reemtsma and Heer have shown that most of the pictures (218 of a total of 314), which originated primarily in archives in Moscow and Minsk, are devoid of *any* information as to their source.⁷² In other words, there is no clue as to who took the pictures when and where, and what exactly they show. It is interesting to note, by the way, that the pictures presented as evidence for National-Socialist crimes were generally taken from books or archives of the nations belonging to the then-Communist Eastern Bloc, which always had a massive vested interest in the exaggeration and exploitation of actual or merely alleged National-Socialist crimes.⁷³ Wolfgang Strauss has shown that the originator of many known photos was Yevgeny Ananievich Khaldei, the

Museum, Warsaw; Kotarbinski, Warsaw; Simonov, Moscow; many of the books quoted in this chapter – many of them by decidedly leftist-radical authors, and published by far-leftist or even communist publishers – come from these sources: Neumann, Desch; Schnabel, Röderberg; Schoenberger; Rütten & Löning; Jacobsen & Dollinger, Desch; Dor & Federmann, Forum (Vienna); Einstein, Röderberg.

Illustration 26: Execution of partisans in Pančevo (Serbia), falsely portrayed as a crime.⁷⁷

“[...] most highly decorated army photographer of the news agency TASS [...], working, as of June 1941, not directly at the front but in the hinterland or the re-captured areas; a celebrated star reporter of the personality cult who after 1945 was rewarded for bravery and skill by being commissioned to portray those in power in the Soviet Union, including Stalin.

*Khaldei's brilliant touch consisted of introducing altered photos into the Soviet and international public as original snapshots, and of collecting rubles and Stalin Prizes for it.*⁷⁴

It is a telling point that such pictures devoid of any information as to their source are uncritically displayed by the exhibitors, and that these exhibitors have not shown themselves willing to change their methods even after massive public criticism of this shortcoming.

Germany's second-largest weekly magazine, *Focus*, repeatedly attacked the exhibition for mis-captioning the pictures displayed, and charged those responsible with falsifications and lies, because they had alleged that one picture actually showing Jews getting undressed *for a bath* was the “scene of a mass execution,” and they had touted another picture whose contents were unclear as a “*Wehrmacht* crime,” and had refused to correct these misrepresentations even after their error had been demonstrated.⁷⁵ The interesting thing about the first case is that the exhibitors had taken the false caption from a book⁷⁶ whose co-editor is Willy Dreßen, from 1967 to 2000 a public prosecutor at the German Central Office of the State Administrations of Justice for the Investigation of National-Socialist Crimes in Ludwigsburg. Even though Dreßen, who had already been working in the Central Office at the time of the book's publication, should have been aware of the actual events, he supported the mis-captioning. Admittedly, this comes as no surprise to those ‘in the know,’ since after all the ideological ties between the professional ‘Nazi hunters’ in the Central Office and the radical left-wing, professional anti-Fascists have always been close.

Let us examine only one picture in more detail which is publicly paraded time and again as proof of the crimes of the *Wehrmacht*. Illustration 26 shows the execution of partisans in front of the cemetery wall of the Serbian village of Pančevo. This picture is also displayed as part of the anti-*Wehrmacht* exhibition. This execution was even filmed by a German war reporter.⁷⁸ The film was shown on German television in April 1997 as proof of the crimes committed by the *Wehrmacht*.⁷⁹ It is already unlikely that the military officials in charge would have allowed a reporter to document a war crime openly and in such detail (and the

same, of course, goes for all such documents). What the anti-*Wehrmacht* exhibition as well as the television broadcast hushed up, however, is the fact that the picture actually shows the enforcement of a verdict passed by a regular German court-martial against partisans who had been sentenced to death for illegal murderous attacks on German soldiers. Therefore, under the martial law in effect both in those days *and today*, this execution is not a crime, but rather a permissible judicial means of war. The event is admittedly cruel, but that is the central characteristic of any war after all. Hence, the crime is not to be sought in the execution, but in the reasons that led to that war.

In Germany the debate about the anti-*Wehrmacht* exhibition, clearly conducted with left-wing extremist aims, has resulted not only in exposing the network of leftist ideologists in Germany who have virtually monopolized the historiography of the Third Reich for themselves.⁷⁰ Another consequence has been that contemporary historians are prepared, for the first time in over 50 years, to critically analyze and question the authenticity of documents that purport to prove alleged National-Socialist crimes. In this context, special mention must go to Professor Dr. Dr. Klaus Sojka who has subjected the pictures of Reemtsma's exhibit to a detailed and devastating critique by supplementing these pictures with many others and analyzing them comprehensively from the perspective of document criticism.⁸⁰ Prof. Franz W. Seidler has set a sort of counterpoint to this entire debate by publishing, in two volumes, the only recently rediscovered files of the *Wehrmacht* War Crimes Bureau⁸¹ which document, with great care and in detail, the crimes that were committed against German soldiers during the eastern campaign:⁸²

"This book is a response to the exhibition 'War of Extermination. The Crimes of the Wehrmacht, 1941 to 1945' [...].

Unlike the anti-Wehrmacht exhibition, this documentation of Soviet wartime atrocities leaves no room for fabrications, misleading text and arbitrary allegations. – All events are documented. – Information regarding places and dates is unequivocal. – The details of the cruel events are supported by testimonies. – The pictures are not private photos, but legal and medical evidence. – The text documents have not been altered. – Most doc-

⁸⁰ Klaus Sojka (ed.), *Die Wahrheit über die Wehrmacht. Reemtsmas Fälschungen widerlegt*, FZ-Verlag, Munich 1998, pp. 90f. To date this book is the scientific high point in the debate over alleged photo documentation of German crimes during the war, and is therefore a must for anyone interested in the topic.

⁸² Franz W. Seidler, *Verbrechen an der Wehrmacht: Kriegsgreuel der Roten Armee 1941/42*, Vol. 1, Pour le Mérite, Selent 1997, pp. 5f.; Vol. 2: 1942/43; *ibid.*, 2000.

uments are supported by further evidence which researchers can examine. – The wording of the text documents can be verified in the Federal Archives / Military Archives in Freiburg under shelf mark RW 2/v.147-v.152.”

Indeed, some of the crimes described are enough to make a reader's blood run cold; for example, the many photos documenting cases of Russian cannibalism of German soldiers, cf. Illustration 27. It takes such documentation to really drive home the point what a dirty war the barbaric attitude of Stalin and his comrades forced the Germans to fight.⁸³

A particularly interesting reply was made by German historian Walter Post, whose account reveals revisionist tendencies in many respects, and concludes in a sort of bottom-line:

“In an essay in the book accompanying the exhibition ‘War of Extermination. The Crimes of the Wehrmacht,’ Alfred Streim [Public Prosecutor with the Central Office of Provincial Justice Administrations in Ludwigsburg] stated that ever since the Central Office was established in 1958, some 3,000 preliminary proceedings have been instituted in the Federal Republic of Germany against members of the Wehrmacht – in other words, 3,000 Wehrmacht soldiers were suspected of having participated in National-Socialist or war crimes.

If one considers that approximately 18 million men and women belonged to the Wehrmacht, then 3,000 defendants constitute 0.017% of the entire personnel. Even if one assumes, absolutely hypothetically, that there was a very high 90% rate of unreported or undetected cases, and thus a total of 30,000 potential suspects, this still amounts to only 0.17%. Incidentally, of the 3,000 preliminary proceedings in the Federal Republic of Germany, only two(!) have resulted in a conviction. In the former German Democratic Republic, there has been a total of eight convictions of former members of the Wehrmacht. Thus, quantitative studies also show that the legend of the ‘decent Wehrmacht’ is not necessarily a legend.”⁸⁴

Finally, in late 1999, shortly before this exhibition was to go to America, it was temporarily canceled, after three scholars proved in detailed studies that most of the pictures were miscaptioned, only 10% of them (allegedly) showing crimes. Some of the exhibits actually show victims of mass murder committed by the Soviet NKVD.⁸⁵ Consequently, Johannes Heer lost his position as head of this exhibition, and some of the most-renowned German historians recommended phasing it out without replacement.⁸⁶ In a thorough study, Walter Post demonstrated shortly thereafter that this exhibition is not just trying to substantiate the ‘correct’ hypothesis (“War of Extermination. The Crimes of the Wehrmacht”) with some wrong photos, as some historians assert, but rather that the hypothesis itself is massively flawed.⁸⁷

These writings seem to have broken a spell that has paralyzed German historiography for more than 50 years and prevented historians from fulfilling their foremost duty, namely to subject their sources to critical analysis. All in all, therefore, and speaking not only from an academic perspective, Reemtsma's exhibition has turned out to be a disaster that would be hard to surpass.

5. Instead of a Conclusion: Some Lesser-Known But *Genuine* Photos

Finally, it should be noted that it is well documented and widely accepted that US soldiers made souvenirs from bones of killed Japanese soldiers (Illustration 28, next page), a crime they apparently were proud of and a crime that was never proven to have been committed by German soldiers.⁸⁸

Illustration Group 29 shows victims of the Holocaust of German civilians in the residential sections of German cities that were deliberately bombed by the Allies.⁸⁹ Altogether, some one million innocent Germans, mostly children, women and elderly people, died like this as a result of Allied terror-bombing in Germany.⁹⁰ There is a world of difference between these photos and those of emaciated victims of starvation and typhus in German concentration camps.

As Prof. Robert Faurisson put it in 1992,⁹¹ the main difference between the victims of German POW and concentration camps and the German victims of Allied air raids and the post-war atrocities committed by Allied forces and authorities of the liberated nations is that the prisoners in German camps *died mainly because of the collapse of the German infrastructure due to the war*, whereas the Germans were *deliberately murdered en masse* by the Allied and the ‘liberated’ nations, *i.e.*, the Serbs, the Czechs, and the Poles. Thus, the real Holocaust happened in German cities during the war, and all over Germany and in German settlement areas of Eastern Europe after the war.

Illustration 28: Life magazine, May 22, 1944, pp. 34f.: "Picture of the week. When he said good bye two years ago to Natalie Nickerson, 20, a war worker of Phoenix, Ariz., a big, handsome Navy lieutenant promised her a Jap. Last week Natalie received a human skull, autographed by her lieutenant and 13 friends, and inscribed: 'This is a good Jap – a dead one picked up on the New Guinea beach.' Natalie, surprised at the gift, named it Tojo. The armed forces disapprove strongly of this sort of thing." Disapprove? Punishing Americans for war crimes would have been more appropriate!

Illustration Group 29: German civilian victims of Allied bombing attacks. Payload dropped: 2,767,000 tons. Only a few cases of roughly one million German Holocaust victims. One tends to forget that the fate of the normal Germans, soldiers and civilians, was sometimes even worse than that of the hundreds of thousands of inmates in POW and concentration camps.

1939 – 1945

Air-Photo Evidence

JOHN CLIVE BALL

1. Introduction

During the 1930s, German scientists and engineers pioneered aerial photography and developed it to high technological standards which the Allies did not attain until World War Two. During the Second World War, German reconnaissance aircraft took millions of photos of the embattled areas as well as of areas in enemy territory. After the war, these photos fell into American hands, and have been stored in the National Archives Air Photo Library in Alexandria, Virginia ever since. The Soviets, British and Americans also took air photos of Germany and the German-occupied territories as of late 1943. This chapter shall examine a few of these photos to see what they can reveal about the events alleged to have taken place at certain sites in connection with the “Final Solution of the Jewish Question.”

2. Technique of Air-Photo Interpretation

The correct interpretation of an air photo depends not only on the expertise of the interpreter, but also on the resolution of the photo and on the sharpness of its focus, in other words, on the quality of the cameras, films and the photographing technique (e.g., compensation for the motion of the airplane). The technique of stereoscopy in particular has effected great improvements in air-photo interpretation. In this technique, two photos of the same area are taken in rapid succession. Due to the forward motion of the airplane, the angle at which the photos are taken will have changed somewhat in this brief time. If these two slightly different photos are then viewed through a stereoscope, one picture with each eye. The result is a three-dimensional effect that allows for the easy differentiation between raised and flat objects on the ground.¹ More recently, image processing using digital technologies has further improved the quality and quantity of information obtainable from air photos.

3. Air-Photo Archeology

Air-photo archeology was used as early as 1938 to locate the sites of medieval, ancient or even Stone Age settlements.² An element of vital importance to the discovery of ancient, extinct settlements is the fact that the remnants of these settlements – which are generally sub-surface, *i.e.*, underground today – are indicated by slight changes in topography, or even in the vegetation on the earth’s surface. Under the right circumstances, these minute differences can be made clearly visible from great elevations. If, on the other hand, large-scale disruptions of the soil involving disturbances of the vegetation and the nature of the soil date back only a few months, these changes are very easy to discern on air photos, even if these disturbances are not apparent at ground level.

¹ Due to the photomechanical reproduction process, some of the pictures shown in this chapter are unfortunately of considerably poorer quality than the originals, so that they no longer show all the details which are clearly visible on the original exposures.

² Cf. O. G. S. Crawford, “Luftbildaufnahmen von archäologischen Bodendenkmälern in England,” in: Carl Troll (ed.), *Luftbild und Luftbildmessung: Luftbild und Vorgeschichte.*, Nr. 16, Hansa Luftbild, Berlin 1938, pp. 9-18; cf. also J. Dassié, *Manuel d’archéologie aérienne*, Editions Technique, Paris 1978; L. Deuel, *Flug ins Gestern – Das Abenteuer der Luftbildarchäologie*, 2nd ed., C. H. Beck, Munich 1977.

4. Mass Graves

4.1. Hamburg, Katyn, and Bergen-Belsen³

It is estimated that the Allied bombing of Hamburg in late July 1943 – “Operation Gomorrah,” as the British called it – claimed more than 100,000 lives. Some 40,000 of these victims were buried in the Ohlsdorf Cemetery, in four mass graves of 10,000 bodies each, arranged in the shape of a cross.⁴ Each of the graves is some 130 m long, 16 m wide and approximately 3.5 m deep (426 ft. × 52 ft. × 12 ft.).

In spring of 1940, the Soviets shot about 25,000 Polish officers and intellectuals in a forest near Katyn and at other locations in eastern Poland, and buried them in a number of mass graves.⁵ In 1943, some of them were discovered by the Germans near Katyn, and investigated by an international delegation. The graves found, containing more than 4,100 bodies, covered a total area of 96 m × 6 m and were roughly 3.5 m deep (315 ft. × 20 ft. × 12 ft.).

In early 1945, the British established four mass graves near the former Bergen-Belsen Camp in order to accommodate the countless typhus victims from that camp which had been dreadfully overcrowded near the war’s end.⁶ These graves measured about 20 m × 7 m × 3.5 m (66 ft. × 23 ft. × 12 ft.) each and contained some 1,000 bodies each.

As we can see, these graves mentioned above held approximately 1 to 2.5 bodies per cubic meter (1 to 2.5 per approximately 35 cu.ft.). Under realistic conditions, the maximum possible density would be roughly 8 bodies per cubic meter (10 per 44 cu.ft.), where the top vertical 1 m (3 ft.) of the grave consists only of a covering soil layer – meaning that, for a grave 3.5 m (12 ft.) deep, the greatest possible gross density is about 6 bodies per m³ (6 per approximately 35 cu.ft.). Thus, the mass graves of Katyn, Hamburg and Bergen-Belsen were not even filled to their maximum capacity.

In estimating the surface area required for mass graves, it must be kept in mind that the soil excavated takes up a greater volume than the graves themselves do, due to the loosening of the soil. What is more, the material excavated can be piled up on mounds only with a certain maximum slope. Postulating, for example, elongated graves of 15 m (50 ft.) width, and allowing 15 m (50 ft.) of space beside each grave to accommodate the excavated material – *i.e.*, 15 m + 15 m, or 50 + 50 ft. breadth required per grave (in fact a much too conservative estimate) – then for an excavation depth of 3.5 m (about 12 ft.) and a gross density of 6 bodies per m³ (roughly 6 per 35 cu.ft.) the minimum surface area required for mass graves for a given number of bodies is indicated in Table 1.

Table 1: Surface Area Requirements for Mass Graves

# Bodies	Surface Area Needed
1,000	10 m × (5+5) m = 100 m ² (≈ 1,080 sq.ft.)
10,000	50 m × (10+10) m = 1,000 m ² (≈ 10,800 sq.ft.)
25,000	83 m × (15+15) m = 2,500 m ² (≈ 26,900 sq.ft.)
100,000	4 × 83 m × (15+15) m = 10,000 m ² (≈ 108,000 sq.ft.)
1,000,000	16 × 210 m × (15+15) m = 100,000 m ² = 0.1 km ² (≈ 1,080,000 sq.ft., ≈ 25 acres)

Illustration 1: Air photo of the Treblinka II Camp of May 15, 1944.

4.2. Mass Graves in Alleged Extermination Camps

4.2.1. Treblinka

Illustration 1 shows an air photo of the Treblinka II Camp, the alleged extermination camp, taken on May 15, 1944.⁷ This is the place where, according to the standard literature, 700,000 to 1.2 million people were killed within just a year between mid-1942 and mid-1943. Most of these victims – some 700,000 – are said to have been buried in the southeastern corner of the camp until early 1943, but were then dug up again and burned.⁸

This and other photos³ reveal the following:

- the surrounding land was cultivated right up to the edge of the camp;
- by virtue of the flat, treeless landscape it was possible to see right into the camp from the fields, as well as from the road running northeastward and from the town of Wolka Okraglik, only half a mile away;
- the place in the southeast area of the camp (bottom right) which the witnesses describe as the location of the mass graves and later mass cremations is less than 10,000 m² in area (2.5 acres). Therefore, no more than 100,000 bodies could have been buried there. Mass graves for about 700,000 bodies would have required an area roughly equal to that of the entire camp (70,000 m², about 17 acres);
- Although the photo is slightly over-exposed, it is clear that not much vegetation is growing in the southern two thirds of the camp, which appears almost completely white.

Illustration 2 shows an air photo from November 1944.⁹ Here the area is overgrown fairly uniformly with vegetation (grass, weeds). We can see that:

- there are a few buildings, or ruins of buildings, in the northernmost area, and possibly traces of more structures that have been removed;
- the lower two thirds of the former camp show uneven growth of vegetation, which may indicate disturbances of the underlying soil. In particular, there are three roughly rectangular shapes in the southwestern area with less vegetation (Nos. 1 through 3 in Illustration 2a) and one large area in the western part that does not seem to have much of any vegetation growing on it (No. 4 in Illustration 2a);
- the southeastern area (bottom right) where mass graves were allegedly located and massive cremations are said to have taken place may have had some soil disturbance, but less so than the rest of the southern two thirds of the former camp;
- contrary to witness accounts, no trees or bushes were planted on the camp grounds for camouflage purposes.

⁹ Exact date unknown, Ref. No. GX 12225 SG, exp. 259.

4.2.2. Belzec, Sobibor, Majdanek¹⁰

Much like Treblinka, the Belzec Camp could easily be looked into from the nearby rail line and road. The town of Belzec was located about 1 mile north of the camp, which had been built on a hillside, into the forest. Air photos from 1944,¹¹ in other words from after the camp was dismantled, show that the area of the camp where witnesses claim mass graves containing some 600,000 bodies as well as their later cremation sites were located, had an area of approximately 7,000 m² (75,300 sq.ft.). Assuming an excavation depth of 3.5 m, no more than 70,000 bodies could thus have been buried there, or proportionally more, if the graves were deeper.¹² Between 1940 and 1944 – the two years for which air photos of the camp area are available – the camp area has been denuded of its former dense forest, and the 1944 photo shows little vegetation growing on a scarred landscape.

It is claimed that in Sobibor 100,000 of the total 150,000 victims were buried before being exhumed later and being cremated along with the rest of the victims. The air photo from 1944,¹³ also taken after the camp was dismantled, shows this camp as having covered an area of roughly 50,000 m² (12.4 acres). Some 10,000 m² (107,600 sq.ft.) – about a fifth of the total camp area – would have been needed to bury the victims. As in the case of Belzec, between 1940 and 1944 – again the two years for which air photos of the camp area are available – the camp area has been denuded of its former dense forest, and the 1944 photo shows little vegetation growing on the former camp area.

In general, the German air photos taken in 1944 of the three camps Treblinka, Belzec and Sobibor aren't as crisp as they could be. Hence, due to lack of resolution and contrast, it is not possible to make out more details on them.

The Majdanek Camp is located at the outskirts of the city of Lublin. Just as for Treblinka, the surrounding fields were cultivated right up to the camp boundary. The alleged gas chambers and the crematorium were outside the camp proper, openly visible and accessible to thousands of people living in the suburbs of Lublin.

4.3. Babi Yar

It is said that, after the city of Kiev was occupied by German forces in 1941, the Jews of this city were taken to Babi Yar, a ravine at the northwestern edge of the city, near the Jewish cemetery. According to eyewitness accounts, they were shot there, thrown into the ravine, and buried – according to some witness statements, the ravine was also blasted and the bodies buried under the rubble.

In late summer of 1943, when the German-Soviet front retreated again, the bodies were allegedly exhumed and cremated on gigantic open-air pyres or in pits. These activities allegedly ended on September 28, 1943, when the Kiev area was already part of the main battle zone.¹⁴

Illustration 3 shows the ravine of Babi Yar in an air photo taken by the *Luftwaffe* on September 26, 1943.¹⁵ The beginning part of the ravine, at the bottom right of the photo, is the location where the initial massacre of some 33,771 Jews in late September of 1941 allegedly took place; see the large ellipse at the bottom right in Illustration 4.

¹⁰ For these camps, cf. Y. Arad, *Belzec, Sobibor, Treblinka: The Operation Reinhard Death Camps*, University Press, Indiana 1987; C. Mattogno, *Belzec: Propaganda, Testimonies, Archeological Research, and History*, Castle Hill Publishers, Uckfield 2004/2016; J. Graf, T. Kues, C. Mattogno, *Sobibór: Holocaust Propaganda and Reality*, 2nd ed., *ibid.*, 2020; J. Graf, C. Mattogno, *Concentration Camp Majdanek: A Historical and Technical Study*, 3rd ed., *ibid.*, 2016. Due to space limitations, these three camps were only briefly mentioned here. For more details cf. G. Rudolf, *op. cit.* (note 3).

¹⁵ Ref. No. GX 3938 SG, exp. 105.

Illustration 3: Luftwaffe air photo of the Babi Yar ravine, taken on Sept. 26, 1943.

Illustration 4: Section enlargement of Illustration 3. Top ellipse hazy feature which could be wafts of smoke. Bottom ellipse: location of claimed initial mass execution and subsequent excavations and cremations. Split line with two arrows: entry point of victims of claimed subsequent executions.

During the German occupation of Kiev, more executions of Jews are said to have taken place, and these victims are claimed to have been led into the ravine following the line and split arrow shown in Illustration 4, where they were supposedly shot and buried.

The upper left ellipse in Illustration 4 shows an area where there seems to be some haze, steam or smoke – or merely some lighter ground discoloration. Could that be the “smoking gun”?

First of all, this is the wrong area, as all the victims are said to have been killed and buried in the ravine branches shown in the lower part of Illustration 4. Next, the gigantic exhumation and cremation activities claimed would have led to massive smoke blanketing the entire area. These activities would have led to the whole area being ripped up not only by the excavations, but also by human and vehicle traffic bringing in the massive amounts of fuel required for the claimed cremations.

What we see, however, is in fact a placid and peaceful valley. Neither the topography nor the vegetation has been disrupted by human intervention. There are no access roads for the transport of humans or fuel, no fuel depots, no excavations, no burning sites, and no massive billowing smoke blanketing the area.

We may conclude with certainty that no part of the Babi Yar ravine was subjected to topographical changes of any magnitude during the war years right up to the Soviet reoccupation of the area. The vegetation in this valley was also not disturbed.¹⁶ Hence, there can have been no mass graves in these locations, and the mass cremations attested to can also not have taken place at this time.

5. Mass Extermination in Auschwitz-Birkenau

5.1. Alterations on Air Photos of Auschwitz-Birkenau

Contrary to the photos of the camps in eastern Poland, most of the photos of Auschwitz (Illustrations 5 and following) were taken by the Western Allies. It took the Allied landing in Italy in autumn of 1943 before the Americans were able to bomb the industrial area of Upper Silesia; Allied reconnaissance flights over this area therefore did not begin until the winter of 1943/44.¹⁷ However, the corresponding air photos were not submitted to the National Archives by the CIA, and thus made accessible to the public, until the late 1970s. It was also the CIA which published the first reproductions of photos of Auschwitz-Birkenau in 1979, commented by Dino Brugioni and Robert Poirier.¹⁸

The Allies took many series of photographs of the Upper Silesian industrial area, and some of them are of excellent quality. Unfortunately, the Auschwitz-Birkenau Camp group is shown on only about half a dozen photos, all of which are of mediocre or poor quality. One qualitatively excellent sequence of photos from June 26, 1944, breaks off just before Auschwitz. While it is possible that the cameras were turned off immediately after the plane flew over the main point of interest, namely the synthetic rubber plant in Monowitz, it seems more probable that these photos of excellent quality and resolution were in fact removed before the public could view them. We shall see the grounds for this supposition in the following.

First it is interesting to note that in Birkenau as well, the surrounding land was cultivated right up to the edge of the camp, which would have rendered it impossible to keep anything secret that happened inside the camp. I would like to focus attention on two pictures of the

¹⁶ This statement can be documented with further air photos showing the valley prior to the war and again after Soviet reoccupation: the vegetation in the valley has grown, but nothing else has changed (May 17, 1939: GX 988 – exp. 48, 49; April 18, 1944: GX 4793 SK – exp. 39, 40). Due to space limitations we have dispensed with showing these pictures here, and chosen one instead that shows the location during the time of the attested-to mass exhumation and mass cremation.

¹⁷ However, bombing the Auschwitz Camp itself would have made no sense (whatever was happening there), as James H. Kitchens has shown, “The Bombing of Auschwitz Re-examined,” *Journal of Military History*, 58(2) (1994), pp. 233-266.

Birkenau Camp made on August 25, 1944.¹⁹ The second picture was shot just 3.5 seconds after the first. This enables us to make a three-dimensional analysis with the help of a stereo viewer. But first we shall analyze only the first of these two pictures. Illustration 6 is an enlargement of the section around the Crematoria II and III. Illustration 7 is a schematic drawing of this picture. The patches visible on the roof of the Morgues 1 of both crematoria were identified as Zyklon-B-input shafts and their shadows by the CIA.¹⁸ However, even without the help of a 3D viewer, it is obvious that these patches cannot be input shafts:

- The alignment of the patches does not agree with the direction of the shadow cast by the crematorium chimney;
- on a photo from September 13, 1944, the patches on Crematorium III retain their direction and shape even though the position of the sun has changed;²⁰
- on that same photo the patches on Morgue 1 of Crematorium II are missing;
- the length of the shadows corresponds to input shafts 4.5 ft. wide and rising 10 to 13 ft. above the roof – in other words, large chimneys, not the approximately 20-inch-high shafts attested to by witnesses;
- these jagged, irregular patches cannot be shadows cast by perpendicular, straight input shafts.

To “explain” these strange marks, some have claimed that they are discolorations on the roofs due to SS men walking from one shaft to another while pouring in Zyklon B.²¹ However, a walking path would be an uninterrupted line starting at the roof’s edge and then going straight from one vent to another, and finally getting off the roof. The actual pattern we see, though, would require the SS men to jump some 5 meters onto the roof to get to the first mark, then again from one mark to the next, and finally off the roof. See Illustration 8.

²¹ Daniel Keren, Jamie McCarthy, Henry Mazal, “The Ruins of the Gas Chambers: A Forensic Investigation of Crematoriums at Auschwitz I and Auschwitz-Birkenau,” *Holocaust and Genocide Studies*, 9(1) (2004), pp. 68-103, here p. 72.

Illustration 6: Detail enlargement of RG 373 Can F 5367, exp. 3185, Aug. 25, 1944, Crematoria II and III.

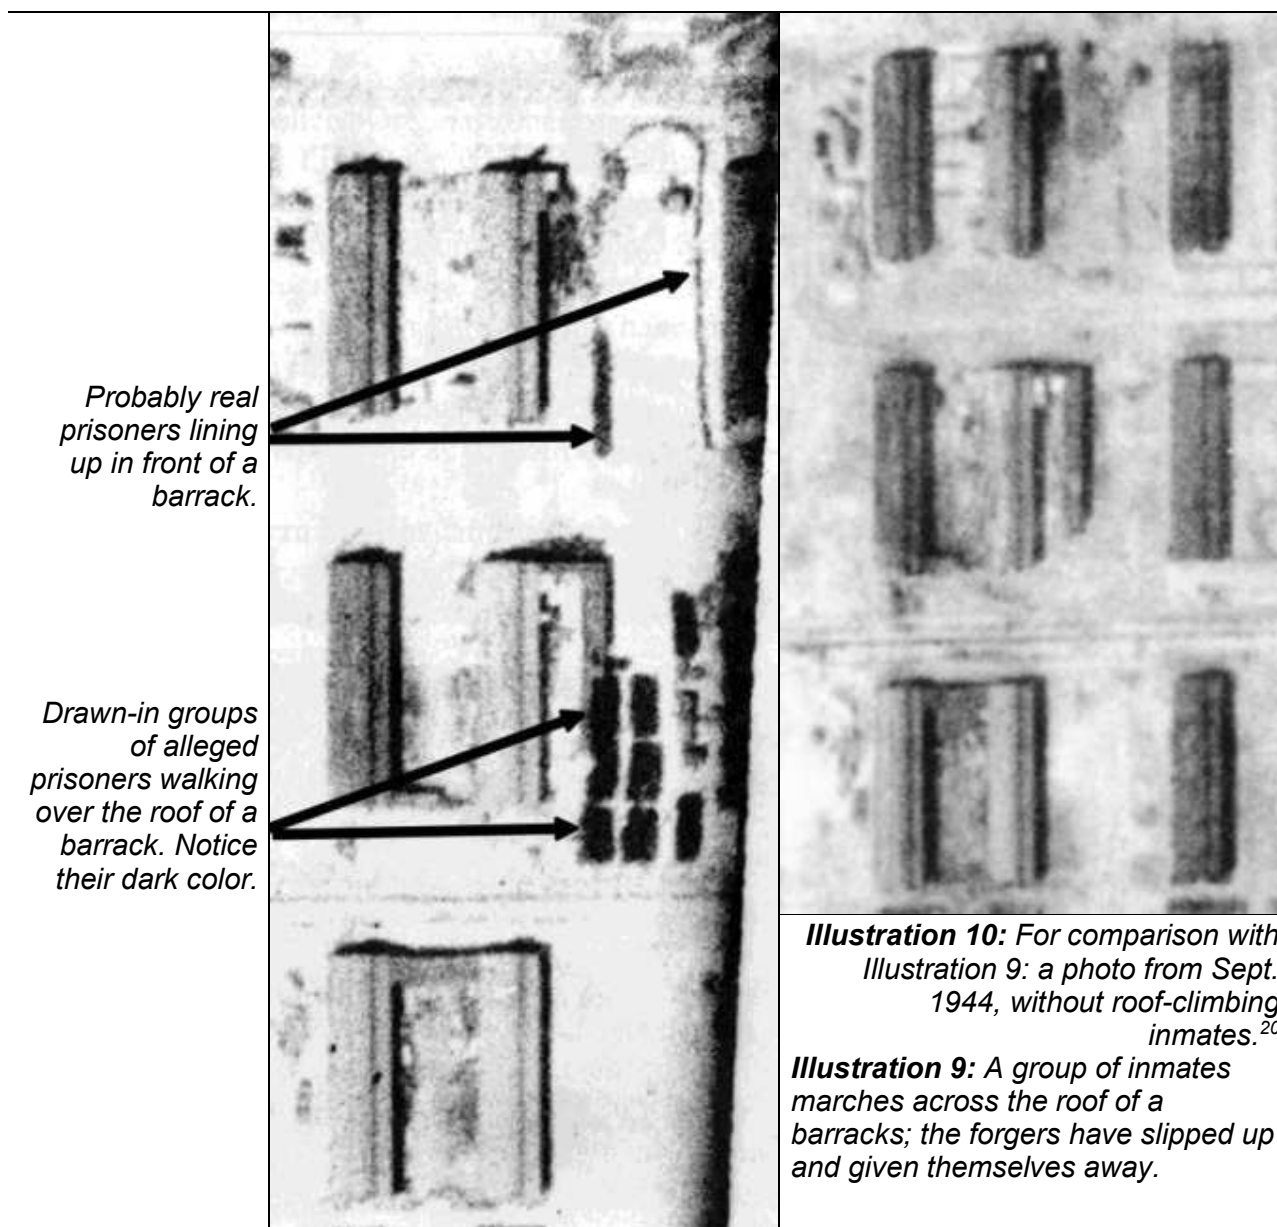

Illustration 7: Schematic drawing of the above air photo. One can easily see that the patches on the Morgues 1 cannot be input shafts: too large, irregular, alignment incorrect for shadows.

Illustration 8: Based on Illustration 6. If these are walking paths of SS men, then they must have walked in a slanted line, then jumped a few meters along the dotted line to the next mark.

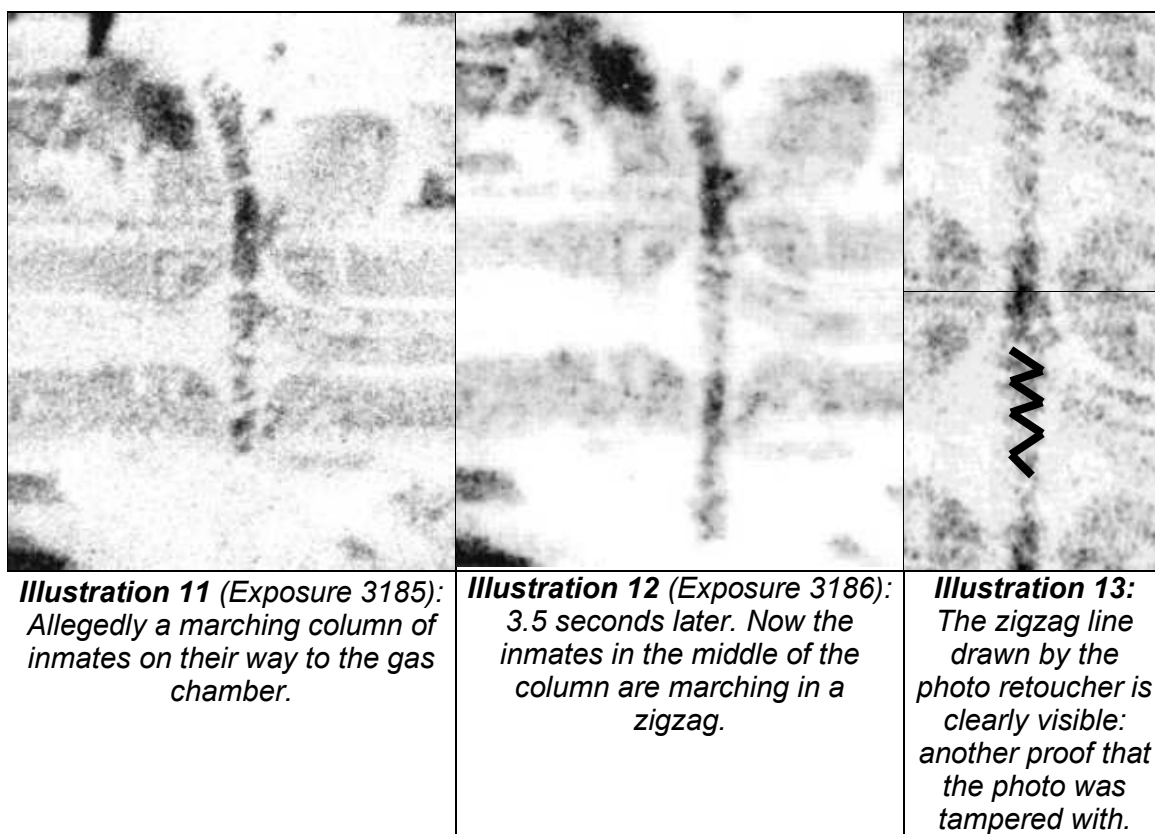

As shown, these discolorations have nothing to do with shadows, and any discolorations from people walking around any objects, *e.g.*, by destroying the grass growing on the two-foot-thick layer of earth on these roofs, would have a circular pattern around these objects, a linear pattern between them, and in addition, as can be seen from other parts of the pictures, areas without proper plant growth cause a lighter color than those with proper plant coverage, and not darker, as in this case.

Illustration 9 is another enlargement from the photo used for Illustration 6. In this picture, patches were added which, according to the CIA, represent groups of inmates. In this context one must consider that a group of inmates is not a massive block structure that could cast darker shadows than, for example, the barracks beside them. More than likely, therefore, the picture was ‘helped along a little’ here. This assumption is proven by the fact that some of these ‘groups of inmates’ are evidently marching across the roof of a barracks – a physical impossibility. This is shown clearly by the photo of September 13, Illustration 10, where the barracks is also clearly visible, but this time without inmates marching across it.

Illustrations 11 and 12 show enlargements of details of the two photos taken in rapid succession on August 25, 1944.¹⁹ According to the CIA’s interpretation, this shows a group of inmates on their way to the gas chambers. Nothing proves that this is so, however. What is most interesting is the manner in which this group of inmates moves, Illustration 13: it moves in a zigzag line, which is not likely to be formed by people marching. Michael Shermer and Alex Grobman have posited that this is a “moiré effect” produced by the alleged fact that the size of the inmates’ heads roughly matches that of the silver grains in the film.²² A “moiré

²² Michael Shermer, Alex Grobman, *Denying History: Who Says the Holocaust Never Happened and Why*

effect” is produced when two repetitive patterns of a similar order of magnitude interfere with each other optically. Such patterns are common today in the age of digital scanners and photography, because their sensors are arranged in a highly symmetrical, repetitive pattern. Photographic emulsions in chemical films, however, have a random distribution of silver grains and therefore by definition cannot produce a moiré effect. In addition, the heads of people walking in a line don’t form a highly regular pattern either – unless they are soldiers marching in a parade. Hence, it is more likely that this line was drawn by a hand guiding a marker in a zigzag pattern.

After realizing these facts of the matter, I went to the National Archives and requested to see the originals, since the photos given to me as originals had clearly been altered. And in fact, I was then given air photos which I was assured were the originals. These were indeed of better quality than the negatives I had been given first: due to the better focus, the work of the forgers was considerably more clearly apparent at the same places on the photos. When I pointed this out to the Archives’ staff, I was told that these were the negatives which the National Archives had received from the CIA in 1979, and that they had always believed that they were in the precise state in which they had been taken from the reconnaissance planes in 1944. I was told that I was the first member of the public ever to have seen these original negatives.

In light of the poor quality of the forgeries on these air photos, it is not likely that the alterations were added by a government agency or by the CIA itself. These authorities have highly qualified staff and advanced technology at their disposal and would have produced forgeries that were perfect, or at least very difficult to expose. However, it is remarkable that in 1999, Dino Brugioni, the same author from the CIA who in 1979 co-authored the first mainstream publication discussing air photos of Auschwitz,¹⁸ published a book about “photographic deception and manipulation,” exposing himself as an expert on making and/or recognizing manipulated pictures.²³ Mysteriously, he discusses the photo criticized here in his chapter on how to detect faked photos – of course without admitting that it was altered. Is that really a coincidence?

¹⁸ *Do They Say it?*, University of California, Berkeley, Los Angeles/London, 2002, p. 147.

5.2. Mass Graves and Mass Cremation

North of Crematorium V of the Birkenau Camp, several 1944 air photos (e.g., May 31, June 26, July 8, Aug. 23; see Illustrations 14 a-d) reveal four elongated shapes some 10 m wide and some 100 to 130 m long. They have a lighter color than their surroundings, which suggests that the vegetation was recently removed. If these were freshly covered mass graves, the area around them would be just as denuded of vegetation caused by labor crews moving corpses and soil. These features are therefore probably a little older. Later in the summer of 1944, these shapes are less visible, both because the canopy of surrounding trees hides them and probably because vegetation has grown on them. If we assume graves of 2 m depth – more would not have been possible due to the high groundwater level in this area – with a cover layer of 1 m and a realistic density of two and a maximum density of five corpses per m³, we calculate as grave capacities:

- $3 \times (100 \text{ m} \times 10 \text{ m}) + 1 \times (130 \text{ m} \times 10 \text{ m}) = 4,300 \text{ m}^2$
- volume at 1 m depth: 4,300 m³ (151,900 cu.ft.);
- realistic: 8,600 corpses
- absolute maximum: 21,500 corpses

The only real evidence of mass graves at Auschwitz known so far are these four objects north of Crematorium V.

Looking at the camp's history, we learn that the first mass graves at Auschwitz were dug already in the winter of 1941-1942, because from October 1941 to February 1942, 8,320 Soviet PoWs died in Birkenau according to the *Totenbuch* (register of the deceased), while the old crematorium at Auschwitz could hardly keep up with cremating the dead inmates of this camp as recorded in the *Leichenhallenbuch* (morgue register) of Block 28. To make matters worse, in July 1942, a typhus epidemic that had slowly been escalating finally got out of control in the Birkenau Camp. It reached its peak a month later, when some 8,600 inmates died during that month alone, almost twice as many as during the previous month (about 4,400 deaths).²⁴ Also starting in the summer of 1942, the old crematorium was inoperable for a while due to major damage to its chimney. No other cremation facility existed at that time. Hence, in the summer of 1942 the corpses of many thousand inmates who had succumbed to the epidemic could not be cremated. They were also initially buried in shallow mass graves. However, due to the high groundwater level in the area,²⁵ these corpses threatened to pollute the entire region's fresh-water supply. For this reason, they had to be exhumed and were probably incinerated on large pyres. This gruesome task was most likely performed by inmates in late 1942, if we are to believe Danuta Czech's orthodox narrative of the camp's history.²⁶ No air photos or ground-level photos of these activities exist.

The air photos of 1944 do not show any activities resembling the events that must have unfolded at Birkenau in late 1942. However, traces of shallow temporary mass graves could potentially be visible on air photos taken some 1½ years later. The rectangular shapes north of Crematorium V may be such traces. Only excavation of the relevant areas could yield evidence to support or refute this thesis, but as far as is known, no such investigations have been undertaken by the Auschwitz Museum so far.

According to Danuta Czech's *Auschwitz Chronicle*, 68,000 persons were gassed and buried in 1942 until the mass graves were exhumed, and the disinterred corpses were cremated on pyres (starting on September 21, 1942). Hence, if the mass graves we identified here were the only ones dug during that time, then the above-calculated 4,300 m³ of grave space available would have had to accommodate $(68,000 \div 4,300 =)$ about 16 corpses per m³, not to mention the tens of thousands of bodies of deceased Soviet PoWs and of the typhus epidemic's victims. This would bring the density in those graves to well over 20 bodies per cubic meter – a physical impossibility.

²⁵ On the groundwater level in Birkenau, see the two papers in the appendix of C. Mattogno, *Auschwitz: Open-Air Incinerations*, 2nd ed., Castle Hill Publishers, Uckfield 2016.

²⁶ D. Czech, *Auschwitz Chronicle, 1939-1945*, Henry Holt, New York 1990, pp. 108, 242, 275, 278.

Illustrations 14 a-d: Potential mass graves of typhus victims on 1944 air photos of Auschwitz-Birkenau; from left to right: May 31, June 26, July 8, August 23.

If Czech's statements regarding the opening of mass graves in September 1942 are correct nevertheless – although they would have concerned exclusively victims of diseases and other “natural” causes – then it seems quite plausible that from this time on until the new crematoria were put into operation in spring of summer 1943, there were indeed open-air pyre cremations of old, partially decomposed corpses, and possibly also of new bodies that could not be cremated, as the typhus epidemic flared up again in the winter of 1942/1943, once more exceeding the old crematorium's capacity by far. This exhumation and outdoor-cremation work, which was likely performed by inmates, might be the factual basis of greatly exaggerated and highly embellished eyewitness statements about perpetual, gigantic mass cremations on pyres and in deep pits. These witness statements generally place the open-air cremations in pits located behind Crematorium V and west of the camp on a meadow near Bunker 2,²⁷ a former farmhouse allegedly repurposed to serve as gas chamber. In the process, it is claimed, the great quantities of smoke emanating from the burning sites swathed the camp in dark clouds.²⁸

Particularly from May to August 1944, during the time of the alleged destruction of the Hungarian Jews and the Jews from the Lodz Ghetto, fires are said to have been burning in the fire pits more or less day and night.²⁹ Pivotal in this regard is the air photo of May 31, 1944, which shows the way the camp looked at that time, see Illustration 15. It was taken at the very peak of the Hungarian Jews' deportation and their claimed subsequent mass murder and cremation.

On the days of May 28 through May 31, 1944, 33,187 Hungarian Jews arrived at Auschwitz, hence on average a little more than 11,000 each day. The vast majority of them is said to have been killed on the spot and cremated. Since the crematoria could have cremated only a small fraction of those bodies, most of them had to be cremated on gargantuan pyres outdoors. Therefore, the area would have been blanketed in smoke, indeed, in a way as I have **simulated** in Illustration 16 using Photoshop.³⁰ This is how it must have looked like, if the orthodox story were true. Compare this with the reality as shown in Illustration 15. The difference speaks for itself.

Orthodox Professor Gerhard Jagschitz's theory, proposing that perhaps the Allies had used filters that resolved the smoke on the photos,³¹ is not even close. Smoke cannot be resolved by optical filters; at best, one could use film that is sensitive to a specific range of the electromagnetic spectrum which the smoke does not absorb. This, however, would have required a homogeneous and known composition of the smoke, as well as highly advanced

²⁷ It is claimed that there was another farm house (Bunker 1), but its exact location is unknown. It is not visible on any air photos, and so it will not enter into this discussion.

Illustration 15: Allied air photo of the Birkenau Camp of May 31, 1944: peaceful and uneventful.

Illustration 16: As Illustration 15, but with the amount of smoke emanating from the crematoria and from the huge cremation pits added using Photoshop. This is how the air photo **would** have looked like, if the orthodox narrative of tens of thousands of Hungarian Jews being cremated during these days in the crematoria and on huge outdoor fires were correct.

technology at the Allies’ disposal at the time. Neither factor is given. The Allied air photos were taken with perfectly normal, simple black-and-white film. If there are no smoke clouds visible on the photos, then there were no incinerations to cause them. Further, in light of the absence of any pits, pyres, fuel depots, heaps of corpses, and massively disturbed soil in the entire area of operation, it is downright irrelevant whether the smoke might have been visible or invisible, since there was nothing that could have caused it in the first place. Filters to render fuel depots, burning pits, heaps of corpses etc. invisible have yet to be invented, even today.

6. Conclusions

HAMBURG, KATYN, BERGEN-BELSEN The mass graves of Hamburg, Katyn and Bergen-Belsen demonstrate how great the area requirements are for mass graves. Due to the area required for the excavated material, which in realistic terms is much greater than the theoretical minimum areas calculated in Table 1, 10,000 bodies need at least 4,000 m² (43,000 sq.ft.).	TREBLINKA Camp activities could be seen from outside by villagers, farmers and travelers along roads and railway. Mass graves for the alleged 700,000 buried victims of this camp would have required seven times as much space as the witnesses state was available. The ground in the camp area shows patterns which point to considerable ground disturbances.
SOBIBOR, BELZEC, MAJDANEK As in the case of Treblinka, it would have been impossible in Majdanek or Belzec to keep any mass murder secret; the close proximity of settlements and roads, and the cultivation of surrounding farm land right up to the camp fences, saw to that. The claimed 600,000 Belzec victims could not have been buried there.	BABI YAR The ravine of Babi Yar underwent no noticeable changes in topography or vegetation up to the end of the war. There are no signs of human intervention during the time of German occupation. There was no human activity there at the time of the mass cremations attested to by the witnesses.
AUSCHWITZ-BIRKENAU The air photos of Auschwitz-Birkenau known to date from the period of December 1943 to February 1945 show no signs of fuel depots, massive smoke from chimneys or open fires, burning pits or pyres. The photos were altered: fake Zyklon-B input shafts and groups of inmates were retouched onto the photo negatives. One must assume that any actual mass-murder activities would not have escaped the notice of the air-photo interpreters, which would have resulted in the bombing of the camp – but this did not happen.	
THE BOTTOM LINE To this day there is no air-photo evidence to support the alleged mass murder of the Jews at any location in Europe occupied by the Germans during World War Two. Further, air photo analysis refutes the claim that the ‘Nazis’ had intended, at whatever time, to keep events in the alleged extermination camps secret. In many cases the air photos provide clear proof that some of the events attested to by witnesses, such as the destruction of the Hungarian Jews or the mass executions at Babi Yar, did not in fact take place. We may hope that the release of Soviet air photos dating from the time the camps were in operation will shed further light on these issues. The fact that these photos have not been published to date may already speak for itself. That the photos in Western hands were altered in order to incriminate Germany, and were first published by the CIA, is also very significant indeed.	

National-Socialist Concentration Camps: Legend and Reality

JÜRGEN GRAF

1. Starting Position

On April 11, 1945, American troops entered Buchenwald Concentration Camp. Four days later, British troops reached Bergen-Belsen Concentration Camp. In the weeks that followed, the Anglo-Americans liberated other camps, including Dachau (April 29) and Mauthausen (May 5). To the victorious soldiers, all these concentration camps represented scenes of horror. The Jewish historian Walter Laqueur reports in this regard:¹

“On April 15, units of a British regiment entered Bergen-Belsen Concentration Camp following a ceasefire negotiated with the local German commander. Colonel Taylor, who commanded the regiment, wrote following an initial investigation of the camp in the laconic language of an official report:

‘As we walked along the main street of the camp, we were greeted with jubilation by prisoners and saw the condition of the inmates for the first time. Many were little more than living skeletons. Men and women lay in rows on both sides of the street. Others crawled slowly and aimlessly around with emaciated, expressionless faces.’

Tens of thousands of corpses, many in advanced stages of decomposition, lay piled on top of each other.”

Following the soldiers came a swarm of photographers and journalists; the world was immediately filled with horrifying images of piles of bodies and walking skeletons. Now, at long last, the Allies had the long-sought proof that the Americans had been fighting the embodiment of Evil, a diabolical enemy against whom any and all methods of warfare had been justified, including the barbaric terror bombings of German cities.

From the very outset, to be sure, a few sober observers recognized that the mass deaths in the recently liberated National-Socialist concentration camps were not the result of an extermination policy on the part of the Germans, but were due to uncontrollable mass epidemics. The Chicago-based *Journal of the American Medical Association*, for example, reported on May 19, 1945:²

“By negotiations between British and German officers, British troops took over from the SS and the Wehrmacht the task of guarding the vast concentration camp at Belsen, a few miles northwest of Celle, which contains 60,000 prisoners, many of them political. This has been done because typhus is rampant in the camp and it is vital that no prisoners be released until the infection is checked.”

But the voices of reason were drowned out in the maelstrom of atrocity propaganda unleashed by the media. In the following months, the anti-German atrocity machine went into high gear, the newspapers dishing up fantastic figures of the numbers of people allegedly exterminated in National-Socialist concentration camps.

A Swiss newspaper, for example, screamed in August 1945:³

I am indebted to my friend Carlo Mattogno of Italy for supplying me with important source references.

¹ Walter Laqueur, *Was niemand wissen wollte. Die Unterdrückung der Nachrichten über Hitlers “Endlösung,”* Ullstein Verlag, Frankfurt a.M./Berlin/Vienna 1981, pp. 1ff.; English: *The Terrible Secret. An Investigation into the Suppression of Information about Hitler’s “Final Solution,”* Weidenfeld & Nicholson, London 1980

² “Typhus Causes a Truce,” *The Journal of the American Medical Association*, 128(3) (May 19, 1945), p. 220; quoted according to M. Weber, “Bergen-Belsen Camp: The Suppressed Story,” *JHR* 15(3) (1995), pp. 23-30, here p. 26; also as “Typhus Causes a Truce,” *The Times*, April 14, 1945.

³ *Berner Tagwacht*, August 26, 1945. No historian with any claim to a minimum of seriousness has ever cited such figures of victims. Nevertheless, 47 years after the end of the war, a madman was permitted to claim, in the highly respected *Frankfurter Allgemeine Zeitung*, without any contradiction by the edi-

“Hitler-Germany Heads the World. Twenty-Six Million People Murdered in German Concentration Camps!”

The prosecutors at Nuremberg did not go as far as this in terms of numbers, but they did their best. The Soviets claimed at Nuremberg four million deaths at Auschwitz⁴ and 1.5 million at Majdanek,⁵ while 840,000 Russian prisoners of war were said to have been murdered at Sachsenhausen, and their bodies cremated in *four mobile crematoria*.⁶

Sir Hartley Shawcross, British head prosecutor at the Nuremberg Trial, summarized the accusations raised against vanquished Germany in the following words:⁷

“Murder conducted like some mass production industry in the gas chambers and the ovens of Auschwitz, Dachau, Treblinka, Buchenwald, Mauthausen, Maidanek, and Oranienburg.”

Revisionist author Wilhelm Stäglich hit the nail on the head in this regard when he wrote:⁸

“No distinction was as yet [in the immediate post-war period] made between the various camps when the ‘Final Solution’ was discussed – the physical destruction of European Jewry allegedly ordered by the leadership of the Third Reich. They were all supposed to have played basically the same role in this enormous ‘murder plot.’ Every concentration camp, it was said, had one or more ‘gas chambers,’ in which Jews were asphyxiated with volatile cyanide (in the form of ‘Zyklon B,’ a proprietary fumigant) or carbon monoxide – in usu vulgi: ‘gassed.’”

For a large proportion of the public – in Stäglich’s words – “no distinction is made between the various camps” even today. The average citizen presumably still believes that Jews and other inmates were gassed in Dachau, Bergen-Belsen and Buchenwald. The principal reason for this situation, in particular, is that photos of victims of epidemic disease (both Jewish and non-Jewish) are regularly shown on television and reproduced in the press as ‘proof’ of an alleged “systematic extermination of the Jews”; on the other hand, the media, a three-quarter century after the end of the war, continue unashamedly to speak of gassings in western concentration camps. For example, a Canadian newspaper in 1993 featured the story of one Moshe Peer, who claimed to have survived no less than six gassing actions as a boy in Bergen-Belsen:⁹

“Each time he survived, watching with horror as many of the women and children gassed with him collapsed and died. To this day, Peer does not know how he was able to survive.”

Mass Grave in Bergen-Belsen Camp, filled mainly with inmates who had succumbed to a typhus epidemic shortly before the end of World War II or thereafter. Photo taken after the liberation of the camp by British forces.

tors, that 26 million people were murdered in German concentration camps (*Frankfurter Allgemeine Zeitung*, Sept. 21, 1992, p. 13).

⁹ *The Gazette*, Montreal, 5. August 1993.

Another ‘Holocaust survivor,’ Elisa Springer, claimed in her memoirs, which appeared 42 years after the war(!), that “the gas chambers and furnaces”¹⁰ had started to operate in Bergen-Belsen after Josef Kramer had become camp commandant.¹¹

The media may occasionally peddle this type of horror story, even today. Historical writers with any claim to seriousness, however, realized that the legend about the purpose of the western camps – to carry out a program of deliberate mass extermination – could not stand scrutiny for long, because it was in overly crass contradiction to the obvious facts. Walter Laqueur states in the appendix to the excerpt about Bergen-Belsen quoted at the beginning:¹²

“The Belsen case was unbelievable for more than one reason. Three years had passed since the world first heard of the existence of the extermination camps for the first time. There were detailed individual reports on the names of these camps, their locations, on the millions of human beings who were killed there – even the names of the camp commandants were known. [...] Thus, Belsen set off a wave of the most violent indignation although paradoxically it was in no way an extermination camp [...].”

In fact, the orthodox historians, *i.e.*, those who defend the allegation that a physical extermination of the Jews took place, abandoned the claim of any mass exterminations in Bergen-Belsen or other western concentration camps soon after the end of the war. While a part of these historians until today are of the opinion that unsystematic gassing actions took place on a small scale in these camps, others no longer speak of gasings in the western camps at all (see Section 5).

This does not, of course, mean that the accusation that millions of people – mostly Jews – were murdered in German concentration camps has in any way been dropped. To mark the defeated enemy with an indelible Mark of Cain for a “crime unique in world history,” to break German morale and self-respect for all time, the victorious powers – with their German vassals – continued their campaign of anti-German atrocity stories, but shifted the scene of the mass killings to a few locations east of the Iron Curtain, inaccessible to western observers. The result was the gradual crystallization of the version of the ‘Holocaust’ familiar to most people today. According to this version, National-Socialist concentration camps fell into three categories:

- a. ‘Normal’ concentration camps, *i.e.*, work camps, where executions – and, according to a few authorities, gasings on a small scale – are alleged to have taken place, but where most of the victims are said to have died ‘natural’ deaths, *i.e.*, in particular, from disease and exhaustion.
- b. Auschwitz and Majdanek. The claim is made that these two camps were used as both work camps and extermination camps. Jews able to work are said to have been exploited for slave labor, while those unable to work were purportedly killed.
- c. Finally, the “pure extermination camps” of Treblinka, Sobibor, Belzec and Chelmno are alleged to have been set up exclusively for the purpose of carrying out a mass extermination of Jews. Apart from a few “working Jews” required to operate the camps, every Jew in these camps was allegedly gassed, regardless of age or state of health, without being registered.

That the above classification is today used in the entire body of orthodox literature on the National-Socialist concentration camps and the ‘Holocaust’ should in no way be allowed to conceal the fact that the classification is entirely arbitrary and not based upon any documental evidence whatsoever. All the German wartime documents relating to Auschwitz and Majdanek (Lublin) refer to them simply as “concentration camps” in exactly the same manner as, for example, Dachau, Buchenwald and Sachsenhausen. As we shall soon see, Auschwitz and Majdanek were governed by the same German regulations as the other camps, and the reasons for the high mortality rates were essentially the same.

¹⁰ There was only *one* furnace in Bergen-Belsen, which had started to operate long before Kramer became camp commandant.

¹¹ Elisa Springer, *Il silenzio dei vivi. All’ombra di Auschwitz, un racconto di morte e di risurrezione*, Marsilio Editore, Venice 1997, p. 88.

¹² W. Laqueur, *op. cit.* (note 1), p. 8.

The situation with regard to the so-called “pure extermination camps” is a different one; the present article restricts itself to a few comments only in this regard. First, Treblinka, Sobibor, Belzec, and Chelmno were not concentration camps. There are very few surviving documents relating to these four camps, and there is very little material evidence. There is not the slightest proof that any program of mass extermination was carried out in these camps at all: all the allegations made in this regard are based solely on unreliable ‘eyewitness’ testimony. On the basis of the few available documents and a great deal of other evidence, it may be deduced that Treblinka and Sobibor were transit camps, via which some Jews were sent east – into the occupied Soviet zones – while others were sent, in transit, via these camps, to a variety of work camps.¹³ It is highly probable that Belzec was a transit camp as well.¹⁴ Of Chelmno, we know next to nothing.¹⁵ These four camps are not the topic of the present paper, and I shall not discuss them in any further detail below.

With regard to the other camps, I have taken the trouble to compare the many myths about National-Socialist concentration camps against the documented facts. Inevitably, many long-cherished preconceptions will be abandoned along the way.

2. Development and Function of the National-Socialist Camp System

2.1. Historical Precedents and Parallels

That concentration camp systems were not invented by Germans has become fairly well known as a result of Alexander Solzhenitsyn’s *Gulag Archipelago*. But they were not invented by the totalitarian Soviet system either: in the past, many democracies have also interned prisoners of war, allegedly disloyal civilians and unpopular minorities in similar camps. The following are a few major examples only:

- During the American Civil War, both the North and South maintained concentration camps for prisoners of war and civilian enemy sympathizers; a considerable percentage of these inmates died, mostly from epidemics. In the Northern prison camps of Camp Douglas and Rock Island, the mortality rates ranged from 2 to 4%. At the Southern prison camp of Andersonville, there were 13,000 deaths out of a total of 50,000 Union prisoners, *i.e.*, a death rate of 25%.¹⁶ As we shall see, the mortality rate at Andersonville was entirely comparable, in terms of percentages, with many National-Socialist concentration camps (*nota bene*: The South was the losing side of that war, too).
- During the Second Boer War (1900-1902), the British built approximately 40 camps in Boer territory, and interned a total of 115,000 Boer civilians, of whom 26,251 women and children died, a mortality rate of 25%.¹⁷
- During the Second World War, the United States government ordered the internment in concentration camps of many Germans and Italians residing permanently in the U.S.¹⁸ and virtually all persons of Japanese descent residing in the United States, including American

¹⁴ On March 17, 1942, Fritz Reuter, an official in Lublin, following a conversation with SS *Hauptsturmführer* Hans Höfle, informed the Official Responsible for Jewish Resettlement in the District of Lublin that he was receiving four to five transports per day, filled with Jews intended for Belzec. These Jews were transported across the border and were never re-transported to the Generalgouvernement. (Józef Kermisz, *Dokumenty i materiały do dziejów okupacji niemieckiej w Polsce*. Vol. II: “Akce” i “wysiedlenia,” Centralna Żydowska Komisja Historyczna w Polsce, Warsaw 1946, pp. 32ff.); cf. C. citizens,¹⁹ regardless of the fact that there had never been a single case of subversion or sabotage by any Japanese-American. During the same war, the National Socialists interned large numbers of Jews. Though this cannot be legally justified, they had at least a reason for it, since – understandably so – Jews constituted a disproportionately large proportion of resistance members and partisans in all German-occupied territories.²⁰

2.2. National-Socialist Concentration Camps during the Pre-War Period

The internment camps erected soon after Hitler's assumption of power on 30 January 1933 – including the well-known "Moor camps" such as Papenburg and Esterwegen – were used to neutralize the militant political opposition: most of the inmates were Communists. The first regular concentration camp was opened at Dachau, near Munich, in 1933. By the beginning of the war, five additional camps had been established: Sachsenhausen, Buchenwald, Mauthausen, Flossenbürg, and Ravensbrück (which was exclusively for women initially).

While the number of internees in the camps still amounted to 27,000 in October of 1933, their numbers fell to 7,000 by February 1934 as a result of the rapidly relaxing political situation²¹ and then remained quite stable, although in addition to political prisoners, hardened criminals ("*Berufsverbrecher*") and "social misfits" (tramps, beggars etc.) were interned as well. Jewish historian Arno Mayer gives the number of concentration-camp inmates for the summer of 1937 as 7,500.²² Another Jewish historian, Joseph Billig, emphasizes that the number of deaths in camps was very low throughout this period:²³

"In the early years of the regime, the death of inmates caused problems for the Nazi leaders. An avalanche of deaths was unacceptable for their policies which had to take account of public opinion. The stability [of the number of camp inmates] was therefore chiefly attributable to the number of released inmates, as well as the arrival of new inmates, which maintained the stability of the total camp population."

In August 1938, the Swiss divisional director Guillaume Favre, delegate of the International Red Cross, visited the Dachau Concentration Camp. In his final report, he wrote:²⁴

"There are over 6,000 prisoners in the camp. [...] Conditions of internment: Solidly built, well-illuminated and well-ventilated barracks. [...] Every barracks contained a modern and quite clean water closet, in addition to wash basins. [...] Work in the summer from 7 to 11 A.M., and from 1 to 6 P.M., in the winter from 8 to 11 A.M. and from 1 to 5 P.M. No work on Saturday afternoon and Sunday. [...] Rations: The meals were prepared in roomy, very clean kitchens. It is simple, but different every day of the week, plentiful and of sufficient quality. [...] Every inmate is permitted to receive 15 Marks per week from his relatives, to improve his care. [...] The tone of the officers is correct. The inmates are permitted to write to their families, and are permitted to send alternatively one letter or one card per week. [...] The discipline is very strict, however. The soldiers on guard duty do not hesitate to use their weapons in the event of attempted escape. [...] Confinement takes place in roomy, well-illuminated cells. [...] The bastinado can also be inflicted as an extraordinary punishment. This punishment is supposed to be used in the extremely rare cases only. [...] It is apparently quite painful and is much feared. [...] When a soldier on guard duty strikes an inmate, he is severely punished, and expelled from the SS. [...] While the treatment of the prisoners is very strict, it cannot be characterized as inhumane."

¹⁹ Udo Walendy, "US-amerikanische Konzentrationslager," *Historische Tatsachen* No. 41, Vlotho/Weser 1990.

²⁰ The Jewish publicist Arno Lustiger, himself a former member of the Résistance, has pointed out that the Jewish population of France made up approximately 15% of all Résistance military operatives (despite the fact that Jews made up less than 1% of the total population of France). *Der Spiegel*, 7/1993, p. 54.

The sick in particular are treated with kindness, understanding, and proper professionalism."

Until 1938, Jews were only imprisoned in the camps if they were political enemies of the National-Socialist regime (or criminals); after the murder of a German diplomat in Paris and the subsequent anti-Jewish pogrom in November 1938, approximately 30,000 Jews were interned, but the overwhelming majority were soon released.

In the last years before the war, the number of inmates as well as the number of fatalities rose continually. In Buchenwald, 48 inmates died in 1937; in 1938, the number of deaths rose to 771, and in 1939 to 1,235.²⁵ In Sachsenhausen, there were 6 deaths in 1936, 38 in 1937, and 229 in 1938.²⁶

2.3. The Function of Concentration Camps during the War

After the beginning of the war, a number of new concentration camps were rapidly established, from Natzweiler in Alsace to Majdanek near the Polish city of Lublin; the number of inmates rose dramatically. The number of prisoners increased to 110,000 by September 1942, 225,000 by August 1943, and 524,000 by August 1944.²⁷ The peak number of inmates was reached in early 1945, with a total of 635,586 prisoners in all concentration camps combined.²⁸ Every concentration camp had a network of satellite camps (up to approximately 100). In the *Generalgouvernement*, i.e., occupied Poland, a dense system of labor camps, in which the inmates, mostly Jews, performed compulsory labor, was created parallel to the official concentration-camp system.²⁹

One reason for this rapid growth of the concentration-camp system was the spread of active resistance movements, particularly in German-occupied territories. A Polish source remarks in this regard:³⁰

"From the beginning of 1942, a partisan movement also began to develop, reaching approximately 20,000 armed soldiers fighting in several dozen different underground formations by 1944. [...] Although the occupying power took the most drastic steps in the struggle against the resistance movements (reprisals, burning villages, executions, deportations, etc.), it was unable to bring the situation under control. We will merely state at this point that, according to German documents, between July 1942 and December 1943, on the territory of the District [of Lublin], no fewer than 27,250 attacks were carried out and several large partisan battles fought [...]; that, during the first months of 1944 alone, 254 trains were derailed or blown up, 116 railway stations and railway installations attacked, and 19 transports held up or shot at."

No occupying power ever tolerates such a situation. The terror tactics of the partisan movement inevitably led to increasingly severe reprisals by the Germans, which were to some extent legal under international law.³¹ The camps formed a chief instrument of this repression.

An even more important reason for the constant expansion of the concentration-camp system was the lack of manpower. At a time when almost every German man fit for service was at the front, the concentration-camp system acquired an increasingly greater economic

³¹ See the contribution by Karl Siegert at the end of this volume.

significance, particularly with regard to the war effort. Many German documents attest to this fact. The following are a few particularly important examples.

On January 25, 1942, five days after the Wannsee Conference, where – according to a stubborn historical myth³² – the decision was allegedly made to order a physical extermination of the Jews, SS-*Reichsführer* Heinrich Himmler wrote a letter to Concentration Camp Inspector Richard Glücks:³³

“Be prepared to accept 100,000 male and up to 50,000 female Jews in the concentration camps over the next few weeks. Great economic tasks will arise for the concentration camps in the next few weeks.”

On April 30, 1942, SS *Obergruppenführer* Oswald Pohl, head of the SS WVHA,³⁴ stated in a report to Himmler:³⁵

“The war has brought about a visible change in the structure of the concentration camps and their tasks with regard to the inmates’ deployment. Increasing the number of inmates due to security, educational or preventive measures alone is no longer one of the primary purposes. The chief emphasis has shifted to the economic aspect. The mobilization of inmate labor first for military purposes (increased armaments) and later for peaceful tasks is increasingly shifting to the foreground. Based on recognition of this fact, necessary measures result which demand a gradual transfer of the concentration camps from their early one-sided political form into an organization reflecting their economic tasks.”

On August 21, 1942, Martin Luther, a Foreign Ministry Official, stated in a memorandum that the number of Jews transported to the east was insufficient to cover the requirements for manpower.³⁶

The extremely high mortality rates in the camps, due chiefly to diseases, but also to poor nutrition and clothing (see Section 4), naturally affected the economic efficiency of the camps in a highly negative way. On December 28, 1942, Concentration Camp Inspector Richard Glücks sent the following instructions in a circular letter to the commandants of 19 concentration camps:³⁷

“With all means available to them, the chief camp doctors must strive to ensure that the mortality figures in the individual camps are to be considerably reduced. [...] The camp doctors must supervise the nourishment of the inmates more than in the past, and submit suggestions for improvement in conformity with the administrations. Such measures must exist not merely on paper but must rather be regularly monitored by the camp doctors. [...] The Reichsführer SS has ordered that mortality be reduced at all costs.”

These instructions had concrete results: within eight months, the mortality in the concentration camps fell by almost 80%.³⁸

On October 26, 1943, Pohl sent all concentration-camp commandants a circular letter in which he remarked:³⁹

“Within the framework of armaments production the concentration camps have become [...] a factor of decisive military significance. We have created incomparable armaments factories where nothing existed before.

In earlier years, within the framework of the then-applicable educational tasks, it could be a matter of indifference whether an inmate performed useful work or not. Now, however, the inmates’ manpower is of significance, and all measures of the commandants,

³² According to the *Canadian Jewish News* of January 30, 1942, the leading Israeli ‘Holocaust’ expert Yehuda Bauer called the allegation that the Wannsee Conference had decided upon the extermination of the Jews a “silly story.”

³⁷ NO-1523. More exactly, 15 concentration camps (Natzweiler, Dachau, Sachsenhausen, Buchenwald, Flossenbürg, Groß-Rosen, Mauthausen, Ravensbrück, Neuengamme, Niederhagen, Auschwitz, Gusen, Stutthof, Herzogenbusch and Lublin), two “Special Camps” (SS Special Camp Hinert, SS Special Camp Moringen) and two penal institutions (Straubing Prison, Danzig/Matzkau Prison Camp).

³⁸ PS-1469.

³⁹ Archiwum Muzeum Stutthof, 1-1b-8, pp. 53ff.

leaders of the penal services and physicians must extend to maintaining the health and efficiency of the inmates. Not for reasons of sentimentality, but rather because we need them, with their arms and legs, because they must contribute to the achievement of a great victory by the German people, therefore we must be attentive to the well-being of the inmates.

I set the following objective: No more than a maximum of 10% of all inmates may be unable to work as a result of disease. This objective must be achieved as a common task of all responsible officials. The following are necessary for this purpose:

- Correct and adequate nourishment.*
- Correct and adequate clothing.*
- The utilization of all natural medicinal remedies.*
- Avoidance of all exertions not immediately necessary for the task.*
- Premiums for efficiency. [...]*

I will personally take care of monitoring the measures outlined in this letter."

The following are a few concrete examples of the significance of inmate labor to the war effort.

In Auschwitz, the largest camp, a considerable proportion of the inmates were assigned to work in I.G. Farbenindustrie factories for the manufacture of a number of chemicals crucial for the chemical industry. In his standard work on the 'Holocaust,' Raul Hilberg reports:⁴⁰

"On 19 March and 24 April 1941, the TEA [Technische Ausschuss der I.G. Farbenindustrie AG; Technical Committee] decided upon the details of production in Auschwitz. Two factories were to be created, one for synthetic rubber (Buna IV) and one for acetic acid. [...] Investment in Auschwitz initially amounted to over 500,000,000 Reichsmarks, but, in the end, to over 700,000,000 Reichsmarks. Approximately 170 sub-contractors were assigned to the work. The factory was erected; streets were built; barracks for the inmates were constructed; barbed wire was used for 'factory fencing'; when the city of Auschwitz was finally overcrowded with I.G. personnel, two company settlements were built. To ensure that I.G. Auschwitz received all the needed materials, [I.G. official] Krauch ordered 'Emergency Classification I' for all materials required for the manufacture of Buna. In the meantime, I.G. Auschwitz also secured its own coal supplies from the Fürsten mine and Janina mine. Both mines were operated using Jews."

In the Dora-Mittelbau Camp, especially feared for its hard working conditions and administered as a satellite camp of Buchenwald until 1944, but then promoted to the rank of a concentration camp in its own right, inmates in underground factories manufactured the rockets by means of which Germany still hoped to bring about a turning point in the war.

On 11 May 1944, Hitler personally ordered the employment of 200,000 Jews within the framework of the fighter-plane construction program.⁴¹

On 15 August 1944, the SS WVHA announced the immediately forthcoming delivery of 612,000 inmates to the concentration camps.⁴² However, this number was never even remotely reached in actual fact.

3. Conditions in the Camps

3.1. Various Inmate Categories

After the beginning of the war, new inmate categories were added to the political prisoners (known as "Reds" in camp jargon due to the red identifying triangles sewn on their uniforms), the criminals ("Greens") and "Asocials" (or "Blacks"). Prisoners of war – particularly Soviets – were interned in several camps; another group consisted of Jehova's Witnesses, who were punished for refusing to do military service.⁴³

⁴⁰ Raul Hilberg, *Die Vernichtung der europäischen Juden*. 3 vols., Fischer Taschenbuch Verlag, Frankfurt 1997, p. 992.

⁴¹ NO-5689.

⁴² NO-1990.

⁴³ Their refusal to do military service caused the Jehova's Witnesses to be imprisoned in many countries. In Switzerland, widely considered a highly democratic country, Jehova's Witnesses were regularly imprisoned until the 1990s. The repression of Jehova's Witnesses in the Third Reich was thus no act of re-

From 1942 onwards, the mass deportation of Jews to concentration camps occurred from all German-occupied territories. The percentage of deported Jews varied greatly from country to country; thus, 75,721 Jews, predominantly those with foreign passports or who had been naturalized only recently, were deported from France, a quarter of the total Jewish population living in that country.⁴⁴ The country with the highest percentage of deportees (over three quarters of all Jewish residents) was the Netherlands.

In addition to the Jews, there were two further inmate categories who are repeatedly alleged to have been the target of a systematic program of extermination, *i.e.*, Gypsies and homosexuals. A brief correction of fact is called for at this point.

3.1.1. Gypsies

Political leaders speaking on behalf of German Gypsies (or “Sinti and Roma”) claim that members of this racial group were murdered by the hundreds of thousands in the National-Socialist concentration camps. The figure of 500,000 purportedly exterminated Gypsies is regularly seen in the relevant literature and repeated in the media.⁴⁵ That this figure is purely a figment of the imagination and there is no evidence of a mass murder of Gypsies under the Third Reich was proven by Udo Walendy, as early as 1985 in his periodical *Historische Tatsachen*.⁴⁶ A body of supplementary evidence against the claim was produced first by Otward Müller in 1999,⁴⁷ and then more comprehensively by Carlo Mattogno in 2014.⁴⁸ – Representatives of the official historiography have also drastically reduced the number of one-half-million murdered Gypsies: in 1997, German historians were talking about 50,000 ‘murdered’ “Sinti and Romas.”⁴⁹

It is a fact that Heinrich Himmler order the internment of “Gypsies of mixed race, Roman Gypsies and Gypsies from the Balkans” on 16 December 1942. At the same time, however, he excepted a number of other categories of Gypsies from internment, those classed as “socially adjusted” Gypsies. According to the Auschwitz *Death Books*, containing a record of every instance of mortality in Auschwitz, 11,843 Gypsies died almost exclusively from natural causes, *i.e.*, mostly as a result of disease.⁵⁰ That the gassing of more than 2,000 Gypsy women in Auschwitz on 2 August 1944 claimed by the official historiography is another myth lacking all basis in fact, has been unimpeachably shown by Carlo Mattogno.⁵¹

ligious persecution.

⁴⁴ Serge Klarsfeld, *Le mémorial de la déportation des juifs de France*, Paris 1978.

⁴⁵ The *New Yorker State Newspaper* of August 7, 1999, carried a report (on page 6) that the Central Council of the German Sinti und Roma had demanded the construction of a monument to the “500,000 Holocaust Sinti and Roma Victims.” Roman Herzog, then president of the German Federal Republic, expressly recognized the figure of 500,000 murdered Gypsies as “historical fact” in 1997: *Bulletin des Presse- und Informationsamt der Bundesregierung*, March 19, 1997, no. 234, p. 259.

3.1.2. Homosexuals

The growing acceptance of homosexuality in Western society, and the increasing influence of gay organizations, have led to intensified efforts to attribute to homosexuals the ‘martyr status’ of a minority “systematically exterminated” during the Third Reich. The number of homosexuals alleged to have died in National-Socialist concentration camps is stated by special-interest groups to amount to as many as 500,000 – or even more.⁵² What is indisputable is that homosexuality in National-Socialist Germany – and in a great many other countries at the same time, for example, Great Britain and the USSR – was a criminal offense. Between 50,000 and 60,000 homosexual males were sentenced by German courts between 1933 and 1944. A minority of these – presumably 10,000 to 15,000 – were sent to concentration camps after finishing their prison sentences in ordinary prisons; these were mostly repeat offenders, male prostitutes, transvestites and seducers of minors.⁵³

3.2. Food

There is no doubt that poor food contributed to the high mortality rates of the early war years, and it is in no way my intention to whitewash the camp administration in this regard. But it should be noted that serious efforts were taken to improve conditions. In the circular letter to all concentration-camp commandants quoted earlier, referring to the necessity for “correct and adequate food,” SS *Obergruppenführer* O. Pohl gave precise instructions as to how the food was to be prepared and served, stating, among other things:⁵⁴

“Vegetables should be served at mealtimes, both raw as salads or unprocessed (carrots, sauerkraut). [...] The quantity of food served for lunch must amount to 1.25 – 1.5 l. No thin soups, but heavy, nourishing dishes. [...] The receipt of additional food is to be encouraged. [...] If sick persons can recover more rapidly as a result of special diets, then such special diets must be served, but in hospitals only.”

Tadeusz Iwaszko, former head of the Auschwitz Memorial, writes the following in an article on inmate food at Auschwitz:⁵⁵

“For lunch, ‘meat soup’ was served four times a week, and ‘vegetable soup’ three times a week, the latter consisting of vegetables including potatoes and beets or carrots [Rüben].”

According to Iwaszko, the soup possessed a nutritional value of 350-400 calories. For dinner, the inmates were served approximately 300 grams of bread, approximately 25 grams of sausage or margarine as well as a spoonful of jam or cheese with a nutritional value of 900 to 1000 calories. Could German front-line soldiers be assured of receiving similar rations every day of the week?

The Polish resistance movement, which certainly had no vested interest in whitewashing the conditions in the camp, had the following to say about the food served in the Majdanek Camp in early 1943:⁵⁶

“The food was rather meager at first, but has recently improved and is of higher quality than in the prisoner-of-war camps in 1940, for example. In the morning, the inmates receive approximately half a liter of barley broth at 6:00 A.M. (two days a week herbal tea with a peppermint taste). For lunch, 1:00 P.M., half a liter of quite nourishing soup is served, even enriched with fat or meal. Dinner is served at 5:00 P.M., and consists of 200

⁵² For example, Franc Rector, in his book *The Nazi Extermination of Homosexuals*, Stern and Day, New York 1981, speaks of “at least 500,000” homosexual victims of National Socialism.

grams of bread with spread (jam, cheese or margarine, twice a week 300 grams of sausage) as well as half a liter of barley broth or soup from the flour of unpeeled potatoes.”

3.3. Medical Care

In a strongly anti-National-Socialist monograph on Groß-Rosen Concentration Camp, the author, Isabell Sprenger, writes as follows:⁵⁷

“A continual collection of disease reports from the years 1943-1945 with very detailed daily procedures in the treatment of individual patients shows that to some extent time and effort could be expended on healing the inmates.”

The objection that Groß-Rosen was an “ordinary concentration camp” and not an “extermination camp” collapses immediately when considering that a great quantity of documents relating to the medical care of inmates has survived even for Auschwitz, the best-known of the alleged extermination camps.⁵⁸ For example, a report on the medical treatment of 3,138 Hungarian Jewish internees was drawn up on June 28, 1944 – when the ‘gas chambers’ allegedly operated at full capacity – establishes precisely the illnesses for which the persons concerned were treated:⁵⁹

“Surgical cases	1,426
Diarrhea	327
Constipation	253
Angina	79
Diabetes mell.	4
Cardiac insufficiency	25
Scabies	62

Intertrig. [sore spots]	59,268
Other	449
Infectious diseases:	
Scarlet fever	5
Mumps	16
Measles	5
Erysipelas [skin rash]	5”

In another “extermination camp,” Majdanek, there was a hospital for wounded Soviet prisoners of war, the construction of which was personally ordered by Himmler on 6 January 1943.⁶⁰

3.4. Punishments and Mistreatment

The widespread idea that limitless arbitrary cruelty prevailed in the National-Socialist concentration camps and that sadistic mistreatment was a common occurrence is simply not confirmed by surviving German wartime documentation. I am aware that regulations often existed only on paper, and I do not doubt that acts of cruelty often occurred in the camps. But that such acts in no way reflected official policy is clearly obvious from the regulations for the camp administration. In Auschwitz, every SS man had to sign a declaration reading word-for-word as follows:⁶¹

“I am aware that only the Führer possesses life-and-death decision-making powers over enemies of the State. I am not permitted to injure or kill any enemy of the State (inmate). Any killing of an inmate in a concentration camp requires the personal approval of the

Medical treatment of inmates at Auschwitz-Birkenau⁵⁹

Reichsführer SS. I am aware that I will be severely called to account for any violation of this regulation.”

Kazimierz Smoleń, former Director of the Auschwitz-Museum, wrote an article on the punishment system at Auschwitz based on German documents, in which the various punishments provided for by the regulation are listed in order of severity:⁶²

- Warning with threat of punishment
- Additional work
- Temporary transfer to a punishment company
- Arrest
- Severe arrest with withdrawal of food
- Arrest in solitary confinement
- Beating (25 blows).

Prior to execution of beatings, an examination by a physician was required. Death sentences required approval by the RSHA prior to execution.⁶³

Severe steps were occasionally taken against SS men guilty of committing crimes against inmates: two camp commandants – Karl Koch of Buchenwald and Hermann Florstedt of Majdanek – were executed by the National Socialists themselves.⁶⁴

3.5. Terror by Criminals and Communists

The mixing of political and criminal inmates could have frightful consequences for the politicals, since the criminal inmates were often the dregs of the underworld, creating a veritable reign of terror in many camps. Whether the camp administration recruited the “Kapos” (inmate trustees) from the “Reds” or “Greens” was a matter of life or death to many inmates. Austrian Jewish Socialist Benedikt Kautsky, who spent the years between 1938 and 1945 in a number of different concentration camps (Dachau, Buchenwald, Auschwitz and, once again, Buchenwald), wrote the following in relation to terror by criminal inmates:⁶⁵

“Whether the criminals or political prisoners ruled a camp was a matter of life and death for ordinary inmates. In camps such as Buchenwald or Dachau, the burden foisted upon the camp by the SS was allocated as skillfully as possible by the camp functionaries recruited from the ranks of the politicals; many assaults by the SS were nipped in the bud, sabotaged or their effectiveness brought to naught by passive resistance. Other camps under the leadership of criminals, such as Auschwitz and Mauthausen, were hotbeds of corruption, where the inmates were cheated out of their rightful allocations of rations in

Schurz
Untersturmführer

St. 66/1.44. 10/00

Release document of an inmate from Auschwitz-Birkenau Camp dated July 21, 1944⁶⁶

food, clothing, etc. and furthermore mistreated in the grossest manner by their fellow inmates."

Other former concentration-camp inmates have painted a darker picture of the camp functionaries recruited from the ranks of the political prisoners. Paul Rassinier, French resistance fighter and founder of Holocaust revisionism, described the terror of Communist inmates in Buchenwald in his book *Le Mensonge d'Ulysse* (*The Lie of Ulysses*), written in 1950. Those inmates tyrannized other, non-Communist inmates and robbed them of their food packages, which was equivalent to a death sentence for many of them.⁶⁷ A U.S. Army report drawn up following the liberation of Buchenwald states that the Communists gradually took power away from the criminal Kapos and – to some extent in collaboration with the SS – killed many inmates. They were said to have been responsible for a large proportion of the brutalities in the camp and were said to have controlled the distribution of food packages.⁶⁸ That the camp administration failed to take sufficiently energetic steps to put an end to the actions of the criminals and Communists must be considered a serious act of negligence.

3.6. Releases

Large numbers of inmates were released, even after the beginning of the war. According to Polish sources, 5,000 inmates were released from Stutthof Concentration Camp,⁶⁹ while the incredible number of 20,000 inmates were released from the alleged "extermination camp" of Majdanek⁷⁰. The total number of inmates released from Auschwitz is unknown, but must

⁷⁰ Anna Wiśniewska, Czesław Rajca, *Majdanek Lubelski obóz koncentracyjny*, Państwowe Muzeum na Majdanku, Lublin 1996, p. 32.

have been considerably high. Danuta Czech, in her *Auschwitz Chronicle*, for the period between February 1942 and February 1945 indicates a total of 1,100 released inmates.⁷¹ However, the very fragmentary release records which have survived – records found by C. Matogno and myself and covering the period between June and December 1943 alone – show almost 300 releases, suggesting that the actual number of total releases must have been far higher. Most of the releases involved educational inmates transferred to Birkenau “work education camp” for 56 days in punishment for violation of their labor contracts (this practice resulted from a Himmler order dated 28 May 1942⁷²). Many of these short-term inmates were released in the summer of 1944, at the same time as the mass extermination of the Hungarian Jews is said to have unfolded. We are therefore supposed to believe that the National Socialists continually released witnesses to their own mass-extinction program, so that the witnesses, in turn, could inform the world about German atrocities at Auschwitz! Prior to the evacuation of the camp, the German authorities at Birkenau left 4,299 inmates behind to await the arrival of the Red Army.⁷³

3.7. Comparisons

Some of the German concentration camps continued operation after the war, this time with Allied guards and German prisoners who were considered a threat to Allied security or who were opposed to occupational policies. Especially infamous in this regard is the Sachsenhausen Camp under Soviet control,⁷⁴ but even the U.S.-operated Dachau Camp served as a concentration camp after the war. One of the prisoners held captive by the Americans in Dachau published a diary,⁷⁵ which is interesting reading, especially when compared with the diary of a prisoner who was in the same camp under German rule, *i.e.*, during the war.⁷⁶ In an analysis, Ingrid Weckert has juxtaposed both diaries and by so doing was able to show that conditions in the Dachau Camp were considerably *better* under German rule than they were under U.S. military rule – except for the very last months of the war, when the German infrastructure had broken down and the inmates, like everybody in Germany, suffered terribly due to lack of all supplies.⁷⁷

4. Mortality Rates in Concentration Camps and their Causes

4.1. Number of Victims of the Camps

How many people died in the National-Socialist concentration camps? Very precise and, in some cases, highly precise statistics are available for seven different concentration camps, based on documentation of the individual camp authorities for these camps, which were basically the seven largest camps. In addition to the number of inmates who died in the concentration camps, we also know the number of total arrivals, which, with the exception of Majdanek, are also known with complete or almost perfect precision. In addition, it should be noted that many inmates were often interned in several different camps, being frequently transferred from one camp to another (it should be recalled, in this regard that Benedikt Kautsky, for example, spent the years between 1938 and 1945 in Dachau, Buchenwald, Auschwitz and, once again, Buchenwald). This means that the total number of inmates in-

⁷⁶ Arthur Haulot, “Lagertagebuch. Januar 1943 - Juni 1945,” *Dachauer Hefte*, 1(1) (1985), pp. 129-203.

⁷⁷ Ingrid Weckert, “Two Times Dachau,” *The Revisionist*, 2(3) (2004), pp. 260-270. The first German version of this essay, published in the Berlin periodical *Sleipnir*, 3(2) (1997), pp. 14-27, was confiscated by the German authorities because of this comparing article (County Court Berlin-Tiergarten, ref. 271 Ds 155/96).

tered in the camps was much less than a mere addition of the figures for individual camps would tend to indicate. It also means that one must take care to avoid drawing the false conclusion that an inmate who survived one camp, must necessarily have survived the war. To cite merely one example, of the approximately 365,000 inmates registered at Auschwitz and subsequently transferred to other camps, a considerable proportion died in another camp.

The statistics for the seven camps are as follows:

AUSCHWITZ: ⁷⁸	BUCHENWALD: ⁸¹
1940/1941: ca. 19,500	1937: 48
1942: ca. 48,500	1938: 771
1943: ca. 37,000	1939: 1,235
1944: ca. 30,000	1940: 1,772
1945: ⁷⁹ ca. 500	1941: 1,522
Total: ca. 135,500 of ca. 500,100 registered inmates. ⁸⁰	1942: 2,898
	1943: 3,516
	1944: 8,644
	1945: 13,056
	Total: 33,462 of 238,979 inmates.

DACHAU: ⁸²	MAJDANEK: ⁸⁴
1940: 1,515	1941: ca. 700
1941: 2,576	1942: ca. 17,244
1942: 2,470	1943: ca. 22,339
1943: 1,100	1944: ca. 1,900
1944: 4,794	Total: ca. 42,200 of an unknown number of registered inmates. ⁸⁵
1945: 15,384	
Total: 27,839 of ca. 168,000 inmates. ⁸³	

⁷⁸ Carlo Mattogno, "Franciszek Piper and *The Number of Victims of Auschwitz*," *The Revisionist* 1(4) (2003), pp. 393-399. Among orthodox historians, *i.e.*, those who assert the existence of the gas chambers and the extermination of the Jews, the number of estimated victims for Auschwitz has ranged from 9 million down to 514,000. F. Piper, Head of the Historical Division of the Auschwitz-Museums, indicates 1,077,000 as the number of victims (F. Piper, *Die Zahl der Opfer von Auschwitz*, State Museum Auschwitz, 1993). The manner in which Piper arrives at these fantastic figures is described by C. Mattogno in the article cited above.

⁷⁹ Auschwitz was occupied by the Red Army on 27 January 1945. Most of the inmates were evacuated beforehand.

⁸⁰ In Auschwitz approximately 401,500 inmates were registered in the camp inventory in a regular manner, *i.e.*, after allocation of a registration number. Approximately another 98,600 were lodged in the transit camp of Birkenau for a certain length of time, whence they were subsequently transferred to other camps. For details, see C. Mattogno, "Franciszek Piper and *The Number of Victims of Auschwitz*," *op. cit.* (note 78).

⁸¹ Eugen Kogon, *op. cit.* (note 25), p. 120.

⁸² Johann Neuhäusler, *Wie war das im KZ Dachau? Ein Versuch, der Wahrheit näher zu kommen*. Kuratorium für Sühnemal KZ Dachau, Dachau 1981, p. 27.

⁸³ Paul Berben, *Dachau: The Official History*, Norfolk Press, London 1975, p. 186.

⁸⁴ Jürgen Graf, Carlo Mattogno, *Concentration Camp Majdanek: A Historical and Technical Study*, 3rd ed., Castle Hill Publishers, Uckfield, 2018, Chapter 4. Polish historiography postulated 360,000 as the number of victims from 1948 until 1992. The official camp historian J. Marszałek, gave this figure in his book *Majdanek: The Concentration Camp in Lublin*, Interpress, Warsaw 1986, p. 142. In 1992, the number of victims at Majdanek was reduced by official Polish historiography to approximately 235,000 (C. Rajca, "Problem liczby ofiar w obozie na Majdanku," in: *Zeszyty Majdanka*, Vol. 14 (1992), p. 127). Finally, in 2005, the new research director of the Majdanek Museum, Tomasz Kranz, reduced the death toll even further down to merely 78,000 (Tomasz Kranz, "Ewidencja zgonów i śmiertelność więźniów KL Lublin," *Zeszyty Majdanka*, Vol. 23 (2005), pp. 7-53). The book by Graf and Mattogno quoted above shows the manipulations with which the three Polish historians arrive at their figures.

⁸⁵ The number of inmates arriving at Majdanek is unknown. In the Polish standard work on Majdanek, the number is given by Zofia Leszyńska as "over 275,000" (in: Tadeusz Mencel (ed.), *Majdanek 1941-1944*, Wydawnictwo Lubelskie, Lublin 1991, p. 93), but this figure is certainly exaggerated (in this re-

MAUTHAUSEN: ⁸⁶		SACHSENHAUSEN: ⁸⁷

1944:	ca. 7,500		
1945:	ca. 11,200		
Total: ca. 26,100 of 105,302 inmates. ⁹⁰			

If one adds the numbers of victims for these seven camps, one arrives at a total figure of approximately 372,000 victims. For the other concentration camps, we must refer to the statistics of the Special Registry Office for Marriages, Births, and Deaths at Arolsen (Sonderstandesamt Arolsen, Germany), which are, however, incomplete, partly because some of the documentation is missing for certain camps, and partly because certain deaths registered at other municipal registries of births, marriages, and deaths have not been certified at Arolsen. In 1993, the situation was as follows:⁹¹

Bergen-Belsen:	6,853 deaths	Natzweiler:	4,431 deaths
Dora-Mittelbau:	7,468 deaths	Neuengamme:	5,785 deaths
Flossenbürg:	18,334 deaths	Ravensbrück:	3,639 deaths
Groß-Rosen:	10,951 deaths	Total:	57,461 deaths

How incomplete are these statistics? For each of the previously listed seven camps, the mortality figures are more or less well-known. However, for these camps Arolsen gave only the following numbers of certified deaths in 1993:⁹¹

gard, see J. Graf, C. Mattogno, *Majdanek, op. cit.* (note 84), Chapter 3).

⁸⁶ Hans Marsalek, *Die Geschichte des Konzentrationslagers Mauthausen: Dokumentation*. Österreichische Lagergemeinschaft Mauthausen, Vienna 1980, pp. 156-158.

⁸⁷ Carlo Mattogno, “KL Sachsenhausen: Stärkemeldungen und ‘Vernichtungsaktionen’ 1940 bis 1945,” in: *VffG*, 7(2) (2003), pp. 173-185. The figures indicated by Mattogno are from the original documentation of the Sachsenhausen camp administration in the State Archive of the Russian Federation in Moscow (GARF, Dossier 7021-104-4, pp. 39ff.).

⁸⁸ The figures for liquidations and executions at Sachsenhausen were separated from those relating to inmates having died natural deaths. See C. Mattogno, *ibid.*

⁸⁹ Jürgen Graf, Carlo Mattogno, *Concentration Camp Stutthof: Its History & Function in National Socialist Jewish Policy*, 4th ed., Castle Hill Publishers, Uckfield 2016, pp. 86-95.

⁹⁰ Elżbeta Grot, *Rejs Śmierci*, Muzeum Stutthof w Sztutowie, Gdansk 1993, p. 13.

⁹¹ Official list of registered death cases by the Special Registry Office (Sonderstandesamt) Arolsen dated January 1, 1993. Arolsen no longer releases such figures to the public, since they do not like the way they are used by independent historians.

Auschwitz:	60,056 deaths	Mauthausen:	78,859 deaths
Buchenwald:	20,687 deaths	Sachsenhausen:	5,014 deaths
Dachau:	18,456 deaths	Stutthof:	12,634 deaths
Majdanek:	8,831 deaths	Total:	204,537 deaths

This figure reflects approximately 55% of the actual figures of approximately 372,000 victims. This suggests that the number of 57,461 victims for the seven other camps registered at Arolsen should be doubled; in this case one arrives at approximately $(372,000 + 115,000 =) 487,000$ victims for the fourteen concentration camps.

The mortality figures for inmates having died in the work camps – mostly located in Polish territory – must be added to the above, but no reliable statistics are available to us in this regard. Raul Hilberg estimates the number of Jews having died in these work camps at 100,000, but fails to back up the estimate with any source references.⁹² If we accept Hilberg's figure, at least as a working hypothesis, and if we assume an equally high mortality figure for non-Jews having died in these same camps as well, we arrive at approximately $(487,000 + 200,000 =) 687,000$ or almost 700,000 human beings having perished in National-Socialist concentration camps and work camps. In our view, this would have to be the maximum figure; it is probable that the actual figure was lower. The number of Jews among the victims cannot be determined exactly under present circumstances, but was presumably no lower than 50%.

4.2. Reasons for High Mortality Rates

The worst mortality figures for Auschwitz occurred during the second half of 1942 and in early 1943, when a typhus epidemic was raging, killing a large percentage of the total camp population. The epidemic peaked between the 7th and 11th of September 1942, with an average death rate of 375 inmates per day.⁹³ In Majdanek, the mortality rate peaked in August 1943, a month in which 6.84% of all camp inmates died.⁹⁴ The principal cause of the mass mortality rate lay in the catastrophic hygienic conditions caused by the absence of any connection to the sewer system of the city of Lublin, which encouraged the spread of epidemics.⁹⁵

The situation in the western camps was different. For example, as we have seen, over 15,000 people died in Dachau between January and April 1945, more than during all the previous war years put together. Statistics for the other western camps are usually similar. The extremely high mortality rate at war's end was the immediate result of the German collapse, for which the Allies themselves were partially responsible. In his autobiography, the famous American aviator Chuck Yeager recalls that his squadron was ordered to machine gun "everything that moved" over a 50-square mile area.⁹⁶

"Germany cannot be so easily divided into innocent civilians and military personnel. The farmer on his potato patch was, after all, feeding German troops."

The Allied terror bombings destroyed the German infrastructure, with the result that concentration-camp inmates could no longer be supplied with food, clean drinking water, medicine, disinfection agents etc. during the closing phase of the war. The main reason for the mass deaths in 1945, however, was not starvation, but epidemics, caused by the evacuation of the eastern camps, which in turn spread epidemic diseases to the overcrowded western concentration camps and could not be brought under control as a result of wartime conditions.

The British physician Dr. Russell Barton spent a month in Bergen-Belsen as a young medical student and drew up a report on the conditions in the camp, in which he remarked:⁹⁷

⁹² Raul Hilberg, *op. cit.* (note 40), p. 1299.

⁹⁴ PS-1469, p. 4.

⁹⁵ See J. Graf, C. Mattogno, *op. cit.* (note 84).

⁹⁶ Chuck Yeager, *Yeager: An Autobiography*, Bantam Books, New York 1985, p. 79.

⁹⁷ Quoted according to Robert Lenski, *The Holocaust on Trial: The Case of Ernst Zündel*, Reporter Press, Decatur 1990, pp. 157f.

“Most people attributed the conditions of the inmates to deliberate intention on the part of the Germans. [...] Inmates were eager to cite examples of brutality and neglect, and visiting journalists from different countries interpreted the situation according to the needs of propaganda at home. [...] German medical officers told me that it had been increasingly difficult to transport food to the camp for some months. Anything that moved on the autobahns was likely to be bombed. [...] I was surprised to find records, going back for two or three years, of large quantities of food cooked daily for distribution. At that time I became convinced, contrary to popular opinion, that there had never been a policy of deliberate starvation. This was confirmed by the large number of well-fed inmates. [...] The major reasons for the state at Belsen were disease, gross overcrowding by central authority, lack of law and order in the huts, and inadequate supplies of food, water and drugs.”

The Allied propagandists of 1945 were naturally uninterested in such facts, and the media of the western world are equally uninterested in these same facts to this day. They kept spreading the distorted picture of the diabolical SS men who supposedly allowed the inmates to starve to death. As a result, the last commandant of the Bergen-Belsen Camp, Josef Kramer – who was executed after a judicial farce,⁹⁸ although he did everything in his power to bring about an improvement in desperate camp conditions – went down in history as the “Beast of Belsen,” a history that was written and keeps being written by the victors.

5. “Gas Chambers”

5.1. Gassing Claims Relating to Western Camps

All allegations of “gas chambers” – by which I mean gas chambers intended for the killing of human beings – in National-Socialist camps are based on ‘eyewitness’ testimonies and are not supported by German wartime documents (which survived the war by the thousands of tons). The “gas chambers” of the “extermination camps” at Auschwitz and Majdanek are discussed by Germar Rudolf and Carlo Mattogno in the present book. Both authors demonstrate that the structures in question, by reason of their architectural features, were unsuited for the killing of human beings with poison gas and, as a result, could never have been used for that purpose. The following comments are limited to the claims of the ‘gas chambers’ in the western camps.

There were numerous ‘eyewitness’ testimonies relating to these ‘gas chambers’ as well. At the Nuremberg Trial, a former camp doctor at Dachau, a Czech named Dr. Franz Blaha, testified as follows:⁹⁹

“The gas chamber was completed in 1944, and I was called by Dr. Rascher to examine the first victims. Of the eight or nine persons in the chamber there were three still alive, and the remainder appeared to be dead. Their eyes were red, and their faces were swollen.”

A fanciful description of the “gas chamber” at Buchenwald was provided by a Frenchman named Georges Hénocque in 1947:¹⁰⁰

“The room was perhaps five square meter wide and three to three and a half meters high. On the ceiling at irregular intervals were seventeen air-tight, sealed shower heads. They looked like ordinary shower heads. The deportees assigned to the crematorium had warned me of the manner in which the victims, to mock them, were all given a towel and a small bar of soap before entering the shower. The unfortunates were thus brought to believe that they were entering a shower.”

⁹⁸ At the Bergen-Belsen Trial, British defense council spoke very disparagingly about the prosecution witnesses and came to the conclusion that their testimony relating to the atrocities at Bergen-Belsen were lies. Raymond Phillips (ed.), *Trial of Josef Kramer and 44 Others (The Belsen-Trial)*, William Hodge & Co., London/Edinburg/Glasgow 1949, pp. 76, 82, 89, 141, 244, 518, 524, 535, 544.

⁹⁹ *IMT*, Vol. V, pp. 172f.; cf. C. Mattogno, *The Dachau Gas Chamber: Documents, Testimonies, Material Evidence*, Castle Hill Publishers, Bargoed, 2022.

¹⁰⁰ G. Hénocque, *Les Antres de la bête*, G. Duraissie, Paris 1947, quoted according to Robert Faurisson, *Mémoire en défense*, La Vieille Taupe, Paris 1980, pp. 192ff.

The heavy iron door shut behind them – a door sealed by a half centimeter thick insulation strip of rubber, so that no air could get in. Inside, the walls were smooth, without cracks and as if varnished. On the outside, next to the door frame, one could see four buttons, each one of which lay beneath the others: one red, one yellow, one green, and one white. But one detail disturbed me: I didn't understand how the gas could descend from the shower heads. Next to the room in which I was standing, was a passageway. I entered it and saw a gigantic pipe, so big that I could not reach all the way around it with my arms, a pipe that was covered with a rubber lining approximately one centimeter thick.

Next to the pipe was a crank, which turned from left to right, to cause the gas to enter the room. The pressure was so strong that the gas descended to the floor, so that none of the victims could escape what the Germans called the 'slow and sweet death.'

Beneath the spot where the pipe entered the gas chamber were the same buttons as on the exterior door: one red, one green, one yellow, and one white. They were obviously used to measure the sinking of the gas. Everything was organized on a strictly scientific basis. The Devil himself could not have planned it better."

Many revisionists think that orthodox historians have finally banished the "gas chambers" of the western camps to the rubbish dump of history, but that is an inaccurate oversimplification.¹⁰¹ In justification of this argument, revisionists cite a letter to the editor written in 1960 by Martin Broszat, at that time an employee and later the head of the Institut für Zeitgeschichte in Munich, in which he stated:¹⁰²

"No Jews or other inmates were gassed in Dachau or Bergen-Belsen or Buchenwald. [...] The mass extermination of the Jews by gassing began in 1941/1942 and took place exclusively in a few locations selected for this purpose and equipped with technical installations, particularly in occupied Polish territory (but nowhere in the Old Reich): in Auschwitz-Birkenau, in Sobibor on Bug, in Treblinka, Chelmno und Belzec."

Anyone who reads Broszat's letter attentively recognizes that Broszat only expressly disputes any and all gassings for three camps (Dachau, Bergen-Belsen and Buchenwald). In relation to all other camps, he rules out "mass gassings" only, thus leaving open the possibility of gassing actions on a smaller scale. Such small-scale gassing actions are alleged in the well-known anthology *Nazi Mass Murder* edited by Kogon, Langbein, Rückerl, and others.¹⁰³ According to the same source, such gassings occurred in the camps of Ravensbrück, Sachsenhausen, Neuengamme, Mauthausen, Natzweiler, and Stutthof. In relation to Dachau, the editors are uncertain; no gassings are reported for Buchenwald and Bergen-Belsen, although numerous eyewitness testimonies confirming such gassings are available for precisely these camps. All such 'eyewitness' testimony, therefore, in the view of the editors, is false. Why the 'eyewitness' testimonies on gassings in Ravensbrück, Natzweiler, or any other camp should be any more credible, remains a mystery.

The intellectual level of the anthology is indicated, among other things, by the quoted description of the "gas chamber" (singular) at Mauthausen. As proof of their existence, a verdict of a U.S. court is quoted, according to which the "gas cells" (plural) were pre-heated with a hot brick and then the gas was introduced on "shreds of paper!"¹⁰⁴

In addition to eyewitness reports by former concentration-camp inmates, numerous "perpetrator confessions" are also quoted. All these confessions were given under duress and are not worth the paper they are printed on. That members of the SS imprisoned in the western camps could be compelled to make any kind of 'confession' one wanted, is proven quite obviously by the deathbed 'confession' of Mauthausen commandant Franz Ziereis, who – dying from three bullet wounds in the stomach – stated the following on the 'gas chamber' at Hartheim Castle near Linz:¹⁰⁵

¹⁰¹ In this regard, see the comments by Reinhold Schwertfeger, "Gab es Gaskammern im Altreich?," *VffG* 5(4) (2001), pp. 446-449.

¹⁰² *Die Zeit*, August 19, 1960.

¹⁰³ Eugen Kogon, Hermann Langbein, A. Rückerl, et al. (ed.), *Nazi Mass Murder*, Yale University Press, New Haven 1993.

¹⁰⁴ *Ibid.*, pp. 178f.

¹⁰⁵ Simon Wiesenthal, *KZ Mauthausen*, Ibis-Verlag, Linz 1946, pp. 7f.

“SS-Gruppenführer Glücks has given the order to declare weak inmates as insane and to kill them in a large installation with gas. Approximately 1 to 1.5 million were killed there. This place is known as Hartheim and lies 10 kilometers from Linz in the direction of Passau. These inmates were reported as having died of natural causes in the camp [Mauthausen].”

Kogon, Langbein, Rückerl, and company are naturally not stupid enough to quote this passage from the Ziereis confession in their book. But if the Mauthausen commandant had spoken of a few thousand instead of “1 to 1.5 million” gassing victims at Hartheim, this part of the confession would certainly have been included as ‘irrefutable proof’ of the murders at Hartheim.

24 years after the publication of the anthology by Kogon and colleagues, a sequel was published aiming at summarizing more-recent research results.¹⁰⁶ That volume contains the same dogmatic tenets on the gas chambers in the various National-Socialist camps, but very little new material.¹⁰⁷

The number of gassing victims in all western camps, if we add up all the figures quoted in the above-mentioned anthologies, amounts to some thousands only, and therefore, numerically speaking, are inessential for the ‘Holocaust,’ *i.e.*, the alleged systematic gassing of several million Jews. That the editors stubbornly insist upon these killings by means of poison gas can perhaps be explained by a desire to prove that National-Socialist concentration camps, by their very nature, were fundamentally different from Russian, Chinese, French, and American concentration camps, etc., and were therefore simply diabolical. The diabolical nature of the camps is lent to them by the ‘gas chambers’ and, therefore, as many National-Socialist concentration camps as possible must necessarily have possessed such installations.

On the other hand, orthodox historians know pretty well that abandoning any ‘gas chamber’ in any camp could be disastrous for other ‘gas chamber’ claims as well. After all, why should one believe any ‘eyewitness’ and any orthodox historian that there were ‘gas chambers’ in camps A and B, if it is a proven and acknowledged fact that all the ‘eyewitness’ testimonies and other evidence for camps C and D are fraudulent?

Raul Hilberg, on the other hand, who never mentions any gassings in western camps in his 1,300-page work on the ‘Holocaust,’⁴⁰ is more pragmatic than the editors of the above-mentioned anthologies.

Apart from Carlo Mattogno’s study of all gas-chamber claims leveled against the Third Reich,¹⁰⁷ the most-detailed documentation on the eyewitness testimonies on the gassings in the western camps so far is the *Second Leuchter Report*,¹⁰⁸ prepared under the direction of Robert Faurisson. This booklet is an indispensable source of information for anyone interested in this matter.

5.2. A Revealing Example: The ‘Gas Chamber’ of Sachsenhausen

In his excellent study on Sachsenhausen, Carlo Mattogno describes how the legend of the homicidal ‘gas chamber’ in that camp was concocted.⁸⁷ According to *Nazi Mass Murder*, Sachsenhausen Commandant Anton Kaindl was instructed by Concentration Camp Inspector Richard Glücks to construct a gas chamber for the liquidation of inmates. The editors of this 1983/1993 anthology quote a pertinent ‘confession’ to this effect by Kaindl, made in Soviet imprisonment, and continue:¹⁰⁹

“During the trial [against Kaindl] both Kaindl and a former prisoner, Paul Sakowski, who had worked in the crematorium complex as an executioner and had witnessed gassings,

¹⁰⁸ Fred A. Leuchter, *The Second Leuchter Report*, Samisdat, Toronto 1989; more-recent as the second section in: F.A. Leuchter, R. Faurisson, G. Rudolf, *The Leuchter Reports: Critical Edition*, 5th ed., Castle Hill Publishers, Uckfield 2017.

¹⁰⁹ E. Kogon *et al.* (eds.), *op. cit.* (note 103), pp. 184f.

gave descriptions of the gas chamber. It had a device for opening containers automatically, and a ventilator equipped with a pressure fan was installed on the outside wall. The container was set in place, it was opened mechanically, and the fan blew the gas into the room through a system of heated pipes.”

A report drawn up by a group of Soviet experts in June 1945 contains a detailed description of the functions of this chamber.¹¹⁰ As Mattogno demonstrates, every detail of the description corresponds to the features of an adapted Degesch circulation-disinfestation device using Zyklon B: the Soviet propagandists therefore turned a disinfestation device intended for the destruction of vermin into a homicidal gas chamber! The dimensions of the chamber are indicated in the report as 2.75 m × 3 m, reducing to an absurdity any notion that the chamber could have been used for the killing of large numbers of people. If the SS had wanted to kill individual inmates, they could have simply shot them, instead of killing them in a highly complicated manner using a dangerous poison gas.

After the war, the Soviets used Sachsenhausen as a concentration camp for their own. Gerhart Schirmer was a former German soldier who ended up in that camp right at the end of the war until he was transferred to a forced-labor camp in Siberia in 1950. In his memoirs, Schirmer described briefly how he and other prisoners were forced by the Soviets to build a mock-up ‘gas chamber’ in Sachsenhausen half a year after World War II had ended:¹¹¹

“There exists a notarized, sworn affidavit about the construction of a gas chamber and a shooting facility during October/November 1945 by eight prisoners, of whom I was one (Appendix 4). Briefly described, this ‘gas chamber’ was a shower room with 25 shower-heads in the ceiling. This was supposed to give the impression that the gassing was conducted in it. Attached to this, we erected a separate chamber with an opening, in front of which the executee would sit facing the opposite side in order to receive a shot in his neck. At least this was what the guide had to tell [to Soviet visitors]. This [guide] was our Fritz Dörrbeck, a translator who had to play this theater because – born in Russia – he spoke perfect Russian.”

This preposterous ‘gas chamber’ was obviously something of a headache to the Soviets and their puppets in the Communist, former German Democratic Republic, since the building in which it was allegedly located was torn down in 1952, thus destroying all incriminating and exonerating evidence.

5.3. Origins of the Gas Chamber Lie

By means of an impressive example, the book *Le Mensonge d’Ulysse* by Paul Rassinier, later to become the founder of Holocaust revisionism, shows the manner in which even the most improbable rumors were believed in the panic-stricken, hatred-impregnated atmosphere of the concentration camps. Over the entrance gate to Buchenwald Camp, there was an inscription reading “*Jedem das Seine*” (“To each his own”) a principle of ancient Greek and Roman law meaning: the principle of justice is to give each person that to which he is rightfully entitled.¹¹² Rassinier, who knew German, understood the inscription. But among the other French inmates, a rumor quickly spread that the inscription in fact meant “Abandon hope, all ye that enter here.”¹¹³

Benedikt Kautsky, who experienced three concentration camps, described the witch’s brew of camp rumor-mongering as follows:¹¹⁴

“The frivolity in the camp was incredibly great. Rumors, called ‘parolen’ by the Aryans and ‘bonkes’ by the Jews, swarmed around constantly and found willing listeners, no matter how nonsensical they might be. No matter how much the camp ridiculed the rumor

¹¹⁰ GARF, 7021-104-3, pp. 2-4.

¹¹¹ Gerhart Schirmer, *Sachsenhausen – Workuta: Zehn Jahre in den Fängen der Sowjets*, Grabert, Tübingen 1992, p. 9, similar p. 36. Because of these passages, Schirmer’s memoirs were confiscated and destroyed by the German authorities in 2002 (online at www.vho.org/D/sw).

¹¹² It also was the motto of Prussia’s highest order of chivalry, the Order of the Black Eagle: *suum cuique*.

¹¹³ Paul Rassinier, *op. cit.* (note 67), p. 26. The sentence “Abandon hope, all ye that enter here” appears over the gate to hell in Dante’s *Inferno*.

¹¹⁴ B. Kautsky, *op. cit.* (note 65), pp. 182f.

mongering (a common joke was ‘Will trade two old whoppers for one new one’), most people fell for the so-called ‘noble bonkes’ anyway.”

Dionys Lenard, former Majdanek inmate, had the following to say about rumor-mongering at Majdanek:¹¹⁵

“I remember how I learned from the newspapers that the British had landed at Bologna. Great hope was placed in this occurrence. Everyone expected a coup d’état. But the hope refused to become reality. Most of the time, we didn’t believe the rumors. It was impossible to verify all these unreal reports. [...] Once, somebody stated that the Russians were already in Lvov. It was said that artillery fire could even be heard. Another time, they said that the German front in the north had collapsed, and the Russians were already in Königsberg. They also said that the Hungarians had laid down their arms, and that the Italians had joined them. The Czechs and Serbs were fashionable for a certain time. They were said to have begun such a huge insurgence that the Germans had to deploy 40 divisions against them. The Japanese, on the other hand, were said to have concluded a peace treaty with the United States and Great Britain.”

Very often, rumors like this did not arise spontaneously, but were the result of false reports deliberately spread throughout the camps by the resistance movement. That the reports on deliberate mass exterminations in the camps lack any real basis is obvious from the mere fact that the versions spread during the war often failed to accord with the post-war versions in any way. The following is an example.

Beginning in 1941, the resistance movement inside the Auschwitz Concentration Camp spread an endless stream of horror stories and reports of mass killings of inmates. But the pesticide Zyklon B was never even mentioned as the murder weapon, but rather at times “electrical baths,” combat gases and a “pneumatic hammer.”¹¹⁶ Even after the occupation of the camp by the Red Army, the Soviet-Jewish war correspondent Boris Polevoi published a report on an “electric conveyor belt” upon which inmates were killed with “electrical current.”¹¹⁷ The version in which Zyklon B became the murder weapon only became current during the following months.

The German-Jewish Communist Bruno Baum, in 1935 sentenced to ten years’ imprisonment for anti-government activity together with Erich Honecker, later president of Communist East Germany, and transferred to Auschwitz from Brandenburg Prison in 1943,¹¹⁸ was, by his own admission, one of the most-active fabricators of camp propaganda. After the end of the war, Baum wrote his memoirs,¹¹⁹ which appeared in three different editions (published in 1949, 1957, 1961). The first edition, published in 1949, states as follows on page 34:

“I believe it is no exaggeration when I say that the majority of Auschwitz propaganda spread at that time all over the world was written by ourselves in the camp.”

One page later, Baum ups the ante:

“We carried out this propaganda in [for] the world public until our very last day of presence in Auschwitz.”

Baum thus generously admits that the reports by the resistance movement were “propaganda.” In the next edition, published in 1957, he states, however:

“It is no exaggeration when I say that the greatest part of publications on Auschwitz spread all over the world originated from ourselves [...] We informed the world in this manner until the very last day of our stay in Auschwitz.” (p. 89)

¹¹⁵ Tomasz Kranz (ed.), *Unser Schicksal – eine Mahnung für Euch. Berichte und Erinnerungen der Häftlinge von Majdanek*. Państwowe Muzeum na Majdanku, Lublin 1994, p. 65.

¹¹⁶ The text of the reports spread by the resistance movement relating to mass killings in Auschwitz have been reproduced by J. Graf, *Auschwitz: Eyewitness Reports and Perpetrator Confessions of the Holocaust*, Castle Hill Publishers, Uckfield, 2019, Subchapter 2.1.

¹¹⁷ *Pravda*, February 2, 1945.

¹¹⁸ I am grateful to Knud Bäcker’s article, “Ein Kommentar ist an dieser Stelle überflüssig,” *VffG* 2(2) (1998), notes 26, 29, for the information on Bruno Baum.

¹¹⁹ *Widerstand in Auschwitz*, East Berlin.

Thus, “propaganda” became “publications,” by means of which the world was “informed”! Baum was transferred from Auschwitz to Mauthausen, where he most certainly assiduously continued his propaganda activity in the local camp resistance movement.

Just how industriously Germany’s military enemies propagated their atrocity stories becomes obvious from the following report by the Norwegian Erling Bauck, who was transferred from Sachsenhausen to Majdanek together with 13 other Norwegian inmates, where they were liberated:¹²⁰

“In the fall of 1944, one could read in American newspapers and illegal Norwegian newspapers that fourteen Norwegians had been executed in Lublin on orders from Berlin. That we were supposed to be the fourteen executed Norwegians proves that the order must have been issued at least four months earlier, when there were still fourteen of us.^[121] We were all mentioned by name and inmate serial number. In November, the priest from Notodden received a letter signed by Ilya Ehrenburg in which the priest was requested to inform the father of the Brattli brothers that his sons were among the fourteen executed men. Papers found in the camp by the Russians stated that we were killed with Zyklon gas and then laid in an acid bath so that no mortal remains could be found.”

Immediately after the occupation of Majdanek by the Red Army (on July 23, 1944), the Soviet-Jewish reporter Constantin Simonov wrote a report describing, among other things, the murder of former French Prime Minister Léon Blum in the same camp in the spring of 1943. Simonov quoted two eyewitnesses, P. Mikhailovic and C. Elinski, who had described Blum’s last moments “in great detail.”¹²² Radio Moscow gave solemn credence to this story. The French Communist newspaper *Fraternité* reported in August 1944:¹²³

“Radio Moscow reported the death of former Prime Minister Léon Blum at Majdanek, a seventy-year-old man who fell victim to racist barbarism like so many of his fellow believers.”

The report of Léon Blum’s murder in Majdanek was a total fabrication. In reality, Blum was deported to Buchenwald in 1943 and then transferred to Dachau, where he was liberated on May 4, 1945.¹²⁴

The inmates took atrocity propaganda about the ‘gas chambers’ very seriously. The Polish historian Zofia Murawska writes as follows about Majdanek:¹²⁵

“In the fall of 1943 (September or October) trucks entered Field V, into which the SS men began to load the children; they tore them out of the hands of their unsuspecting mothers. Although the SS assured the mothers that their children would be cared for in homes under the protection of the Polish Red Cross, the mothers became desperately frightened, as they suspected that the destination of their [children’s] journey was the gas chambers. In reality, the young inmates were placed in the children’s camp in Lodz.”

In the verdict of the Majdanek Trial, the District Court of Düsseldorf stated as follows:¹²⁶

“The mass selections of people to be killed by gassing was general knowledge in the Majdanek Concentration Camp at least as of early 1943. This resulted in the fact that screenings carried out under similar conditions as selections but actually intended for other purposes, primarily transfers to other camps, were misunderstood by a number of inmates as being selections for gassing.”

Carlo Mattogno comments in this regard:¹²⁷

“In fact, matters were the reverse of what the court assumed: since the selected inmates who were transferred elsewhere did actually disappear from the camp, those who remained behind became convinced that their departed comrades had been murdered. This conviction was strengthened by the fact that before leaving the camp, the selected inmates went through the showers and delousing, i.e., through Barracks 41 and 42 where delousing gas chambers were known to exist. This procedure left the remaining inmates with one powerful impression: their fellow prisoners had been sent to where the gas chambers were; they had not returned; consequently, they had been gassed.”

There is, therefore, no doubt that many former concentration-camp inmates believed in the reality of the homicidal gassings in good faith. Let us quote Benedikt Kautsky, who states the following regarding the ‘gas chambers’ of Auschwitz:¹²⁸

“At this point I would like to give a short description of the gas chambers which I never saw myself, but which were described to me so credibly by so many people that I cannot help but repeat their description here.”

Kautsky then proceeds to describe the ‘gas chambers’ which he never saw. This is not without irony, since he himself describes the camp rumor-mongering, hitting the nail right on the head:

“No matter how much the camp ridiculed the rumor mongering [...], most people fell for the so-called ‘noble bonkes’ anyway.”

To the end of his life, Kautsky probably never imagined that he had himself fallen for the biggest of the “bonkes” in mentioning the ‘gas chambers’ and even describing them!

6. Summary

6.1. Fiasco of Official Historiography

In view of these obvious facts, orthodox historians could not uphold for long the claim of the extermination character of all National-Socialist concentration camps. They were compelled to shift the scene of the alleged mass killings away from nearby locations, such as Dachau, Bergen-Belsen and Buchenwald, to more-remote alleged extermination camps located in the east, which was then in the Soviet sphere of influence and thus inaccessible to critical observers. In addition to the four so-called “pure extermination camps” of Treblinka, Sobibor, Belzec, and Chelmno, regarding which there is little surviving documental or physical evidence, Auschwitz-Birkenau and Majdanek were alleged to have been “combined extermination and work camps” in which Jews were killed in gas chambers in huge numbers. These claims are in direct contradiction to many verifiable facts destined to bring about the utter defeat of the orthodox historians:

- As in the western camps, most of the deaths in Auschwitz and Majdanek were due to epidemics, with the difference that the death rate in both of the last two camps peaked in 1942 or 1943, while in the western camps the death rate peaked only shortly before the end of the war, as a result of the German collapse.
- Like the camp administrations of Dachau, Buchenwald, etc., the camp administrations of Auschwitz and Majdanek received repeated instructions to reduce the mortality rate at all costs and to improve inmate living conditions.
- Large numbers of surviving documents from Auschwitz – the “death camp” par excellence – describe the medical care provided to keep the Jews alive who were allegedly destined for death.
- In ‘proof’ of the exterminations in the eastern camps, orthodox historians can produce only ‘eyewitness’ testimonies and ‘confessions,’ which are qualitatively no better than the corresponding but discredited testimonies and ‘confessions’ from the western camps. There is no discernible reason why the ‘confession’ by Auschwitz Commandant Rudolf

¹²⁷ J. Graf, C. Mattogno, *op. cit.* (note 84), p. 182.

¹²⁸ B. Kautsky, *op. cit.* (note 65), pp. 272f.

Höß relating to the gassing of 2.5 million people by November 1943 in Auschwitz alone¹²⁹ should be any more credible than that of Mauthausen Commandant Franz Ziereis relating to the gassing of one to one and a half million people at Hartheim Castle.

- Orthodox historians are unable to explain why Jewish inmates who were allegedly destined for extermination were, in many cases, transferred from one camp to another without succumbing to extermination; or why Benedikt Kautsky, who, as a left-wing Socialist and Jew was doubly marked for extermination, survived Dachau, Buchenwald, Auschwitz, and, once again, Buchenwald; or why Israel Gutman, later co-editor of the *Encyclopedia of the Holocaust*, survived not only the “extermination camps” of Majdanek and Auschwitz but the “ordinary concentration camps” of Mauthausen and Gunskirchen as well,¹³⁰ or why the Polish Jew Samuel Zylbersztain survived to write a report titled *Memoirs of an Inmate of Ten Camps*, describing his experiences in Majdanek, Auschwitz, and eight (!) other concentration camps.¹³¹
- Orthodox historians must be deeply embarrassed by the release of 20,000 inmates from Majdanek “extermination camp,” each one of whom must have been a witness to the cruelty of the “mass exterminations,” if any such exterminations ever took place there; or by the fact that the National Socialists released large numbers of inmates from Auschwitz in the summer of 1944, in the midst of the alleged extermination of the Hungarian Jews. They cannot explain either why the Germans, during their withdrawal from Auschwitz-Birkenau, left 4,299 inmates behind, almost all of them Jewish, each of whom would have been an accuser of the Third Reich, if the orthodox narrative of Auschwitz squared with the historical facts.

In short: orthodox historiography of the National-Socialist concentration camps lies in shambles.

6.2. Break with Civilization?

Orthodox historians and journalists incessantly invoke the alleged “break with civilization” (“*Zivilisationsbruch*”) represented by National-Socialist concentration camps generally, and Auschwitz in particular. The alleged “break with civilization” was also mentioned by *Spiegel* editor Fritjof Meyer in his article on the number of Auschwitz victims.¹³² In his reply to Meyer, Germar Rudolf raised the question of whether the existence, at Auschwitz, of choir groups, orchestras, kindergartens, a dental clinic, a large kitchen, a microwave delousing facility, a swimming pool, and a soccer field truly represents a “break with civilization.”¹³³

After the war, Jewish professor of medicine Marc Klein had the following to say, among other things, about his imprisonment at Auschwitz:¹³⁴

“To the loud applause of the viewers, football, basketball and water ball games were held on Sunday afternoon: men need very little to distract them from the threat of danger! The SS administration allowed the prisoners regular pleasures, even on weekdays. The prisoners were shown Nazi newsreels and sentimental films in a cinema, in addition to which a saucy cabaret put on shows which were often viewed by SS men. Finally, there was a

“L’appel avait lieu à onze heures, puis c’était le repos. Le dimanche après-midi, il y avait des séances de football, de basket-ball, de water-polo sous les acclamations bruyantes des spectateurs ; il faut extrêmement peu de choses à l’homme pour le distraire des dangers les plus immédiats ! L’administration SS avait permis des distractions régulières pour les détenus, même les jours de semaine. Un cinéma projetait des actualités nazies et des films sentimentaux, et un cabaret fort prisé donnait des représentations fréquentées souvent par les autorités SS. Enfin, il existait un orchestre très honorable, composé au début uniquement de musiciens polonais et remplacé ultérieurement par une nouvelle équipe de haute classe composée de musiciens de toutes nationalités, en majorité juifs.”

very respectable orchestra initially composed exclusively of Polish musicians, but replaced, over time, by a team of first-class musicians of all nationalities, mostly Jews.”

A “break with civilization”? Anyone who reads James Bacque’s documentation *Other Losses*,¹³⁵ in which he describes the manner in which Eisenhower’s soldiers allowed German soldiers after the war to die miserably by the hundreds of thousands in camps without any infrastructure of any kind, without barracks, without medical care, totally exposed to rain and cold weather, dying of starvation because they were deliberately deprived of food – food which was available in large quantities – must wonder whether the “break with civilization” was, in actual fact, a German phenomenon, or whether, on the contrary, it occurred as the result of the actions of quite other people.

Microwave Delousing and Gastight Doors at Auschwitz

WILLY WALLWEY

1. Introduction

In 1992 the Moscow Central Archives made its holdings publicly accessible.¹ These include the – evidently not entirely complete – correspondence of the Central Construction Office of the Waffen SS and Police of Auschwitz – some 83,000 documents.² This Construction Office was in charge of all matters relating to construction in the concentration and prisoner-of-war camps in the environs of Auschwitz. Auschwitz-Birkenau, the infamous camp belonging to this complex and generally described today as “concentration and extermination camp,” was designed and built by this Central Construction Office as a “prisoner-of-war camp.” Construction began in late 1941. Work proceeded as per a blueprint of the Special Construction Office of Auschwitz, dated October 7, 1941.³ Construction Sector Ia was completed in March 1942, and housed prisoners of war until August 1942. The designation of the camp was retained. A renaming does not become apparent until mid-April 1944, as of when the term “*KL-Auschwitz, Lager II*” (Auschwitz Concentration Camp, Camp II) was also used.

Up to early 1998, only a tiny fraction of the holdings of this archive had been tapped by three researchers, and a non-objective choice of documents on their part is obvious.⁴ Since early 1998, a series of well-researched articles on a range of issues of the Auschwitz Camp appeared in revisionist periodicals,⁵ and a comprehensive monograph on the organization,

¹ This archive underwent several name changes since 1991. It is now called *Rossiski Gosudarstvenni Vojenni Archiv (RGVA)*, Viborskaja ult 3, Moscow.

responsibilities and activities of the Central Construction Office was presented by Carlo Mattogno in the summer of 1998,⁶ followed by many more monographs addressing individual issues of the history of the Auschwitz Camp.⁷ Two especially interesting findings resulting from a study of the Moscow archives will be summarized in the following.

2. Shortwave Delousing Facilities in Auschwitz⁸

2.1. Introduction

A new discovery of immense significance is one about which Jean-Claude Pressac reports in his second book: the VHF delousing facilities.⁹

These facilities were actually used with phenomenal success, and not only in Auschwitz and Birkenau. It is only astonishing that to date neither the deloused nor the delousing inmates nor any of the supervisory personnel have reported about these facilities that were present in both Auschwitz Camps, as well as in other camps!

The high-frequency technique used here for the first time was far superior to all other delousing methods known at that time. Not only did it kill the lice and their nits, it also destroyed the bacteria that caused typhus – as small-scale tests performed by the manufacturer showed. The facilities were developed by the firm Siemens-Schuckertwerke in Berlin; preliminary tests were conducted in 1939.

In rather oversimplified terms, the microwave appliances used in almost every household today are the next generation. Only recently, on November 2, 1996, the German press¹⁰ reported that the Göttingen Institute for Agricultural Technology had developed a procedure for sterilizing foods that “utilizes microwave energy and steam” – exactly the procedure described in the documents at hand, but 55 years later.

The significance of this discovery is heightened when we consider that 55 years lie between the development of these facilities and our first knowledge of their use in those days – for this is how long the documents we speak of have been held under lock and key. This discovery confirms with great emphasis that, during the 1990s, research about Auschwitz was yet in its beginning stages.

Before I discuss the significance of the microwave technology,¹¹ I will give an overview of disinfestation and disinfection as a whole, with special attention paid to Auschwitz. I have at my disposal archival documents that permit a complete analysis. This goes equally for the technical, the medical and the organizational aspects.

2.2. Danger of Epidemics

I assume as known that in wars throughout history, for example during the U.S. Civil War, epidemics caused more deaths among soldiers and civilians alike than did the use of weapons. It took the atomic bomb, deployed in ruthless and criminal manner by the United States against unarmed people and in contravention of international laws, to locally change this aspect of war in two cases.

The epidemic most feared at the eastern front in World War I was typhus.¹² Since that war – in which this epidemic claimed uncounted thousands of lives among German soldiers at the Russian front and could be prevented from spreading into German territory after the end of the war only by the most rigorous measures – the danger of epidemics has been firmly entrenched in the awareness of all medical and military offices and personnel.

For example, the German encyclopedia *Der große Brockhaus*, Vol. 6 of the 1930 Leipzig edition, contains a comprehensive article on typhus and states that this acute infectious disease is spread only by the body louse:¹³

“The disease is caused by Rickettsia prowazeki (discovered in 1910 by Ricketts and in 1913 by Prowazek), a micro-organism found in the intestines and salivary glands of infected lice.” [...]

After a detailed description of the symptoms and the course of the disease, we read there:

“Epidemic typhus occurs chiefly where unfavorable social and sanitary conditions prevail, in dark overcrowded living quarters, hospitals, prisons, emigration ships, caused by crop failures and price increases, thus also known as starvation, hospital, prison, ship or war typhus. Typhus is endemic in Russia, the Balkans, northern Africa, Asia Minor, and Mexico. According to Tarrassevich, 25-30 million people suffered from typhus in Russia in 1918-1921, which amounts to 20-23% of the population. [...]

Successful control and prevention of typhus consists of enforcing all measures available to destroy the body louse.”

Countless publications elaborated the topic further. Practical experiments were also conducted to increase the knowledge of how to successfully control the cause. For example, Dr. G. Peters reports in his work *Hydrogen Cyanide for Pest Control*¹⁴ about the fumigation of ships with hydrogen cyanide, done in the United States as early as 1910, and about tunnel facilities which entire railway trains could enter to be disinfested. Thus, it is no surprise that Peters also mentions the quantity of hydrogen cyanide (HCN) that is lethal when absorbed by humans. Therefore, Pressac's claim¹⁵ that the lethal dose was not known is completely false. It was also already a known fact in those days that HCN could be absorbed via the skin.

Professor Dr. F. Konrich was completely justified in stating in his article “On the Sanitation Facilities of the German PoW Camps”¹⁶ that epidemics such as those in question “had long been extinct here [in Germany].” However, it also becomes quite understandable why all offices and institutions involved **over-reacted** totally when a typhus epidemic developed in the Auschwitz Camp starting in early 1942, brought in from outside by civilian laborers.¹⁷ The spreading of the epidemic to the camp's environs, *i.e.*, to the civilian population, had to be prevented.

¹² Although caused by different bacteria, typhus and spotted fever (sometimes called typhoid fever) are frequently confused because they cause similar symptoms (and have similar names).

¹³ The *Brockhaus* encyclopedia refers to the article by A. Schittenhelm, “Flecktyphus” in: Gustav von Bergmann, Konrad Bingold, Leo Mohr, *Handbuch der Inneren Medizin*, Bd. 1: *Infektionskrankheiten*, 2. Auflage, Springer, Berlin 1925.

2.3. Epidemic Control

2.3.1. Terminology Used

I will use the technical terms established in the 1939 Army Regulations (*Heeresdienstvorschrift*) 194,¹⁸ since these determined how the personnel, *i.e.*, the physicians and those who disinfected the camps, were to proceed:

“Disinfection

Disinfection means [...]: destroying the disease-(epidemic-)causing agents on objects, in rooms, in excretions and on the bodies of infectious persons.

Disinfestation

Disinfestation means: ridding rooms, objects and people of vermin (small life forms) that can transmit pathogens, cause economic damage or annoy man.”

The regulation quoted lists all physical and chemical means of disinfection and disinfestation that were known. Similarly, a “work guideline” was released in 1943 by the Sanitation Institute of the Waffen SS: “Entkeimung, Entseuchung und Entwesung” (Sterilization, Disinfection and Disinfestation).¹⁹

The authority in charge of sanitation in the Waffen SS as well as in the concentration camps was the “*Hygieneinstitut der Waffen-SS*”²⁰ (Sanitation Institute of the Waffen SS), established in 1942 in Berlin, which set up a branch office in 1943 in Rajsko near Auschwitz, with its “*Hygienisch-bakteriologischen Untersuchungsstelle Südost d. W-SS*” (Sanitary and Bacteriological Testing Station Southeast of Waffen SS). The files from this testing station have survived (151 volumes dating from 1943 to 1945).² To date I know of approximately 110,000 laboratory tests. Many informative documental facsimiles are reproduced in the *Hefte von Auschwitz*.²¹ It is unfortunate that research generally underestimates the historical value of these books for Holocaust studies.

The garrison physician (army medical officer) and the medical personnel were in charge of implementing all sanitary measures. This physician – and this was the case in Auschwitz as well – was to be consulted as subject expert in all relevant matters of construction planning. Where hydrogen cyanide and T-gas were to be used, requirements even called for specially trained expert personnel. In Auschwitz, this role was filled by the “disinfectors.”

For the time period at issue, Dr. E. Wirths was stationed at Auschwitz on September 9, 1942 as garrison physician. From the records, I can say that he fulfilled his duties correctly, and in this context, I refer particularly to his massive criticism addressed to the highest echelons.

2.3.2. Procedures Used

I will confine my analysis to procedures used in Auschwitz primarily before the outbreak of the first typhus epidemic, since the latter outbreak resulted in considerable changes in the camps. I draw my data from the listing dated January 9(?), 1943: “Sanitary Facilities in the Auschwitz POW and Concentration Camp”²² directed to the head of Office Group C (Berlin), and a “List of Disinfestation Facilities, Baths and Disinfection Apparatus Installed in the Auschwitz POW and Concentration Camp”²³ dated July 30, 1943. All the facilities listed therein were subject to modifications. The number of sanitary facilities increased with the

²⁰ *RGVA* 502-1-26-117.

²¹ *Hefte von Auschwitz*, Vols. 1 to 19 and Special Issues, Verlag Staatliches Auschwitz-Museum, as of 1959.

²² “Hygienische Einrichtungen im KL und KGL Auschwitz,” *RGVA* 502-1-332-46/46a. Since the document is in poor condition and barely legible, we shall dispense with a reproduction of it here.

²³ “Aufstellung über die im KL. und KGL. Auschwitz eingebauten Entwesungsanlagen Bäder und Desinfektionsapparate.” *RGVA* 502-1-332-9/10. This document is also in poor condition; the capacity data are transcribed in my original work, *op. cit.* (Note 8).

number of inmates, as the two aforementioned documents already show. In his first book, on p. 550, Pressac mentions 25 chambers operated with Zyklon B. However, there is no verifiable listing provided.

2.3.3. Results

Results could be reliably assessed only if the total number of people disinfested in these facilities were known. I chose for this analysis a document that is beyond all doubt, from an 18-page report about a September 25, 1942, visit of SS *Obergruppenführer* and General of the Waffen SS Pohl to Auschwitz.²⁴ The report is the typical work of an aide-de-camp. The “overview of total labor expenditure,” contained therein, including “persons unfit to work, and undeployable persons,” ends on Sept. 25, 1942, with a total of 28,207 persons. The calculated capacity of the various parts of the camp is given as follows:²⁵ “preventive detention camp [concentration camp], 15,000” and “camp Birkenau [POW camp], 12,000 men and 18,000 women.” Thus, a total of 45,000 persons.

It is not yet possible to say for certain whether the delousing facilities that were available at that time were consistently adequate for the number of persons stated. In his second book, Pressac sets the peak of the first epidemic “from September 7 to 11,” with “375 deaths per day.”²⁶

2.3.4. Policy Decisions

Two policy decisions made by the SS Main Office Budget and Buildings (*Hauptamt Haushalt und Bauten*) in the Reich Administration of the SS and its successor no doubt also influenced the measures taken in the camp. The first decision of June 5, 1940, stated that HCN would no longer be used, and replaced instead with a hot-air method.²⁷ The second, issued on March 11, 1942, 21 months later, instead called for the “conversion of all delousing facilities to operation with HCN.” Exceptions were only permitted if “the necessary safety during the application of hydrogen cyanide” was not guaranteed.²⁸ A further letter from the Office C VI of February 11, 1943,²⁹ to the commandant then again expressly states, probably with reference to the letter of June 5, 1940: “as per the prohibition against the use of HCN for disinfestation,” which may have referred only to unsafe facilities.

Now, if one puts oneself into the shoes of those in charge of the camps, one gains some idea of the situation that resulted from these decisions. Men in positions of authority who are used to making decisions, who are faced with a dangerous epidemic that could also spread to the civilian population with incalculable consequences, find a way out of this situation, and act on it! Hydrogen cyanide (= Zyklon B) was the most-reliable disinfestation agent at that time.³⁰ It merely had to be made sure of that a safe location or procedure was chosen for such facilities.

2.3.5. The Garrison Physician

The situation did not end with the number of inmates given, nor with only one epidemic. Therefore, I will briefly summarize by means of examples which conclusions this physician came to and what steps he took.

²⁴ RGVA 502-1-19-86/103.

²⁵ RGVA 502-1-19-86.

²⁶ J.-C. Pressac, *op. cit.* (Note 3), p. 157.

²⁷ RGVA 502-1-333-145.

²⁸ RGVA 502-1-336-94.

²⁹ RGVA 502-1-332-37.

³⁰ For details the reader is referred to: Gerhard Peters und W. Rasch, “Die Blausäure als Entlausungsmittel in Begasungskammern,” *Der praktische Desinfektor*, September 1941, pp. 93-96; Gerhard Peters, E. Wüstinger, “Entlausung mit Zyklon-Blausäure in Kreislauf-Begasungskammern,” *Zeitschrift für hygienische Zoologie und Schädlingsbekämpfung*, 32(10/11) (1940), pp. 191-196; also as a special reprint “Sach-Entlausung in Blausäure-Kammern”. A copy of the latter was sent to the New Construction Office of Auschwitz. RGVA 502-1-332-86/90. Received there on July 3, 1941.

On December 4, 1942, Dr. Wirths reported to headquarters about a discussion held in the administrative council of the Bielitz District.³¹ The subject was typhus. A considerable number and variety of persons had participated in the discussion, from the public medical officer to the *Wehrmacht* to representatives of the government. This shows how seriously the epidemic was taken to be:

“He reports that at present three large disinfestation, shower and sauna facilities could be put into operation, specifically two facilities for the inmates and one for the members of the SS troops. The capacity of these facilities is some 3,000 to 4,000 persons per 24 hours. Zyklon-B disinfestation has been discontinued entirely, since it has been found that success is not 100% certain with this procedure.”

Buildings 5a and 5b were intended for the inmates. The capacity of these disinfestation facilities was probably adequate for the number of inmates at this time. However, their original design – one large hall, open up to the roof – made them unsuitable for Zyklon-B disinfestations.

One must consider, however, that at this same time the structural shell for another 19 highly secure DEGESCH circulation fumigation chambers (normal gas chambers = serial type; cf. the publication *Die kleine Testafibel über Normal-Gaskammern* by Tesch & Stabenow³²) was being completed in Building 160 of the Main Camp (the admissions building). Pressac has called the above term for these disinfestation gas chamber an “incredible error” by Rudolf Jährling, a civilian employee and the Central Construction Office’s official in charge of heating installations.³³ In actual fact, however, it has been shown that it was instead a typical error in judgment by Mr. Pressac. A copy of the publication explaining these gas chambers was sent to the Auschwitz camp authorities; it bears the Auschwitz Construction Office’s date-of-receipt stamp for July 3, 1941.³⁰

Another paragraph of the above letter states that the garrison physician of Kattowitz had provided on loan two mobile boilers. On April 18, 1943, Wirths conveyed to the commandant a warning about the sewer system in Birkenau, and concluded that “[...] great danger of epidemics is inevitable.”³⁴

On May 7, 1943, in a discussion with the chief of Office Group C, SS Brigadier General and Major General of the Waffen-SS engineer Dr. Kammler, and others, the garrison physician set out in section “II. Buildings Under the Charge of the Garrison Physician”:³⁵

“[...] that the continued health of the inmates for the major tasks is not guaranteed, due to the poor toilet conditions, an inadequate sewer system, the lack of hospital barracks and separate latrines for the sick, and the lack of washing, bathing and disinfestation facilities.”

Dr. Wirths clearly pointed out the inadequacies, and also how to rectify them.

At this point I must warn any reader incompletely aware of the historical context not to jump to false conclusions. The reader may well lack an understanding of all the problems that were involved in obtaining materials as well as all the other necessities required to build these facilities in wartime. For every brick – figuratively speaking – it was necessary to obtain permission for purchase. I must also point out that a sewer system of any kind at all was already highly advanced in those days, and this goes all the more for sewage-treatment facilities, which were built for both camps with a great investment of resources and in a technically exemplary fashion.

The document last quoted continues:

“The Brigadier General acknowledges the foremost urgency of these matters and promises to do everything possible to ensure rectification of the shortcomings. He is somewhat surprised, however, that on the one hand the physicians presented him with reports giving a very favorable account of the sanitary and hygienic conditions, and on the

³¹ RGVA 502-1-332-117/119.

³² As quoted by W. Dötzer, *op. cit.* (Note 19).

³³ J.-C. Pressac, *op. cit.* (Note 3), p. 114; cf. Mattogno, “Auschwitz: The End of a Legend,” in G. Rudolf (ed.), *Auschwitz: Plain Facts*, 2nd ed., Castle Hill Publishers, Uckfield 2016, pp. 179f.

³⁴ RGVA 502-1-332-219.

³⁵ “II. Bauten in Zuständigkeit des Standortarztes,” RGVA 502-1-233-33/38.

other hand he is then immediately confronted with reports to the exact opposite effect. The head of the Central Construction Office is hereby instructed to present suggestions for rectification of the problems raised by May 15, 1943.” (Emphasis added)

Given the widespread disinformation, I consider it appropriate to also speak of the physicians of Auschwitz themselves, that is, of their tasks and activities, based on the files in my possession. From a physician who spent a brief time reviewing the files reposing in the Auschwitz Archive, I am aware of the bulk of these holdings. In his words: “A gigantic amount.” For example, the infirmary records are preserved in their entirety up to 1943.

The garrison physician of Auschwitz took care of everything that was his job, and much more. I will thus mention only a few particulars that relate to our present topic. It began with the toilet facilities; here he enforced changes which he considered necessary. For example: lids on the toilets, because otherwise “a great danger of epidemics is inevitable.”³⁶ These lids were ordered by the head of Office C of the WVHA (Economic Administrative Main Office) on May 10, 1943.³⁷ It ended with roofing matters related to the Gypsy kindergarten:³⁸

“For the damaged roofs of kindergarten Blocks 29 and 31 in the Gypsy Camp I request 100 rolls of roofing felt (very urgent.)”

In between, on May 28, 1943,³⁹ he selected six circulating-air delousing facilities which – as was noted down by hand – were ordered on May 29, 1943, by the Construction Office’s expert on heating technology, Jährling. Then there is an account of a water-quality test on June 1, 1943,⁴⁰ etc. This extensive correspondence resulted in separate subject files in the filing system of the Central Construction Office, such as “Sanitary Conditions.”⁴¹

The physician’s field of work was great and varied indeed. Even ensuring that the inmates’ kitchen personnel be frequently examined – including laboratory tests of their stool, etc. – was part of his job. Dr. Wirths truly saw to absolutely everything! This is evident from the documents.

One comment made by Pressac strikes me as highly important; he concludes from Dr. Wirths’s “unsparing report on the insufficient possibilities for disinfestations” that “the terms ‘*Sondermaßnahme*’ and ‘*Sonderbaumaßnahmen*’ [special measures and special construction measures] [...] were not used in a criminal context [...]”⁴² Evidently Pressac has realized that the German prefix ‘Sonder-’ [special] has no negative connotations whatsoever – rather the opposite. The garrison physician’s reminders and admonitions even increased over time. I will return to this later.

On balance, one must conclude that, just as today, while there were “opportunists” and “careerists” in those days, there were also – as my example shows – SS men with backbone and a sense of duty, professional ethics and the courage to stand up for their beliefs.

At the end of the comments section of the memorandum of May 9, 1943, we find:

“As stop-gap measure until that time, the Brigadier General provides the loan of a new microwave delousing train.” (Emphasis added.)

2.4. Microwave Delousing Facilities

2.4.1. Development History

Together with the Siemens-Reiniger Werke AG, which developed medical instruments, the Siemens-Schuckertwerke GmbH (henceforth called SSW) developed the microwave facilities when the outbreak of the war accentuated the importance of pest extermination. At that time, the German eastern border was also the border for lice and fleas and other vermin. This new means of combating pests was directed first and foremost at lice as the carriers of typhus. The aim was, on the one hand, to improve upon the long exposure times necessary for

³⁶ RGVA 502-1-322-219.

Illustrations 1 and 2: Plan sketches of the building that was to house the microwave delousing facility.

hot-air or gas methods, and on the other hand, to find a means that would also kill off the typhus microbes, as well as to improve efficiency.

Together with the Reich Biology Institute in Dahlem, led by Professor Dr. Hase, SSW conducted successful tests in the high-frequency field of a microwave transmitter. In operating the transmitter that had broadcast the 1936 Olympic Games, it had already been established that microwave frequencies had previously unknown effects on insects. These tests were then demonstrated to civilian and military authorities. Soon the advantages of these new devices over the ones used previously became apparent. Once considerable difficulties had been overcome, these devices achieved not only a great throughput in a very short treatment time, but also absolute certainty in killing off lice and nits. The pests were dead only one to two seconds after the microwave field was activated. What was more, the typhus bacteria could also be killed in the process. The suitability of these facilities for large camps aroused the interest of the *Reichsführung* of the SS.

Many different kinds of camps grew up in the course of the war. Today, particularly maps in Polish books⁴³ show the large number of these camps (5,877) in what used to be the “General Government.” These were not all concentration camps. There were considerably more labor camps and others. Next to almost every larger factory there was a “guest or foreign workers’ camp.” However, here is not the place to go into greater detail on this topic. Large sectors of German industry, for example, were transferred into areas which, for the time, were not accessible to the bomber planes of Germany’s enemies. Industries essential to the war effort were not moved underground until later. I refer the reader to the immensely informative book *Siemens 1918-1945*.⁴⁴ A detailed, information-packed and relevant reference section is included. On page 168, for example, we read:

“On May 31, 1944, 7.126 million foreign workers were employed on the territory of the Reich; by fall the number had risen to about 7.7 million.”

In *Heft von Auschwitz* Issue 14,⁴⁵ other camps are also named:

“In 1943 there were more than a dozen secondary camps in Gliwice [Gleiwitz], and in Upper Silesia there were more than 225 camps for inmates, prisoners of war and forced laborers.”

⁴³ Główna Komisja Badania Zbrodni Hitlerowskich w Polsce (ed.), *Obozy hitlerowskie na ziemiach polskich 1939-1945*, Państwowe Wydawnictwo Naukowe, Warsaw 1979 (Encyclopedia).

⁴⁴ Wilfried Feldenkirchen, *Siemens 1918-1945*, R. Piper GmbH & Co. KG, Munich 1995.

⁴⁵ *Heft von Auschwitz*, No. 14, Verlag Staatliches Museum Auschwitz, 1973.

It took personnel and material support from the *Reichsführung* of the SS to continue developing the high-frequency devices. Interest grew when these developments were demonstrated. Initially, these facilities were supposed to be constructed for the front-line troops; thus, they were to be mobile (on wheels) and capable of delousing the gear of 400 men per hour. As developments progressed, the stationary model was given preference. These were to be set up at troop-reassignment centers. The facilities were to be accessible within a few hours or at most a day.

Illustration 3: Photo of the microwave delousing facility, taken in Auschwitz in 1944.

2.4.2. Orders

The *Wehrmacht* (Army) reluctantly ordered a first device for its own use, although it was never completed. Not so the SS; they ordered five devices to begin with, and after the first mobile one (*“Osten II”*) proved effective in Lublin in 1943, they ordered another five stationary devices. The aforementioned mobile installation fit onto the trailer of a truck manufactured by Dromos-Werke of Leipzig. Operating the installation merely required a 380-volt grid connection or a portable electrical generator.

There is a privately owned film about this facility which was probably filmed in Lublin. Unfortunately, it is not very instructive, as it does not show the interior of the trailer. The main part of the process is the introduction of the clothing bundles sideways into the vehicle on the conveyor belt. To date the owner of the film is reluctant to publish the film because he fears the persecution that might result from granting permission for such an action.

2.4.3. Further Development

In further laboratory experiments about May 1942, it turned out that no metal parts were allowed on the clothing to be treated – just as today in microwave ovens. It was confirmed that, with a treatment time of 30 to 40 seconds, killing all bacteria was possible. It was also recognized that a light moistening of clothing was useful.

The first mobile installation *“Osten II”* was developed further into the stationary facility *“Osten III”* for the Auschwitz Main Camp. In late spring of 1944, this device was installed in the building intended for it, the inmate-reception building in the Main Camp (*Bauwerk 160*), which was under construction at that time. Initially 19 Zyklon B delousing chambers were supposed to be installed in this building, but this never happened – perhaps as a result of the development of the microwave facilities. Instead, while retaining the function of the rest of the building, the microwave facility was planned for installation in four of the 19 chambers (Illustration 1).⁴⁶ Only a short time later, the plans were expanded, that is, modified to stretch over eight chambers⁴⁷ (Illustration 2, previous page). I even have a photo of the microwave facility that was in service (Illustration 3),⁴⁸ as well as the installation plan for the facility itself. I also have the further planning documents, including mass calculations and detail plans. Fifteen inmates were put to work operating the disinfestation facility. A temporary heating system also had to be built in order to operate the already existing shower installation.

⁴⁶ RGVA 502-2-146.

⁴⁷ RGVA 502-2-149.

⁴⁸ Siemens archives, Munich. We thank an alert reader of *VffG* for discovering these valuable documents.

2.4.4. Method of Operation

The louse-infested clothing was dampened slightly with a spray-gun. A photo shows this process as it was performed in Auschwitz.⁴⁸ Then the bagged clothing was piled into bundles of 12 × 40 cm in cross-section and placed on transport belts, which carried it through the high-frequency generator's capacitor field. The capacity was 400 kilograms of clothing per hour.

2.4.5. Installation

Delivery of the first facility was promised for May 15, 1943.⁴⁹ This probably led to many a planning debacle, for example that other, expensive delousing facilities could not be built or completed because a quick delivery of the microwave facility was expected. Reasons for the delays that occurred may have included SSW's underestimation of the development work that was yet necessary, or the increasing difficulty in obtaining materials, and of course also the destruction of parts of the manufacturing plant in bombing attacks. Only on June 18, 1943, Office C of the WVHA stated additionally that the microwave facilities had been assigned top priority.⁵⁰

In a discussion on June 30, 1943, Dr. Willing of Office C/3 stated that⁵¹

"[...] after a pass through the ultra-shortwave field, which takes 11 to 12 seconds, all vermin as well as bacteria, germs, brood and nits are killed, and given non-stop operation, 13,000 to 15,000 pieces of clothing can be sterilized in one day."

The installation of the mobile unit was carried out between July 16, 1943, (commissioning) and October 21, 1943 (last requisition of materials). The operation is documented right down to virtually the last screw.⁵² The relevant files show not only that the parties involved in Auschwitz made all necessary preparations as quickly as possible, but also – and this is an important point to consider in an overall assessment – that they relied fully on the promises made them, in particular with regard to the time of delivery of the device.

On July 15, 1943, the garrison physician confirmed⁵³ that it had been stated in the discussion of July 1, 1943, that

"[...] the stationary microwave delousing facility will be ready to begin operation in an estimated eight weeks, but that the mobile one will have arrived in the Auschwitz Concentration Camp in three weeks at the latest."

These deadlines were not met. In the listing of July 30, 1943, delivery of both units is announced for "early October."⁵⁴ Further, the hourly capacity of each unit is given as "625 men = 15,000 men" per 24 hours. Thus, the total capacity of both microwave facilities amounted to the clothing of 30,000 persons per day. On August 27, 1943, the construction costs of the stationary facility are given as RM 98,000,⁵⁴ which translates into approximately a million US dollars today. A notice of December 11, 1943⁵⁵ stated that the materials and apparatus had already been received. The installation date for SSW is given as January 16, 1944 at the earliest. Work actually began on February 16, 1944.

A second stationary microwave delousing facility for the Birkenau Camp is first mentioned in March 1944.⁵⁶ In a telex of May 25, 1944, the chief of Office C III ordered that

*"[...] the microwave delousing train be started on the road from Breslau to Auschwitz immediately."*⁵⁷

⁵⁷ RGVA 502-1-333-45.

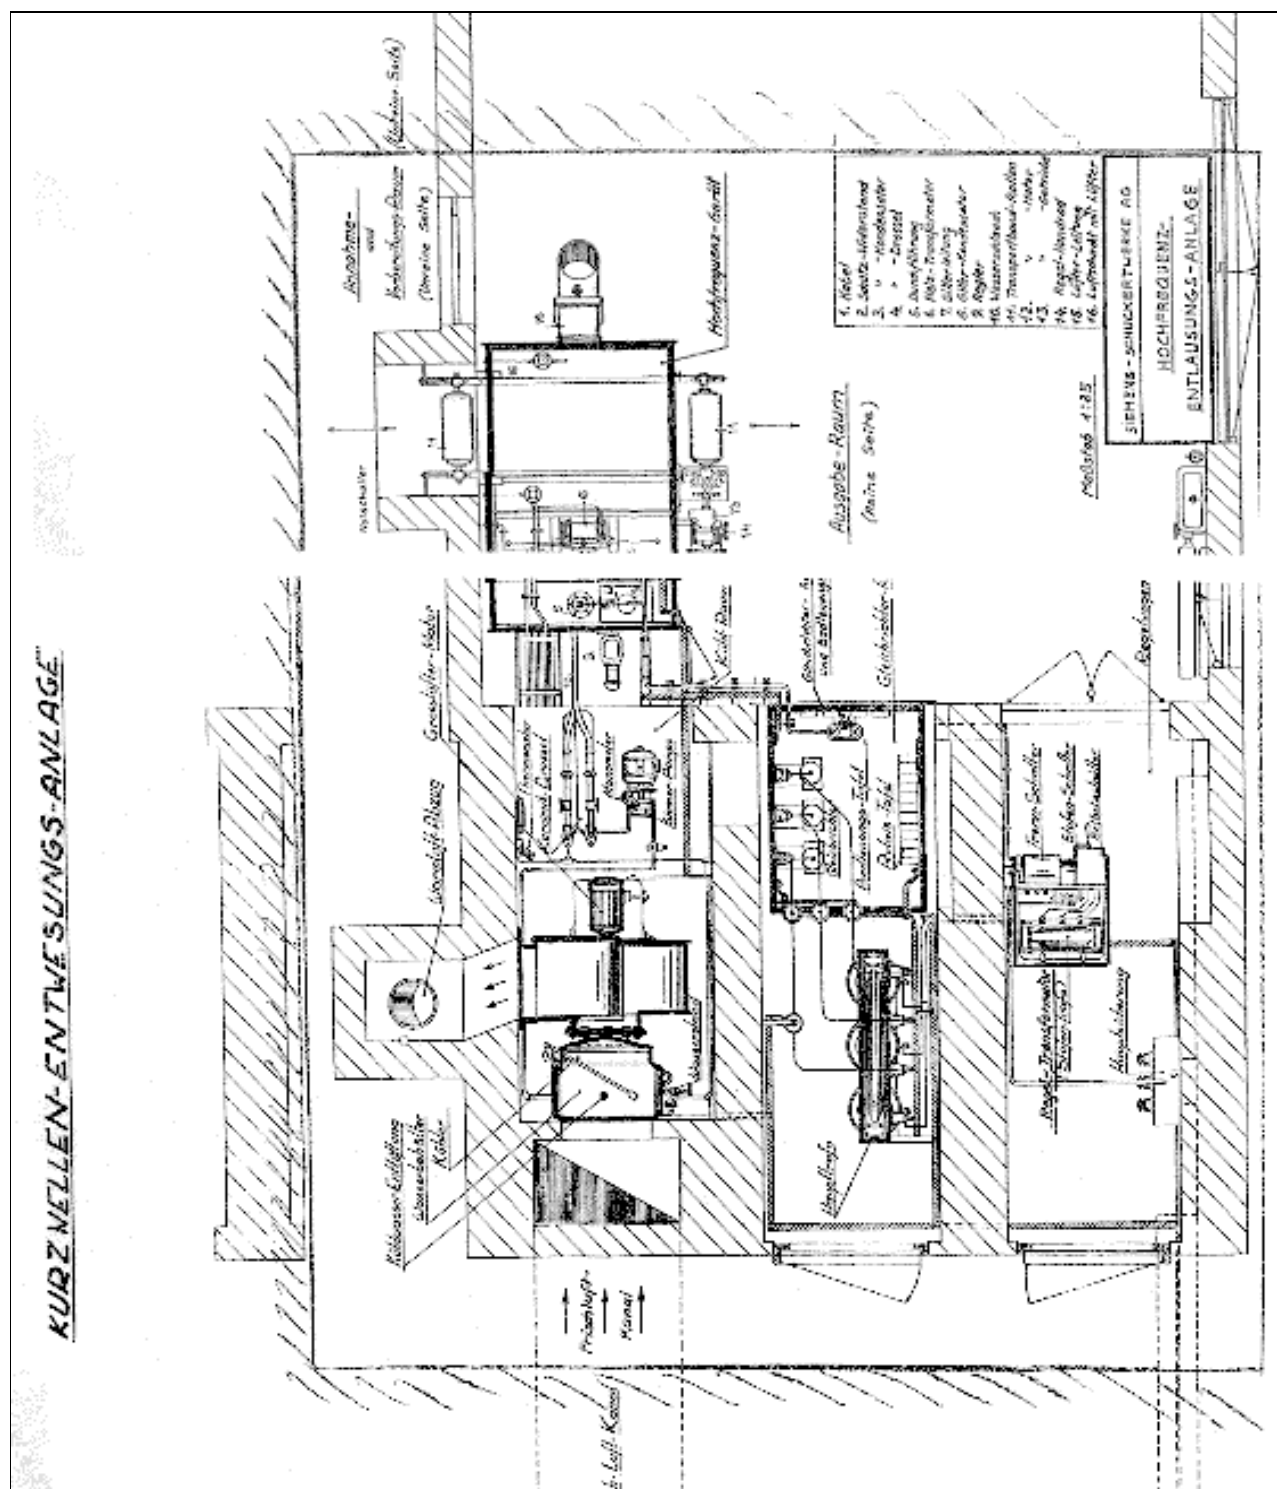

Illustration 4: Construction sketch of the microwave delousing facility by Siemens-Schuckert, from the Second World War. (A section is missing in the middle. Source: Siemens archives, Munich.)

The stationary microwave facility went into operation on June 30, 1944.⁵⁸ On the initiative of the garrison physician, a test of the facility's bacteria-killing effect was performed on July 29, 1944 by Dr. Bruno Weber, the chief of the Waffen SS Sanitation Institute; the results of this test may perhaps repose in Auschwitz in the files held there.

On Aug. 10, 1944, the garrison physician reported to the chief of Office Group C of the SS WVHA "[...] on the effectiveness of the stationary microwave delousing facility."⁵⁹ It had turned out to be sensationally fast, effective and efficient.

On Nov. 7, 1944, the Central Construction Office stated⁶⁰ that

"[...] at that time there was a stationary microwave delousing facility in Concentration Camp I [Auschwitz] and a mobile one in Concentration Camp II [Birkenau]."

According to a detailed report, further developments and modifications were made to the remaining facilities that had been ordered.

2.5. Comparisons

The advantages of the microwave delousing facilities become apparent in a comparison with the other types of procedures. Using the Zyklon B method, treatment of the clothing to be disinfested required at least 70 to 75 minutes (with the DEGESCH circulation device).⁶¹ The Topf hot-air disinfestation furnaces in Building 32 took 60 to 80 minutes.⁶² For the autoclaves, the time requirement was similar.⁶³ In the microwave facilities, on the other hand, 11 to 12 seconds sufficed to even kill the bacteria.⁶⁴

Installation of all the disinfestation facilities in Building 32 cost RM 153,000.⁶⁵ The microwave facilities in Building 160, on the other hand, cost RM 75,000.⁶⁶

Thus, the planning goals of the developer companies Siemens had been fully realized. Aside from that, construction costs for new buildings dropped as well, since the microwave facilities required less space. The same went also for installation in existing buildings, of course.

2.6. Summary

Evidence that has been missing for almost 50 years – the files on the microwave delousing facilities of Auschwitz – has been rediscovered in the shape of plans and documents, even in photos and a film. They are not only proof that serious efforts were made to rid the camp of epidemics, and thus to keep the inmates healthy. Their far-greater significance is that they show that the inmates were so important to the Third Reich that they were given preference and priority status with regard to these new and better disinfestation facilities. The German front-line soldiers and the German civilians never enjoyed this life-saving technology – a fact that cannot possibly be overestimated. This fact is of a similar importance as the order of Dr. Mrugowsky, head of the *Hygiene-Institut der Waffen-SS*, from August 8, 1943 to all SS departments and to the committee for disinfestation and epidemic control within the *Reichsministerium* for Armament and Ammunition:⁶⁷

"In future times, hydrogen cyanide may only be provided in cases of a severe danger of typhus epidemics. According to previous experiences, this is only the case in concentration camps. Thus, in future times, hydrogen cyanide may only be applied for the fumigation of huts in concentration camps."

⁵⁸ RGVA 502-1-333-7.

⁶⁶ RGVA 502-1-333-84.

⁶⁷ Hessisches Hauptstaatsarchiv Wiesbaden, 36342-5; quoted according to Jürgen Kalthoff, Martin Werner, *Die Händler des Zyklon B: Tesch & Stabenow. Eine Firmengeschichte zwischen Hamburg und Auschwitz*, VSA-Verlag, Hamburg 1998, p. 124.

Furthermore, the 83,000 documents in the Moscow archives contain not so much as one proof of the alleged “self-evident” mass murder, and as far as I know, no publication to the contrary has appeared in the meantime either. This leads to one central question: given the acute shortage of labor in the armaments industry, who could have benefited from the deliberate murder of even a single inmate? Does anyone seriously believe that this would have been tolerated? Any such murderers would have been hauled into court at least for “subversion of the war effort” or for “sabotage.” Pressac has neglected to this date to address this question. No historian has yet answered it either.

Similarly, another central question is also still open: why was a construction proposal submitted, on Sept. 30, 1943, to the tune of RM 32,200,000 for Birkenau alone, if the intent was to kill the inmates?⁶⁸ In today’s currency (1 RM had approximate purchasing power parity with 10 US Dollars today) the estimated construction costs amount to \$322,000,000 – that is about a third of a billion US Dollars. Construction and the attendant spending proceeded as planned – the documents prove this.

I am painfully aware that the entire microwave-delousing topic points to some of the SS plans and actions as being utterly humane, thus opening me to the legal charge in Germany of *Verharmlosung* (trivialization) of the SS – a wholly evil organization according to the Nuremberg show trials. But a scientific accounting of history about Auschwitz compels my work – rather than politically correct acceptance in the Berlin salon *Kaffeeklatsch*.

3. “Gas-Tight” Doors in Auschwitz⁶⁹

3.1. The Cause for This Investigation

The word *gas* alone takes on a sinister overtone as soon as it is used in the context of *Auschwitz*. This “psychology of horror” is precisely what is often used to escalate harmless terms which appear in the correspondence of the Central Construction Office of the Auschwitz Concentration Camp, into purported evidence for the mass murder. The ordering and installation of actually or even only allegedly gas-tight doors in buildings of the Auschwitz-Birkenau Camp plays a central role in this. From the fact that the term “gas-tight door” appears in various documents from the Central Construction Office of Auschwitz, the orthodox subject literature has drawn the – untenable – conclusion (frequently without bringing any further proofs) that these occurrences are evidence for the construction of execution gas chambers. In fact, however, the documents in question not only supply no indication whatsoever for the existence of such chambers, as shall be shown in the following. They also usually indicate that these doors were used, or were to be used, for a completely different purpose, namely to seal delousing gas chambers. To date there has also been no examination of whether the doors used in Auschwitz were in fact *gas-tight* doors in the technical sense, *i.e.*, doors suited to hermetical sealing for purposes of absolutely locking poisonous gases in or out. In the following, this omission shall be rectified.

3.2. The Task

Let me say at the outset that there were indisputably gas chambers in Auschwitz which were used for the eradication of vermin and in which Zyklon B was used. These rooms were also called “gas chambers” on the building plans, for example the extensions of Buildings (*Bauwerk*, BW) 5a and 5b in Construction Sector (*Bauabschnitt*, BA) 1.

What is disputed, however, is that there were any such rooms for the gassing, *i.e.*, killing of human beings. To this day there is no material evidence for this claim. Pressac believed that he had discovered “criminal traces,” which he tried to promote as circumstantial evidence – an attempt which, however, failed and must perforce continue to fail, simply because he has no proof. I will return to this.

A discussion of witness statements is beyond the scope of my present investigation since they do not affect my topic. Furthermore, they differ too much from each other and contain

⁶⁸ RGVA 502-1-238-10.

⁶⁹ This is an abbreviated version of my original article under the pen names Hans Jürgen Nowak and Werner Rademacher, “‘Gasdichte’ Türen in Auschwitz,” *VffG* 2(4) (1998), pp. 248-260.

no irrefutable evidence or indisputable documents. It is thus logically consistent to question the veracity of their contents. Therefore, since there is no evidence, I consider these “execution gas chambers” as merely claimed – until and unless the evidential situation changes.

Before the Second World War, there were practically no problems with lice or fleas among the civilian population of the German Reich. But the situation was very different beyond the eastern border of the Reich, for example in Poland, into which, as is known, the German *Wehrmacht* advanced in late summer 1939.

It no doubt makes sense that vermin were to be found wherever many people lived in camps or in poor sanitary conditions. “Polish conditions” was a catchphrase in those days! I mention this here only to indicate how first-hand experience influenced people’s thinking back then. Very many persons were still living in those days who had relevant experience from World War I in combating vermin. Back then, physicians and administrations had at their disposal extensive first-hand reports about the sanitary conditions in eastern Europe.

3.3. Development of the Delousing Facilities

The following brief summary shall also clarify where, how many, and when gas-tight doors were called for. After the arrival of the first 30 inmates in the Auschwitz Concentration Camp (Main Camp) on May 20, 1940, there were evidently no major problems as regards delousing.⁷⁰ In the following, I list the delousing facilities that existed at that time.

One hot-air delousing facility (manufactured by Topf and Sons) was installed in Building BW 1 L in the fall of 1940.⁷¹ It remained in service until it was damaged by fire on Nov. 5, 1942.⁷² According to a listing of July 30, 1943, it was restored (manufacturer Klein) and equipped as before.⁷³ The facility conformed to a June 5, 1940, order of the *Reichsführer SS*.⁷⁴

“[...] henceforth no HCN, but rather hot-air delousing facilities, are to be built. (Chief of Army Weapons and Commander of the Reserves.) These facilities are to be installed in extant buildings.”

In Crematorium I, the first double-muffle cremation furnace was completed on July 25, 1940, the second on Feb. 22, 1941, and the third on May 30, 1942. With these three furnaces, and given the maximum possible duration of operation (20 hours a day), the daily crematoria capacity was 120 corpses – as shown by the double-checked, correct calculations performed by Mattogno.⁷⁵ The chimney sustained damage due to overheating, since it was probably not designed to serve 3 cremation furnaces.⁷⁶

On July 3, 1941, the Construction Office received articles regarding the delousing of material objects with hydrogen-cyanide and circulation-fumigation chambers (serial production), relating to the planning of Building 160, the future inmate-reception building with delousing and laundry facilities for the concentration camp.⁷⁷

In a circular of March 11, 1942, the WVHA changed its position on hydrogen cyanide.⁷⁸ It maintained its position that hot-air facilities were to be used everywhere where the use of hydrogen cyanide was too dangerous. The statement of principle, however, follows:

“The goal is the conversion of all delousing facilities to operation with HCN.”

Two further hot-air delousing facilities were ordered by the garrison physician on May 19, 1942. The order to the manufacturer Hochheim was confirmed on June 29, 1942.⁷⁹ This exchange proves one more time that matters relating to delousing were part of the garrison physician’s duties.⁸⁰

In the summer of 1942 the first “chamber for hydrogen-cyanide gassings,” Building 28, came into service in an old building of the Personal Effects Depot Kanada 1.⁸¹ One advantage of these chambers was that heat-sensitive objects that had to be deloused were treated without heat.

On July 1, 1942, a sergeant from the gendarmerie of Auschwitz arrived and closed off the construction firms’ civilian laborers’ camp due to typhus.⁸¹ As the voluminous correspondence in my archive confirms, this event caused great commotion among all offices and authorities involved: from the state, the *Wehrmacht* and the SS. It was deemed possible that the epidemic could spread to the camp and the civilian population, with immeasurable consequences for, among other things, the numerous armaments factories in Silesia. The files at hand from the RGV Archives prove unambiguously that the subsequent re-designing of the Birkenau Camp and most of all the planning of a much-increased cremation capacity was a consequence of this typhus epidemic.

And just at that critical time, the chimney of Crematorium I was torn down (on June 12), and repairs were not finished until Aug. 8, 1942.⁸² Thus, cremation of victims of the epidemic was not possible during that time.

As a result, a newly revised construction program was immediately drawn up for the Birkenau POW Camp. The file containing the outline of October 28, 1942, and plans was found in the War Archives in Prague, with the additional description “Durchführung der Sonderbehandlung” (Implementation of Special Treatment).⁸³

Within this file, however, only one building is marked with the express and special note “*Sonderbehandlung*” (Special Treatment), namely the disinfestation facility Building 32, later nick-named *Zentralsauna*.¹⁷ To date no one has produced any evidence for the common, though much-disputed claim that in this case “Special Treatment” amounted to killing. Building 32 was first put into operation in the Birkenau POW Camp on January 29, 1944. It housed hot-air delousing facilities pure and simple,⁸⁴ and thus proves the exact opposite of the alleged killing of inmates, namely that “Special Treatment” referred strictly to delousing measures.

Almost at the same time as Building 32, another delousing facility, Building 32a, was built in Construction Sector IIe, also called the Gypsy Camp. It went into service on February 17, 1944, as a hot-air disinfestation facility, but it was heated with electricity.⁸⁵

On July 9, 1942, an offer was received from the company Berninghaus, regarding gas-tight doors; a construction plan was included.⁸⁶ A detailed description and the related plan reveal a type of door construction that differed radically from that of the doors that were otherwise manufactured mostly by inmates at the DAW (Deutsche Ausrüstungswerke), an SS company operating near the camp. The doors were offered for use with the HCN-based DEGESCH circulation-fumigation chambers which were to be installed in the delousing facility in Building 160. I will return to this matter.

At this point at the latest, the Central Construction Office could see how inadequate the doors were that had been manufactured by the DAW as “gas-tight doors.” They lacked all the characteristics of a truly gas-tight door.

On July 23, 1942, the entire camp area was closed off due to the typhus epidemic that had been introduced through civilian laborers.⁸⁷ Another hot-air delousing facility from the com-

pany Klein was installed in Building 20 L of the Main Camp and came into service in the fall of 1942.⁷¹

However, it took facilities in the Birkenau Camp, which was at that time under construction, to deliver a noticeable relief of the situation. In Birkenau, Section a of Construction Sector 1 was finished in March 1942, and Section b in August 1942. These sections each contained a large delousing facility, each with one hot-air installation from the Hochheim Company, one disinfection apparatus by the Werner Company, and one sauna facility.⁷¹ A chamber to be used for HCN fumigation was attached to both. The buildings with the official designation Building 5a and 5b came into service in November and December 1942, respectively. Further, a facility with a hot-air apparatus from the Hochheim Company, and a disinfection apparatus from the Goedicker Company was put into operation in January 1943 to service the civilian laborers.⁷¹

3.4. Undisputed, Allegedly Gas-Tight Doors

Since air-tight and heat-insulating doors were also needed for the hot-air facilities, I assume that the doors were of more or less the same construction. I will summarize for which facilities gas-tight doors were required (as per the documents from January 9, 1943,⁷¹ to July 30, 1943):⁷³

3.4.1. Auschwitz Concentration Camp

- a. Block 3, upper story: (probably) 2 inside doors
- b. Personal-Effects Depot Kanada 1: (probably) 1 inside door and 1 outside door

3.4.2. POW Camp Birkenau

- a. Building 5a: 4 inside doors, double-leaf as per plans
- b. Building 5b: 4 inside doors, double-leaf as per plans

Total: 12 doors.

3.5. Disputed, Allegedly Gas-Tight Doors

I do not intend to discuss here why I question that there were rooms for the alleged gassing of human beings in the buildings described in the following. The fact is that to this date, Pressac and other orthodox scholars have not offered any verifiable material evidence for the alleged existence of execution gas chambers. On the contrary, Pressac even refutes some of the eyewitness testimony he himself has presented. In addition, the published eyewitness statements which Pressac relies on heavily are so unbelievable and abstruse that even persons with no special subject knowledge can easily recognize that they are false. In many cases, all it takes are simple calculations based on logical deductions.⁸⁸

From my various studies, the general question arose whether there was even a single, truly gas-tight door in the Auschwitz Camps that could meet the necessary criteria. Only this question I want to clarify below.

Let us look first at the controversial claims which Jean-Claude Pressac makes with regard to gas-tight doors.⁸⁹

3.5.1. Auschwitz Concentration Camp

- a. Building 160, admissions building: 38 inside doors, as per plan.

3.5.2. POW Camp Birkenau

- a. Building 30, Crematorium II: 1 inside door, possibly double-leaf
- b. Building 30a, Crematorium III: 1 inside door, possibly double-leaf

⁸⁸ For a critique of some of the most important testimonies on the claimed homicidal gassings at Auschwitz see J. Graf, *Auschwitz: Eyewitness Reports and Perpetrator Confessions of the Holocaust. 30 Gas-Chamber Witnesses Scrutinized*, Castle Hill Publishers, Uckfield 2019.

⁸⁹ Jean-Claude Pressac, *op. cit.* (Note 15), pp. 161-171.

- c. Building 30b, Crematorium IV: 3 inside doors, 2 outside doors, 7 windows
- d. Building 30c, Crematorium V: 3 inside doors, 2 outside doors, 7 windows

3.6. Alleged Evidence for Gas-Tight Doors and Windows

Aside from verbal statements which are of no value as evidence since they are clearly based on wishful thinking, the pharmacist J.-C. Pressac – and other orthodox authors as well – offer the following documentation:

3.6.1. Photos of Construction Parts

In his first book, Pressac repeatedly shows photos of doors and windows that have been removed from their original locations but are allegedly supposed to correspond with those I have listed in the previous.⁸⁹ I will get back to this with regard to specifically quoted illustrations.

3.6.2. Construction plans allegedly showing merely the location of construction parts

Since Pressac presents a jumble of plans which in part are also repetitions or preliminary versions of the final plans, I will proceed similarly in this case.

3.6.3. Documents containing the word “gas” in some form or another

This includes particularly those documents which Pressac described as “39 criminal traces” in his Chapter 8. Again, I will go into detail here only where these “traces” are specifically mentioned.

3.7. General Comments on the Alleged Evidence

First, I will remark on the overall terms in question before giving detailed reasons for my position where required. Another section will then give specifics regarding buildings and construction parts.

I must mention that only one of our working group has any on-site knowledge of Auschwitz. However, considering that most of the buildings no longer exist and that only a few doors remain *in situ*, this fact matters little, since a detailed examination of the door (which would only be possible by taking it apart) would certainly not be permitted by the Auschwitz Museum anyhow. Yet this is the only way to obtain the information required. Construction parts held in storage cannot provide any information regarding where they were installed more than 50 years ago anyway, unless they have special characteristics making them distinctive and unmistakable.

Of particular interest to us in this context are the “38 gas-tight doors,” allegedly kept in storage. On page 31 of his first book,¹⁵ Pressac tries to give the impression that the 19 HCN-circulation gas chambers in Building 160 had been finished. His brief commentary at this point reveals that he knew neither how these were built nor how they were operated. While he writes:

“The present state of the premises makes it impossible to reconstruct the techniques employed”,

he obviously proceeds on the assumption that there was a “technique.” Since in 1989 he knew nothing of the microwave delousing facilities, Pressac probably assumed that the HCN gas chambers had been finished. That, at least, is indicated by his phrase:

“[...] making it possible to recover 38 gas-tight doors.”

It is typical for Pressac’s style of writing that he constantly tries to infer proof even when there is not the slightest reason for doing so. He feigns knowledge where he doesn’t have a clue. As it has turned out, uninformed readers are not the only ones who fall for this.

The fact is that these DEGESCH chambers were never finished. I will prove this further on with some documents which also show that not one of the 38 gas-tight doors for the chambers in fact even existed.

3.7.1. Comments on Photos in General

No expert is able to judge from photographs whether a construction part such as a door is “gas-tight,” since the proper construction of those parts that are not visible is also important. In the case of doors, this goes, for example, for every screw that was screwed *through* the door leaf. It is commonly known that under conditions of varying humidity and temperature, wooden construction parts warp, due primarily to the ever-changing moisture levels in the wood. It would thus be necessary to know for certain whether, when and how the individual parts were given a waterproof coating, for example. This can be decisive for the wood’s tendency to absorb moisture. However, there is no data about this. It is an even more important factor for outside doors that were or are installed on the south side of buildings, for example. Where there are considerable temperature differences between the inside and the outside, such doors warp considerably. Since none of the doors shown had more than two devices with which they could be pressed against their frames, this was a significant shortcoming.

Ultimately, the photos in question show only one thing: namely that either a window or a door is depicted – not more. Not even the date of the photo can be determined. In the best case, there are some indications as to where a component was installed. If any additional information is available, it will be mentioned.

How great the danger of falsification is in the matter of photo captions is shown by the article “Volksverhetzung? Volksverhetzung!”⁸⁵ (Incitement of the masses).

3.7.2. Comments on Construction Plans in General

An expert cannot assess, on the basis of construction plans, buildings which at the time of assessment have not existed for 50 years, since there is no means for comparison. There are no photos that permit assessment with certainty. Further, the recorded eyewitness statements diverge from each other so extremely that they are useless as evidence. There are even “as-completed drawings” which can be demonstrated with certainty that they do not represent known conditions as completed.

One exception is the delousing facility of Building 160. In his second book,⁸² Pressac reports about new findings regarding microwave delousing facilities. Based on his references, I was able to considerably expand my own files on the subject (see Section 2 of this paper).

3.7.3. Comments on Other Documents in General

From the fact that someone labels or has labeled a construction part as “gas-tight,” one cannot automatically conclude that it really is or was gas-tight. The word merely means that the object was supposed to have this property. A photo showing sufficient detail can give indications for an assessment; the same goes for text documents. However, if there is no description or specification and/or no plan of a construction part, then there is not even a basis for an assessment.

The documents pertaining to the aforementioned stationary microwave delousing facility enable us to draw concrete conclusions, to follow.

3.8. Photos Offered as Evidence

3.8.1. Observations on Photos Shown

All photos cited are from J.-C. Pressac’s first book,¹⁵ and show exclusively construction parts made of wood. Of course, this observation is true also for other publications, insofar as the photos they show exhibit the same characteristics or stem from the same source.

On pp. 28 and 29, Photos 14 through 19 show the outside door of a hot-air delousing facility in Block 1 of the Auschwitz Concentration Camp. This is the only door that can be verifiably assigned to a specific building. Whether this is still the original door cannot be determined. However, it is not part of our topic, unless the assumption could be proven that the construction type corresponds to that of the gas-tight doors. The captions of the photos do not correspond to the undoubtedly genuine documents.^{71,73} One more proof that Pressac

should be read with great caution. I do not wish to suggest that he deliberately sought to increase the number of delousing facilities operated with Zyklon B, merely that he did not have access to the files presently available.

Photos 13 through 18, 21, 22, 23, 25, 26 and 29/30 on pp. 41 to 52, regarding Building 28 in Kanada 1, would seem to indicate that the assumption that the doors were of the same construction type is correct (cf. Illustration 5).

Proceeding from this, the photos show the mountings of such doors. These are: a handle of round iron, two steel straps the width of the door (and bolted through the door leaf!) and on the hinge side supported by blocks lag-screwed into the door frame (this is the construction method for heavy door leaves). At the swing side, these straps are fitted with latches that engage catches made of band steel. The catches have threaded boreholes for securing the latches with a threaded bolt. At the same time, these bolts were supposed to press the door leaf down to its frame gas-tight.

Felt was used as gasket material, as shown by some photos as well as by documents, e.g. the materials inventory of February 24, 1943 (Pressac,¹⁵ p. 444). For this purpose, strips of felt of low elasticity, 7 mm thick and of varying widths, were nailed into the panel and door-frame seams. This is documented by a photo on page 61, and others. There are many other minor details of evidence with which I won't bore my readers, but one more essential point is that not every photo shows whether the necessary 5-cm-high threshold was present on the floor in every case; no door can be sealed gas-tight along the floor without one.

This manner of door construction originated with the war-time provisional air-raid-shelter construction programs.⁹⁰ It is no doubt clear that construction parts not produced to industrial standards would have resulted in inaccuracies.

The alleged windows (or rather shutters) of Crematoria IV and V were of a special type. They were window-sized but had no glass pane, and thus were actually more like tiny doors at window level. The aforementioned details apply by analogy. There is no need to go into specifics.

3.8.2. Comments on Photos Shown

I will be brief here, because detailed descriptions of doors and the excerpts of a plan for Auschwitz will be presented later that will substantiate the correctness of the following.

The most important criteria for a truly gas-tight door are readily to be found in the contemporaneous subject literature on air-raid and HCN-delousing facilities. As examples for both, I refer the reader to *Schutzraumabschlüsse*⁹¹ for the former, and to *Blausäuregaskammern zur Fleckfieberabwehr*⁹² for the latter, since this publication already takes into account the experiences gained in the first years of the war. The main criteria are:

Illustration 5: Door of a Delousing Chamber in Auschwitz. (J.-C. Pressac,¹⁵ p. 49.)

⁹⁰ Cf. Samuel Crowell, "Defending against the Allied Bombing Campaign: Air Raid Shelters and Gas Protection in Germany, 1939-1945," *JHR*, 20(4) (2001), pp. 15-41; more recently in *idem*, *The Gas Chamber of Sherlock Holmes*, Nine-Banded Books, Charleston, W.Va., 2011.

⁹¹ R. Scholle, "Schutzraumabschlüsse," *Baulicher Luftschutz*, No. 3, W. Ernst & Sohn, Berlin 1939.

⁹² Franz Puntigam, H. Breymesser, E. Bernfus, *Blausäuregaskammern zur Fleckfieberabwehr*, Sonderv-

1. Due to the highly penetrative property of HCN, absolute gas-tightness of all construction parts.
2. The door leaf must fit against all parts of the door frame in a parallel and uniformly tight manner. This requires a rubber gasket. To this, people often object that there was no rubber in Germany during the war. This is true only to a degree; the Germans had a substance that was in some respects even better than natural rubber, namely Buna. This is why motorcyclists' Buna overcoats dating from 1937 are still in perfect condition today, whereas such made from natural rubber are not!
3. A 5-cm-high threshold was required.
4. The door hinges required a free axis so that the door leaf could move on the band side when being closed. Illustration 8 shows this important point. To allow the door leaf to be pressed tightly to the frame but also to let it move freely, the pivot loop on the end of the steel strap hung on the pin of the lag-screwed block is not round and close-fitting in shape, but oval. This allows the door leaf to move a short distance laterally. This is a necessary prerequisite for a gas-tight door, since a door leaf that cannot be pressed tightly to the frame cannot be made gas-tight. This goes even more for felt than for Buna-hose gaskets.
5. As locking mechanisms, even steel doors – as I will show – required at least eight wedge fasteners, three on either side and one each at the top and bottom. The wedge fasteners made it possible to press the door leaves uniformly to their frames. If this was necessary for steel doors, this goes all the more for wooden doors (cf. Illustration 7, page 320).

None of the doors pictured met even these five criteria:

1. The doors had bolts etc. penetrating the door leaf.
2. The doors had only two fixed points, and two bolts of limited adjustability.
3. Felt is not gas-tight.
4. The steel straps had no adjustable axes.
5. The wooden door leaves could warp. (Anyone who wishes to seriously examine this issue should at least have *read* the aforementioned study *Blausäuregaskammern...* about gas chambers operated with hydrogen cyanide.)

Two photos⁹³ exist of the annex to Building 160, belonging to the microwave delousing facility. They prove that construction of the remaining facilities was not finished.

3.9. Construction Plans Offered as Evidence

3.9.1. Observations on the Construction Plans Shown

I will of course limit myself to points relevant to this topic. Regarding the plans of Crematoria II and III, therefore, it must be pointed out that the entrance door to Morgue 1 is depicted in several different ways. There are doors which open into a room, but also such that open outwards. Further, both single and double doors are shown. The most-credible plans are probably the as-built plans made of the completed structural shell. These plans are by the HUTA Company of Series 109; as reproduced by Pressac,¹⁵ pp. 327 and 329, they clearly show a suitable double door.

In the plans of Crematoria IV and V, I merely point out the depiction of the small windows/shutters. The wall anchors sketched in here reveal an unusual form. They are configured in such a way that it appears that they were intended to open outwards; cf. p. 399.¹⁵ Wall anchors are not generally sketched on the inside wall. How they were in fact really constructed is unknown.

3.9.2. Comments on the Construction Plans Shown

As I already stated, no indisputable findings can be based on the plans. However, if the doors were fashioned as double doors, then it is certain that, if they were made of wood, they could

öffentlichung des Reichsarbeitsblattes, Berlin 1943.

⁹³ From the Siemens archives, Munich; for one of them see Illustration 3. The other was reproduced in H. Lamker, *op. cit.* (Note 11).

not possibly have been gas-tight. The seam between the two movable leaves of a double door cannot be gasketed to gas-tightness with felt. Added to this was the fact that, given the shortage of skilled labor during the war, parts which were manually manufactured on-site could not have been as precisely made as industrially produced parts. This goes for the doors themselves but even more so for the felt gaskets. The same goes for the windows/shutters, but these are to be considered as above, since in this context it is irrelevant whether they opened inwards or outwards. Most at risk is the construction shown in Photos 32 and 33, p. 427,¹⁵ given large temperature differences between inside and outside. Aside from that, the construction shown in Photos 29 and 30 is more reminiscent of a door to an ice box, of which it is known that there were some in the camps.

As part of its offer of July 9, 1942, the Berninghaus Company supplied a plan of its door, “Delousing Chamber Door St. 3596,” dated March 20, 1942. Where the buildings in Auschwitz are concerned, this offer for gas-tight doors is highly significant in terms of its timing, since it had already been obtained before any of the crematoria and Birkenau were being built. If, as is alleged, ‘execution gas chambers’ had been planned for these crematoria, then such doors would have been ordered early on as well, but this was not done. On the other hand, such doors manufactured by the same company were verifiably installed in the Buchenwald Concentration Camp, for example (note: there were *no* ‘execution gas chambers’ in Buchenwald!).

From the plan supplied by the Berninghaus Company, I present some detailed excerpts which show how great the difference was between these doors and those made by the Auschwitz-based DAW (Deutsche Ausrüstungs-Werke), which produced the allegedly gas-tight doors for the camp, largely with unskilled labor. These prove that the criteria set out in 3.8.2 were known:

1. Stiffer, more-precise construction with the aid of steel profiles: Illustration 6
2. More and better locking hardware: Illustration 7
3. Free axes and wedge fasteners: Illustrations 8 & 9

3.10. Other Documents Offered as Evidence

The files contain an offer for 38 gas-tight doors for the delousing facility in Building 160. It is a typical “circulation-fumigation chamber by the firm Degesch,” about whose particular design and construction Pressac evidently did not inform himself. For this reason, he made many errors and misinterpretations in this regard. The detailed offer and drawing, which I have in my files, was received by the Central Construction Office on July 13, 1942.⁸⁶ The salient point within the extensive correspondence is that these doors were not ordered until May 5, 1944.⁹⁴ Due to the microwave delousing facility, which had been implemented in the meantime, the order was reduced to 22 doors.

Another important element is the May 12, 1944, letter⁹⁵ from the Berninghaus Company, in which they state:

“[...] that today we no longer supply gas-chamber doors of anything other than double-walled all-steel construction, since it has turned out that doors of a construction type that economizes on steel do not meet the necessary requirements.”

This letter was supplemented with a new offer dated May 12, 1944, including a detailed description.⁹⁶ The doors were ordered via registered letter of June 20, 1944.⁹⁷ Finally, in a letter dated November 21, 1944, the Berninghaus Company asks whether the ordered doors should still be delivered.⁹⁸ Since the Auschwitz Camp was preparing to shut down all operations at that time, we may assume that they were not delivered.

⁹⁴ RGVA 502-1-354-7; May, 5, 1944.

⁹⁵ RGVA 502-1-354-3; May 12, 1944.

⁹⁶ RGVA 502-1-354-4; May 12, 1944.

⁹⁷ RGVA 502-1-354-5; June 20, 1944.

⁹⁸ RGVA 502-1-333-2; Nov. 22, 1944.

Illustrations 6-9 (from top left to bottom right): detail enlargement of construction plans by the Berninghaus Company, from March 20, 1942, discovered among the correspondence of KL Auschwitz. Doors at least this solid and gas-tight would have been necessary for execution gas chambers, but were verifiably never supplied to the Auschwitz Concentration Camp.⁸⁶

If even the much-improved construction type of door offered in 1942 were not reliably gas-tight, then this is an additional corroboration of my concluding position. A subject expert could not wish for better evidence. A manufacturer of a much-improved but nonetheless makeshift ‘gas-tight door’ who, even in times of severe steel shortage, declares only all-steel doors to be truly gas-tight and offers to supply only them, can hardly be surpassed as evidence.

3.11. J.-C. Pressac’s “39 Criminal Traces”

3.11.1. Observations on “39 Criminal Traces”

Completeness requires that this part of Pressac’s book¹⁵ also be examined. However, only those who have read and worked through this book from start to finish would know what they are getting into. To refute every nonsensical and illogical sentence and, even more-so, every technically or physically incorrect statement made in this book on the subject of the gas-tight doors and windows – and unfortunately there are a great many such statements – would take an entire book.⁹⁹ Within the scope of the present study, it is impossible to provide a complete analysis of Pressac’s section of 29 oversized text pages.¹⁰⁰ For this reason, I shall choose just one example:

1. On p. 429 Pressac writes:

“Proposition A: A gas-tight door can be intended only for a gas chamber.”

This is a thoughtless and untenable claim. His further conclusions can only be correct if this statement is correct. But anyone who lived through the time in question must then conclude from Pressac’s claim that Germany was full of gas chambers – for prior to the war there were legal regulations that required the construction of air-raid shelters as part of new buildings, and one of the requirements was that the air locks of such shelters had to be gas-tight.⁹⁰ So Pressac’s proposition is false!

Pressac claims dubious “39 criminal traces” but offers evidence for only 34. Moreover, his ‘line of reasoning’ is characterized more by wishful thinking than by documented facts. Evidently, he put himself (or was put?) under pressure to produce the desired evidence. There is no other way to comprehend that he turns the one point in his exposition, “gas-tight door,” into 17 separate entries, such as for example:

“23. [...] 210 anchors for gas-tight doors.”

I could have given him suggestions for some more, such as for example, “35 nuts for bolts in gas-tight door.” The seriousness of the topic prevents me from doing this.

3.11.2. Comments on “39 Criminal Traces”

I have demonstrated clearly and compellingly the cardinal error of not only Pressac’s entire book, but ‘serious’ orthodox studies in general: rather than the pharmacist J.-C. Pressac, subject experts should have dealt with all matters that require special, *i.e.*, subject-related knowledge. A pharmacist is not the proper person to determine the presence of “gas-tight doors,” just as a construction engineer would not be given work in a pharmacy, and rightly so.

The same, of course, also goes for the disciplines of history and law. In these cases, laws even require the consultation of suitable subject experts, which are available in all fields of study. As subject expert, one must thus ask oneself: why do precisely these two disciplines continually refuse, even in violation of legal precepts, to avail themselves of such subject experts?

Pressac’s section in question does not provide any evidence that other, truly gas-tight doors or windows existed. Pressac’s attempt to bring evidence ‘indirectly’ also fails, as Carlo Mattogno has amply demonstrated.¹⁰⁰ The sentence which he aims at others on p. 421 of his first book applies very much to Pressac himself:

⁹⁹ Cf. also the chapter by W. Lüftl, this volume.

¹⁰⁰ This was actually done by C. Mattogno in his 690-page book *The Real Case for Auschwitz*, *op. cit.* (note 7).

“There is none so blind as he that will not see.”

3.12. Summary

After careful examination of all photos, descriptions and documents available for analysis, I conclude that the infamous gas-tight doors of Auschwitz were, in fact, not gas-tight. In particular, they lacked the following characteristics:

1. The felt used as gasketing material, which is not gas-tight to begin with, is also not sufficiently elastic to compensate for warping of the door leaf. This goes all the more for the strapped side of the door leaf, because here it is not possible to compensate by pressing on, since
2. there are no free axes.
3. The number of latches is too small to fix the door leaf uniformly, and there are no parts that would allow for uniform sealing pressure on the one hand and prevent distortions on the other.

The doors shown could not have prevented gas from escaping into the buildings and the surrounding areas. Claims to the contrary of these facts are false.

However, as the correspondence from the firm of Berninghaus proves, the Central Construction Office of Auschwitz would have been able at any time to obtain sturdy, gas-tight steel doors, such as were manufactured by the umpteen thousands for Germany's air-raid shelters. The fact that this was not done can only be because they simply were not actually needed in Auschwitz. For delousing facilities, where the aim is not to keep great numbers of people mechanically completely isolated from poison gas (as in air-raid shelters) or locked into a concentration of poison gas (as in the alleged execution gas chambers), wooden doors with makeshift gaskets will do.

There was no gas-tight door in the two camps comprising Auschwitz.

Editor's Remark

When the retired former crematorium of the Auschwitz Main Camp was converted to an air-raid shelter for the SS in the second half of 1944, three access doors were equipped with “gas-tight” doors. However, since at that point in time the war was going badly for Germany, and ordering professional air-raid-shelter doors from a manufacturer in the Reich was not an option anymore, the three doors were of a locally improvised nature as well, probably also fabricated by inmates at the local DAW workshop. No documentation on their order and production has surfaced yet, but from the extant doors it can be seen that the door leaves were made of wood, covered on both sides with sheet metal to render them “gas-tight.”¹⁰¹

Abbreviations

- BA: Bauabschnitt = Construction Sector
- BW: Bauwerk = building
- Exterminationist: a person propounding the theory of the extermination of concentration-camp inmates
- RGVA: Rossijski Gosudarstvenni Vojenni Archiv, Moscow (the former *Tsentr Chranjenija Istoriko-domumental'nych Kollektii*, Center for the Custody of Historical Document Collections, TCIDK)
- WVHA: Wirtschafts- und Verwaltungs-Hauptamt = Economic Administrative Main Office

The Technique and Chemistry of the ‘Gas Chambers’ of Auschwitz

GERMAR RUDOLF

1. Introduction

Prior to the *Leuchter Report*¹ no scientific study of any significance had ever been conducted about the homicidal ‘gas chambers’² of Auschwitz and Majdanek, which is astonishing in view of the importance of the topic. Even in the great Auschwitz Trial in Frankfurt in the mid-1960s, the expert reports that were commissioned had an exclusively historical focus, and not even the defense thought to request a report on the alleged murder weapons, which have partly survived to this day. In its verdict, the court stated that it lacked “almost all the means of evidence available in a normal murder trial,” including “the bodies of the victims, autopsy reports, expert reports on the cause and time of death, [...] evidence as to the criminals, murder weapons, etc.,”³ and after a detailed analysis of the course of the trial one cannot help but note that this court, just like all those which dealt with the topic before and since, never made even the slightest effort to locate any such evidence or to commission any subject experts. The same goes no less for the great Majdanek Trial in Düsseldorf in the late 1970s.⁴

It was not until 1988, 45 years after the alleged crime, that Ernst Zündel, a German-Canadian charged by a Canadian court with knowingly disseminating false news about the Holocaust,⁵ commissioned the American gas-chamber expert Fred Leuchter to compile a report about the evidence for the supposed murder weapon. The idea for such a report had been suggested to Zündel by Robert Faurisson, who already as early as 1978 had published his thesis of the radical impossibility of human gassings in the alleged ‘gas chambers’ of Auschwitz.⁶ In the resultant, hastily drawn-up report, Leuchter concluded that the “alleged gas chambers” of the facilities he examined could not have been used as such for several technical reasons. Additionally, analyses of brick samples from the alleged ‘gas chambers’ showed that these contain negligible traces of hydrogen-cyanide poison from Zyklon B, whereas the walls of the delousing chambers where the inmates’ clothing was deloused with Zyklon B contain great quantities of such residue.

It is not surprising that this report caused considerable uproar, which resulted in a number of publications.⁷⁻²⁸ Inspired by the *Leuchter Report*, the *Rudolf Report* – for the first time released

¹ F. A. Leuchter, *An Engineering Report on the Alleged Execution Gas Chambers at Auschwitz, Birkenau and Majdanek, Poland*, Samisdat Publishers, Toronto 1988, 195 pp.; more recent: F.A. Leuchter, R. Faurisson, G. Rudolf, *The Leuchter Reports: Critical Edition*, 5th ed., Castle Hill Publishers, Uckfield 2017.

² I intentionally put ‘gas chambers’ in quotation marks for the following reason: In the wartime German technical literature as well as in many blueprints of German architectural maps, this term was exclusively used to describe delousing facilities, but never in the context of homicide. Nevertheless, I do understand that whenever this term is used today, a homicidal ‘gas chamber’ is normally meant and/or understood. But since this is a misuse of the original term and hence ambiguous, I put it in quotation marks to distinguish it from the original term referring to delousing gas chambers, see note 30f.

⁴ District Court Düsseldorf, Ref. 8 Ks 1/75; C.F. Rüter, D.W. de Mildt (eds.), *Justiz und NS-Verbrechen*, Vol. XLIV, University Press, Amsterdam 2011, Case No. 869.

⁵ Regarding the trial cf. B. Kulaszka (ed.), *The Second Zündel Trial: Excerpts from the Court Transcript of the Canadian “False News” Trial of Ernst Zündel, 1988*, Castle Hill Publishers, Uckfield 2019; R. Faurisson, “The Zündel Trials (1985 and 1988),” *Journal of Historical Review (JHR)* 8(4) (1988), pp. 417-431. Robert Lenski, *The Holocaust on Trial: The Case of Ernst Zündel*, Reporter Press, Decatur 1990. The law under which E. Zündel was charged was quashed by the Supreme Court of Canada in spring 1992 as being in violation of human rights. The reason: no one other than the accused himself could possibly know whether the accused had knowingly told untruths (in other words, had lied or de-

- nied). Everyone must be granted the right to be wrong. This antediluvian law required the court to be able to read minds, and was an elastic, ambiguous paragraph posing a dire threat to the free expression of opinion. The court rejected subsequent motions to re-charge Zündel under other paragraphs. Zündel was thus acquitted of all charges.
